Of the portraits of Miss Gillies we hope to see many more; she has been fortunate in preserving likenesses of other men of genius—and has thus rendered a service we can scarcely estimate too highly; for when they live but in their works, it will be very pleasant as well as very profitable to renew acquaintance of them, not by indistinct and unsatisfactory searchings after resemblances, but by bringing them before us as clearly as Art can do.

#### TO CORRESPONDENTS.

**J. H. M.**—A note has been received from this correspondent, bearing date the 22nd ult., wherein he alludes to a communication sent a few days previously, and in which he wishes us to correct an error into which he had fallen in reference to the Van Eyck, in the late exhibition of the British Institution. We beg to say, that the communication of which he speaks has never been received.

**THE VAN EYCK VEHICLE.**—We have received from a Brighton correspondent a letter on this subject, the insertion of which we are obliged to decline. The writer claims to be in possession of a genuine document, in which the veritable vehicle employed by Van Eyck is described. He further says, that having experimented upon the instructions contained in the document, a composition was produced which caused the work executed with it to excel in brilliancy certain productions of Raffaele and Reynolds. Our correspondent is of course desirous of making the most of the information he possesses, but he does not clearly state his view on the subject; he speaks of a committee, but we do not think it necessary that a committee should be formed; the studio is the place to test the value of this secret, and whether it be the Van Eyck medium or not, his vehicle cannot fail to recommend itself if it possess the properties described.

**FINE ARTS IN IRELAND.—ROYAL IRISH ART-UNION.**—We made a mistake in our last month's notice of this Society. In referring to the subject selected for engraving we were quite correct in our conjecture that it would be from a work by Rothwell, an artist who is deservedly most popular with his countrymen; but instead of the "Tired Out," we should have said the chef-d'œuvre of this gentleman, "The Noviciate Mendicants." The former, although very clever, has little or no subject in it; the latter is a work of a very high character, full of expression and feeling; and we sincerely congratulate the Society on its choice, and Mr. Rothwell on the national compliment paid to him. It will make a most popular print, produced as it will be by this Society in first-rate style.

☞ An accident (to the extent of half the quantity of the ART-UNION) at the moment of going to press, and after the Editor had finished his labours,—has compelled the Printer to omit the Report of the Royal Art-Union, several Reviews, &c., intended for this Number.

## POETRY, PAINTING, AND MUSIC.

In post 8vo, price 6s. cloth,  
TREATISES ON

**POETRY, MODERN ROMANCE, AND RHETORIC**, being the Articles under those Heads in the Seventh Edition of the *Encyclopædia Britannica*. By GEORGE MOIR, Professor of Rhetoric in the University of Edinburgh, and WM. SPALDING, Esq., Advocate.

"The Article 'Poetry,' by Professor Moir, is prefaced with an eloquent and perspicuous exposition of the mental and moral qualities requisite to its production; and the distinction between the province of imagination and of fancy evinces discrimination at once accurate and profound."—*Exeter Gazette*.

## II.

In post 8vo, price 6s.,

**PAINTING AND THE FINE ARTS.** By B. R. HAYDON and WILLIAM HAZLITT. Forming the Articles under those Heads in the Seventh Edition of the *Encyclopædia Britannica*.

"Mr. Hazlitt's clever Treatise, written for the 'Encyclopædia Britannica,' has come under our notice. We have read no work of that Author with anything approaching to the same gratification."

"We must add a similar testimony in favour of his fellow labourer, Mr. Haydon. His Treatise seems to us the result of study and observation extensive and profound."—*Quarterly Review*.

## III.

In quarto, price 9s. with numerous Engravings and copious Musical Illustrations, interspersed with the Text,

**AN ESSAY ON THE THEORY AND A PRACTICE OF MUSICAL COMPOSITION**, with an Introduction and Appendix, including the Article "Music," in the current Edition of the *Encyclopædia Britannica*.

By G. F. GRAHAM, Esq.

"A masterly and comprehensive Essay."—*Athenæum*.  
"A lucid and harmonious arrangement of the principles of the art."—*Musical World*.

"We never saw so much sound practical intelligible information on the subject compressed into the same space."—*Spectator*.

ADAM and CHARLES BLACK, Edinburgh; SIMPKIN, MARSHALL, and Co.; WHITTAKER and Co.; and HAMILTON, ADAMS, and Co., London.

**ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.**

**MODERATE RATES**, both for Fire and Life Assurance. Liberal Conditions and unquestionable Security are the distinguishing features of this Corporation.

Special Risks reasonably rated.

Tables of Rates, and every information, may be had of the Secretary, at the Chief London Office, No. 449, West Strand, or at the City Branch Office, No. 78, King William-street, Mansion House.

Scottish Union Office,  
No. 449, West Strand, London.

F. G. SMITH,  
Secretary.

Price 7s. 6d.,

**THE STUDENT'S GUIDE, or ELEMENTS of DRAWING and PERSPECTIVE**, with directions for Drawing and Colouring from Nature, by H. M. WHICHELO.

A work upon an entire new plan, combining the Art of Sketching and Colouring with Perspective, containing graphic examples with perspective lines attached to facilitate the acquirement of that pleasing Art.

Published by Smith, Elder, and Co., Cornhill; and may be had of Reeves and Sons, 150, Cheapside; and of all principal Booksellers.

TO ARCHITECTS, BUILDERS, &c.

**PAPIER MACHE' WORKS, 15, WELINGTON-STREET NORTH, STRAND.**—CHARLES F. BIELEFELD begs to inform Architects, Builders, &c., that in addition to the Volume of Patterns already published, he has now produced 40 New Engravings, which may be had separately at 6d. each. The complete work now comprises nearly 850 patterns of works in every style, actually manufactured in Papier Mâché, and on sale: consisting of Picture and Glass Frames, Cornices, Mouldings, Flowers, and every species of decoration for ceilings, walls, &c. The excellence of the improved Papier Mâché Ornaments in architecture is now fully understood and admitted by the first architects, and by the most eminent builders in London and the provinces.—The above folio volume is sold, bound complete, with a tariff of prices, at Three Guineas, which will be remitted to persons ordering goods to the amount of £50 or upwards.

**SPLENDID AND SUPERIOR GILT FRAMES.**

**CHARLES M'LEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**POOLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razormakers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

22, Golden-square, September 27, 1841.

MRS. PARKES begs leave to claim the attention of those Ladies and Gentlemen who intend to take chances for the under-mentioned Prizes, and to urge them to be prompt in securing them, as the greater portion of the numbers are already engaged; and she is anxious immediately to make preparations for the day on which the drawing shall come off.

TO BE DISPOSED OF UPON THE PLAN ADOPTED BY THE "ART UNION," IN THE DISPOSAL OF THEIR PRIZES.

## BOWYER'S UNIQUE ILLUMINATED BIBLE,

**MÜLLER'S PICTURESQUE SKETCHES OF THE AGE OF FRANCIS THE FIRST.**

UNIFORM WITH HAGHE'S BELGIUM. £ 5.  
Price, imperial folio, tinted, half-bound .... 4 4  
Coloured and mounted, in a Portfolio ..... 10 10  
Messrs. Graves and Co. in selecting an Artist for the express purpose of visiting France to make Drawings for their intended work, had the good fortune to engage the services of Mr. William Müller. The choice has given them, and they trust it will the public, great satisfaction, as Mr. Müller returned with a portfolio so rich that they are enabled to present a work unequalled in the lithographic art.

The drawing on stone was confided to the judgment of Mr. Haghe, and to him and his able Assistants the Publishers are indebted for a considerable part of the beauty of the Plates.

London: Published by Henry Graves and Co., Printers to her Majesty, 6, Pall Mall; and may be had of all Book and Printsellers in the Kingdom.

HENRY GRAVES AND COMPANY.

Her Majesty's Printsellers and Publishers, Have the honour to announce the Publication of a Splendid Engraving of

or, a New Mode of Radically Studying the German Language: developing, by lists of all the words of similar meaning in the German and English, the great affinity of the two languages, and their similarity of expression in the more essential parts of speech. By HENRY MEIBINGER, Author of the "Comparative Dictionary of the Gothic-Teutonic Languages."

London: Whittaker and Co., and Dulau and Co.

CHURCH MUSIC.

**MOTETT SOCIETY, INSTITUTED FOR THE REVIVAL OF THE ANCIENT CHORAL MUSIC OF THE CHURCH.**—Subscribers to the Music about to be printed by the Society are received at One Guinea per annum. The collection will consist of—I. Complete Services by English and Foreign Masters; II. Miscellaneous Anthems; III. Anthems and Motetts for the Festivals of the Church. The latter division of the work is intended to supply a desideratum which has long been felt, and will comprise a regular series of Anthems for the Festivals and Fasts of the Church, selected chiefly from Palestrina and other great Masters of that period.

For prospectuses and full particulars apply to Mr. RIMBAULT, 9, Denmark-street, Soho; or to Mr. BURNS, 17, Portman-street. To whom names and subscriptions should be forwarded immediately.

N.B. Subscriptions for the first year will include the Society's Publications to Dec. 1842. It is expected that 300 pages will be given during the year.

## ENGRAVING ON WOOD.

University College, London, 19th Oct., 1841.

## PAINTING AND DRAWING MATERIALS.

**ROBERSON AND CO., 51, LONG ACRE.** Artists' Colourmen and Pencil Makers, beg to call the attention of Artists and Amateurs to their New List of materials for Drawing, Painting, &c., manufactured and sold by them.

In addition to every article hitherto used, it comprises all the New Colours and improved methods of preparing them, both for Oil and Water Colour Painting.

**OIL COLOURS** of the finest quality, in Metallic Collapsible Tubes, Glass Tubes, and Bladders.

**WATER COLOURS** in Cakes and in the Moist State for Sketching, &c.

**PREPARED CANVAS** for Oil Painting, with Indian-rubber, Oil, or Absorbent grounds.

**Flemish ground MILLBOARDS and PANELS.**

**VEHICLES and MEDIUMS**, prepared from Silica and Borax, in bottles and powder, after the recipes of Lieut. Hardy, and J. Eagle, Esq.

**Macgelliph, Gum Medium, Gumption, and Preparation of Copal** for Oil Painting.

**WHATMAN'S DRAWING PAPERS**, London and Crayon Boards, and Harding's new pure Drawing Paper.

**FRENCH BLOCKS** for Sketching in Oil and Water Colours.

**SABLE and CAMEL HAIR PENCILS**, Goat, Hog, and Badger Hair Brushes.

**FINEST PURE CUMBERLAND LEAD DRAWING PENCILS**, of various degrees of hardness, at the recent reduction in price.

**ROBERSON AND CO.** have much confidence in respectfully stating, that they continue to supply the above, and every other article connected with their business, of the very first quality and at the lowest possible prices.

**MANUFACTORY, 51, LONG ACRE, LONDON.**

## TO ARTISTS' COLOURMEN.

**BROWN'S PATENT COLLAPSIBLE METALLIC TUBES.**—The success of these Tubes being fully confirmed, the Patentees beg to inform the Trade that they may be supplied with full or empty Tubes and Filling Apparatus, at 163, High Holborn, London.

**VOLATILE FIXER**, a Preparation to fix and secure Coloured Crayon and Chalk Drawings, to prevent their rubbing. Sold in bottles, price 2s. and 3s. 6d.—S. and J. Fuller particularly call the attention of Artists, Amateurs, and Drawing-Masters to the above useful Preparation; likewise to their permanent Coloured Crayons, for Portrait and Landscape Painting, fitted up in boxes, price 25s. and £2 10s. each. Specimen Drawings to be seen, and Portraits painted in Crayons.—Temple of Fancy, 34, Rathbone-place.

**POOLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razormakers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

**TO ARTISTS & AMATEURS—BROWN'S PATENT COLLAPSIBLE METALLIC TUBES** for Colours, Oil, and Varnish.—**THOMAS BROWN**, Colourman to Artists in Oil and Water, returns his sincere thanks to his numerous Patrons for the many years of patronage bestowed on his late Father, and begs to inform them that he has the above New Invention for containing Oil Colours, &c.: it possesses all the advantages of bladders and syringes without any of their inconveniences, and he offers it at a price very little exceeding bladder colours; it effectually prevents all waste, dirtiness, and smell, and will preserve the colour good for years, and in any climate. T. B. also begs to say that he now manufactures Water Colours, and sells every Material for Drawing and Painting. Orders by post attended to immediately.—No. 163, High Holborn, London, 1841.

**GEORGE ROWNEY AND CO.'S PRE-SERVING ENVELOPES** to supersede the use of the Bladder for Oil Colours.

This mode of putting up Oil Colours for the use of Artists, will be found much more cleanly and portable than the old plan of employing the bladder or weasand, besides possessing the advantage of preserving the colour for an indefinite period of time.

Also a new red, called Palladium Red, which possesses a similar tone to Chinese Vermilion, but of greater brilliancy; it is perfectly permanent with a semi-transparent body; and having neither sulphur or mercury in its composition, it is not liable to form a black sulphuret when used in combination with white or any other colour.

And a new and permanent Blue, price 4s. the oz., equal in tone and colour to Ultramarine of the best quality.

Canvasses prepared with Indian Rubber, Flemish, and other grounds. Panels, Millboards, and all other articles connected with the Fine Arts, at the lowest possible prices, and of first-rate qualities.

Sold, wholesale, retail, and for exportation, at the Artists' Repository, No. 51, Rathbone-place, Oxford-street.

## BY HER MAJESTY'S ROYAL LETTERS PATENT.

**WINSOR AND NEWTON'S TUBES OF OIL COLOUR.**—This beautiful invention obviates the numerous imperfections attendant on the use of BLADDER COLOURS, as the bladder in which the paint is enclosed being porous, allows the oil to exude; and thus, by admitting air, the colour necessarily hardens, becomes contaminated with skins, and frequently more than half of it is rendered totally unserviceable.

The PATENT TUBES are formed of stout cylinders of glass, hermetically secured with an air-tight piston, traversing the tube, and ejecting the colour by a gentle pressure.

The colour being visible through the glass, the artist immediately perceives the one he may require, and the air being excluded, no smell can proceed from them. They are also so perfectly clean to handle, that oil pictures may be executed without the least soil on the table, or on the hands of the artist.

To be had, wholesale and retail, at their Artists' Colour Manufactory, 38, Rathbone Place, London.

Newly invented Zinc Panels for Miniatures and other highly finished Paintings in Oil, and all the new manufactures of the trade.

**TO MINIATURE PAINTERS, &c.—W. WARRINER, 39, GREAT CASTLE-STREET, REGENT-STREET, Manufacturer of OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES, of all sizes, shapes, and patterns.**

W. Warriner, having been established more than a Quarter of a Century, begs to return his sincere thanks to those Artists and others who have undeviatingly patronised him; begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses, always ready, or speedily made to Order.

The Trade, Merchants, and Captains of ships supplied on the most advantageous terms, and with the greatest punctuality.

## CHEAPEST AND BEST MANUFACTURED PICTURE FRAMES IN THE WORLD.

**P. GARBANATI, WORKING CARVER** and GILDER, 19, St. Martin's-court, St. Martin's-lane, respectfully informs Artists, &c., that as he Manufactures every description of ornamented, Gilt, and Fancy-wood Picture Frames entirely on his premises, he is enabled to offer them at such low prices, that he defies competition. A most extensive assortment of every description of Picture Frames kept ready. Re-gilding, in all its branches, done in a most superior manner, and cheaper than by any other Gilder in the kingdom. Estimates given free of charge.

**P. S.** A List of the Prices of PLATE GLASS, Gilt and Fancy-wood Picture Frames, Room Mouldings, &c., can be had at the Manufactory (gratis), or sent (pre-paid) to any part of the Kingdom.

**P. G.** respectfully solicits a Trial of his Work, for comparison of Quality and Price, with other Manufacturers.

## SCOTTISH UNION INSURANCE COMPANY. Instituted in 1824, and incorporated by Royal Charter.

## LONDON BOARD.

Charles Balfour, Esq.	James Gooden, Esq.
J. Deans Campbell, Esq.	John Kingston, Esq.
W. Fane De Salis, Esq.	Divie Robertson, Esq.
J. Gordon Duff, Esq.	H. F. Sandeman, Esq.
Robert Murray, Esq.	John Small, Esq.
R. Oliverson, Esq.	Daniel Stoddart, Esq.
Sutherland Mackenzie, Esq., Manager.	

**MODERATE RATES**, both for Fire and Life Assurance. Liberal Conditions and unquestionable Security are the distinguishing features of this Corporation.

Special Risks reasonably rated. Tables of Rates, and every information, may be had of the Secretary, at the Chief London Office, No. 449, West Strand, or at the City Branch Office, No. 78, King William-street, Mansion House.

Scottish Union Office, F. G. SMITH, Secretary.

## GLOBE INSURANCE, Pall Mall and Cornhill, LONDON. Established 1803.

## DIRECTORS.

Edward Goldsmid, Esq., Chairman	Wm. Tite, Esq., F.R.S., Deputy Chairman.
Henry Alexander, Esq.	Sheffield Neave, Esq.
Jonathan Birch, Esq.	Fowler Newsum, Esq.
J. S. Brownrigg, Esq. M.P.	William Phillimore, Esq.
Jonathan Chapman, Esq.	Wm. H. C. Plowden, Esq.
Thomas Collier, Esq.	John Poynder, Esq.
Boyce Combe, Esq.	Robert Saunders, Esq.
J. W. Freshfield, Esq. M.P.	Emanuel Silva, Esq.
George Carr Glyn, Esq.	Sir W. G. Stirling, Bart.
I. L. Goldsmid, Esq. F.R.S.	Wm. Thompson, Esq.
Robert Hawthorn, Esq.	Ald., M.P.
John Hodgson, Esq.	Edward Vaux, Esq.
Boyd Miller, Esq.	B. G. Windus, Esq.

For FIRE and LIFE INSURANCE, and ANNUITIES, and the PURCHASE of REVERSIONS and LIFE CONTINGENCIES.

**CAPITAL, ONE MILLION STERLING.** The whole paid up and invested, and entirely independent of the amount of premiums received; thereby affording to persons Assured an immediate available fund for the payment of the most extensive losses, without liability of partnership, and free from uncertainty as to the result of their engagements—which the Directors consider to be highly important to those who effect Insurances in the capacity of Trustees, or otherwise in the performance of a specific trust or duty.

Insurances may be effected with this Company to the extent of £10,000, on a single life, if approved.

(By Order of the Board)  
**JOHN CHARLES DENHAM, Sec.**

Rates and Conditions of Fire and Life Insurance, or other information, may be obtained at the Offices in London, and of the Company's Agents in the Country; and where Agents are not appointed, persons in active life, and desirous of the appointment, may apply to the Secretary.

Fire Policies due at Christmas Day must be paid on or before the 9th January next.  
London, 27th September, 1841.

## THE ART-UNION.

LONDON, NOVEMBER 1, 1841.

THE QUESTION CONCERNING  
FRESCOS.

TO THE EDITOR OF THE 'ART-UNION.'

SIR,—The respective merits of oil and fresco painting will, no doubt, receive the deliberate attention of the commission appointed to consider the best mode of embellishing the Houses of Parliament; but as the subject is new to the public, and cannot be too much discussed, you will permit me, perhaps, through your valuable journal, to offer a few remarks on the subject.

On an attentive perusal of the evidence given before the late committee on Fine Arts, one cannot but wonder on what grounds the committee should have recommended fresco painting. That a strong predilection for that style has been shown in part of the evidence is obvious, but that no adequate reason has been assigned for preferring it is equally manifest. Why, indeed, should we adopt fresco painting? why pick up that which the good sense of our predecessors has thrown away? Fresco was the language of Art during its infancy, but, like all primitive usages, it gave way before the march of improvement and invention; and, as soon as the enormous superiority of oil painting was developed, it sunk into desuetude, and died a natural death. "Fresco," says the report, "has lately been revived on the Continent, and employed in the decoration of public buildings, especially at Munich; the space which it demands for its free development, and the subjects which it is peculiarly fitted to illustrate, combine to point out national buildings as the only proper sphere for the display of its peculiar characteristics, grandeur, breadth, and simplicity." Now, I submit that there is not the slightest reason that fresco painting should be adopted in England, because it has grown into a fashion at Munich. There can be no space which fresco painting may be designed to fill, nor any subjects which it may be intended to illustrate, which oil paintings would not fill quite as well, and illustrate much better. Breadth, grandeur, and simplicity, which are described as the peculiar characteristics of fresco, I conceive to be qualities not inherent in mortar; that they depend on the mind of the artist, not on the material he works with. I am aware that some of the great artists of the fifteenth century worked in fresco, and their works, fading and crumbling before our eyes, furnish the strongest evidence against the use of that medium. The great frescoes of Correggio in the two cupolas of St. John, and the cathedral of Parma, have ceased to exist, except in disjointed fragments. Parts of Michael Angelo's works have been detached from the roof of the Sistine Chapel, and his 'Last Judgment' is a mass of discolouration. Raffaele's 'Marriage of Cupid and Psyche,' in the Farnesina, has been repaired so often as to be absolutely disfigured; and his sublime 'Heliodorus' is not only darkened and discoloured, but the wall on which it is painted has actually heaved up like a sheet of undulating water, and in no slight undulations either; nails, as has been given in evidence, have been applied in abundance, to secure the surface, but the waves rise in spite of them. 'The Defeat of the Saracens at Ostia,' and the 'Incendio del Borgo,' are in a similar condition; and at no distant period these works will cease to exist. Some of the frescoes in the Vatican, and more especially those of Annibale Carracci, in the Farnese Palace, are, I admit, in a better state; but the examples I have cited are sufficient to show the general perishability of fresco. Unless the laws of matter itself shall alter, walls will decay, and mortar must come down; while pictures painted in oils on canvass, gradually hardening

until their surface acquires almost the solidity of marble, may be preserved almost for ever; for when the threads of the canvass shall have rotted, the picture remains entire and unfaded, and may be transferred as often as may be necessary to a new ground.

But apart from the consideration of permanency, fresco, as a mode of painting, is weak and inefficient. It admits of no refinement of colour, of no grand effects of chiaroscuro; it is destitute of depth, brilliancy, and transparency. In the vast range of paintings which fills the apartments of the Vatican, and from such masters, it would be strange, indeed, if some passages of fine colouring did not occur; but those passages are few and far between, and form the exceptions, not the rule. In the hands of the modern resuscitators of fresco it would be difficult to find any such redeeming points. I recollect to have seen the works of the new German school of fresco painters, when they were first exhibited at the Casa Bertholdy, at Rome; the attempt struck me as a sort of puerile caprice, and I little imagined that from so obscure a source, the Arts of England could ever be threatened with a serious revolution. There was no more conception of colour, harmony, or general effect in those pictures, than one sees in the court cards, or in a coat of arms. But I do not mean to undervalue the merits of the German school; their works sometimes exhibit an interesting cast of character and costume, which they have drawn from the early painters, and which affects the imagination agreeably by associations connected with the romance of the middle ages. They have great skill in composition; and in their best works, the Outlines of Retch for instance, there is a sweetness of expression and sentiment which has never been surpassed; but the Germans are in Art, as in much of their literature, recondite and visionary: they delight in abstractions for which Art has no language, and shrink from that vivid reality which is the peculiar prerogative of painting. According to an ingenious theory, thrown out by Mr. Eastlake, their predilection for fresco had its origin in patriotic feeling. "The effort," he observes, "to create a new style of Art in Germany in the beginning of the present century, was connected with the struggle for political independence." This may be a very good argument for the Germans in adopting fresco, but it is none for us; our artists, indeed, would be worthily employed in illustrating our achievements during the great contest in which we stood forward as the vindicators of the liberties of Europe; but for that national task, we have no need to creep after the whims of continental practitioners, among whom, we are informed, "the indications of a classic spirit were sufficient to condemn the finest works, and hence the latter productions of Raffaele were not considered fit models for imitation"! Such fanaticism needs no comment, nor has it always met with sympathy even where approbation was most desired. When the Emperor of Austria was at Rome, the German students got up an exhibition of their works for his inspection; this modern antique propensity had just then begun to be prevalent in their style; the Emperor was surprised at it, and said that, understanding that the purpose of artists in visiting Rome was to improve themselves by the highest examples, he wondered what could have induced them to take this retrograde course. But admitting, with Mr. Eastlake, that the Germans, in taking up fresco, were somewhat influenced by political sentiment, I cannot help thinking that motives of a much humbler kind had something to do with it; that, conscious of a certain inaptitude which is manifest in their whole school, to deal with the manual processes of oil painting, they were glad to turn round to a style which absolved them from that difficulty. Now, the English painters stand exactly in the opposite predicament; we are admitted by all Europe to be the best colourists, and to have more executive mastery than any other school. What then is the inducement held out to us to forego our vantage ground? Is it to avail ourselves of some great improvement? to follow in the track of some daring discovery? No; but to become the imitators of imitators, the apprentices of a foreign school, and that school itself the shadow of an exploded system. Being masters of the best implements, we are desired to use the worst;

really the absurdity is as great as if our soldiers were directed to throw away their guns, and take to drilling in the use of bows and arrows.

It is asserted that fresco painting exacts a more rigid and exclusive attention to design than is usual in the English school, and that therefore we should be compelled to improve ourselves in that particular. I am afraid that not much good will ever be done in the Arts, as Falstaff says, on compulsion; but if the attention of our school has been too much directed to minor excellences, what has been the cause of it? Not, certainly, that we are incapable of high Art, but because we have never been encouraged in that pursuit. That there is any inherent tendency in the practice of oil painting to seduce the artist from correct design—that that process is in any respect inimical to grandeur and severity—is a preposterous fallacy.

Look at the Roman school, and at that of the Carracci; and more especially at the modern French school of David, in which design has been carried to a point of perfection almost equalling the excellence of Greek sculpture. Barry's picture of the 'Olympic Victors' is an example nearer home; and various other examples might be adduced from the works of English artists. But colour and chiaroscuro, so far from being the antagonists, are the grand auxiliaries of design. I would add, that there seems to be in the English people a peculiar sensibility to colour; whether the taste be indigenous or acquired, it certainly exists, and no style of Art in which colouring is compromised will ever be likely to be popular in this country.

So widely do my impressions differ from much of the evidence given before the Committee, that I am half afraid to express my convictions, lest I should appear to be writing in an uncourteous spirit. I would ask, on what possible proof has it been assumed that fresco is equal, nay, superior to oil painting in durability; or that oil painting has any tendency to grow heavy and blacken? That such is the case with bad pictures, we have proof, no doubt, in every broker's shop; but I cannot recollect a single instance of any great work in oils (painted on canvass) which time has not tended to improve rather than to injure. It seems almost superfluous to cite particular instances of facts which are manifest through the whole circle of Art; but as one cannot be too specific in this sort of evidence, I will mention a few leading works in the order they occur to me:—Raffaele's 'Transfiguration'; his 'Madonna and Infant,' at Dresden; his 'St. John,' at Florence; his 'St. Cecilia,' at Bologna, are all in the finest preservation. Titian's 'Assumption of the Virgin,' at Venice; his 'Peter Martyr,' and the 'Cornaro Family,' in the same city; the 'Human and Divine Love,' at Rome; the 'Flagellation of Christ,' at Paris; the 'Bacchus and Ariadne,' in our own National Gallery—do not his works, in fact, wherever they are found, furnish irrefragable proof of the enduring quality of oil painting? Even Tintoretto, who has been made a peculiar subject of animadversion in the evidence, never fails in permanency, except in a few of his slight pictures, painted on dark grounds. What has Art to show more brilliant than his great picture of the 'Martyrdom of the Slave,' which confronts Titian's magnificent 'Assumption,' in the Academy at Venice, and suffers nothing by the comparison? Almost beyond all the rest is Correggio's exquisite picture of 'St. Jerome,' at Parma, which unites with consummate harmony a freshness which is absolutely startling; while his frescoes, as I have stated, are nearly obliterated. Paul Veronese supplies arguments on many points in question; it has been said that fresco is better fitted to fill large spaces than oil painting, and that it has greater clearness and lightness of effect: his picture in the roof of the Ducal Palace at Venice is the largest in the world, except the 'Last Judgment' of Michael Angelo; things so dissimilar, of course, admit not of comparison; but in what relates to permanency, or the capacity to fill space, Paul Veronese would not suffer by the contrast. As to lightness of effect, the works of this artist have a brilliancy and an atmosphere which exhilarates one with the sensation of a spring morning; while the boasted freshness of fresco, even while it is new and untarnished, reminds one of nothing but a newly-painted wainscot. I cannot forbear glancing at the works of

Rubens and Vandyck as specimens of unimpaired splendour; nor can I imagine a more effectual mode of converting the most determined advocate of fresco, than by placing him before Rubens's magnificent series of pictures painted for the Luxembourg; and whilst his eyes were yet filled with their gorgeous colouring, picturesque chiaroscuro, fluent execution, and delicious harmony, to bid him imagine for a moment what these designs must have been, if executed in the crude, husky, and discordant medium of Fresco!

Climate alone furnishes an insuperable argument against fresco in this country. If its permanency cannot be ensured in the dry air of Italy, what may be expected in the moist atmosphere of England? Another argument against it, is the impossibility of removal in case of fire or other accidents. Oil paintings, on the contrary, unless the danger is imminent, may be abstracted from the wall immediately, by passing a knife through the edges of the pictures. This was the mode practised by the French generals during their spoliations in Spain: as those operations were usually performed in a hurry, the knife was applied, the picture fell out, and was rolled up, the frames remaining in their places. The impracticability of cleaning fresco is also to be considered. It has been stated in evidence, but merely as a supposition, that there is either a recognized process, or that one might be easily found by chemical skill. Let us recollect that the Papal Government, intensely anxious as it is, and has always been, to preserve its works of Art, has found no method to arrest the progress of discolouration and decay in so many of its finest frescoes. The process of cleaning oil paintings, on the contrary, if intrusted to skilful hands, involves neither difficulty nor danger. Titian's great picture at Venice, which I have mentioned, of the 'Assumption of the Virgin,' had remained, since the time it was painted, as an altar-piece in one of the churches. So much had it been obscured by the smoke of incense, tapers, &c., that it had long been considered to be a picture executed in chiaroscuro, without colours. It was taken down, and removed to the Academy; and, by the simple process of rubbing with bread, was restored at once to the most brilliant effect of colours, perhaps, which human genius has ever set on canvass. Michael Angelo's 'Last Judgment,' discoloured beyond remedy as it is, was painted nearly at the same time, and has been exposed exactly to the same tests. Vasari, in his 'Vite de' più eccellenti Pittori,' taking up the common error of his age, speaks of permanency as one of the recommendations of fresco painting; but the error, which was pardonable then, would be unpardonable now, when we have behind us the additional experience of 300 years. There are other points in Vasari's panegyric on fresco, which one might almost imagine to have been quoted direct in the evidence:—"Di tutti gli altri modi," he says, "che in pittori facciano, il dipingere in muro è più maestrevole e bello; perchè nel fare in un giorno solo quello, che negli altri modi si può in molti ritoccare sopra il lavoro." This choice of difficulty for its own sake, the selection of materials for their intractability, and the preference of a process merely because it precludes the possibility of rectifying an error, is a curious mode of reasoning; but Vasari had more volubility than logic.

It seems that in England it will not be practicable to work on the walls more than five months during the year; and that the other seven must be spent in the preparatory labour of making Cartoons. This accords but little with the spirit and energy with which undertakings are usually carried on in this country. Well may it be said that we must educate a new school of students for the purpose. Poor fellows! no one will envy them their dusty labours; especially if one hint given to the committee should be acted on, which suggests that the best way to secure a finished and consummate harmony through the whole range of contemplated embellishments, would be to entrust the entire commission to one great artist, to whom all the rest should, of course, act as assistants! The prospect of becoming the drudges of a manufactory, and the helots of a task-master, would no doubt be very animating to the host of aspirants who are panting to distinguish themselves. Is there any professor whose modesty would permit him to accept the proposed dictatorship?

Whether the project shall constitute a great era in British Art, or be productive of sheer disappointment, will in a great measure depend on the mode in which it is carried into execution, apart, I mean, from the process employed. The selection of artists is a most important point. Competition is the best test of talent; but it has been suggested that artists of established reputation will not submit to this ordeal. Now, it is to be recollected that the talent specifically required on this occasion, is the capacity of executing historical works on a large scale; and, neglected and discouraged as this style of Art has been in England, how many artists have we, in that particular class, who have acquired such incontestable eminence as to justify them in declining competition? If such there be, they should assuredly be commissioned without further probation, always understanding that the arena of competition is left sufficiently wide to give fair play to the general talent of the country. A public exhibition of the works of candidates is the direct and obvious course; but as the preparation of pictures for this specific purpose (involving, as it must, the chance of rejection) would be in all instances a severe, and in many an impracticable condition, artists might be allowed to select one or more of their works, painted at any previous period of their practice (the later the better), which would furnish the criterion required. In respect to the tribunal, care should be taken, in whatever manner it may be constituted, to exclude that most inadmissible of principles which permits the same persons to sit both as judges and competitors.

There is one point, the most important which has been mooted during the whole discussion, on which there can be no difference of opinion, except among persons who are divested of that sense of respect and preference for their country which, with most men, is one of their leading instincts. Whether the Houses of Parliament are decorated with oil or fresco, and in whatever manner the artists are selected, the work, assuredly should be entirely English. If the project of employing foreign artists had not been discussed in committee, it would be impossible to believe that so deliberate a death-blow to British Art could ever have been contemplated. To say nothing of the claims of our artists, has the country itself no interest in the question? Is her honour and character unconnected with it? Is there no humiliation in admitting ourselves to be inferior to other nations in any department of intellect? Not many years since, certain philosophers on the continent set up an hypothesis which affirmed that the English, from their climate and geographical position, were radically incapable of excelling in the Fine Arts! Is it for ourselves to confirm the insolent slander, and by the employment of foreign artists to affix on the walls of our very senate-house an avowal of our own incapacity? To convert a great public work, which may be made a monument of national genius, into a mark for the derision of the world, and the shame of our posterity? I should be sorry to believe that we have less patriotism than our neighbours; but, certainly, if a project had been promulgated in France to call in foreign aid to embellish their public edifices, the whole country would have rung with indignation. We are told that it is merely to teach us the mechanical process of Fresco painting that this sort of assistance is required, as if the same sources of information which are open to other schools were not open to us. If we had really anything to learn from foreign professors, there is no occasion that they should be commissioned to execute our national works by way of giving us lessons. Holbein and Vandyke were liberally employed in this country, but at those periods we had no artists of our own. We have now a school which stands second to none in Europe; and although high Art has been least cultivated among us, so much talent has been thrown out in every other branch (as well as occasionally in that), that it cannot be doubted, except by the most determined and illiberal prejudice, that the English school will acquit itself with honour in any task which may be demanded from it. The gross indignity put on our Arts in the late affair of the Glasgow Statue to the Duke of Wellington, is surely not to be repeated on a larger scale in the Houses of Parliament; in both instances, it seems, the project of employing foreign artists was mainly instigated by the same person!

Let us hope that such projects are dismissed for ever. "The very fact," says the Report, most justly, "of a determination by the House to take this opportunity of encouraging the Arts, and of associating them with our public architecture, our legislation, our commerce, and our history, would alone stimulate and raise their character and quality;" and let not the opinion of Sir Martin Archer Shee be forgotten:—"I consider it," he says, "a most favourable opportunity for calling forth the *genius of our country*, and promoting the Fine Arts to the utmost extent of which they are capable, and if it be suffered to pass unheeded, I should say there is no hope in this country for artists in the higher department of the Arts."—Yours, &c.

J. P. DAVIS.

[We shall, of course, have to comment upon this all-important topic again and again. Meanwhile, it is the imperative duty of British artists not—as the lawyers have it—to suffer "judgment to go by default," but to make out such a case as shall satisfy the jury by whom they are about to be tried; upon whose verdict will mainly depend the character and condition of British Art for the residue of the nineteenth century. We call earnestly upon the Press and the Profession to dispute the ground inch by inch.]

### THE GLASGOW STATUE.

On the 29th September, a meeting of the sub-committee was called by the Convener, at which he stated that he had received a requisition for a meeting of the general committee; but with which he did not choose to comply till he had previously consulted the sub-committee, and received their instructions upon the subject. In a discussion which followed, Lord Bellhaven, Mr. Robert Findlay, and the Convener, defended the conduct of the sub-committee; and urged the impropriety of falling back upon the general committee for further instructions; whilst Messrs. Stirling, M'Lellan, and George M'Intosh, argued for the necessity of assembling the general committee, on the ground of disobedience of instructions on the part of the sub-committee; and in respect to which alleged malversations, the general committee was the only party competent to judge. After a somewhat stormy debate of three hours continuance, the business for which the meeting had assembled, was got rid of, by Lord Bellhaven moving, "That before proceeding further in the contract with the Baron Marochetti, that the Baron be instructed to furnish a bust of the Duke of Wellington in the prime of life, and not less than the size of life." Hereupon his lordship was reminded by Mr. M'Lellan, that this motion was nearly identical with one proposed at a previous meeting by Mr. George M'Intosh, but which had been negatived by an amendment, actually proposed by his lordship (here the minute book was referred to, and the case found to be as stated by Mr. M'Lellan), who went on to show, that when Mr. M'Intosh proposed his motion some result might have been expected from its adoption in regard to influencing the decision of the sub-committee, whereas now that they had resolved to employ Marochetti, had instructed him to proceed with the work, and actually, as stated by the Convener, having nearly completed a contract with Marochetti, it was wholly immaterial whether they adopted, or rejected, Lord Bellhaven's present motion. The motion was, however, put and carried. Messrs. G. M'Intosh and M'Lellan declining, under the circumstances of the case, to vote at all upon the occasion. The following, from the *Glasgow Argus*, of the 11th of October, contains the continuation of this strange story:—

### "THE GLASGOW WELLINGTON TESTIMONIAL."

"On inquiring at the Sheriff Clerk's Chambers, we have learned that on Friday last a petition was presented, at the instance of Mr. William Leckie Ewing, Mr. Archibald M'Lellan, Mr. William Stirling, and Mr. George M'Intosh, for an interdict to prevent the majority of the sub-committee from concluding any contract with Marochetti. The grounds of the petition, as we understand, were much the same as those with which our readers are already acquainted; viz., that the parties complained against were about to employ

Marochetti to make the statue, without having obtained any model of what the statue was actually to be. A long discussion took place between the parties, in presence of Mr. Sheriff Bell, after which the Sheriff stated, that, without going into the merits, there appeared to him sufficient grounds for granting an *Interim Interdict*, unless the defenders themselves undertook not to proceed further in the meantime. This they agreed to do, and accordingly came under an obligation that they would not move in the matter for a month; and that, if no agreement had been then come to, the complainants should be again at liberty to renew the application for further interdict. In the meantime the Sheriff has ordered written pleadings to be given in.

"We congratulate the subscribers to the Wellington Memorial on the success which so far has followed the highly-proper step taken by the gentlemen composing the minority of the sub-committee. We have reason to believe that much misapprehension is abroad on the subject; and we know that the exposure, which we have felt it to be our duty to make, of the conduct of the majority, has been instrumental in opening the eyes of many, who might otherwise have felt disposed to acquiesce in the choice of Marochetti as the artist. Since our former remarks appeared, we have had the pleasure of conversing with a foreign nobleman, at present on a visit to this city, who has enjoyed frequent opportunities of examining the state of Art on the continent, and whose acquirements and position enable him to pass an impartial opinion on the entire question. He states that the name of the Baron Marochetti is one totally unknown in the studios of Rome, and that it is impossible this could be the case had that individual attained any celebrity abroad. The nobleman to whom we have referred has also seen the much-talked-of statue of Duke Phillibert of Savoy, at Turin, but it has left no impression of a favourable character on his mind. We rejoice, therefore, that the delay of at least one month, which has been procured, and which will no doubt be extended, should it be found necessary, will afford an opportunity for a calm re-consideration of the whole subject. The subscribers are, in our opinion, under deep obligations to the gentlemen forming the minority of the sub-committee, for the persevering energy which they have displayed in averting from our city the disgrace of having the indelicate abortion of the Baron Marochetti erected as the testimonial of our townsmen to the hero of Waterloo; and we trust that the returning good sense even of those who have most loudly advocated the claims of the Italian charlatan, will satisfy them that a British artist is alone capable of doing full justice to the character of a British warrior. And at all events, if foreign talent is to be employed, the subscribers are assuredly entitled to demand that it should be proved to be superior to what our own country can produce, and not of a mediocre description, never previously heard of beyond the small circle of would-be-patrons of Art who have endeavoured to foist the Baron Marochetti upon the Glasgow Wellington committee."

[We are not without hope that the nation may yet be preserved from the insult and injury with which it has been threatened. Its history does not record a more iniquitous attempt to degrade it; and, we trust, if the statue be erected by the mountebank—whom Mr. Bankes patronises out of his delicate admiration of foreign tastes and decencies—that the names of the guilty parties will be carved upon the pedestal; headed by that of the honourable gentleman whose French and Italian predilections they have imitated. If we abhorred the Great Duke and our country, we should, indeed, rejoice that an opportunity was to be afforded a foreigner to pay off some of the old debt of hatred that France owes to Wellington and Great Britain; and should consider the triumph over both as a sufficient set off against the victor in a hundred fights—in every one of which France was humbled. No plan could be devised more effectual for showing the great superiority of the French over the English; to say nothing of the power of making the old soldier look like an old woman.]

### ROYAL IRISH ART-UNION.

#### REPORT OF THE COMMITTEE OF SELECTION, 1841.

The substance of this report presents one of the most striking results that the annals of any Art-Union has ever been enabled to exhibit. In Dublin, two years ago, an exhibition worthy of the name could not be formed; and at such exhibitions as did take place on the four preceding years, absolutely nothing was sold, so that the prospects of Art in Ireland were really gloomy and dispiriting to a degree. Portraiture, it is true, was a little patronised, and to this the enthusiast in his profession was compelled to resort for the means of living. For a great measure of its success the Irish Art-Union is indebted to its honorary secretary, Stewart Blacker, Esq., to whose indefatigable zeal in the cause of its welfare we are well assured the artists, not only of Ireland, but of Great Britain, are not insensible; for in glancing over the list of pictures sold, the names of many artists appear who are not natives of the sister isle. Mr. Blacker has alone, and unrewarded, save by the grateful consciousness of benefiting the Arts of Ireland, managed the affairs of the Society during two years and a half; and with what success is declared by the arithmetical conclusions of the report, the following extract from which will better show its satisfactory condition, than any account that could be otherwise afforded:—

"Our funds last year amounted to £1235; this has—without any very extraordinary, or forced exertions, but by chiefly allowing the Society to move on by the impetus given to it on the outset—been very nearly doubled, and would, we are fully convinced, have been far more than doubled, did we think that the exigency of the times required the matter to be pressed; but we felt that we had ample for our present purposes, and deemed it wiser to allow our system to take its natural and free course to grow and become acclimatised in public opinion, a healthy evergreen instead of a forced and sickly exotic.

"A comparative view, with the subscriptions to other similar societies in the sister countries at a similar period of their respective existences will, however, more fully illustrate and show that we have reason to look with a good deal of honest pride on our labours in this respect, and we institute the comparison in the true spirit of generous emulation, acknowledging, in the fullest manner, the valuable hints and assistances we have received from these societies, and that our success is, in a great measure, owing to the spirit they have been for some years diffusing through the land. In the Scottish Society the amount subscribed in the first year amounted to £728 14s., and no engraving. The London Art-Union collected in their first year 466 guineas and could afford no engraving; while our Society showed a total of £1235, and besides expending as much as the last-mentioned Society on works of Art, and we are proud to say, to their credit, with scarce an exception, on native and resident artists, we produced from the works of a native artist an engraving which has elicited the greatest admiration from all possessed of judgment, taste, and feeling on the subject. In its second year, the Scottish Society produced £1270; the London, £721; and ours, in this, also, our second year, £2318."

The report in continuation points out the general improvement resulting from the labours of the Society. The Exhibition of the Royal Hibernian Academy, instead of being filled as formerly merely with portraits and commissioned pictures, a very large proportion of works of originality and fancy adorned its walls, at once gratifying its visitors and improving the public taste. The steady increase of the funds even during periods when public movements of a very opposite tendency occupied and distracted the public mind, shows at once that such an occasion only was wanting for a declaration of that warm and widely diffused feeling for the Fine Arts, which it would have been difficult to have shown otherwise: as existing largely in a status of society in which individuals cannot gratify expensive tastes. This prosperity will operate most beneficially on the circumstances of the Royal Hibernian Academy, which is worthy

of every support that can be extended to it. The suggestions offered to this body in the report are highly judicious, and it cannot be doubted that, if acted upon, they will tend to further the advantages of the Academy. It is proposed to appoint a fixed day for the opening of the exhibition, and that a notice of such determination be as widely circulated as possible. Secondly, if the exhibition could be managed to be opened early in April, in order to have the full benefit of that month, together with that of May and June, when the town is most full, and close so as to allow the Society to wind up its affairs in the first week in July, previous to the departure of many of its most zealous and efficient members to the country, the benefits arising from such an arrangement must be substantial to the interests of the Institution. And, thirdly, increased attraction would result from following the example of the Royal Scottish Academy, which spares no pains or exertions in providing attractive and valuable contributions for their annual exhibitions, which, if not attainable from the artists of high note and character themselves, are by a little interest procured from the galleries and collections of private persons who feel proud in contributing their aid in such a cause.

In order to elicit what talent there may be at home, the Society have, after mature deliberation, thought proper to recommend the appropriation of 100 guineas, in the following proportions, to be offered for the best specimens (if approved of by the committee of selection) in the following branches of Art, executed by individuals resident in Ireland for at least one year previous to the time of exhibition:—

1. For a line engraving on copper or steel, size not less than six inches by four	£25 0 0
2. For an etching on copper, or a mezzotint, size not less than eight by six inches	15 0 0
3. Engraving on wood, size not less than six by four inches	10 0 0
4. Lithographic drawing, size not less than eight by six inches	10 0 0
Impressions on India paper and white paper to be exhibited.	
5. A pair of medal dies, diameter not less than one and a half inch; impressions in silver and copper to be exhibited	20 0 0
6. Engraving on a gem or hard stone	10 0 0
Ditto, on a shell	5 0 0
7. Model in wax	5 0 0
8. Model in clay or plaster	5 0 0
	£105 0 0

#### CONDITIONS.

1. In case any impression or copy of any work be publicly exhibited previous to its being sent in for competition, it shall be disqualified to receive the premium.
2. The engraving, &c., must be from original and unpublished subjects, by living Irish or resident artists.

The works of Art purchased this year have risen in number from thirty to ninety-one, and in amount from about £140 to nearly £1150. Add to this about £700 for engraving, printing, and paper; £100 for engraving prizes, &c., in Ireland; and allowing £250 for general expenses, there is the sum of £2200 accounted for, and the remainder will, of course, be carried forward to some future benefit of the Society.

On this occasion of the meeting of the Society, the chair was occupied by Lord Massareene; and Mr. Blacker having read the report, the ballot was then proceeded with in the following manner:—Bone counters, on which were written all the numbers of the tickets issued to members, were placed in a handsome revolving mahogany box, and other counters bearing the number of the prizes, amounting to 91, were put into another smaller box. Six gentlemen who had superintended the arrangements, certified to the correctness of the books and the numbers. Two scrutineers were appointed from the meeting—Thomas Beasley and James Wynne, Esqrs. Two blind boys from the Richmond Institution were empowered to draw the tickets from the two ballot boxes; and the scrutineers having announced the numbers to the chairman, Lord Massareene declared the successful members.

The whole arrangements gave the greatest satisfaction, and the interest was kept up to the last; and in addition to the fifty-one pictures distributed, the committee came to the resolution of giving forty casts from Mr. Kirk's attractive and beautiful group in marble, the 'Young Champion.'

At the conclusion Mr. Blacker announced that

all would be entitled to engravings from Mr. Rothwell's picture of the 'Noviciate Mendicants.'

Col. D'Aguillar, C.B., begged leave to claim the attention of the meeting for a few moments; it was to propose a vote of thanks to Mr. Stewart Blacker, to whose disinterested zeal and unremitting exertions this Society owed not only its origin, but very mainly the high state of prosperity and efficiency at which it had arrived.

Lieut.-Col. Pratt seconded the motion.

Lord Massareene said—Gentlemen, I think I need only mention this resolution to you to ensure its passing with acclamation.

Mr. Blacker.—My lord, ladies and gentlemen, I have so often obtruded my remarks on you respecting a subject so interesting to us all, that I shall not delay you at this late hour with any lengthened observations; but I must take this opportunity to return you my sincere and heartfelt acknowledgments for your kind, valuable, and strenuous assistance throughout the past year. I asked you to double your subscriptions, and you have granted my request quite as far as it was necessary or required. Now, I am a most exigent person, and I am going to increase my demand. I want not less than £3000 for next year; and I may pledge myself as your guarantee to the artists that upwards of that sum will be forthcoming (cheers); and artists, Irish and resident artists in particular, I also pledge myself as a guarantee for you, that you will next year have works exhibited that will merit the fair and just distribution of upwards of £2000 of that money. (Cheers.) I feel proud in thinking that in neither respect will I be disappointed; and conclude with returning you my heartfelt thanks for the confidence you have reposed in me. (Cheers.)

Mr. Blacker rose again, and said, I beg to propose a vote of thanks to a public body, to which we are under a deep debt of obligation—I mean the Royal Dublin Society, who placed all their accommodation at our service, and by their kindness we have been enabled, for the three last days, to gratify our members and their friends by an exhibition of our prizes. (Applause.) Gentlemen, it is only necessary to mention the illustrious names of Barry and Barret: of Sir Martin Shee, the President of the Royal Academy; of Behnes, the eminent sculptor; and of Rothwell and Danby, who all received the rudiments of their education here, with numerous others, to apprise you we are on ground consecrated to the Arts. Too high a testimony cannot be borne by us of their valuable exertions, and the success resulting from their care, as manifested in the fame of their pupils. On this subject alone can we fairly express ourselves, and on this all must admit the value of the Royal Dublin Society. (Cheers.)

The resolution was put, and passed amidst general acclamation.

[We shall take an early opportunity of reverting to this Institution; and be especially careful to give British artists due notice of the period when the exhibition will open: sure we are that if good pictures be sent to Dublin very few of them will come back. Meanwhile we heartily congratulate Mr. Blacker on the success that has followed his exertions. He has proved a true benefactor to his country. His name is already a conspicuous and an honourable one in Ireland; he has added to its good repute. We regard, too, the appointment of Earl De Grey to the vice-royalty as an auspicious event for the Arts in that part of the United Kingdom. His lordship's taste, judgment, and liberality are extensively known and appreciated here; we have no doubt they will there have a most salutary influence. The engraving of Mr. Rothwell's picture, for the subscribers of 1841-2, has been entrusted to Mr. Sangster, who has already exhibited proofs of high professional ability. The compliment paid to him in the selection was a very marked one; inasmuch as he was the artist first applied to after the task had been declined by Messrs. Doo and Robinson, both of whom were too fully occupied to undertake it.]

## THE CONTROVERSY TOUCHING VEHICLES.

TO THE EDITOR OF THE 'ART-UNION.'

SIR,—I am exceedingly happy to find that your correspondent J. H. has taken an interest in the *vitrefied silica medium* invented by me. I feel greatly obliged to him, and am most desirous to see his promised experiments published in your valuable ART-UNION. I think he will find reason to change his opinion respecting litharge, and that the bad qualities imputed to it are entirely corrected by PURE SILICA. I have, for the sake of experiment, combined *pure silica* with all the preparations of lead, as well as with the oxides of tin, zinc, antimony, bismuth, copper, &c., &c., but I find none of them so good as litharge; and I have ascertained that the presence of even a very small portion of *alumina* will vitiate the medium. This shows the absolute necessity for using PURE SILICA.

Since reading the letter of J. H., I have made the following experiment, which, I think, realizes his wish as to *perfect solubility*:—

B. Take two ounces of purified cold-drawn linseed oil; one drachm of my vitrefied silica medium; mix, and incorporate them as well as possible. Then place the mixture in an open-mouthed vessel, and expose it to the free action of the sun and air, till it acquire the consistency of honey, is perfectly clear, and almost colourless. This will, according to the weather, require a fortnight or three weeks to accomplish. It will be necessary to keep the mixture well stirred with the steel spatula for about a week; otherwise the medium will remain *inactive* at the bottom. In the course of a few days after the mixture has been made, the oil will have acquired a dark red colour; an indication that the medium has done its work. Let the oil now stand undisturbed till it becomes clear, when all the medium which had not been dissolved by the oil will subside and form a white cake at the bottom. Pour off the clear oil, which is to be kept in corked bottles for use. Nothing is more delicious to work with than this thickened and *silicated* oil; and nothing with which I am acquainted will give greater richness and more astonishing transparency to oil colours. Should this oil be too thick, as doubtless it will be for some work, it may be thinned with rectified oil of turpentine, which will not weaken the body of the vehicle, or make the colours spread; and every touch will remain steady and just as it was laid. Oil of turpentine was known in the time of Van Eyck.

I have sent a specimen of linseed oil thus prepared to Messrs. Ackermann and Co., and have requested them to exhibit it to any one who may feel an interest therein. If oil thus treated be suffered to stand till a skin forms on the top, this skin will be brilliant, and transparent as glass. I have much pleasure in sending for your inspection a portion of such a skin; and as soon as I have prepared a sufficient quantity of oil, I will likewise send you a specimen of that.

I now come to a more painful subject, the communication of your correspondent, J. E. I am bound to state that Messrs. Ackermann and Co. have not made an improper use of my name. In their advertisement, they very properly refer to the ART-UNION for August last, where it is stated by J. E., in allusion to MY DISCOVERY, that I "found that silica, in however small proportion, had the astonishing effect of rendering the vehicle as rich as if the best varnishes were mixed with it." And further on he adds, "I will here insert his formulas, *which there is every reason to believe will produce a perfect medium, and not improbably that of Van Eyck, or one very similar to it.*" I have put part of this extract in italics, because J. E. has, perhaps unconsciously, contradicted himself in his late communication. For the convenience of your readers, I copy three of the published recipes:—

### DR. RAINIER'S RECIPE.

B. Take 2 lbs. 2½ oz. of borax;  
1 lb. of sugar of lead.

M. VIGNÉ'S Analysis of the *fuse of Ancient Stained Glass.*

B. Litharge or minium, 5;  
Fine sand,\* 1;  
Borax, from, 5 to 1, 5.

\* Fine sand contains a large proportion of silica.

### MY RECIPE, No. 6.

B. Litharge, 24 drachms;  
Glass of borax, 12 drachms;  
PURE SILICA, 4 drachms.

It will be evident to every one who reads, that my recipe bears a closer resemblance to the glass fuse of M. Vigné's analysis, than to that of Doctor Rainier; and, in point of fact, I took the experiments of M. Vigné as the basis of my own. I have necessarily changed the proportions to adapt the composition to the use of the oil painter; and I used silica in a perfectly pure state, for reasons which every scientific reader will comprehend. This, therefore, constitutes the substance and the *essence* of my discovery; and that the effect of pure silica upon good linseed oil is such as to make the latter dry in a PERFECTLY SOLID FORM, that is, without a wrinkled skin, and without altering the transparency of the oil. Pure silica, however, with oil, dries too slowly for common purposes; and it, therefore, requires to be combined with a drier, such as lead. In my recipe, and in that of M. Vigné, the borax is used merely as a flux, to vetrify the other substances. Perhaps potass would answer a better purpose. I am now making further experiments; and as soon as completed, I shall be happy to communicate them to you for publication.

J. E. asserts that the beautiful colour of Naples yellow is not injured by being rubbed up with a steel palette knife when borax is with it. This I deny: let any one make the following experiments:—

*First Experiment.*—Mix Naples yellow on a glass slab or plate with oil, using a *steel palette knife*: the colour will immediately acquire a dirty greenish hue—rendered more dirty the more it is mixed with the knife.

*Second Experiment.*—Mix up Naples yellow as before with oil; powdered glass of borax having been previously added to the oil. The colour will presently acquire, as in the first experiment, a dirty greenish hue, &c.

*Third Experiment.*—Mix Naples yellow as before, the oil having been previously combined with only Rainier's medium; and the same kind of dirty greenish hue is given by the knife to the colour.

*Fourth Experiment.*—Mix levigated glass alone with oil, and rub Naples yellow up with it. The result will be the same.

*Fifth Experiment.*—Mix glass of lead (according to the recipe of Neri, in "Arte Vitraria," cap. lxxiii., p. 123.) The effect of Naples yellow will be the same as in the former experiments.

*Sixth Experiment.*—Mix pounded flint, &c. The result will be the same.

*Seventh Experiment.*—Mix impure silica, such as is used in porcelain, as before. The result will be the same.

*Eighth Experiment.*—Mix pure or impure alumina. The result will be the same, indeed worse.

*Ninth Experiment.*—Mix *pure silica* with oil and Naples yellow, as in the former experiment. This will impart to the Naples Yellow a pure and very delicate colour, in no way impaired by the rubbing of the steel palette knife, however long continued.

It is but fair to state that the circumstance of my Silica Medium preserving the purity of the colour of Naples yellow when in contact with the steel palette knife, was communicated to me by an intelligent lady, practically acquainted with the preparation of oil colours.

I have selected the above from numerous other experiments of a like kind, as showing by comparisons easily made, the inferiority of *all* the substances mentioned, as ingredients for making media, with the exception of PURE SILICA, which I conceive to be perfect. And I may add, in reference to the eight first experiments, that if water be added to the oil, the bad effect is infinitely more apparent. Naples yellow is so fine and so essential a colour, that it cannot be dispensed with in oil painting; and as it must therefore mix with the ochres, light red, Venetian red, and Indian red, and any other colours of a ferruginous nature, a medium which will prevent the unfavourable effect which these valuable pigments would have upon each other, is surely an important discovery, and deserving of that name.

The employment of borax is not new in painting. See 'A Family Library,' by Colin Mackenzie and others. And also 'The Family Receipt Book,' published, I believe, nearly half a

century ago. The former work was published, I think, the early part of this century. The following recipe is taken from Mr. T. H. Fielding's very valuable work on "Painting in Oil and Water Colours." Published in 1839:—

B. "Dissolve borax in boiling water in the following proportions, viz., to 12 parts of water (by weight) add one part of borax; into these gums may be mixed, also, bees' wax or oil, which, when dry, make a perfectly transparent vehicle, although, in working, it possesses a most unpromising degree of opacity," page 76. The words in italics are so done by me. At page 77 the same writer describes the lac vehicle. This valuable work ought to be in the hands of every artist and amateur who wishes to become eminent.

Field, in his important work, "Chromatology," 4to ed., published in 1835, has this passage (he is treating of the bad quality of essential oils):—"They gave occasion for the introduction of *resins* and *balsams*, which gave body to oils and varnishes; and the employment of resins introduced *spirituous solvents*. To these have been added, *bees' and myrtle wax, aqueous liquids, soaps, and salts*, as media for uniting them with oils, and a variety of dryers and other substances, too numerous to mention, with which oils, &c., have been compounded, under the appellations of macgips, gumtions, Venetian processes, and in the various empiricism of vehicles with which practice has been confounded, in endless mixture and mystery."—Page 202. This author, in another place, speaks of the employment of *lustrated glass* for oil paints, to prevent the bad effect of some particular colours upon others, pp. 80, 81. I may here observe, *en passant*, that *borax alone*, under any form, is a pernicious ingredient in an oil vehicle. Those who venture upon its use will find, after a short time, that the surface of their pictures will be covered more or less with opaque white spots, which are so violently attracted by the moisture of the atmosphere as to come through a coat of varnish. It is only when in combination with other substances, for the vitrification of which it forms a flux, that borax can be trusted.

It will be seen, therefore, that it is impossible to admit J. E.'s claim to *originality* in respect to the introduction of *water* in oil vehicles. The composition of "painters' cream" is known to most artists, and has been known for upwards of a century. It consists of *water, oil, sugar of lead, and mastic*, worked together to form a cream-looking substance. Again, at page 70 of Fielding's work, I find mention of *water* saturated with sugar of lead, and afterwards mixed with soap and *water*. Surely J. E. must have been labouring under a strange delusion when he wrote his paper for "Blackwood's Magazine," in June 1839, and when he gave to the ART-UNION an extract from it in last month's number!

"Crescit indulgens sibi dirus hydrops,  
Nec sitim pellit, nisi causa morbi  
Fugerit venis, *aqueous albus*  
Corporis et languor."

HORACE, lib. secs. Ode ii.

I would humbly recommend the whole of this ode to the deep consideration of J. E.

When J. E. asked my permission to allow him to publish my recipes and experiments, and embodied in his letter to the ART-UNION for August last, my extracts from Lanzi, I entertained no idea that it was his intention to repay my kindness with injustice.

It will appear extraordinary that J. E. should not have published the recipe of his late friend, Doctor Rainier, when alluding to the labours of the latter and his experiments, in "Blackwood's Magazine" in 1839. The opportunity was a good one; nay, it was due to the memory of his departed friend, "who could not speak for himself," to have published it. Certain it is, that J. E. did not avail himself of that opportunity of doing justice to the memory of his late friend, but quietly waits till 1841, two whole years, before he attempted to give publicity to that recipe, and then not before my recipes and discovery were ready for publication!

Before I close my remarks, I will direct your attention to another discovery which J. E. "appropriates" to himself, in the paper in "Blackwood" from which he gives his quotation to the ART-UNION: I allude to *starch grounds*. An account of starch grounds will be found in the

"Accidence, or Gamet of Painting in Oil and Water Colours," by Julius Ibbetson, published in 1803. T. H. Fielding alludes to it in his work on oil and water colours, at page 81.

"Palman qui meruit ferat."

J. E. further states, that he has not given his approval to Miller's preparation. He could do no otherwise, for he is not *practically* acquainted with the method of preparing my "Vitrified Silica Medium;" and he admits that he does not know how to prepare Doctor Rainier's medium, for in one part of the quotation from his former paper in Blackwood, I find this remark:—"We do not know, *certainly*, what his (Rainier's) discovery, if it be one, was; but we give it as we had it analysed, and every artist may try for himself." (See ART-UNION for Oct. 1841, page 165.) Besides showing in the above passage J. E.'s want of *accurate* information respecting his late friend's discovery, he at once casts a doubt upon it as his "*discovery, if it be one*." I have purposely underlined these words. Could Andrea del Castagno, "nome infame nella storia," have aimed a more cruel blow?

Should J. E. allude to my discovery in any future number of the ART-UNION, I must beg him to give his name, and not his initials, to the communication. I should not, in this instance, have noticed the remarks of an anonymous writer, if my name had not appeared in Messrs. Ackermann's advertisement, and *properly so*, as the *inventor* of the "*Vitrified Silica Medium*," to which J. E. takes objection; and this being an answer to his unjust attack, I trust you will in justice insert this in the next number of your very valuable and useful ART-UNION; and with an apology for occupying so large a space,

I am, yours, &c.

R. W. H. HARDY.

#### ON VEHICLES.

SIR,—In my last I ventured a conjecture, that all transparent vitrified substances might probably be varnishes and vehicles for painting. Following up this idea, I pounded, very fine, some spar (quartz). Here, then, is a natural glass. I found it mix up perfectly well with the water and oil, as the other substances: it was most delightful to use, and a dryer. I considered, then, that a decided advantage was obtained, for no mixture of litharge or lead in any form is required. I would wish those who object to the former recipe on account of the litharge, to put this to such test as their judgment may suggest. It is curious enough that silica should be such an anti-dryer, and that spar, which is, I suppose, chiefly silica, should dry well. The oil I used with it was cold-drawn linseed oil: I found the paint to be dry in little more than 24 hours. I then tried spar (ground) and borax in a crucible: it did not run so readily as the borax only, but I was able to take a considerable part out of the crucible, and it was a clear glass. This I have not yet tried as a vehicle. It has been remarked to me, that there is no vehicle that will prevent the paint sinking a little to a lower tone. This may be the case; but if it does so very moderately, and has no other evil property, there may be good reason to be content. That *little lowering* may, indeed, not be permanent—I suspect it is not; and that if pictures be carefully washed, for the purpose of removing that greasiness which comes to the surface, the original tone will be recovered. There may be many ways of thus cleaning the surface; perhaps there is not a better method than with a little common sand; nor need it be very fine—it will not scratch the paint. But if it should turn out that still the tone is a little lower, I suspect, in nine cases out of ten, it would be an advantage, provided the *colours* are not changed, and the texture does not become disagreeable to the eye. Some have asserted that the works of the old masters changed their tone—became darker; some more and some less: perhaps so; yet we do not hear many complaints on that account, nor will there be, where brilliancy and colour are retained pure. Are we not aiming at too much? Water-colour painting has made an invasion upon oil painting. The former began by imitating the force of the latter, and now the compliment is returned, and oil painting is made to imitate water-colour and its weakness; and not only that, but, if

possible, to come up to white paper. This may be good practice, and very difficult to attain, but we must establish for it new principles of Art; and hope that there will be, in process of time,—for Nature is wonderfully accommodating,—a generation born with eyes to endure it. Do we not miss brilliancy because we begin with these very high tones; and when they sink, there are few lower to sustain them? Is there any picture of the good old schools that could not from the easel bear a trifling lowering of the whites and yellows? They do not, it is true, show the lowering, because the bright is made to tell wonderfully, by the lower scale of the whole.

I did not sit down to lecture on Art, but simply to throw out the suggestion, that vitrified substances (transparent), natural or artificial, may constitute, with or without other substances, vehicles, when mixed with oil; and to mention the experiment with spar. Much good will be effected if we banish gums, especially mastic. Let us not persevere in what we know to be bad. The knowledge that the old gumptions and megillups are bad, justifies every experiment in a new direction.

J. E.

#### CARVING IN WOOD.

THIS beautiful and interesting art constituted formerly an independent vocation, and so received its share of direct patronage; but it is now so entirely in the hands of upholsterers, that carving it is not generally recognised as a branch of art requiring taste and unwearied application to attain to successful results. It is a fact that modern English carving of the florid style is generally superior, and always equal to, every foreign production of the same kind, whether modern or antique. Figure carving has never been attempted, therefore of this we say nothing; for in the middle and latter periods during which Italian art flourished, the figure was carved in Italy with an excellence which can never be surpassed. A taste has of late years arisen for carved furniture of the Tudor, Louis Quatorze, and Renaissance periods; a taste more or less prevalent in Germany and France as well as in England, and inasmuch as all the reliques of those periods would in their grand total be but as a drop in the sea, compared with the professedly veritable remnants of the times, what could be more mortifying to a *soi-disant* connoisseur than to learn that the "object of *vertù*" which he purchased at some well known depôt, had been manufactured but a week before in the purlieus of Soho? An absurd impression exists that modern carving is by no means comparable to ancient; but the former is continually sold for the latter—the wood having been stained and carefully toned down to the depth of colour imparted by age. The impulse given to carving in France during the time of Francis the First, and his immediate successors, has left a rude fashion of work which in the provinces is upheld by the lower classes; it is, however, chiefly confined to the enrichment of one piece of furniture, the *armoire*, or wardrobe, which every newly-married couple regard as a household requisite. According to the evidence offered before the committee of fine arts by Mr. R. Mitchell, the wood carvers of London have formed an association for the advancement of their art. The society consists of about seventy members; and it is highly desirable that a body so respectable, aiming at that consideration to which their art is entitled, should have something beyond the wages of journeymen mechanics to look forward to in requital of the study and persevering inquiry with which they pursue the means of improvement. It is a subject of bitter complaint among them that the profits and credit of their best works are reaped either by upholsterers or dealers in ancient furniture. An opportunity is, however, now at hand, which must call them forth from the obscurity whence have issued for a long series of years their anonymous works. The doors of the new Houses of Parliament will afford them the means of exhibiting the state of their art, which it cannot be doubted will do ample justice to the occasion. We have reason to know that in the provinces many very able artists in this department are labouring for wages much less than those received by journeyman tailors. We trust that better days are in store for them.

## LETTER FROM B. GIBSON, ESQ., R.A.

[We are permitted to print an interesting letter from Mr. Gibson, to a friend in the neighbourhood of London. It contained a striking pen and ink drawing; which, with the letter, our readers will no doubt thank us for copying into our pages.]

DEAR SIR,—I had no sooner finished my group in marble of 'The Shepherd Boy and Dog,' than, at the solicitation of some friends, I set off with them in the beginning of April to see Naples, intending to return in a month to Rome; but, going much further, as far as Paestum, then to Castellum, staying at Loreto, visiting Pompeii several times, and other cities famous in ancient history, we did not return till June. On my arrival here the heat was so oppressive, that I accompanied my brother northward to Switzerland; we crossed the Alps over San Bernardino, covered with snow, in July; thence down to the Splügen, on to the Tivoli and to Inspruck; where we passed the hot months in a fine cool climate: thus I had an opportunity of seeing the cities of Italy most famous for historical, antiquarian, and artistic associations. We passed through Genoa, saw the collections there, among which were some fine specimens of Vandyck: then to Milan; here the collections at the Palazzo Brena and the Ambrosian Library are remarkably fine; at the latter is to be seen the original Cartoon of Raffaele, for his school of Athens, painted here in fresco in the Vatican: the drawing of the figures is powerful and very fine.

In returning to Italy we called at Trent, famous principally for its church council: then to Verona; here is one of the finest amphitheatres ever examined; the interior is quite perfect, and kept in good repair; the monument of the Scaliger family is a curious specimen of the Gothic architecture and sculpture of the fourteenth century. We next went to Mantua, where are to be seen the finest productions extant in fresco by Julio Romano, the celebrated scholar of Raffaele. The Cathedral of Mantua is the architecture of Julio Romano, as well as the Palazzo Te, where we saw the fresco of 'The Fall of the Giants,' 'The Story of Cupid and Psyche,' by far the best; and other mythological subjects. On the walls of the Palazzo Vecchio Ducale he has painted 'The War of Troy.' Walking through

the streets of Mantua, I stopped suddenly before an antiquated-looking house, and recognised, by the Latin inscription over the door, that it was once inhabited by Julio Romano, and repaired fifty years since. It was interesting to behold a house in which so celebrated a painter had lived.

From Mantua we proceeded through Modena to Bologna, as I was anxious to see the productions of the long-famed Bolognese school: here lived the Caracci, Guido Reni, Domenichino, &c.; and, indeed, fine specimens are to be seen here by all these masters. From Bologna we reached Florence; the collections here were not new to me, as three years ago I spent four months there; but I must say, the collection of pictures at the Palazzo Pitti, the residence of the Grand Duke, is the finest collection in Europe—I do not speak of the number of pictures, but each picture is well selected, and is a good specimen of each master. As we had heard that Thorwaldsen was on his return to Rome, and had arrived at Florence, we proceeded to his hotel to call on him; we found him looking very well; he had become more lusty during his absence of three years from Rome. When we congratulated him upon his good looks, he said, "Hey! what can you expect, when I am now seventy-one years old?" He left Florence the day before our departure. Two miles from Rome he was met by a great body of artists, who resolved to celebrate his return by a grand public dinner; so Sunday last, at five o'clock, being fixed for the occasion, about one hundred and twenty of us met, and sat down with him to dinner at Meloni's Hotel. At half-past five Thorwaldsen entered the room, looking remarkably well; for his white and snowy locks falling over on his shoulders, gave him a grand and venerable appearance. At six o'clock dinner being announced, he took his place at the middle of the table at the upper end of the large saloon; on his left hand was Rheinbart, a man older than Thorwaldsen, and a celebrated landscape-painter, and who has resided here 50 years. On his right hand was one of the chamberlains of the King of Denmark, together with other diplomatists and consuls. Two long tables were placed along the sides of the saloon; at one of these we sat with the British Consul at our head; the other tables were occupied by the mass of German artists, who were by far the most numerous. In the centre was a

round table occupied by German artists, who entertained us with their vocal musical performances. Soon after we sat down, a printed song, in the German language, congratulatory upon the safe return of our guest, was distributed; afterwards speeches were made, and a laurel crown was placed upon his head by Rheinbart; he took off the crown and gave it back to Rheinbart, who placed it on a bronze group of "the Graces" in the centre of the table. Here Thorwaldsen rose and made a bow to the company: at that moment, in the gallery at the further end of the saloon, the curtains were drawn from a finely painted transparency, surrounded with laurels and evergreens, representing the bust of Thorwaldsen on a column, with a hammer and chisel enclosed in a wreath, supported by Genius on one side and crowned by Victory on the other. Inscription:—(See cut).

Victoria ingenio Parta  
Salve sculptorum Princeps romam redux.

A lion and eagle on either side of the base of the pedestal. We were enlivened by Signor Flar's fine singing, accompanied by himself on the guitar: he also prepared a comedy, and appeared as chief actor, personifying a sculptor showing off his statues: he had something witty to say at every statue,—the statues were living men dressed up for the occasion. All were anxious to pay their tribute of respect to our chief, decidedly the greatest sculptor that has hitherto appeared in the world since the time of the ancient Greeks, for there is more purity and more classical sublimity in his style than in any other artist living.

I am &c.,

Rome, Sept. 23.  
Edwin Keete, Esq.

B. GIBSON.

## VARIETIES.

COMMITTEE OF FINE ARTS.—On this subject Mr. Hawes put a question to Sir Robert Peel on the 30th of September in the House of Commons. The committee which had sat for the purpose of seeing how far the fine arts might be promoted in connexion with the new Houses of Parliament, had pointed out some means of making further inquiry; and he was anxious to know whether the Government had any intention of acting upon the recommendations of that committee; or whether the right honourable baronet had any information to give to the House upon the subject? Sir Robert Peel said that he had read with the greatest attention the report of the committee referred to by the honourable member, and the very interesting evidence taken before that committee. He certainly thought that the opportunity afforded for the encouragement of the arts by the building of the Houses of Parliament ought to be taken advantage of, at least for the purpose of fully investigating upon mature reflection, whether or not the construction of those houses might not be made conducive to the encouragement of the higher branches of the arts. It was doubtless a subject deserving the most serious attention. He thought that the committee which had been appointed last session had conducted the inquiry, so far as time had permitted, in a very satisfactory manner; and that it would have been most useful to have carried that inquiry further. That, however, the committee were prevented from doing by the close of the session, although there were many more persons whose opinions they would have been glad to receive, and many points which they had not an opportunity of fully considering which they gladly would have considered. He would have no objection whatever to the re-appointment of that committee, in consequence of the manner in which they discharged the duty with which they had been entrusted, did he not feel that inquiry in that shape was somewhat unsatisfactory. It could only be carried on during the sitting of Parliament. The prorogation, or adjournment, of Parliament, necessarily terminated the labours of the committee. He was therefore of opinion that this inquiry, which it appeared to him was of the greatest importance to continue, might be continued with the greatest advantage by a commission appointed by the crown, without reference in the slightest to party distinctions. And considering that the buildings now in progress were for the accommodation of the House of Lords as well as Commons, considering that joint committees, although not with-

out precedent, were rather cumbrous tribunals, and that a commission, to be appointed by the Crown, was the most advisable; he conceived that such members in each House of Parliament as had turned their attention to the question of the fine arts might be invited to constitute that commission. Another advantage to be derived from the appointment of a commission, would be, the enabling inquiries to be continued during the recess, when Parliament was not sitting; it was, he thought, upon the whole, the most advisable and expedient. He was sure the House and the country would hear with satisfaction, as this commission would in no respect partake of a party or political character, and as also the new building, when completed, would comprise a part of her Majesty's ancient palace of Westminster, that his Royal Highness Prince Albert had willingly consented to become a member of that commission, and to add to its labours the advantage, not only of his station and character, but also of his knowledge and taste in all matters connected with the promotion of the fine arts.—[Mr. Hawes here made a remark across the table.]—The honourable member hoped that the commission would be unpaid.—It certainly would. He was sure that such members of both Houses as he suggested might be invited to assist upon the commission, would find sufficient in their love of the fine arts to induce them to do so. He thought it would also be desirable to include in the commission some persons not in either House of Parliament, but well known for their admiration and encouragement of the fine arts; which, indeed, he was sure would be a sufficient stimulus to every member of the commission to apply himself sedulously to the discharge of the duties connected with the inquiry.—Mr. Hawes said, that he had asked if the commission were to be a paid one, thinking, perhaps, that a number of professional gentlemen would be appointed, whom it would be reasonable to remunerate.—Sir R. Peel was happy at the opportunity afforded him of publicly stating that there would be no remuneration.

**FEES FOR ERECTING MONUMENTS.**—So heavy are the fees demanded by the Dean and Chapter of Westminster, for the erection of monuments in the Abbey, that they are a constant subject of very just complaint among sculptors. The monument to the Earl of Chatham, executed by Bacon, cost that artist, in fees, nearly 700*l*. When to this are added the charges for the labour of erection, &c., some idea may be formed of the price at which an artist purchases fame of this kind.

**THE NIGER EXPEDITION** seems doomed to be without an artist. The first who was engaged in this capacity took alarm at the moment the ships sailed; and the second, who entered upon it at twenty-four hours' notice, went all the way to Cape Coast Castle without being able "to screw his courage to the sticking-place." He has got Captain Trotter's permission, if we are rightly informed, to return home in the Ranger schooner. The expedition, however, will not be without persons capable of bringing from the interior of Africa sufficient illustrations of its peculiarities. Captain Allen, of the Wilberforce, has devoted himself very much to the study of drawing since he last visited those regions, and there are many of the officers who are able amateur draughtsmen.

**THE VISIT OF CORNELIUS** to this country has been short though not ineffective. Lord Monson, who invited him here, died at the moment of his arrival; and as the "Commission" is not yet formed for the consideration of the question of introducing fresco decoration into England, he had no opportunity of being examined on the probable advantages or disadvantages likely to result from it. His opinion, however, has been privately given to Sir R. Peel, Sir R. Inglis, and others, and this opinion is, of course, favourable to its introduction. This style of art, he says, corresponds with the English character, inasmuch as steadiness and perseverance are necessary to carry on works which, when begun, must not be trifled with or abandoned. While the walls are fresh the pictures must be done. It is the preparation of the designs only that requires time and consideration. The Germans are very long in thinking out their subjects, and in making their cartoons. The transferring them to the wall is rather a work of manual than mental labour. The difficulty ceases when the composition is completed. Such is the view of

the great German artist—the subject, as will be seen, has been treated by us elsewhere.

**R. J. WYATT**, the English sculptor, who in conjunction with Gibson have gained for Britain a high reputation in "the Eternal City," has lately paid a visit to his native country after an absence of twenty years. The reception he met with has proved that England is not unmindful of his high deserts. Amongst other commissions he has been honoured with one from Prince Albert to execute a figure of Penelope, to be placed at the entrance to the Queen's apartments in Windsor Castle. A circumstance connected with this commission ought to be known. The Prince had invited Wolff (the celebrated German sculptor) to come to this country, for the purpose of executing some figures for the palace; and Wolff, with the honest ingenuousness of genius, said to him, "Why does not your Royal Highness encourage the artists of your adopted country? Gibson and Wyatt have gained a reputation for English sculpture that has spread through all Europe." The Prince listened attentively to this recommendation; and hearing that Wyatt was then in England, requested him to come immediately to the Castle, when the whole was arranged, and the sculptor has gone back to Rome with this addition to his fame. It was to a similar display of noble-mindedness on the part of a foreigner that Gibson owed his first commission. The Duke of Devonshire applied to Canova for some of his works. The generous Italian said, "Why do you come to me? I am full of engagements, while there is a countryman of your own of the greatest genius without employ." He took the Duke to Gibson's studio and told him he would do himself honour by ordering the group of Mars and Cupid which the artist had just finished, and which now forms one of the principal ornaments of Chatsworth.

**BUST OF WILKIE.**—The characteristic bust, executed by Joseph, of the late lamented Sir David Wilkie, has excited a deep interest with the public. Hundreds of persons have been to the artist's studio to see a resemblance so perfect of a man so much admired and loved. This bust was executed at the period of Wilkie's best state of mental and bodily health—at the time he painted the Waterloo picture for the Duke of Wellington. It will add much to the popularity which Mr. Joseph has already gained by his beautiful statue of Wilberforce in the Westminster Abbey.

**FREE EXHIBITIONS.**—The exhibition of works of Art selected by the prize-holders in the Art-Union of London, afforded evidence of the eagerness with which the English public will avail itself of the means of obtaining intellectual gratification that may be afforded it, and the safety with which the opportunity may be given. In the first instance the committee issued to the subscribers about forty thousand tickets to be distributed amongst their acquaintances and connexions generally. They afterwards threw the rooms open to the public at large for one week by advertisement, by which means, in the whole, above *sixty thousand* persons were led to visit the exhibition within the twenty-five days during which it was open. On several occasions towards the close, it was computed that no less than six thousand visitors examined the gallery in one day, and yet we are glad to say that not the slightest damage was done to any of the pictures, and that with the aid of very few attendants the most perfect order and regularity were preserved. H. R. H. the Duke of Cambridge visited the gallery during one of the fullest days, and examined all the pictures with some members of the committee. The interest which the Duke feels in the Association is shown strongly by the fact that his Royal Highness canvassed subscribers to it, and sent the amount of their subscriptions himself.

**NEW COIN.**—We have been enabled to examine a new "five-pound gold piece," the production of William Wyon, Esq., R.A., which, for chastity of design and beauty of execution, far exceeds anything that has been hitherto issued from her Majesty's Mint. The head of the "royal lady" is clear and carefully defined; and on the reverse Mr. Wyon has happily identified the exquisite fable of Una guiding the Lion with our own Queen. The likeness is preserved in both face and figure. When the coin comes into circulation, no cabinet of English coins can be without it. We sincerely congratulate Mr. Wyon on this *chef-d'œuvre* of his art: his pure and classic taste is of great

value to the country; and everything within the sphere of his influence takes a high moral tone worthy his occupation. We must bear in mind that, above all others, the medallist labours for posterity: his works are tests of the truth of history; they mark the period and semblance of the age. It is pleasant to think that such labours cannot fail of being "time-honoured."

**STATUES FOR THE NEW HOUSES OF PARLIAMENT.**—In the evidence given before the select committee on the fine arts, the following questions and answers occur in the examination of Mr. Banks:—"Would you disapprove of marble statues in the new building? No, certainly not; our ancestors only used alabaster, because alabaster was the product of England, and white marble was not: the old monuments are of touchstone, brass, and alabaster; for this reason, that they were things which they could get, and Italian marble they could not get.—Do not you think that white marble would ill harmonize with the general tone of the building? I should prefer metal statues, and I very much wish to see bronze castings encouraged in this country; compared with the Continent it is surprising how little it is practised amongst us.—Have you seen any of Mr. Pugin's adaptations of the middle ages? No; but I have heard them highly spoken of.—In Mr. Pugin's works he has attempted to revive the colouring of statues; what are your opinions upon that subject? I have always felt very sorry to differ from the ancients in that one single point; the only particular in which I cannot acquiesce in the taste of the Greeks, is in the painting of their statues; and they are right in so many points, that I am led to doubt whether I may not be wrong in differing from them in this.—Was that done in the best times of Art? Yes, I am afraid that it was."—The following observations occur in the evidence of Mr. Barry, the architect:—

"The inquiry at present having been confined to painting, I wish to ask, what is your opinion as to the introduction of sculpture? I should say that sculpture might be introduced into the same portions of the building to which I have before alluded with the best effect; it could be employed in statues placed in niches and upon pedestals, with very great effect, in all those portions of the building.—In reliefs? I fear that reliefs could not be applied with any good effect.—Sculpture to be confined to statues and groups? I should say, almost exclusively to statues.—Statues of eminent individuals? Statues of royalty, great dignitaries of the church, and eminent statesmen; that is the class of statues I would recommend.—Would you exclude groups of two or three figures altogether? I am not prepared to say I should exclude them altogether.—You are aware that reliefs are frequently used in the exterior portions of Gothic architecture? Yes, in continental architecture.—Have you not seen reliefs in church porches, Gothic church porches, as at Rouen, for instance? Yes, very frequently; but I am not aware of the same practice having obtained to any great extent in this country.—Is there any portion of the external part of the building to which you think reliefs would apply? I think not.—When you speak of reliefs, I presume you do not mean single statues? No, I allude to subjects.—When you say you approve of the application of sculpture to the building, do you mean sculpture in white marble, or such coloured sculpture as you find in the internal decorations of Gothic buildings? By no means in marble, because the effect would be crude and unsatisfactory, and very inharmonious with the style of the building. I should recommend any of the best kinds of freestone, such as the Caen stone, or the Maltese stone; or the stone from Painswick, in Gloucestershire, which would, in my opinion, be preferable to marble.—What would you say to colouring statues? I should be rather averse to colouring them; my present feeling is, that I should be satisfied with the natural colour of those stones.—Are you not aware, that in the old application of sculpture to Gothic architecture, and in the late application of Mr. Pugin which I have spoken of, that the coloured statues are introduced with good effect—coloured wooden statues, I think? I am not quite sure that I altogether approve of the effect of sculpture, so coloured.—Do you mean that you do not entirely approve of wooden statues? I mean the colouring of either wood or stone in

sculpture.—Do you happen to be acquainted with Roche Abbey stone? Yes.—Do you not conceive that would be very suitable? Extremely suitable.—Do you not consider it to be a particularly good stone, both as regards colour and durability? For internal purposes, certainly.—When you spoke of statues which were to be likenesses of eminent characters in English history, I suppose you contemplated a style of sculpture very different from the antique? Somewhat different from the classical style, though not altogether so. I was contemplating the style of sculpture which may be observed in monumental shrines of the 15th and 16th centuries; that is a style of sculpture which comes very near in some instances to the antique.—Was it your idea to represent our eminent characters in the costumes of their own times? I am not prepared to enter into all that detail at present.—Will you inform me whether I rightly understand you, that you would render both painting and sculpture entirely subservient to the producing of the highest architectural effect? Not entirely, but to a certain extent.—Is that entirely your object? It is my object, as an architect, to give the most striking effect to the building as a whole, and I think that the effect of architecture can in no way be so highly enhanced as by the arts of painting and sculpture."

"THE TIMES" TESTIMONIAL.—On the 20th ult. the committee appointed to carry into effect the resolutions of the meeting of merchants and bankers, relative to the testimonial to the conductors of *The Times* newspaper, for the measures which they pursued to destroy the conspiracy against the commercial men of all countries, assembled at the Mansion-house. The Lord Mayor was in the chair; and Mr. Hughes Hughes, as honorary secretary, declared the amount of subscriptions to be 1218*l.* 6*s.* and also reported, that nearly the whole of the volume giving the report of the trial of the action, "*Bogle v. Lawson*," together with the proceedings of the public meeting, &c., &c. was in type, and would soon be ready for circulation. Part of the subscription will be employed in placing a suitable tablet in the Merchants' Walk in the new Royal Exchange, and in establishing "*The Times* medal" in the City of London School, as recommended by Mr. Laurie; and also, if it should be so resolved, to found an exhibition to each of the Universities of Oxford and Cambridge, to be called "*The Times* Exhibition."

NATIONAL GALLERY.—1. A return of the number of visitors to the National Gallery in each year since 1825:—1826, 110,051; 1827, 69,461; 1828, 57,925; 1829, 50,963; 1830, 60,321; 1831, 71,978; 1832, 76,820; 1833, 79,440; 1834, 89,374; 1835, 127,268; 1836, 125,747; 1837, 113,937; 1838, 397,649; 1839, 466,850; 1840, 503,011.—2. Return of the number of students admitted to paint in the National Gallery for the following years:—1838, 1016; 1839, 1162; 1840, 1257. N.B.—We have not the means of furnishing the numbers previous to 1838. WILLIAM SEQUIER, Keeper.

NELSON TESTIMONIAL, &c.—It is already known that the works in Trafalgar-square, and also at the New Houses of Parliament, have been suspended, in consequence of a "strike" of the masons. It was fully expected that the whole of those (222 in number) employed on the latter erection would have returned to their work, but such not being the case, measures have been adopted by the contractors to supply their place by men unconnected with Unions, so as to expedite the works without further interruption.

THE TWO FRANCIS.—The following letters are a part of the correspondence relative to the purchase of these two pictures now in the National Gallery:—

"London, March 19, 1841, 46, Pall Mall.

"Sir,—Towards the end of last Session of Parliament, several pictures belonging to his Royal Highness the Duke of Luca were offered to her Majesty's Government, on account of the National Gallery.

"Among these, two pictures, by Francisco Francia, valued at 4000 guineas, were submitted to the trustees of the National Gallery, who gave an opinion that 3500*l.* might be offered for the same. This offer could not at the time be accepted by the Signor Galvani, in consequence of his not having the power to make any diminution in the original demand.

"These two pictures having been lately placed under my care, with power to sell the same, I have recommended that the price offered by her Majesty's Government should be accepted, and I have now, Sir, to acquaint you, that I am ready to deliver these pictures on receiving your authority in regard thereof.—I have, &c.,

"(Signed) WM. BUCHANAN.

"To the Right Hon. the Chancellor  
"of the Exchequer," &c.

"National Gallery, April 7, 1841.

"Sir,—I am directed by the Trustees of the National Gallery to acquaint you, for the information of the Lords of the Treasury, that they have had under their consideration the offer made by Mr. Buchanan in his letter to the Chancellor of the Exchequer (which you forwarded to them with your letter of the 20th ult.), for the sale of the Francis from the Lucca collection, for the sum of 3500*l.*; and to report to the Lords Commissioners, that they consider these pictures of great merit and value, and recommend the purchase to be made by her Majesty's Government.—I have, &c.,

"(Signed) G. SAUNDERS TEWAITES.

"Robert Gordon, Esq., &c.  
"Treasury."

BUSTS OF "ETON MEN."—It is probable that Eton will soon possess a very remarkable collection of busts. The Duke of Buckingham has just presented to the College an admirable bust of the late Lord Grenville, with an earnest request that it may be placed in the upper school; and it can scarcely be doubted that the wish of his Grace will be complied with. Lord Canning has also presented a bust of his father, which is likewise to be placed in the upper school; and Lord Guildford has contributed the bust of his uncle, the minister, Lord North. It is to be hoped that other offerings will follow in a similar spirit; for assuredly, no assemblage of portraits could be regarded with greater interest than those of the remarkable men who have been educated at Eton. If the busts of all the distinguished persons, who have studied here, were placed in the upper school, they would form an important and very gratifying collection. Sir Robert Walpole and Lord Bolingbroke were "Eton men;" as were also Lord Chatham, Lord North, and Charles James Fox. The Duke of Wellington, Lord Grenville, Lord Grey, and the Marquis of Wellesley were likewise educated at this ancient seat of learning—the last of whom is still known as a "prime old Etonian," whose Latin versification, even in advanced age, is of the first degree of elegance. Waller, Bishop Sherlock, Fielding, the poet Gray, and the scholar Porson, were also of this seminary. The busts of such men adorning the source of so much of the power by which they achieved their greatness, would possess an interest which could attach to no ordinary collection.

NEW HOUSES OF PARLIAMENT.—Mr. Barry, the architect, having been requested to inform the committee of the superficies of the different portions of the buildings which could be appropriated to painting; and also the number of positions or places in which sculpture could, with advantage, be placed, has stated those to be as follow:—In St. Stephen's Hall, 3000 feet; Royal Gallery, 2140; the Queen's Robing-room, 1168; lower corridors, fronting the river, 5672; House of Lords, 1800; House of Commons, 1260; in the Corridors, from the central Saloon, 1325; Conference Hall, 1340; in the Lobby of Committee-rooms, 25,350; besides numerous other less important portions of the building. Total, 49,823 feet. In Westminster Hall the superficies capable of being devoted to this purpose is 6160 feet; but Mr. Barry considered it to be absolutely requisite that the roof of this building should be pierced in various places, equi-distant, so as to admit of an increased quantity of light, the present lantern not being adequate for that purpose.

THE SIDDONS MONUMENT.—The committee formed for the purpose of placing a bust or statue of the late Mrs. Siddons, in Westminster Abbey, have circulated a copy of the resolutions framed at a meeting held by them at Exeter Hall on the 22nd of March—upon which occasion the chair was filled by the Marquis of Lansdowne. In committees like this, formed in the spirit of a common admiration of exalted intellect, it is most gratifying to find a list of names which stand be-

fore the world as "proverbs" of excellence and genius. The name of Siddons is brought forward here with redoubled lustre, associated as it is with so much of the greatness of our land, since, among the names of the committee, are to be found so many already embalmed in never-dying fame. We have, however, in similar committees, to deprecate the course of proceeding adopted by this, inasmuch as artists are frequently misled from ignorance of arrangements with regard to the execution of the work proposed. We could cite one instance, in which, under an impression that this work was to be open to competition, a model has been prepared; and doubtless, the Siddons Monument has occupied much of the attention of many eminent sculptors not aware of the resolution of the committee, "that Sir Francis Chantrey be requested to undertake the work."—The committee are invested with the full power of selection, and the work must, in the hands of Sir F. Chantrey, realize the best hopes of the subscribers; but yet it is due to the profession, that in works of a public nature, they should receive an early intimation of the selection, or the manner of selecting, the artist. The highest credit is due to the Hon. Sec., Wm. Brydon, Esq., for the successful issue to which the subscription has been brought.

ART-UNION OF LONDON.—Mr. Shenton has just finished his engraving, for this Society, after Charles Landseer's picture of "*The Tired Huntsman*." He has performed his task with considerable ability; the plate will add greatly to his reputation. It has been executed, too, in a marvelously short space of time. We shall notice the work more at length when it is issued by the committee.

"COMMISSION" ON THE FINE ARTS.—The commission, at the head of which is Prince Albert, have, we understand, already had a meeting in reference to the contemplated adornment of the House of Lords and Commons.

ASSOCIATES R.A.—On Monday next, the 1st Nov., the Royal Academy will fill up the vacancies in the list of Associates. We believe there are three.

MOTETT SOCIETY.—Urged by the best wishes for the promotion of the sister art—music, we advert to the proposals of this Society for extending to the public the benefit of one of its resolutions, viz., "That the Society shall, from time to time, print selections of standard church music for the use of its members." The plan for the admission of subscribers is highly honourable to the Society, and advantageous to those who may be induced to profit by such an opportunity of possessing the best sacred music at a very moderate price. The annual subscription will be £1 *ls.* for which a subscriber may obtain 300 pages of rare and valuable music. A plan so liberal and spirited we cannot help thinking will meet with encouragement at home, and also abroad, as it extends to the works of every celebrated composer of sacred music, and also to MS. compositions which are unknown to the world generally, even by name.

IMPERIAL GIFT.—The Emperor of Russia has presented to Mr. Moon a very magnificent diamond ring—of which the respected publisher is, naturally, not a little proud; since these tokens of imperial satisfaction are rarely bestowed on personages less dignified than ambassadors. Mr. Moon has been publishing a series of portraits of the Royal family of Russia; engraved in this country. We rejoice to find they have met with the marked approbation of the Emperor.

THE KING OF FRANCE has devoted a separate gallery in the Louvre to the pictures bequeathed to him by the late Mr. Standish—to be henceforth called "*The English Gallery*."—British would have been a better term. This may perhaps form the nucleus of a collection of British works of Art; and thus the testator may have advanced the interests of this country.

HOGARTH.—At the late sale of the effects and moveables at Vauxhall, were disposed of some valuable pictures painted by Hogarth for Mr. Tyers, who was proprietor and manager of Vauxhall somewhat more than a century ago, and to whom we are indebted for this place of amusement as it has continued to our time. Some of these works were catalogued with names unknown to the admirers of Hogarth, as for instance, Jobson, Nell, and the Conjuror, was entitled "*The Reproof of the Drunken Cobbler*."

## ART IN THE PROVINCES.

## BIRMINGHAM SOCIETY OF ARTS.

THIS Exhibition may be quoted as an example of a growing feeling for Art in the provinces. High class pictures, it is true, do not abound, nor can this be expected; but in the general tone of the assemblage of the works of this year there is a solidity of purpose and a mastery of circumstance contrasting most favourably with a similarly broad view of the exhibitions of preceding years. The catalogue of the works brought forward by an institution, is a sufficient evidence of the position which it occupies in the estimation both of the public and of artists; and if the Birmingham Institution were not regarded with interest by both we should not find upon its list of contributors the names of so many accomplished painters. Among the attractions of the exhibition are, 'The Sleeping Beauty,' by MacIise, and 'The Trial of Effie Deans,' both of which hung on the walls of the Royal Academy, and were then treated at length. To what we have already said of these works, we can only now add our expressions of surprise that they have not been long since sold.

'The Fall of Cain,' W. Dalziel. The design of this picture is altogether worthy of the poetry of the Pentateuch. It is one of those works we so frequently meet with—in which limited experience is far outstripped by a rich and excursive imagination. Cain is in expression dull and unimpassioned, and Lucifer too material; faults to be remedied only by an entire yielding to the inspiration of such subjects.

No. 22. 'Andrea del Sarto's first Interview with Lucrezia di Breccia,' G. J. Hollins. This is a carefully painted picture, but it is deficient in such expressions as would best befit the scene. In pictures like this, where it is necessary to work up to a familiar identity, it is extremely difficult to invest common place with motive of interest. Of this great painter, there are five or six portraits in Florence, where arose to him that fame which even in his own day filled civilized Europe; but we cannot recognise here features which might have matured into the plain reality painted by Andrea himself.

No. 73. 'Italian Peasant Boys,' G. F. Hurlstone. This artist has studied closely and seen much of these Italian *gamins*, whom he has reiterated in whole families of pictures such as this. Artists, like story-tellers, frequently depart from truth in repetition, but this work is all fidelity; the hair, eyes, nay the entire impersonations are Italian. We may even read Italian history on the rags they wear.

No. 142. 'Interior of Petrarch's House at Arqua,' G. Partridge. The interest here as in most similar cases settles rather in the association than the mere subject-matter, which, however, is admirably dealt with, and will happily remind all who have visited them of

His mansion and his sepulchre; both plain  
And venerably simple, such as raise  
A feeling more accordant with his strain  
Than if a pyramid form'd his monumental fane.

'The Slave Market,' and others of Müller's productions are already sufficiently known: he has, we believe, again departed on another visit to the land of Egypt; our best wishes go with him.

No. 188. 'Calais Sands, with Fort Rouge,' H. Gritten, jun. Scarcely does a year go by without a view of Fort Rouge; this version, however, of the old and wave-fretted wooden piles will lose nothing by comparison with many of those which have preceded it.

No. 207. 'Giddy Youth in Ancient Garb,' T. Clater.

"With roguish glee the artless maid  
Hath rummaged out the secret store;  
In garb of ancient days arrayed,  
And faded wreath old granny wore."

The title and the quotation sufficiently describe the picture, which, in composition and execution, sustains the reputation of the artist.

No. 219. 'Fishing Trap, Berkshire,' J. B. Pyne. A work in the very best style of this artist—a snatch of foreground landscape, with anglers, but painted with an unaffected devotion to nature.

No. 223. 'Leaving the Ball,' J. C. Horsley. This work has already come under our notice, having been exhibited at the British Institution. No. 159. 'The Contrast,' C. Stonehouse, has been

painted in illustration of the same passage in Goldsmith's "Deserted Village," beginning,

"Sure scenes like these no troubles ere annoy!  
Are these thy serious thoughts? nay, turn thine eyes  
Where the poor outcast shivering female lies."

No. 232. 'Bacchus Consoling Ariadne for the Loss of Theseus,' W. Patten, A.R.A. This picture we remember at the British Institution; we reported of it then according to its merits—favourably.

No. 237. 'A Detachment of Cromwell's Cavalry surprised in a Mountain Pass,' T. Woodward. The character of the subject is well sustained; the horses are most effectively drawn, and the men full of life.

No. 266. 'Slender's Introduction to the Dinner at Page's, &c., A. T. Derby. Falstaff with his tail, and the friends of his humour, constitute the grand trial shot of the artists of our school. They adhere to the hero's own words—

"Banish plump Jack, and banish all the world;" for never can we enter an exhibition without meeting our ubiquitous "fat friend." It is as difficult to paint Shakspeare's humorous characters as it is to sum up all their pungent sayings into one grand passage of wit. If Mr. Derby fails here, he only does so in common with our most distinguished artists.

No. 280. 'Gil Blas Relating his Adventures,' R. T. Lonsdale. A picture which we have already had the opportunity of noticing.

No. 281. 'At Haddon,' T. Creswick. This is, like all the works of the great artist, painted with that extraordinary truth which acquires for him a yearly increasing fame.

No. 372. 'Fruit Piece,' G. Lance. This, like all Mr. Lance's vegetable and fruit subjects, is a most elaborate imitation of nature. Not only in colour, but appropriate texture, does this equal the best of all similar productions.

No. 373. 'The Young Dairy Maid,' P. F. Poole. An extremely simple subject; but we cannot help remarking on the interest with which the artist has invested it. There is certainly too great a display of colour in the maiden's dress.

No. 384. 'A Naiad,' W. Etty, R.A. As is usual with all Mr. Etty's pictures, this is distinguished by a charm, in search of which artists frequently pass their lives; in purity and sweetness of tone he approaches Guido; and the fleshy roundness and lifelike texture which he imparts with so much freedom of handling, remind us of Rubens.

Among the Water-Colour Works are several which we have already had opportunity of noticing—Mr. Corbould's 'Griselde and the Markis' may be instanced. It is matter of surprise that this excellent picture is not sold.

No. 414. 'Mountains—North Wales,' D. Cox. Exactly a scene calculated to exhibit the powers of this admirable artist. The subject is replete with grandeur, and has been wrought out with the mind fully alive to impressions from Nature's sterner moods. By the same hand is also No. 440. 'Retreat of Colonel Claverhouse to the Tower of Tilletudlem.'

"Gracious powers!" said Edith, whose eye at that instant caught a glance of the road which ran up the river; "and yonder they come."

We have not room for the lengthy quotation which describes the pell-mell riding of the Life Guards after their defeat at Drumclog, and which is followed in the true spirit in the drawing.

No. 426. 'Morning,' J. D. Harding.

"The morn is up again—the dewy morn—  
With breath all incense, and with cheek all bloom,  
Laughing the clouds away with playful scorn,  
And living as if earth contained no tomb," &c.

The poetry of Byron receives full justice at the hands of Mr. Harding. The colour here is beyond anything we have ever seen from his pencil; but he is no ordinary man, and his resources in Art seem to multiply rather than diminish with years.

Among the Sculpture are many works of a high order of merit. Mr. Papworth contributes 'Poor Little Nell'; Mr. Bell a 'Statue of Dorothea'; and Mr. Clarke a 'Bust of G. F. Muntz, Esq., M.P.' The necessary brevity of this notice compels us to omit very many pictures of acknowledged excellence, to the authors of which we have already more than once paid the tribute of sincere praise, and whom again we trust yet to meet upon the same terms.

GLASGOW.—The *Scottish Guardian* announces the opening of an Exhibition of Works of Art in Glasgow. Since the exhibitions which were established by the Glasgow Dillettanti Society became extinct, the citizens of Glasgow have had no opportunity of visiting any regular collection of paintings. We have from year to year been anxiously hoping that some spirited and influential individuals, uniting together, would undertake the formation of an extensively organised society, having for its object the promotion of the Fine Arts in the west of Scotland, and, more especially, the establishment of a School of Design, for the improvement of the Art as applied to manufactures. The Government having now determined on patronising the Fine Arts, and having proffered its assistance in the formation of Local Schools of Design, we think a favourable opportunity has arrived for the furtherance of this desirable object. We hoped that some private individuals would have been the first to move in this matter, and having obtained the patronage of the most influential noblemen and gentlemen in the west of Scotland (a patronage which, we have no doubt, would be granted as soon as applied for), they would then have found no difficulty in obtaining such a number of members as would at once have placed the institution on a most prosperous basis. In an institution such as we have hinted at, the leaders and acting men ought, no doubt, to be persons thoroughly conversant with matters of Art; but we do not perceive any necessity for each individual member being a connoisseur. If any one possesses a love for Art to the extent of giving the annual subscription or entry money, we would say by all means allow him to be a member; and if he has not a taste for the Fine Arts when he enters the society, there is little doubt but such will be acquired, to a greater or less extent, before he has been long in connection with it. An institution founded on this principle, from the number of members connected with it, and each one having a certain influence in its sphere, would soon be established on a permanent basis. This plan, we are sorry to say, has not been adopted; but we can discover no reason why it should not yet be carried into execution. The artists have in a manner been compelled to form themselves into a society for the furtherance of Art, consisting exclusively of professional gentlemen. Under their auspices the present exhibition has been commenced, and we are happy to find in it so much to commend and so little to condemn. We heartily wish them all success in their present undertaking. An association for the promotion of the Fine Arts has been formed on the model of the ART-UNION in London. This, however, can only be regarded as a useful auxiliary, and not as a moving power, commensurate to the accomplishment of the great end in view. The exhibition contains works by Harvey, Gilbert, Bonnar, Scott, &c., &c., of the Royal Scottish Academy, and many other artists of high promise, though comparatively unknown to fame.

THE LIVERPOOL PRIZE has been awarded to Thomas Webster, Esq., A.R.A., for his picture of 'The Boy of Many Friends,' a work of rare merit, and unquestionably entitled to the distinction conferred on it. We are unable this month, to notice the Liverpool Exhibition, but shall do so "in our next." Meanwhile, we lament to observe that the press in Liverpool is doing much injury to the best interests of Art, by a system of remarks (not criticisms) upon the pictures in the present exhibition, we allude more particularly to the ill-judged notices in the *Standard* and the *Chronicle*, the writers in both these papers are evidently totally unacquainted with the subject on which they profess to write; in illustration we need only refer to the blunderings of the *Chronicle* both in manner and matter; and the "*feshings*" of the *Standard*, coupled with a general vulgarity of style, eminently calculated to disgust the friends of Art. We can assure their editors, that Liverpool is the only town in which such bad taste is displayed, and we trust we may venture to hope, that in future the gentlemen will confine themselves to writing upon subjects they may chance to understand, and not imitate Sir Roger de Coverley, who deemed it his duty to make a speech whether to the purpose or not!

## FOREIGN ART.

**ITALY.—ROME.—THORWALDSEN.**—On the 12th of last month Thorwaldsen arrived in Rome, after an absence of three years. No words can express the cordiality and respect with which he has been welcomed by the Roman artists, and the artists of all countries residing at Rome. He has also received the extraordinary compliment of a deputation from the Academy of St. Luke, to congratulate him on his return to his second country, and to express how highly they value the honour of his presence and the advantage of his opinions as a member of their body. After forty years' residence in Rome, Thorwaldsen is said to have found no other climate so suitable to his health. May we not also say that Rome is the true country of an artist like him—he is an exile elsewhere. On the evening of the 24th the first council of the Academy of St. Luke since his return was to be held. As soon as it was known that he intended on that evening to resume his place in the council, the president, the Proff. Cav. Felchi, went to the house of Thorwaldsen, with the equipage of the academy, to conduct him to the meeting, and all the members were waiting to receive him at the foot of the stairs. Thorwaldsen appeared much moved by his reception, and cordially thanked and embraced his colleagues.

**ST. PAUL'S WITHOUT THE WALLS.**—Since the arrival of the splendid columns and blocks of alabaster destined for this church, the magnificent gift of the Viceroy of Egypt to his Holiness, the works have proceeded with increased energy. It is said that in four years they will be completed, when this immense and gorgeous Basilica will appear more majestic and beautiful than before its destruction by fire many years ago. The director is the Cavalier Pletti.

**COLONNA ANTONINA.**—During the tempest of the 23rd of September, the lightning struck the column of Marcus Antoninus, which adorns and gives the name to one of our principal "Piazze." Most happily the electric fluid struck only two angles of the pedestal erected by Sextus V., the ancient column itself remaining quite untouched and unharmed, though part of the angles of the pedestal fell down. They are now being repaired with all speed.

**BOLOGNA.—NECROLOGY.**—This year is unfortunate for the Academy of Fine Arts: it has lost two others of its members—the Professor G. Tambroni, an excellent landscape painter, and the sculptor G. Giungi. As yet only one academician has been elected to fill up the vacancies—G. Barbieri, a clever painter of landscapes.

**BIBLIOGRAPHY.—FELSINA PITTRICE.**—The Marquis Amorini, President of the Academy of Fine Arts, continues successfully his biographical labours on the lives of the old masters, principally all those of the Bolognese school. At this time he has published, executed with the greatest elegance and correctness, the life of Count Carlo Malvasia, a painter and author; especially of the celebrated work called 'Felsina Pittrice.' 'Felsina,' as is well known, is the ancient name of Bologna, and under the title of 'Bologna, as a Paintress,' he has written the lives of an immense number of Bolognese artists, beginning from the most remote times. It is a work full of curious erudition and useful information, and has been carried down to our times by various authors, among whom we may name the Canon Crespi, and Zanotti. Malvasia certainly shows much critical acumen in combatting various erroneous opinions and false accusations of Vasari, a Florentine artist and author, and jealous of the Bolognese school. But the Marquis Amorini has included in his work all the lives of artists published by Malvasia, with corrections and condensations little practised by the prolix Malvasia. He has also applied to it the philosophic criticism which suits the present day. Honour then to the President Amorini! who has devoted time, fortune, and great labour to the embellishment and illustration of the history of the Fine Arts, in which the school of Bologna boasts so many fair and noble pages.

**Original Italian Memoirs regarding the Fine Arts.**—Signor Michel Angelo Gualandi, a man of talents, character, and with much taste for the fine arts, has published a work, original of its

kind, and which it were desirable should be followed by similar publications in every city and nation where the Arts have flourished. We should then possess a true history of the Fine Arts, of which partial sketches, more or less perfect, only now exist. The work of Signor Gualandi is a collection of original Manuscripts, drawn from the archives of the various cities in Italy, having relation to the lives or works of the old masters, serving to clear up many hitherto contested points which have been the subject of controversy by various authors. The documents are illustrated by useful, learned, and carefully-written notes. Among the documents published we observe the last wills of several celebrated painters, such as Primaticcio, Orazio Samacchini, Dionysius Calvart, Alexander Tiarini, Guido Reni, Gio. F. Barbieri (Guercino), and many contracts between the artists and the noble families for whom they painted. Some letters of F. Albani, regarding his great and famous picture of 'Adam and Eve,' painted for Count Leopardi. Signor Gualandi was known as an excellent judge and lover of art; he had also a small but excellent collection of old and modern pictures for sale in the halls of the Palazzo Fava, so celebrated in Bologna for the frescoes of the Carracci, with which they are adorned; but he is now yet more honourably known as one of the best contemporary writers on the Fine Arts.

**Notices of various Fresco Pictures removed from the Walls and placed on Canvass.** by G. GIORDANI, Keeper of the Gallery at Bologna.—Many fine classical works have been thus saved from ruin in Italy, and more particularly in Bologna, besides the hundred pictures by Guercino—of figures, landscapes, hunting scenes, dead game, &c., which were in the Palazzo Clarelli—there have been safely transported a 'Hercules and Iole,' by G. Cavedone; an 'Aurora,' by Guido; a 'Flora,' by A. Tiarini. A subject so interesting as the preservation of such works, well merits consideration and study on the different methods employed. These will be found detailed, with the progress and success of various operations, in a book published by G. Giordani. Like his other works, it is full of interest for lovers of Art.

**SCULPTURE.**—Professor Baruzzi, since his beautiful portrait in marble of Tagliani as 'La Sylphide' which he modelled from life, has been employed on three sepulchral monuments, to be placed in the cemetery of the Certosa. One is for the Countess of Bentivoglio; it represents 'Filial Piety' in a beautiful group of four figures; another is for the poet and professor of philosophy, Paolo Costa, representing 'Philosophy and Poetry embracing'; the third, in a grander style, is a 'Group of Mendicants, to whom Charity is distributing relief'; it is for the Marchioness Pizzardi.

**TURIN.—V. RASORI'S PICTURE.**—We have recently seen a picture which we shall not soon forget, like the masterpieces of old times, the impression it makes is stamped on the mind. The work in question is by a young painter of Bologna, Vincenzo Rasori; it has been purchased by the King of Sardinia, to be placed in his palace at Turin. The subject represents a scene interesting to the poet, to the historian, and to the philosopher. Who has not read of the long, bitter feuds that divided Italy for ages, and that sprang from the broken vows of Buondelmonte dei Buondelmonti? The moment represented in the picture is that in which the lady of the Donati presents to him her beautiful daughter, hoping, by her extraordinary charms, to cause him to break his faith to the daughter of the Amedei, to whom he was pledged, and obtain him for her son-in-law. Besides the three principal persons, two attendants are introduced, an old and a young woman; they are like the chorus in the Greek tragedy, commenting on the action of the principal figures, and interpreting it to the spectators; the younger looks on with an expression of pleased surprise, while in the sad countenance of the elder we seem to read the woes she foresees from this fatal meeting. The scene is placed in an inner atrium, in the house of the Donati, from whence there is a distant view of the heights of Samminiato. The young girl seems to have risen from some feminine occupation, as various articles on a table indicate. Her mother holds her right hand, and turning towards Buondelmonte presents her to him, seeming to say, "this is her whom I destined for you." Her face expresses triumph and

plensure; at the same time a careful observation of the face of the youth, whose modest countenance seems to struggle for composure, and to resist the expression of what he feels; that of the young girl beams with a timid pleasure. These three countenances speak, as much as mute expression can; they are beautiful, but not ideal beauty—not Grecian—not Roman; they are truly Italian heads—types such as do exist, but are but rarely met. The accessories are carefully and finely painted, as in the pictures of some great master; the feathers are true feathers, and seem to wave, the silk to rustle, the flesh to live and breathe. The idea, composition, and execution are all in harmony, and in this harmony the imitative art consists.

**MODENA.—"NEW THEATRE."**—The new Ducal Theatre was opened on the 2nd of October, with a magnificent opera, *Adelaide di Borgogna*, by Gandini. The exterior architecture is simple, but elegant; the interior, beautiful and highly ornamented: it is the work of Vandelli, Professor in the Ducal Academy of Modena. The drop scene is a classical picture by Malatesta, representing 'Hercules I., of Este, Duke of Ferrara, examining the Design for the first Theatre, built of wood, in his Court-yard, in 1486.' The second drop-scene, in Italy, called *Comodino*, is painted by Manzini, having as its subject 'the Count Rangone receiving Tasso in the Castle of Rangoncastelvetro.' The whole scenery is superbly painted by the Professor Camillo Crespolani, D.A. The theatre is not large; but its beauty entitles it to a place among the finest theatres in Europe.

**FABRIANO.—WORKS IN IVORY.**—When his Holiness, during his tour, was in this city, he visited the celebrated collection of ancient works in ivory, belonging to Count Possenti, a collection which does honour to the town, and which its proprietor is constantly increasing.

**FRANCE.—PARIS.—INAUGURATION OF THE STATUE OF DR. BROUSSAIS.**—The inauguration of the statue of this celebrated physician took place the end of last month, in the court of the amphitheatre of the hospital of Val de Grace. Under a canopy in front of the statue were assembled the officers of the hospital, the Academy of Moral Sciences, represented by their vice-president, M. H. Passy, and their secretary M'net, and several of the members in their academical robes; all the members of the Academy of Medicine, professors, and students. The statue was uncovered amidst great applause, and discourses were pronounced by M. Passy in name of the Academy of Moral Sciences; by Dr. Pariset, secretary of the Academy of Medicine; by Dr. Fossati, for the Society of Phrenology, &c., &c. The ceremony was on the whole very imposing. The statue is really fine, executed in bronze by Bra, in a sitting position, the head turned upwards inclining a little to the left in a meditative attitude. The left foot rests on his works; on the front of the pedestal is an inscription, on the sides a list of the works of Broussais.

**LOUVRE.—Exhibition of the Works of the Pupils of the French Academy at Rome.**—This exhibition was delayed to give time to restore a statue broken in the journey. The following is a brief notice of some of the works:—

**Architecture.**—By M. Lestuel—Copy of the two famous Corinthian capitals of the villa Ponzietowski; and the yet more famed Ionic capital of Sta. Maria, in Trastevere. In these copies there is correctness and talent, but they are somewhat stiff. By M. Ochara—Fragments of the Temple of the Sun, and of 'the Frontone,' called of Nero in the Colonna Gardens. Here there is talent, but the drawings are hard. By M. Guenepin—Three drawings, executed with much freedom—'The Temple of Fortune,' at Paestrina; 'the Temple of Castor and Pollux,' at Cora; 'the Arch of Trajan,' at Benevento. M. Farmin—Plan of an Hospital. It is gigantic, but a skilful and beautiful design.

**Sculpture.**—M. Bonavieux—'Faithful Love in the act of depriving himself of one of his Wings.' An elegant statue, pure in style and soft in its forms. M. Otlin—A 'Hercules,' of which the critics say, that though the Hercules be strong, the work is weak. M. Champard—A 'Bacchus,' in a good style, but wanting in *morbidezza*. M. Vilain—A 'Thesus.' Beautiful in every respect.

**Painting.**—M. Blanchard—A 'Noli mi tangere.' Free, but negligent. M. Murat—'Hagar

and Ishmael.' The conception is dramatic, the design good, the colour perhaps rather weak. M. Pils—'An Archer.' Somewhat theatrical, and meretricious in colouring, but clever. M. Robert—'The Slave.' Beautiful forms, good design, but the colour rather wanting in transparency. M. Buttura—Two landscapes: 'The Suburbs of Rome.' True and beautiful. M. Papety—An imaginary landscape, with 'The Funeral of Achilles.' Full of spirit. He also sends a beautiful copy from Raffaele, the 'Banquet of the Gods in the Villa Farnese.'

*Engraving.*—M. Normand—A fine engraving of a 'Madonna,' after Raffaele. M. Pollet—Water-colour copies of the portraits of 'Annibale Carracci,' 'Andrea del Sarto,' 'Rubens,' and the 'Fornarina.' All are excellent.

This exhibition is really a pretty one, notwithstanding certain small defects, which, as implacable critics, we are bound to notice. In all the works we trace the progress of those young artists, who, entirely at the expense of the French government, study in the right path—in the classic land of Rome.

*Monument to Napoleon in the Invalides.*—We announced formerly the time of presenting designs for this work; eighty-two have been presented. They will be exhibited in the Louvre.

FOIX.—THE CATHEDRAL.—Two young artists, Messieurs Vallette and Mercadier have just completed, by their joint efforts, a large picture, intended for the Cathedral of Foix. We have seen this work, and feel assured it will establish the fame of its authors; it combines many rare merits. The subject is Christ and the Woman of Samaria.

#### GOVERNMENT PATRONAGE OF ART!

ALTHOUGH we have been indebted to several correspondents for canvassing this topic, the matter is of so much importance that we feel sure our readers will not complain of our treating it at too much length.

It is a proverb that "what every one says must be true." Without allowing perfect correctness to the adage, it appears verified in the one remark concurred in by writers on British Art, be they natives or foreigners. Whenever our national inferiority in this department of genius has been their theme, they unhesitatingly point out the want of *Government patronage* as the root of the evil. The field has lain barren, they say, not because there is any inherent infertility in the soil; the wild herbage springs, the wild flowers are luxuriant, and the regular harvest is wanting year after year, only because there comes no fostering husbandman to improve the native qualities of the soil, and to sow the seeds of a more valued vegetation. Thus, it is argued that, while we have in abundance the choicest specimens of imitative Art, flowers of romance that will fill the mind with ideas of beauty and grace, and pictures of domestic scenes that teem with a quiet joy peculiarly English, there is still a national deficiency in that department of Art which, requiring the addition of the highest excellences of intellect to technical skill, is at once a cause and proof of a Nation's mental refinement.

There is much truth in these strictures; but we rejoice that they will soon cease to be applicable. The Government have at length seriously entertained the project of patronizing the Arts of this country, and the Houses of Parliament, it is said, will no sooner rear their heads, than they will be submitted to the operations of the sculptor and painter, in order that their walls may contain a lasting memorial of the achievements of British artists. We say, emphatically, of *British* artists, because, notwithstanding the gossip about the "calling in of the Germans," and even the advocacy of that measure by one or two journals, the unpatriotic scheme appears to be abandoned to the oblivion which it deserves. It was the public works of Rome and of Bavaria that drew out the genius of the Italians and Germans; and let us hope that historical painting in this country will date its first great spring from the determination to illustrate British history on the walls of the British Houses of Parliament.

The recent intimation of the above-named decision, formally ushered in by the remarks of a statesman, as distinguished for his encouragement of the abilities of others, as he is pre-eminent for

his own, has caused a great sensation in the artistic world. Genius is alive to the power of displaying its "writing on the wall" to the wandering gaze of future ages; the veteran conceives few finer stages on which to bring forward the crowning master-pieces of his creation; and the value of the prize induces younger ambition to hope eagerly for a place in the lists. And, in good sooth, should this opportunity of fostering historic painting in this country be duly seized, there has seldom occurred so heart-stirring an occasion for the development of sterling talent. What themes for the pencil! What heroic subjects for the chisel! And to be recorded in a building which will be one of the finest architectural works of the age, and will probably exist when many proud buildings around it shall have been swept "adown the gulph of time." These are exciting thoughts for English artists. No wonder, then, that they are discussing with zeal and eagerness the new field about to be opened to their labours. It is an absorbing topic; even the "new vehicles" are half forgotten, and *fresco*, the presumed medium by which Art is to be applied in the Houses of Parliament, is become a new and interesting topic of conversation; and, still better, a subject of careful thought. All this must have a valuable result, whatever may be the ultimate resolution of the pending question. The possibility, or probability, of its application in this way will doubtless stimulate many to the practice of "*fresco*." Opportunities will soon offer for this (among us) new Art, and there may consequently be a considerable and important improvement in the internal decoration of all classes of houses, from the palace to the humbler mansion.

We deny, however, the necessity, and doubt the policy, of applying the art of *fresco* painting to the walls of the two Houses. The necessity of adopting this method in such extensive decorations is contended for—by a few, on the ground of its suiting all lights, of its durability, and of its peculiar adaptation to the "grand style." The first reason is the most cogent, but evidently not imperative; the second may be met by the statement of the nearly equal duration of some paintings in oil; and the third by the fact that the "grand style," although hitherto principally made manifest in *fresco*, has, nevertheless, no essential connexion therewith; that is in truth an original mental attribute of the painter, and that the great works of Raffaele, Rubens, the Caracci, Paul Veronese, and others, indicate with all sufficient force, that for grandeur of treatment it matters not whether the pencil be dipped in size or oil, whether the recipient ground be a prepared canvass or a moist stucco. Nor let us forget the 'Battle,' by De Keyser; the 'Ulysses,' by Etty; and the 'Crucifixion,' by our lamented Hilton. If, then, it be not positively injurious to the architectural ensemble,—and that it would not be so we think may safely be affirmed; let every lover of British Art enter his humble "veto" against the adoption of *fresco* painting in the Houses of Lords and Commons. There are many reflections which urge to such a conclusion; and with an earnest desire for the advancement of Art in this country, proceed we to examine the propriety and facility of adopting some other method—that of painting in oil. *Fresco*, even allowing some two or three years for preparation, would have the double effect of displaying the deficiencies, while it marred the superiority, of English painters. With the exception of two or three, we can scarcely call to mind a painter who possesses the peculiar power of drawing, which forms one of the main attractions in a work of *fresco*. *Fresco* is known to require that precise knowledge of the anatomy and of every movement of the joints, which the great Italian painters spent so much time in acquiring. Our oil painting is corrected again and again, the parts are, as it were, melted-in, until at last a correct general appearance is obtained; but we much doubt whether the most careful cartoon would enable any but the most accomplished draughtsman to make an equally effective drawing in *fresco*, unless the mind be previously stored with the requisite amount of knowledge. In effects of colour, the great attribute of the English school, the exclusion of oil painting would be peculiarly unfortunate. *Fresco* paintings, it is true, exhibits occasionally the most delightful colouring; but they, we think, are much mistaken who imagine that

such power can be acquired without long practice, even by those who are already masters of painting in oil. Take away from the majority of our English painters the power of scrambling and glazing, pummeling and scraping, with all the peculiar aid of the strongest *impasto* here and there, and their productions would, we fear, be far from exhibiting, at once, a gratifying result. Surely there should be some hesitation ere we abandon, in favour of *fresco*, all chance of producing those charms of colour which constitute so much of the rich eloquence and poetry of painting—charms in which our school is allowed to excel, and which, as in the works named above, delight as much in the more grand and elevated subject, as in the smallest cabinet-painting by a Dutchman.

#### CORRESPONDENCE.

##### VEHICLES.

SIR,—Having read with considerable pleasure, the correspondence of "J. E." on Vehicles, and considering that every objection that can be raised against it, should be brought forward, induces me to ask of "J. E.," through your valuable work, whether he considers the glass medium after its use ever acquires its original hardness and body, allowing of course something for the oil and pigments? I seem to think not; for it appears to me that the small particles will always remain separate, and if so, no greater hardness will be produced than with common oil. I have often thought that many works are ultimately ruined by the use of *too much vehicle*; if the colour were used simply as we have it from the colour shops, without any addition of oils, &c., it would be found to acquire a hardness equal to the old masters; take for instance, a small portion of, say white, and mix a little sugar of lead in it; let it be very stiff, and spread it thickly over an earthenware palette, and in twelve months it will be as hard as stone. So I am inclined to think that the purity of the work depends not so much on the presence, as it does on the absence of vehicle, and any one may find on trial, that the simple paint, as it comes from the bladder, will admit of the sharpest finish and of the finest texture, without the appearance, as is now too common, of a mawkish insipidity, occasioned by an *over fondness* for some particular vehicle. I have often wished in my own practice that there were not a drop of oil to be procured, for one gets into an overfondness for something to work free and easy, thereby diluting the paint until it has no body left. If we look at the works of some of the old masters, it appears stamped on with the arm of a giant, without the appearance of vehicle; and even the Dutch School did not use so much, as is commonly supposed; yet I would say, if the *new medium* has the property of becoming harder than oil, I think it may be used with success; and I would say use the powder and work the paint as stiff as possible, by driving it out with a short stiff brush; and by the application of a sweetener you may produce a texture equal to a

—Yours, &c., J. B. T.

##### TEST FOR LEMON YELLOW.

SIR,—I have great pleasure in answering an enquiry in the ART-UNION, concerning a test for Lemon Yellow, as I think every artist ought to be in possession of the means for testing the purity of his colours.

The most simple test is this:—Take some of the colour and mix with water, then spread it upon a piece of white paper; cut the paper in half, keep one half in a folio, and expose the other to common gas, or impure air, during one night. On the following morning compare the two pieces. If the colour be pure, both papers will appear of the same tint; if not, one will be much darker than the other.—Yours, &c.,

56, Long-acre, 27th Oct., 1841. T. MILLER.

##### ADMISSION TO THE TOWER.

SIR,—In the October number of the ART-UNION, I perceive a slight notice of the Armoury in the Tower, coupled with a regret that greater facilities were not given to those artists who might wish to sketch therefrom.

As it is probable that the following information may be of service to many, allow me to say, that an application made to the Board of Ordnance, accompanied by a letter from the President of the Academy, will procure an order for unlimited free admission, and a command to those in whose custody the armour is placed, to afford every accommodation possible to the applicant.

Upon acting in the above manner some years back, I received all the attention and assistance I could desire.

Yours, &c.

S. J. B. JONES.

3, Bartholomew Lane, Bank, Oct. 6th.

## REVIEWS.

**THE BLIND GIRL AT THE HOLY WELL.** Painted by F. W. BURTON, R.H.A. Engraved by H. T. RYALL, Portrait and Historical Engraver to the Queen.

This is the engraving of the Irish Art-Union of the last year, and is in size sufficiently important to show the admirable style in which it has been engraved. The subject supposes a blind girl to have been led by her mother and attended by her younger sister to the Holy Well to supplicate Heaven for the restoration of her sight. Above the well rises a stone cross, before which the mother and her blind child are kneeling in devotion. Holy water they have none; but the little sister stands in the stream which flows from the well, and having filled a wooden bowl with the water of the well, is earnestly directing to it the finger of the blind girl as she has been before accustomed to do. With her hands firmly clasped before her, the mother is uttering a fervent prayer for the recovery of her child, towards whom, in her abundant love and solicitude, she has partially turned from the cross. The head of the blind girl is extremely beautiful, and the blindness is expressed, not only by the closed eyelids, but also by the particular set given to the head by the deprivation of sight, and without which the mere closing of the eyes would have been as nothing: the artist has never once lost sight of this powerful expression; it occurs again in the hand, which, although conducted to the water by the little sister, moves slowly and indeterminately. The features are full of placid resignation, contrasting powerfully with the intense feeling expressed in the face of the mother. The figures are costumed as peasantry, and a sobriety of tone prevails throughout the composition, which is in perfect accordance with its affecting sentiment. The back ground is a steep hill, rising so as almost to exclude the sky which appears only in one corner of the picture. The engraving of this work is an unrivalled performance, as combining, with the most perfect success, various styles of work adapted to variety of character and effect. The sky—what there is of it—is given in mezzotint, and its softness and distance tell admirably in comparison with some of the foreground objects,—a freestone rock for instance, the uneven and sandy surface of which is expressed in broken line with singular truth. The water again, is described in lines, more determined, but better calculated to give the necessary transparency. The work, in short, comes from Mr. Ryall's hands, not as an example of the excellence of one style of engraving, but embodying the perfections of many, and each so judiciously adapted to the object, as to bring it forward in its own peculiar texture. 'The Blind Girl at the Holy Well' is a national subject; and the purity of its treatment places the picture, if not in the highest rank of Art, in a degree not far removed from it,—if deep and refined sentiment in expression constitute value in Art. It is in all respects honourable to the prospering society from which it has emanated; and is infinitely superior to any print hitherto issued by an "Art-Union."

**THE BUD AND THE BLOSSOM.** Drawn by W. C. ROSS, A.R.A. Engraved by C. W. WASS.

This little engraving is carefully but freely executed after a drawing uncommonly elegant in style and pleasing in character. The composition consists of two figures, evidently portraits:—the "Blossom" is a sweet girl apparently about sixteen or seventeen years of age; and the "Bud," her younger sister, yet wanting some years of her teens. In the head and entire figure of the elder of the two there is a grace of carriage truly patrician, and in the features is written a modest dignity, tempered with feminine gentleness; this face is seen in profile, but that of the younger is three quarter, and not yet being past the vacant age of childhood, has a smile for all who choose to look on it. It is engraved with an admirable lightness of effect well adapted to drawings.

**THE MOMENT OF VICTORY.** Painted by ALEXANDER FRASER. Engraved by CHARLES ROLLS.

This work has been engraved for the Society for promoting the Fine Arts in Scotland; a fact, which,

together with its title, might mislead persons unacquainted with the story into the supposition that the subject was historical, or that, at least, it pointed a moral: but it does not claim to rank in any class of didactic art to which should be extended the cares of a Society expected to give a tone to public taste. The subject matter is the episode to a cock fight which has been got up by some "ne'er-do-weels" in the back premises of a shoemaker; who, at "the moment of victory," comes forth to chastise the promoters of the mischief. One of the cocks, a fine white bird, and by the way extremely well drawn and engraved, lies on the ground evidently dying, while the other, in victorious exultation, is perched crowing upon a wheelbarrow. The youthful scapegraces who have pitted the birds, are in the utmost confusion, attempting an escape over the paling, followed by the angry shoemaker, while his wife, with a child at her breast, bestows her commiseration on the vanquished. The engraving is of high merit, and very creditable in all respects to the burin of Mr. Charles Rolls.

It is to be lamented that a society instituted professedly for the advancement of Fine Art should turn their backs upon that department of it which has so much need of all the support that at present seems likely to be bestowed upon it in this country. We would ask if there is nothing in the comparatively unillustrated history of Scotland that has been lately painted that would not have better befitted the occasion than that which has been engraved? If there be not, this is an additional and very powerful reason for a better direction of the cares of the Society, who, in such case, should have shown themselves anxious to relieve their school of such a stigma. That there is a fine feeling for high art among Scottish artists is everywhere known; to countenance which, as far as in them lie, would be the best method which the Society could adopt for the promotion of the Fine Arts of their country. If they are engaged to engrave one of their prizes, the sooner they rid themselves of such obligation the better; for it rarely happens that among these selections there is a picture really adapted to appeal forcibly to the better feelings in favour of Art—and at the same time to school the mind in such painted lessons as may readily be learnt and never forgotten. It is a source of congratulation that the London Art-Union have departed from the practice of selecting a prize for engraving, they having determined upon one of Hilton's pictures for their next presentation plate. In after years—when our school may have attained a more elevated character—they will, on that score, be adjudged to have efficiently acquitted themselves if their future proceedings be in the same spirit, for the works of William Hilton rank with the best of the time gone by, and will claim a place among the best of the time to come. But when, hereafter, this plate of the northern society shall be exhibited in juxtaposition with works of another character, its appearance in such companionship may easily be figured; we say with works of another character, for the sentiment which dictated this selection must be changed. It is scarcely necessary to say that this is a national question, which by no means involves the merits of the work itself, as belonging to the style of Art under which it classes. Its author must admit the truth of what is here advanced: we could not do the admirable painters of our domestic school the injustice to suppose that they are wanting in feeling for sublimer aspirations because their vocation is to paint every-day life; but recognising the value of that refinement which prepares the world to appreciate their own works, they must acknowledge that a public body should exert whatever power may be intrusted to them in furtherance of the object of their institution.

**THE MELTON HUNT.** Painted by FRANCIS GRANT, S.A. Engraved by W. HUMPHREYS. Published by HENRY GRAVES and Co.

We may be justly proud of the sports of our country and the manner in which they are followed, for there is a noble hardihood and contempt of all peril in our sportsmen, which leads them to pursue, with an equable relish, a fox at Raby or Melton, or a tiger in the jungles of the Sunderbunds. These "meets" and "gallant companies" could not be in better hands than in those of Mr.

Grant, who seems to have studied his subjects practically, as to command entire success in their execution. The particular "meet" described in this work is that of the Melton Hunt, at the Ram's Head Cover, in the season of 1839, when Lord Suffield was master of the hounds. A general movement prevails, for the entire field is proceeding at a steady pace towards the cover, the time selected by the artist for giving an assemblage of the most striking portraits we have ever seen. Necessarily, many of the sportsmen are not present in the foreground; but some of those who are a little removed are so characterised that it is impossible they can be mistaken by any one who has ever seen them "in the saddle." The landscape is an open country with rising ground on the left, against which the horses and their riders are made out with admirable effect. The grouping is perfectly inartificial; and yet nothing could be better suited to the objects of the work in which there is no affectation of romance to destroy the business-like purpose of the composition. The horses are drawn to the life—their elastic action and sleek trim declare them at once English. The picture contains some five or six and thirty mounted figures; hence may be judged the difficulties which the artist has overcome. The Melton Hunt, known as one of the best appointed in the kingdom, is constituted of a society of noblemen and gentlemen, among whom are found many of the most ardent and devoted sportsmen of the day; we are accordingly presented with portraits of Lord Gardner; Lord Suffield; the Earl of Darlington; Lord Macdonald; the Hon. Mrs. Villiers; the Countess of Wilton; Walter Little Gilmour, Esq.; the Earl of Wilton; Hon. Augustus Villiers; John White, Esq.; Sir F. Johnstone, Bart.; Prince Lichtenstein; Sir David Baird, Bart.; Earl of Rosslyn; Count Bathany; T. Haycock, Esq.; William Coke, Esq.; Lord A. St. Maur; Lord Cranston; the Marquis of Waterford; Earl of Howth, &c.

Mr. Grant has already identified his name with this department of Art; we may instance 'The Meet of her Majesty's Stag-hounds at Ascot Heath.' The plate is most effectively engraved, up to the full character of the picture, and cannot fail to give such satisfaction to sportsmen as to be received by them as "a gem."

It is from the burin of Mr. Humphreys, who having established a very high character as a line engraver, is rapidly maintaining his right to a foremost rank among British engravers in mezzotint—a less arduous but more profitable branch of the profession.

Mr. Grant's original picture is in the small, but peculiarly fine, collection of his grace the Duke of Wellington, by whom it was purchased at the exhibition of the Royal Academy some three years ago.

**THE HIGHLAND GUEST.** Painted by E. LANDSEER, R.A.; engraved by THOMAS LANDSEER.

**THE CHIEF'S COMPANIONS.** Painted by E. LANDSEER, R.A.; engraved by W. GILLER. Published by F. G. MOON.

We are not sure that we have printed the titles of these prints correctly; but our design is to recommend to the especial patronage of all lovers of Art, and those, more particularly, who admire the noble forms of the more noble animals—the dog and horse—two very admirable prints, from pictures by Edwin Landseer; of a class in which he has no rival among the modern, and scarcely one among the ancient, school. The first represents a palfrey, caparisoned for a lady, which a boy is holding sitting at the door of a Highland cottage, within which is the fair visitor. Two dogs are waiting patiently the appearance of their mistress. The other—a companion to it—pictures the steed, Newfoundland dog, setter, and hawks of a gentleman, attending his approach in the court-yard of a baronial castle. They are exquisite prints—works of the very highest class of Art, and cannot fail to be universally popular. We may have to refer to them again; for we mean, ere long, to devote no inconsiderable space to the numerous publications preparing by Mr. Moon—so numerous, costly, and magnificent, as almost to create a new era in British Art.

**THE DREADNOUGHT.** Drawn by W. C. SMITH. Engraved by R. W. PRICE. Publishers, TILT and BOGUE.

This is an engraving of the hospital ship Dreadnought, 104 guns; which moored off Greenwich, is so well known to all voyagers and "excursionists" frequenting the trackless highway of the Thames. The view presents the head of the vessel, with its complication of wood work and numerous hawse-holes; the back ground is a view of Greenwich Hospital. The print being, for the subject, very large, the artist has been enabled to enter into the detail with much nicety; the whole, therefore, of the minute circumstance of the floating mass is made out with extreme care. The ornament occupying the place of the customary figure-head, could not well have been more appropriate; it is simple enough, being merely a shield with the arms of the United Kingdom, guarded by the British lion; a cognizance which, at the bows of a British man-of-war, gives rise to reflections that are not to be immediately forgotten. The sky is threatening and unsettled, and the enormous dark mass is well relieved by a towering white cloud careering before the wind, which has also made some impression on the surface of the water. A boat containing, probably, a patient is alongside; this, together with some other craft, displays, by contrast, the huge proportions of the hull of the Dreadnought. The work is well executed, and must be interesting to all who love to contemplate these "oak-leviathans," and

"Their armaments which thunder-strike the walls Of rock-built cities, bidding nations quake."

**THE BURY HUNT.** Painted by C. AGAR and J. MAIDEN. Engraved by F. BROMLEY. Publishers, ZANETTI, Manchester; ACKERMANN, Strand, London.

This is a class of picture which has of late years become highly popular in the sporting world, as containing portraits of the members of the various hunting associations so represented as well equine and canine as human; the landscape, too, is generally a well known view, in order to assist the entire identity. All pictures of this kind are extremely difficult to deal with, since the artist is subject to laws which forbid him the employment of the graces of composition; his work, therefore, in such cases must be considered with regard to the disabilities under which he has laboured. 'The Bury Hunt' consists of sixteen figures, thirteen of which are mounted, the whole being portraits of well known members. The periods of the day, the most favourable to grouping, and portraiture in such subjects, are the "death" and the "meeting," the latter of which has, for very obvious reasons, been chosen by the artist. The plate is executed in mezzotint, and the figures generally come out with much clearness, but they are perhaps playing rather to the bystander than occupied with that which should be the business of such a meeting, for six or eight of them are absent to the matter in hand, as they look out of the picture and eye the spectator. The pack is already mustered in such strength, that some of the dismounted figures are walking up to the middle in dogs. The back ground is admirably adapted for giving effect to such a scene, as furnishing every degree of light and shadow. The depth of tone afforded by the neighbouring trees serves to force the lower lights of the figures, to clear up the shadows generally, and to throw off the distance. The grouping is designed with good effect, and if the portraits are happy, the print has many claims to the hearty patronage of all the members and well-wishers of the Bury Hunt.

**VIEW OF THE INTERIOR OF ST. MARY REDCLIFF CHURCH, BRISTOL:** showing the New Gothic Organ Screen. Drawn by S. G. TOVEY; and on Stone by G. BARNARD. DAVEY, publisher, Bristol.

A print dedicated to a churchwarden for improvements made by him in a church during his wardenship, which are improvement and not injuries, as have too often been the case—should, surely, not escape our notice. Through the exertions of Mr. William Ringer, the composite organ screen, which marred the effect of one of the finest parish churches in England, namely, St. Mary's Redcliff, has been cased in strict accordance with the fabric, and of this improvement the print before

us gives a very fair representation. It now only remains to effect a similar alteration at the east end, where an altar-piece of *pseudo* classic style has been tacked on without the least connection or harmony with the building, to restore the chronological integrity of the structure and render it perfect. We hope Mr. Ringer will not relax in the good work.

**ELEMENTS OF PERSPECTIVE DRAWINGS.** Designed by AUGUSTUS DEACON. Publishers, TAYLOR and WALTON.

The purpose of this work is to inculcate the advantages derivable from perspective as an initiative in drawing. It were desirable that this indispensable to perfection should be more extensively cultivated, as we so frequently find even masters of effect fail in it. These lessons, however, are entirely elementary, as being preparatory to the finishing instructions of a skilful master, whose labours must be facilitated by the method here proposed, which is novel, inasmuch as the pupil commences at once drawing from forms of mathematical proportion, instead of, as usual, imitating lithographed or manually executed copies. These forms or models, which are referred to and intended to accompany this excellent little treatise, consist in number of 57 pieces contained in a box, the dimensions of which are, length 18 inches, breadth 12½ inches, and height 8½ inches. The advantages of drawing from positive forms are obvious, for not only is the student introduced to an early acquaintance with linear perspective, but also with light and shade. The figures proposed are those of the simple mathematical solids, such as the cube, cone, sphere, pyramid, cylinder, &c., together with their combinations which may be arranged in imitation of turrets, houses, &c. It will be readily understood that a student who has practised only from drawings or lithographs will find much difficulty when he applies himself to the delineation of real objects; the sooner, therefore, that these are brought under his notice, the more easily will he acquire confidence and accuracy, of execution, to which by such means, we know of no work better calculated than this to promote his advancement.

**FIELD MARSHAL HIS GRACE THE DUKE OF WELLINGTON.** Painted and Engraved by J. LUCAS. Published by F. G. MOON.

The best criterion of the popularity of a distinguished character, is the avidity with which the public desire a memento of him: thus the Duke of Wellington ("votre Duc" as the French bitterly call him,) must enjoy a larger share of popular affection than any other man in Europe. Not one statue, but three, have been voted to "The Duke" by the common voice; any one of which according to the regime of the Romans would have been reward enough for a vast extension of dominion. He has passed through the trials of prosperity to the admiration of his country; these statues therefore are not enough; the print shops have teemed with portraits of him—nor is this enough; he is still solicited to sit for portraits and statues to come. In this portrait he is represented in uniform, and the figure is so felicitously circumstanced, that the impersonation will convey the most perfect idea of the original to those who have never seen the Duke of Wellington, and to those to whom his person is known—it is his presence. The execution of the picture and that of the print have been conducted with the greatest skill on the part of Mr. Lucas, who combines in his two works so many of the perfections of the arts of painting and engraving; throughout the production there is an energy and masculine ease which become the subject well. His Grace is standing in an easy position, and the features derive marked character from the management of the shadow, much of which is seen on the face, reminding us of many similar effects of "that Antonio Vandike." He is dressed as a soldier—the garb that suits him best—and as a British Field Marshal.

**ZUMALACARREGUI AND THE CHRISTINO SPY.** Drawn by J. F. LEWIS. Engraved in Mezzotint by F. C. and C. G. LEWIS. Published by HENRY GRAVES and Co.

The story of this excellent engraving, as the title declares, is derived from the history of the late civil war in Spain, and its relation is admirably

made out in the composition. A spy has been captured, and is conducted, bound and guarded, for examination before the Carlist chief. A priest is seated at the table, and pressing for a conviction by exhibiting the papers which have been taken on the person of the prisoner; Zumalacarregui has risen to examine them, having just removed from his mouth, and yet holding between his fingers, a cigar—the solace to which a Spaniard applies even amid the most serious business of life. The subject comprehends eleven figures—the prisoner guarded by soldiers, and attended by his wife and family; the priest, secretary, *aide-de-camp*, &c., and Tomas Zumalacarregui himself. The countenance of the spy proclaims the inward conviction of his fate; despair has stricken his heart while listening to the earnest accusations of the priest, and finding himself in the presence of the most determined and dreaded opponent of the Christino cause. This representation of the renowned Carlist leader is declared, by persons who have known him, to be a perfect similitude in features and general personal character; indeed, it may at once be seen that there is nothing imaginative in the figure, which is a substantial, a pronounced reality. His name seems to come of an Arabic etymon—his features speak for themselves as of Moorish cast, and may be truly so, by that unaccountable tradition of personal characteristic which will adhere to a race through the descents of ages. The brow of the man is stern and care-worn; and such is the feeling given to the figure, that it is at once seen that every movement is deliberate and impassive. He is here in the costume in which he always appeared, or which he changed only to present himself at court. The only ornament he ever wore was the silver tassel on the top of his cap, which resembles very much in shape the Highland bonnet, but is yet a part of the national costume. He always wore the *zamorra*, or fur jacket, of the Carlist chiefs, and his moustache and whiskers so trimmed as to meet upon the cheek. In this work there is no attempt at display; and would, for the sake of the country which furnishes the subject, that there were less of truth. The wife of the prisoner is on her knees imploring mercy for him, and in him, for herself and their child; but she is supplicating a man who evidently dismisses the humanities, and keeps the passions in check when they present themselves in the path of duty. The main interest of the composition comes forward at once; there is nothing to distract the eye, but everything to establish the genuineness of the record—it is original in its entire style, and full of such emphasis as must exalt Mr. Lewis into the class of the best painters of character of our time. It has received due justice at the hands of the engravers—father and son; for it is the joint production of both; and the names of F. C. and C. G. Lewis accompany that of the accomplished painter—John F. Lewis; a striking and interesting circumstance; for it is rare to find in one family such a combination of talent.

#### TO CORRESPONDENTS.

**PUBLIC EXHIBITIONS.**—We purpose next month devoting some attention to the many exhibitions in Art and Science which claim our notice. In the limited space that we could have allotted to them this month, we should have been unable to render them due justice.

We have several "Letters" in type; but our correspondents must bear in mind, that if we printed an answer to every letter, we should occupy very considerable space with matter interesting only to the parties immediately concerned.

On the subject of "Vehicles" we are crowded with communications; and in reference to Frescoes we have also many letters. The writers of those we do not insert must not imagine us indifferent to their kindness; but it is impossible to find space for all.

T. M. B.—We have attended to the subject.

M. O.—Certainly. We shall be happy to engrave any subject of interest that has novelty to recommend it.

On the subject of Van Eyck we shall communicate privately with the writer.

We shall of course give a table of contents, as usual.

### VAN EYCK'S GLASS MEDIUM.

**THIS MEDIUM** having been tried by artists of the first eminence, is found to be the grand desideratum for removing the existing evils of the modern school; namely, the destructive effects of varnishes, oils, and megueups, as all pictures painted with them, after a time, lose their transparency and brilliancy, and become horny, spotted, and dark-coloured; whereas those painted with the glass medium have a most brilliant effect, and will be found to remain perfectly unchanged, as its durability can only be compared to painting in enamel.

#### Glass Medium in Bottles.

No. 1. For mixing in colours, already prepared in oil.

No. 2. For general painting, and rubbing up powder-colours with.

No. 3. For glazing or mixing with lakes, and other colours, requiring strong driers, giving at the same time additional transparency.

#### Glass Medium in Powder.

If this powder be mixed stiff upon the palette with a small portion of pure poppy oil, it will enable the artist to lay colour, pile upon pile, and dip his pencil in water or oil at pleasure. It will also dry so hard that it may be scraped with a knife on the following day.

**T. MILLER**, being the original Preparer of this invaluable Medium, has the honour of supplying

**SIR MARTIN ARCHER SHEER**, President of the Royal Academy,

Sir A. W. CALLCOTT, R.A.

C. L. EASTLAKE, Esq., R.A.

W. ETTY, Esq., R.A.

D. MACLISE, Esq., R.A.

W. MULREADY, Esq., R.A.

H. W. PICKERSGILL, Esq., R.A.

C. STANFIELD, Esq., R.A.

D. ROBERTS, Esq., R.A.

C. LANDSEER, Esq., A.R.A.

J. P. KNIGHT, Esq., A.R.A.

R. REDGRAVE, Esq., A.R.A.

T. WEBSTER, Esq., A.R.A.

And many other Artists of eminence.

**T. M.** would recommend artists to replenish their colour boxes with colours prepared in medium, as they will be found better in every respect than those prepared in the ordinary oils.

He has also great pleasure in calling the attention of artists to his **NEW SILICA COLOURS**, which are perfectly imperishable; namely, blue, red, yellow, brown, white, and black. These colours will be found to surpass in brilliancy and purity any at present known. To be had, prepared in medium, in powder, or in cakes.

#### To Water Colour and Miniature Painters.

#### MILLER'S GLASS MEDIUM.

It is well known that some preparation for giving brilliancy and depth to Water-Colour Paintings, and enabling the artist to repeat his touches without disturbing the colours already laid on, has been long sought after. This new vehicle possesses all these advantages, when mixed with the colours has a most brilliant effect, and will preserve delicate tints uninjured. In durability it will approach nearer to Oil-painting than anything hitherto in use.

To be had at

**MILLER'S ARTISTS' COLOUR MANUFACTORY,**  
56, LONG-ACRE, LONDON.

**THE POET WORDSWORTH**; an Engraving from a Picture by Miss MARGARET GILLES; engraved by EDWARD M'INNES. To Subscribers, Proofs with the Autograph, 41 1s.—This being a private Plate, a few only are for sale.

Apply to Mr. Moon, 20, Threadneedle-street.

Just published, Part VI., price 2s. 6d.,

**THE IMPERIAL FAMILY BIBLE**; containing the OLD and NEW TESTAMENTS, according to the most correct Copies of the authorized Version; with many thousand Critical, Explanatory, and Practical Notes; also References, Readings, Chronological Tables, and Indexes. The whole illustrated by a superb Series of ENGRAVINGS, from the Old Masters, and from Original Designs by JOHN MARTIN, K.L. To be completed in about Thirty-six Monthly Parts, at 2s. 6d. each.

Blackie and Son, Queen-street, Glasgow; South College-street, Edinburgh; and Warwick-square, London.

**THE FOLLOWING SUPERIOR WORKS ON THE ART OF DRAWING ARE NOW PUBLISHING BY S. & J. FULLER, 31, RATHBONE-PLACE.**

**BRIGHT'S ELEMENTARY LANDSCAPE DRAWING-BOOK**, in Eight Nos., 1s. each; cloth bds., 9s.

**CIPRIANI'S RUDIMENTS for DRAWING the HUMAN FIGURE**, engraved by F. BAROLOZZI, Two Parts, 12s. each.

**D. COX'S TREATISE on LANDSCAPE PAINTING**, and Effect in Water Colours, from the First Rudiments to the finished Picture, in Twelve Nos., at 5s., 7s. 6d., and 10s. each, folio super-royal; or half-bound, complete, containing 56 Plates, price 43s.

**D. COX'S YOUNG ARTIST'S COMPANION on LANDSCAPE PAINTING in WATER COLOURS**, price 42s.

**T. S. COOPER'S STUDIES of CATTLE and RUSTIC FIGURES**, in Ten Nos., 4s. each; cloth bds., 42s.

**T. S. COOPER'S ELEMENTARY STUDIES of CATTLE**, in Eight Nos., 2s. each; cloth bds., 16s.

**T. S. COOPER'S COLOURED IMITATIONS of DRAWINGS**, in Two Folders, price 52s. 6d. each.

S. and J. Fuller beg to call the attention of the Admirers and Collectors of Water-Colour Drawings to their Rooms, in which will be found beautiful specimens by the following Masters:—Cattermole, Stanfield, Harding, Poole, Bright, T. S. Cooper, Allen, Bentley, Pyne, Richardson, Prout, Cox, and all the leading Artists of the day.

**ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.**

**C. J. ECKFORD, 45, FLEET-STREET**, corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE and CLEAR EXPLANATORY SHEET of DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

#### SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES M'LEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET of DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

#### TO ARCHITECTS, BUILDERS, &c.

**PAPIER MACHE' WORKS, 15, WELINGTON-STREET NORTH, STRAND.**—**CHARLES F. DIELEFELD** begs to inform Architects, Builders, &c., that in addition to the Volume of Patterns already published, he has now produced 40 New Engravings, which may be had separately at 6d. each. The complete work now comprises nearly 850 patterns of works in every style, actually manufactured in Papier Mache', and on sale: consisting of Picture and Glass Frames, Cornices, Mouldings, Flowers, and every species of decoration for ceilings, walls, &c. The excellence of the improved Papier Mache' Ornaments in architecture is now fully understood and admitted by the first architects, and by the most eminent builders in London and the provinces.—The above folio volume is sold, bound complete, with a tariff of prices, at Three Guineas, which will be remitted to persons ordering goods to the amount of £50 or upwards.

132, FLEET STREET, LONDON.

### MESSRS. HOW AND PARSONS

WILL SHORTLY PUBLISH THE FOLLOWING BOOKS.

#### I.

On the 4th of December, in 1 Vol., imperial 8vo. (uniform with "IRELAND,") containing Five Engravings on Steel, after Drawings by D. McCLISE, R.A., and about Fifty superior Woodcuts,

#### SKETCHES OF IRISH CHARACTER.

BY MRS. HALL.

A New Edition, with Additions.

#### II.

On the 30th of November. In royal 8vo., with Engravings,

#### THE OLD FOREST RANGER;

Or, WILD SPORTS on the NEILGHERRY HILLS, and in the GREAT WALIAR JUNGLE.

By Captain WALTER CAMPBELL, of Skipness.

#### III.

On the 4th of December. In 8vo., with Twelve Engravings on Steel,

#### THE SPORTING SKETCH-BOOK:

A SERIES OF CHARACTERISTIC PAPERS CONTRIBUTED BY CRACK AUTHORITIES.

Edited by J. W. CARLETON, Esq.

#### IV.

Now ready, in 2 vols., small 8vo.

#### CAKES AND ALE:

TALES AND LEGENDS.

By DOUGLAS JERROLD, Esq.

#### V.

On the 15th of December. In a pocket volume, price 2s. 6d., in cloth,

#### THE EPICURE'S ALMANACK FOR 1842.

By BENSON HILL, Esq.

This Manual will contain a Calendar, with Seasonal Dishes, and the Receipts for their preparation.

Now on sale,

#### THE EPICURE'S ALMANACK FOR 1841,

Price 2s. 6d.

#### VI.

Now ready, in 1 vol. 8vo., with Twenty-three Steel Plates, by ROBERT CRUKSHANK, HUGGINS, and LEA, with about Fifteen Woodcuts, price 14s. in cloth,

#### JEM BUNT.

By THE OLD SAILOR,

#### VII.

Lately published, in imperial 8vo., with Sixteen Engravings on Steel, from Paintings by CRESWICK, Six Maps, and 148 Woodcuts, from Drawings made expressly for this work, elegantly bound in cloth, price 25s., Vol. I. of

#### IRELAND: ITS SCENERY & CHARACTER.

By Mr. and Mrs. CARTER HALL.

Dedicated, by permission, to his Royal Highness Prince Albert.

#### VIII.

In imperial 8vo., price 25s. elegantly bound,

#### ILLUSTRATIONS OF SHAKESPEARE:

Landscape and Architectural, in a Series of Forty-five Line Engravings on Steel, by VARRALL, CARTER, HINCHLIFF, STARLING, TINGLE, GODFREY, SMITH, BENJAMIN, WOODS, and others.

From Original Drawings by G. F. SARGENT.

#### IX.

On the 4th of December, with Thirteen Engravings of new or beautiful Flowers, drawn and coloured from Nature, price 7s. 6d. in cloth,

#### THE FLORIST'S JOURNAL for 1841.

A Monthly Record of Flowers, adapted to all Soils and situations.

THE FLORIST'S JOURNAL for 1840 may be had, in cloth, price 6s.

**ART UNION OF LONDON.**—The PRINT engraved by Mr. H. C. SHENTON, for the Subscribers of the year 1840, from Mr. C. LANDSEER'S picture 'THE TIRED HUNTSMAN,' is now printing, and will be distributed about the middle of the present month. Due notice will be given to the Subscribers entitled to receive the same.

The SUBSCRIPTION LISTS for 1842 are NOW OPEN, and an immediate renewal of Subscriptions is earnestly requested, to enable the Committee to make advantageous arrangements for the current year.

GEO. GODWIN, Jun. } Hon. Secs.  
LEWIS POCOCK.  
73, Great Russel-street, Bloomsbury.  
December 1st, 1841.

**ART-UNION OF ISLINGTON AND NORTH LONDON.**—This Institution is founded on the model of the Art-Union of London, for the purpose of promoting the extension of taste in the Fine Arts, and for the encouragement of Living Artists, while, by the non-appropriation of any funds for the production of a single Engraving, the Prizes are relatively greater in value and in number. Subscription to the Annual Distribution, half-a-guinea. Particulars may be obtained on application to the Office, *pro tempore*, Halton Cottage, Halton-street, Islington.

T. W. BENTLEY, } Hon. Secs.  
W. H. BUTTERFIELD.

**ARTISTS' AND AMATEURS' CONVERSAZIONE. FREEMASONS' TAVERN.**—The MEETINGS of the SOCIETY will take place on the first WEDNESDAY in the following months:—Wednesday, the 1st day of December, 1841; Wednesday, the 5th day of January, 1842; Wednesday, the 2nd day of February, 1842; Wednesday, the 2nd day of March, 1842; Wednesday, the 6th day of April, 1842.

TO ARTISTS.—LECTURES.

**MR. DERMOTT**, Lecturer on Anatomy, will deliver a COURSE of LECTURES, expressly for Artists, at his ANATOMICAL THEATRE, CHARLOTTE-STREET SCHOOL OF MEDICINE, 15, CHARLOTTE-STREET, BLOOMSBURY. In these Lectures all the Muscles, Sinews, and Bones, forming the external configuration of the human frame, will be fully demonstrated, especially the Muscles, which are called into action during the different movements of the body, causing the variations of its contour. Terms for the course two guineas, including subjects for demonstration; the fee to be paid when the admission ticket is taken out at the commencement of the course. The Subscribers will be permitted to inspect the bodies in the Dissecting-room; and to dissect if they are desirous of so doing. The Course to commence as soon as 20 Subscribers have entered their names. Communications to be made to Mr. Dermott, Charlotte-street School of Medicine, 15, Charlotte-street, Bloomsbury.

**FURTHER IMPROVEMENTS IN THE MODE OF PRESERVING OIL COLOURS FOR ARTISTS' USE.**

**WINDSOR AND NEWTON'S COMPRESSIBLE METALLIC TUBES.**—These Compressible Metallic Tubes are lined with Membrane, and the objection raised by many Artists against the contact of delicate colours with metal thereby avoided.

The colour is ejected by squeezing or compressing the sides of the Tube between the thumb and finger, and the Tube being formed of several layers of thin metal is extremely tough, and not liable to break or crack in using.

Price 6d. each Tube, filled with colour.—(Cobalt, Madder, Lakes, &c., extra as usual.)

To be had, wholesale and retail, at their Artists' Colour Manufactory, 38, Rathbone Place, London.

**TO ART-UNIONS.**—An Engraver has a PLATE, now nearly completed, to dispose of. It is a LINK ENGRAVING, on steel, size 15 in. by 12; and the subject is well calculated for the purpose of an ART-UNION.

Apply, by letter, to A.B., 3, Grove-terrace, St. John's Wood.

**DRAWING AND PAINTING, No. 14, TOTTENHAM COURT-ROAD.**—Artists, Artisans, and others, are respectfully informed that a Large Room, furnished with Casts from the Antique, Ornaments, &c., has lately been opened for STUDY, every Monday, Tuesday, Thursday, and Friday evenings, from 6 o'clock till 10. Subscription, 4s. per month.

A Class for the Study of the Living Model meet on Wednesday and Saturday Evenings.

THE DUKE OF WELLINGTON!

**MR. LAVER** begs to announce, that a splendid full-length MILITARY PORTRAIT of Field Marshal the DUKE OF WELLINGTON, from a painting by Pickersgill, R.A., executed for the Oriental Club, has just been completed in mezzotint, by C. E. Wagstaff. This engraving will be found on inspection to be, without exception, the most correct likeness of his Grace extant, whilst the known excellence of the painting in its chiaro-oscuro and all its details have been faithfully copied by the engraver. No expense has been spared to make this publication worthy of the reputation of the illustrious individual it pretends to commemorate; and in deference to the universal respect in which his character and high public services are held, the publisher has determined, by a much more moderate price than is ordinarily charged for such publications, to place copies within the reach of all. Size of the engraving, 16 inches by 26 inches, exclusive of margin. Proofs before letters, on India paper, with autographs, &c. (a few only), £4. 10s.; proofs before letters, with autograph, &c., £3. 10s.; lettered proofs, £2. 10s.; prints, £1. 10s. The copies will be ready for delivery in a few days.

Applications to be addressed to Mr. Laver, 47, Great Marlborough-street; or to Messrs. Welch and Gwynne, Printers to the Royal Family, 24, St. James's-street, where a finished proof may be seen.

12, Berners-street, Oxford-street.

Just published,  
SCHLOSS'S MOST UNIQUE CHRISTMAS PRESENT.

**THE ENGLISH BIJOU ALMANAC** for 1842, Edited by the HON. MRS. NORTON. (Size 4 in. by 3 in.) will contain Portraits of her Royal Highness the Princess Royal, Mdlle. Rachel, Ellen Tree, Charles Dickens, Staudigl, and John Murray; each accompanied with a Poem from the pen of the illustrious Editress; with an Address in commemoration of the happy event, the birth of the INFANT PRINCE OF WALES. A complete Calendar, and every thing connected with it.—Price, plain, 1s. 6d., beautifully bound in Morocco or Vellum, 3s.

The MICROSCOPIC EYE-GLASS, plain, 1s. 6d.; folding in tortoise-shell case, 3s. Extra neat cases to contain the TINY Book and Glass to be had—plain Morocco, 2s. 6d.; ditto, superior finished, with illuminated work, 5s.; ditto, very elegant in Velvet, 4s.

London: A. Schloss, Fancy Stationer to Her Royal Highness the Duchess of Kent, 12, Berners-street, Oxford-street.

\* \* \* This Literary Curiosity, happily termed by Sir Lytton Bulwer, "The Humming-bird of the Annals," with its extra case and glass, can be sent, for the postage of One Penny, to all parts of the United Kingdom

SALE OF COUNT PERREGAUX'S COLLECTION OF CHOICE PICTURES, AT PARIS.

**MR. GEORGE** has the honour to apprise the Nobility, and other Amateurs of Works of Art, that he will Submit to PUBLIC COMPETITION, by AUCTION, at No. 4, RUE DU GROS CHENET, PARIS, on WEDNESDAY and THURSDAY, DECEMBER 8 and 9, the very important Cabinet, rich in the finest pictures, by the élite of the various schools, belonging to M. le Comte de Perregaux, deceased. Amongst the matchless productions which grace this splendid gallery, it may suffice to mention—'Cattle in a Landscape,' by Berghem; 'A Sunny Landscape,' Both; 'Cattle near a Ruin,' Cuyp; 'The Forl,' Karl du Jardy; 'A Woolly Scene,' Hobbima; 'A Domestic Scene,' P. de Hooghe; 'A Gem,' by F. Mieres; 'A Landscape,' Ommegeanck; 'A Grand Waterfall,' Ruysdael; and others by J. Steen, Wouvermans, W. Vandervelde, Teniers, Greuze, Rubens, Torbury, Vandyck, &c.

The Collection may be publicly viewed from Dec. 3, until the days of Sale, and Catalogues and other information procured of Mr. HENRY ARTARIA, No. 26, St. James's-street.

Published in 4to., Price £4 10s., in French Boards; and on Royal Paper, 4to., with proof impressions of the Plates, and a Portrait of the Author, Price £7 7s.

**A TREATISE ON PAINTING.** In Four Parts. Illustrated by One Hundred and Thirty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNET, F.R.S.

The Parts may be had separate.

1. On the EDUCATION of the EYE. Second Edition. Price £1 5s.
2. On COMPOSITION. Fifth Edition. Price 15s. in boards. 18s. in boards.
3. On LIGHT and SHADE. Fifth Edition. Price 4s.
4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This Work is particularly recommended to the Student in Art in the New Edition of the Encyclopædia Britannica.—See the article on Drawing.

James Carpenter, Bond-street.

THE FOLLOWING SUPERIOR WORKS ON THE ART OF DRAWING ARE NOW PUBLISHING BY S. & J. FULLER, 34, RATHBONE-PLACE.

**BRIGHT'S ELEMENTARY LANDSCAPE DRAWING-BOOK**, in Eight Nos., 1s. each; cloth bds., 9s.

CIPRIANI'S RUDIMENTS for DRAWING the HUMAN FIGURE, engraved by F. BARTOLOZZI, Two Parts, 12s. each.

D. COX'S TREATISE on LANDSCAPE PAINTING, and Effect in Water Colours, from the First Rudiments to the finished Picture, in Twelve Nos., at 5s., 7s. 6d., and 10s. each, folio super-royal; or half-bound, complete, containing 56 Plates, price 4s.

D. COX'S YOUNG ARTIST'S COMPANION on LANDSCAPE PAINTING in WATER COLOURS, price 42s.

T. S. COOPER'S STUDIES of CATTLE and RUSTIC FIGURES, in Ten Nos., 4s. each; cloth bds., 42s.

T. S. COOPER'S ELEMENTARY STUDIES of CATTLE, in Eight Nos., 2s. each; cloth bds., 16s.

T. S. COOPER'S COLOURED IMITATIONS of DRAWINGS, in Two Folia, price 52s. 6d. each.

S. and J. Fuller beg to call the attention of the Admirers and Collectors of Water-Colour Drawings to their Rooms, in which will be found beautiful specimens by the following Masters:—Cattermole, Stanfield, Harding, Poole, Bright, T. S. Cooper, Allen, Bentley, Pyne, Richardson, Prout, Cox, and all the leading Artists of the day.

IN THE PRESS,  
**THE CASTLES AND ABBEYS OF ENGLAND;**  
 INCLUDING  
**ROYAL PALACES, BARONIAL HALLS, MANOR HOUSES, &c.**  
**ANCIENT AND MODERN,**

WITH NUMEROUS ILLUSTRATIONS FROM ORIGINAL DRAWINGS;

TOGETHER WITH HISTORICAL DETAILS—FAMILY RECORDS AND GENEALOGIES—PUBLIC SERVICES, CIVIL, MILITARY, AND ECCLESIASTICAL—HEROIC ACHIEVEMENTS—BIOGRAPHICAL SKETCHES—TRAITS OF CHARACTER—CLASSICAL ASSOCIATIONS—LOCAL SCENERY—ANECDOTES—LEGENDS, TRADITIONS, &c.

By WILLIAM BEATTIE, M. D.,

Grad. of Edinburgh; Memb. of the Royal Coll. of Physicians, London; Memb. Hist. Instit. of France; Instit. d'Afrique; Author of "Switzerland," "Scotland," "The Waldenses," "Residence at the Courts of Germany," &c.

The Work will present Engravings of whatever is most interesting, or least known, in the scenery, style, or decorations of each subject, and will be illustrated with Vignette specimens of the Cathedrals—Abbeys—Chapels—Tombs—Altars—Royal, Baronial, and Monastic Ruins—Halls—Courts—Galleries—Armouries—Portraits and Medallions;—Sculptures—Arches—Gateways—Staircases—Ceilings—Antique Furniture and Inscriptions;—Statues, Fountains, and Fragments of Art;—Festive, Military, and Rural Scenes;—Battle-fields—Banquet Halls—National Sports and Athletic Games; and whatever illustrates most forcibly the minds, habits, and pursuits of our ancestors, so distributed throughout, that the engravings and literary matter will mutually ILLUSTRATE each other, and bring the country and the domestic life of its inhabitants once more into primitive existence.

The Work will be elegantly printed in imperial octavo, and will be published in Parts at 2s. 6d. each; the first of which will appear in December. A more elegant edition, on superfine royal quarto paper, will be printed at the same time, at 5s., with first impressions; but as this edition will be limited to the number of Subscribers, it is particularly requested that those who wish to secure it, would at once forward their names.

MORTIMER and HASELDEN, 21, Wigmore-street, Cavendish-square; TILT and BOGUE, 86, Fleet-street.

**VAN EYCK'S GLASS MEDIUM for OIL PAINTING.**—This Medium having been tried by Artists of the first eminence, is found to be the grand desideratum for removing the existing evils of the Modern School; namely, the destructive effects of Varnishes, Oils, and Meguips, as all pictures painted with them, after a time, lose their transparency and brilliancy, and become horny, spotted, and dark-coloured; whereas those painted with the Glass Medium have a most brilliant effect, and will be found to remain perfectly unchanged, as its durability can only be compared to painting in enamel.

**Glass Medium in Bottles.**

No. 1. For mixing with colours already prepared in oil.

No. 2. For general painting, and rubbing up powder-colours with.

No. 3. For glazing or mixing with lakes, and other colours, requiring strong driers, giving at the same time additional transparency.

**Glass Medium in Powder.**

Nos. 1, 2, and 3.

If these powders be mixed stiff upon the palette with a small portion of Miller's pure Poppy Oil, it will enable the artist to lay colour, pile upon pile, and dip his pencil in water or oil at pleasure. It will also dry so hard that it may be scraped with a knife on the following day.

T. MILLER, being the original preparer of this INVULNERABLE MEDIUM, has the honour of supplying SIR MARTIN ARCHER SHEE, President of the

Royal Academy,

Sir A. W. Calcott, R.A. J. Gilbert, Esq.  
 C. L. Eastlake, Esq., R.A. F. Y. Hursthouse, Esq.  
 W. Etty, Esq., R.A. T. C. Hoiland, Esq.  
 D. Macleise, Esq., R.A. J. Huskisson, Esq.  
 W. Mulready, Esq., R.A. — Hervé, Esq.  
 T. Phillips, Esq., R.A. W. Hughes, Esq.  
 H. W. Pickersgill, Esq., R.A. W. Havell, Esq.  
 D. Roberts, Esq., R.A. T. M. Joy, Esq.  
 C. Stanfield, Esq., R.A. — Jenore, Esq.  
 J. M. W. Turner, Esq., R.A. J. D. King, Esq.  
 J. P. Knight, Esq., A.R.A. J. Lucas, Esq.  
 C. Landseer, Esq., A.R.A. J. Lynn, Esq.  
 R. Redgrave, Esq., A.R.A. T. Lewis, Esq.  
 T. Webster, Esq., A.R.A. S. Lawrence, Esq.  
 G. Arnold, Esq., A.R.A. J. M. Lea, Esq.  
 J. Ayton, Esq. W. L. Leitch, Esq.  
 A. Agtis, Esq. J. Müller, Esq.  
 W. Allen, Esq. — Moseley, Esq.  
 W. Boxall, Esq. R. M'Innes, Esq.  
 G. Brownning, Esq. Sir W. Newton.  
 J. Bell, Esq. R. P. Noble, Esq.  
 — Baxter, Esq. T. Noble, Esq.  
 G. Cattermole, Esq. Dr. Penrose.  
 G. Crookford, Esq. A. Penley, Esq.  
 J. Courtney, Esq. — Raphael, Esq.  
 W. Collett, Esq. G. K. Robinson, Esq.  
 — Cooper, Esq. — Rand, Esq.  
 — Cox, Esq. W. Richardson, Esq.  
 J. Cole, Esq. F. Stone, Esq.  
 — Dyce, Esq., Royal School of Design. J. R. Say, Esq.  
 W. Derby, Esq. M. Smith, Esq.  
 — Duncan, Esq. Weld Taylor, Esq.  
 T. Ellerby, Esq. R. J. Walker, Esq.  
 — Ellis, Esq. J. Wilson, Esq.  
 W. Fisk, Esq. — Watkins, Esq.  
 D. Francis, Esq. W. Wilson, Esq.  
 W. Gush, Esq. T. Yeats, Esq.  
 E. A. Gifford, Esq. W. Yetts, Esq.  
 G. Guy, Esq.

And many other Artists of Eminence.

T. M. would recommend Artists to replenish their Colour Boxes with Colours prepared in Medium, as they will be found better in every respect than those prepared in the ordinary oils.

He has also a great pleasure in calling the attention

of Artists to his new SILICA COLOURS, which are perfectly imperishable, viz.: Blue, Red, Yellow, Brown, White, and Black. These colours will be found to surpass in brilliancy and purity any at present known. To be had, prepared in Medium and in Powder.

To Water-Colour and Miniature Painters, MILLER'S GLASS MEDIUM.

It is well known that some preparation for giving brilliancy and depth to Water-Colour Painting, and for enabling the Artist to repeat his touches without disturbing the colours already laid on, has been long sought after; this new vehicle possesses all these advantages. When mixed with the colours it has a most brilliant effect, and will preserve delicate tints unimpaired; in durability it will approach nearer to Oil Painting than anything hitherto in use.

**Glass Medium in Bottles.**

No. 1.—For first colouring or laying on masses of colour. This dries so hard that the second colouring or finishing will not disturb it.

No. 2.—For second colouring and finishing.

Also the NEW SILICA COLOURS, prepared in Cakes, which possess many and great advantages over the Cake and Moist Water Colours, at present in use.

T. M. has great pleasure to inform Artists that he has on sale all the Colours made by G. Field Eye, author of "Chromatography," &c.

T. M. has also all the remaining stock of Ultramarines, manufactured by the celebrated Italian maker, the late G. Arzone.

**DISSOLVING VIEWS.**

Colours prepared in small boxes, for painting the Dissolving Views as now exhibited at the Royal Polytechnic Institution, Regent-street, with directions for use are now ready for delivery. The same Colours are also applicable for painting the slide glasses of Magic Lanterns, and devices or ornaments on ground glass, in imitation of the old masters.

To be had at

MILLER'S ARTISTS' COLOUR MANUFACTORY, 56, LONG ACRE, LONDON.

ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.

C. J. ECKFORD, 45, FLEET-STREET, corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1729.

CHEAPEST AND BEST MANUFACTURED PICTURE FRAMES IN THE WORLD.

P. GARBANATI, WORKING CARVER and GILDER, 19, St. Martin's-court, St. Martin's-lane, respectfully informs Artists, &c., that as he Manufactures every description of ornamented, Gilt, and Fancy-wood Picture Frames entirely on his premises, he is enabled to offer them at such low prices, that he defies competition. A most extensive assortment of every description of Picture Frames kept ready. Re-gilding, in all its branches, done in a most superior manner, and cheaper than by any other Gilder in the kingdom. Estimates given free of charge.

P. S. A List of the Prices of PLATE GLASS, Gilt and Fancy-wood Picture Frames, Room Mouldings, &c., can be had at the Manufactory (gratis), or sent (pre-paid) to any part of the Kingdom.

P. G. respectfully solicits a Trial of his Work, for comparison of Quality and Price, with other Manufacturers.

In royal 8vo., with Engravings, price 31s. 6d., **THE OLD FOREST RANGER;**

Or, WILD SPORTS OF INDIA, on the NEILGHERY HILLS, in the JUNGLES, and on the PLAINS. By Captain WALTER CAMPBELL, of Skipness. Published by How and Parsons, 132, Fleet-street.

Now publishing, beautifully printed and neatly bound in cloth, price 7s., or in six parts at 1s., illustrated with Water-coloured Engravings.

**THE COMPLETE GUIDE to the FINE ARTS:** containing full Instructions in Drawing, Oil and Water-colour Painting, Portrait Painting, Landscape Painting, Miniature Painting, Perspective, Crayon Painting, Grecian and Persian Painting, Flower Painting, Lithography, Engraving on Wood, Copper, &c., and valuable Recipes.

Part 1. contains—The Whole Art of Oil Painting—2. Drawing and Sketching from Nature—3. Drawing in Perspective—4. Miniature Painting—5. Engravings on Wood, Copper, and Lithographic Drawing—6. Landscape Painting in Water-colours, &c. Each part complete in itself.

T. Sloper, 19, High-street, Marylebone; and W. Brittain, Paternoster-row.

**RATCLIFF'S PATENT INKSTANDS,** the most complete yet offered to the Public, in which the usual faults of Inkholders—Mouldiness, Corrosion, Evaporation, and thickening of Ink, are completely avoided.

"An immense improvement on the Fountain and other Inkstands now in use, and will prove invaluable in India and other hot climates."

Sold by L. Booth, Duke-street, Portland-place, and by all Stationers, in a variety of Mountings, suitable for the Office and Drawing-room. Merchants and Foreign orders supplied on Liberal terms.

**SPLENDID AND SUPERIOR GILT FRAMES.**

CHARLES M'LEAN, 78, Fleet-street (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

TO ARCHITECTS, BUILDERS, &c.

**PAPIER MACHÉ WORKS, 15, WELLINGTON-STREET NORTH, STRAND.**—CHARLES F. BIELEFELD begs to inform Architects, Builders, &c., that in addition to the Volume of Patterns already published, he has now produced 40 New Engravings, which may be had separately at 6d. each. The complete work now comprises nearly 850 patterns of works in every style, actually manufactured in Papier Maché, and on sale: consisting of Picture and Glass Frames, Cornices, Mouldings, Flowers, and every species of decoration for ceilings, walls, &c. The excellence of the improved Papier Maché Ornaments in architecture is now fully understood and admitted by the first architects, and by the most eminent builders in London and the provinces.—The above folio volume is sold, bound complete, with a tariff of prices, at Three Guineas, which will be remitted to persons ordering goods to the amount of £50 or upwards.

## THE ART-UNION.

LONDON, DECEMBER 1, 1841.

## VEHICLES.

SIR,—As the last letter of your valuable correspondent "J. E." contains important admissions respecting the somewhat superabundant proportion of litharge in his recipes, I do not regret the miscarriage of a communication I had intended for your last number (and to which circumstance I observe a reference in your Notices to Correspondents).

But why abandon *Silica* also? Have we not been repeatedly told that the varnishy lustrous quality of the vehicle is chiefly, if not solely, dependant upon this ingredient?—An ingredient which was considered of such importance as to confer a distinctive title upon the composition of which it formed a part. As your correspondent repeatedly disclaims any pretension to chemical knowledge, he will, I trust, acquit me of any uncourteous intention, in saying that I suspect he has been deceived by a name into the idea that *glass* of borax might be analogous to, and an appropriate substitute for, flint glass, or even for silica itself; whereas, although *vitrified* as your correspondent's last recipe directs "to a perfect and clear glass," it is no more *glass* than it was before this 'vitrification'; it still remains simply borax, or as it is descriptively named by the chemists, sub-borate of soda—a saline substance, with an excess of alkaline base. When subjected to considerable heat it parts with its water of crystallization, and then fuses; in this form it was called by the alchemists in their usual fanciful style of nomenclature 'glass of borax.' For the purposes of the new vehicle this calcination and fusion may very well be spared, because the water of crystallization assists that partial saponification of the oil which is said to be desirable; whether it be so or not, borax will regain its water of crystallization immediately on being placed in contact with that fluid.

I should regret the total abandonment of silica without further trial, because I think it enables the oil to maintain its transparency when dry. The silica with which I have experimented, was obtained by precipitation from an alkaline solution; it is not only more pure, but more impalpable, and in every respect superior to mechanically pulverised flint or other silicious matter. I moreover expect that it will have a tendency to prevent cracking, on the same principle that sharp, gritty powders, such as emery and ground glass, are added to brittle resinous matters, to increase their coherent power in the formation of cements.

After all, however, that has been said about vehicles and mediums, I must repeat my settled conviction, that those qualities of pictures by the old masters which have been attributed to their possession of some peculiar vehicle, are attainable by means of our ordinary materials.

Your correspondent does not explain in what respects he considers my observations on the processes of the Venetian masters (although he admits their correctness) "as quite apart from the subject of vehicles." I will, however, take what he considers to be a case in point—he questions whether the off-hand manner by the Flemish Painters could be imitated by our common "methods" (as we were not then speaking of *methods* but materials, I presume he intended to say with our common *vehicles*).

I have no doubt, whatever, that it might be so imitated. But as much of the beauty of colouring of the Flemish school is the result of that very "off-hand" power of execution, and as the degree of dexterity possessed by such painters as those he cites is of very extraordinary occurrence, it is difficult to support my opinion by modern instances. I will, however, venture to ask him whether he does not think it probable that such materials as *Edwin Landseer* uses would have fully answered the purposes of *Teniers* or *Berghe*? In my opinion we are by no means so deficient

in good materials, as in sound principles and judicious methods of applying them.

I am glad to find that the admixture of water is not a necessary condition of the successful employment of the new vehicle, for although I am not aware of any peculiarity in my method of working, I fear that I should never be enabled to paint with any precision with such a composition; and with regard to the suggestion, that the Venetian painters, not unfrequently dipped their brushes in water only, for the purpose of applying colours previously mixed up with oil, in order to give a more luminous power to the general texture, I think it is far more likely, (and, indeed, there are some good reasons for supposing,) that many Venetian pictures were not only commenced but carried near to completion in *distemper*, or what the water-colour painters call "*body colours*;" if so, a good and convenient distemper vehicle would really be a desideratum—animal size, whether of glue, leather, or isinglass, is inadmissible, because of its tendency to evolve hydrogen, and thereby blacken the metallic whites, especially those of lead. I have tried the experiment of painting on pannel with a solution of gum tragacanth in water, using white lead as in oil-painting; but not being accustomed to paint in distemper, I was prevented from working with the precision that I could have wished, by the washing up of the colours on going over them repeatedly. In more experienced hands, such, for instance, as Mr. Stanfield's, this would not have occurred, and perhaps borax would render the gum less soluble when once dry. I fixed my work by applying a thin coat of copal varnish, intending to carry it farther in the ordinary method of oil-painting, but have not since touched it. It remains as fresh and clear as on the day it was done; whereas an oil picture finished about the same time has become decidedly *darker*. A very Titianesque effect, or rather quality, of colour may be produced by executing all the light and shade of a picture in distemper, and the glazings and enrichments with oil colours. A picture so painted would, I have no doubt, preserve its brilliancy better than one entirely executed in any oily vehicle whatever, nor do I apprehend that it would have any peculiar tendency to crack. It would also possess another advantage over an ordinary oil-painting, in presenting a surface texture somewhat absorbent, and therefore better adapted to receive the glazing tints by imbibing them *into* its substance, and not merely receiving them *upon* its surface, as must be the case when that surface is rendered impervious by oil.

I think the loss of colour or fading of many pictures, those of Reynolds for instance, is owing, not to any impurity of vehicle or peculiar fugacity of pigments, but to their having been applied upon a surface, the texture of which was too close and unabsorbent, so that the colouring matter constituted a mere superficial film or pellicle of which the very transparency was a chief cause of its destruction, inasmuch as that great destroyer of colour, light, had free access to every part and particle of the pigment.

I have lately had an opportunity of inspecting one of Sir Joshua's pictures, which, although so faded that there remains merely sufficient evidence to show that it *has* been coloured, is as vigorous and perfect in light and shadow as ever, and, I doubt not, will long remain so. It is in the possession of Sir Charles Lamb, and is a portrait of, I believe, Miss Montgomery. I have already stated what I consider to be the chief cause of the loss of colour in Sir Joshua's pictures. The permanency of the *light and shadow* in this charming picture is evidently owing to its having been executed with a neutral grey formed of one of the carbonaceous black pigments, which are pre-eminently permanent—in nature, excepting by actual combustion.

The cause of the superior durability of the glazing tints of the Venetians may, I think, be found in the fact of their having been laid upon a distemper preparation, or, at least, upon one of a porous nature, which protected the particles of colour from the too free chemical action of light by receiving them within its interstices. I may also adduce similar considerations arising from observations on faded pictures, in apology for my adherence to certain opinions commented upon by "J. E." in the last number of the ART-UNION—your correspondent says, "the meaning of Sir Joshua Reynolds' expression, that a well coloured picture should look as though it was painted in *two colours*," may not go the whole length of the argument of "J. H.," not even with the additional sentence, "that it should possess an unity of light and an unity of shadow." In my letter to the Editor of the ART-UNION I trusted to memory for the quotation; on referring to my authority, I find that I have not done myself justice, for had I made my ex-

tract a little longer and a trifle more exact, it would then have gone quite the length of my argument. It is from a dissertation by T. Sheldrake, which obtained the premium of the Society of Arts in 1798. The precise words of the dissertation are, "I once asked Sir J. Reynolds by what circumstances in the management of a picture he thought the harmony of colouring was to be produced?" He replied, 'An unity of light and an unity of shadow should pervade the whole;' and illustrated what he had said by this simile—'A picture to possess harmony of colouring should look as if it were painted in *one* colour, and, when the chiaroscuro was complete, the colour of each object should be glazed over it.'

Now, my "argument," if it deserve such a title, amounts to little more than what is to be found in the above extract; but I think it *does* contain a little more, inasmuch, as I have indirectly, and without being aware of it, not only corrected in argument that which I had imperfectly quoted, but, at the same time, insisted upon what I consider to be the right principle on which this dead colouring, this "unity of light and unity of shadow," should be effected, namely, its perfect *neutrality*.

It appears to me that *light and shadow* considered with reference to the management of a picture should be treated as *colourless*; and that the *colour* of all bodies whatever, whether solid, liquid, or æriform, should be considered as a mere supplementary and independent accompaniment of light and shade. I know it will be objected, that what is termed the *chiaroscuro* of a picture is as dependent upon the effect of *dark colours* as upon shadow. I am not, however, of that opinion; and I think it unfortunate for the art of painting that it is so prevalent. It has deluded many a clever artist into an unsubstantial, and unnatural mode of procedure.

The fact is (at least, according to my notions), that, although there are dark substances enough in nature, and dark pigments amongst the rest, there are no such things as *dark colours*.

I may be wrong, but it appears to me that whatever colour seems to be darker than those of the prismatic spectrum must be so far of the nature of shadow, and is generally the result of mechanical texture.

A simple instance or imaginary experiment will, perhaps, make my meaning clearer. Take a quantity of unwoven silk fibre dyed of some prismatic colour, divide it into two portions, let one portion be converted into velvet, and the other into a plain tissue. The velvet will seem to have by far the most colour, but we know that it can have no more than the other fabric; this apparent excess is therefore not *colour*, but *shadow*, seen between the fibres which form the pile of the velvet. Let us try to imitate this apparently greater degree of colour by an increased quantity of colouring matter, and, again, by means of neutral material, and we shall be satisfied that the latter is the best method, inasmuch as it looks less like paint and more like velvet. We frequently hear persons when speaking contemptuously of a picture compare it to a coloured print. Now, I cannot help thinking that many pictures of importance might be greatly improved by such a resemblance; indeed, it would be no easy matter to colour a respectable print so badly as to produce such chalky lights and leaden shadows as we too frequently see, especially in the imitation of flesh in pictures, admirable for every quality but that of colour.

There is another point in your correspondent's attempted correction of my construction of Sir Joshua's expressions to which I cannot accede. There is as little reason for suspecting that such a man as Reynolds borrowed the expression in question from Da Vinci, as that he would sententiously deliver such a self-evident truism, as that "no distracting colouring" should be admitted into a well coloured picture. However sound may be the *theory deducible* from those words of Da Vinci, which your correspondent has given in italics, there is enough in the rest of the chapter to show that his *practice* was one of great complication, very dissimilar from, if not the opposite of that which it appears on the best of all possible evidence was the simple procedure of Reynolds, which I would advocate as being more conformable to nature, and more practically advantageous in art. Judging from Da Vinci's "mixture of colours" in my copy of Da Vinci's work (Paris, 1650), this section is headed "Du Meslange des Couleurs l'une avec l'autre;" if he really intends, as your correspondent says, to describe the setting of his palette, this great artist must have prepared as many separate tints and tones as were to be found in his models, just as our young ladies match their patterns in embroidery, or in the manner of those who copy pictures in mosaic.

There is, however, a master of colour of our own

time, and I am proud to say of our own country, from a right and well regulated study of whose works the rising generation of painters might derive more useful information respecting the *true principles* of colouring, than from either Da Vinci or Reynolds; if they would not allow themselves to be influenced by unmeaning sneers, and indiscriminate abuse of a man, who, with all his faults as an artist, is unquestionably the greatest genius and by far the best landscape painter of his day. I beg to say, nevertheless, that nothing can be further from my intention than to recommend one artist to imitate another, indeed I know of no readier a way for a young artist to render himself supremely ridiculous, than by attempting to ape the peculiarities of such a man as Turner. My present object being to elicit information as to the principle of those processes on which a picture, considered simply as a piece of imitation, ought to be executed, I have avoided touching upon matters of taste, such as the arrangement and distribution of colours. On carefully examining the works of the most celebrated colourists, I think that much of the secret of their success will be found to resolve itself into a right understanding of the principles of imitation carried into execution by the most simple and uniform means that the nature of their materials would admit of. They endeavoured not only to imitate as closely as possible the appearances of nature, but as far as they could in accordance with the *manner* in which they are produced naturally. If I were called upon to illustrate my meaning by examples, I should have no hesitation in referring to the water colour pictures of Turner, as the best instances of colouring conducted on the principles of common sense and true science; not that I think there is any essential difference in his system, whether he dip his brush in oil or water, but the simplicity of his method is more visible in one material than in the other. I will not at present trespass farther on your attention, than for the purpose of assuring your correspondent "J. E." that although I have felt it necessary to reply to his remarks on my opinions, I quite agree with him in preferring co-operation to controversy, for which, indeed, I possess neither ability or inclination.—Yours, &c. J. H. M.

#### THE CONTROVERSY CONCERNING "VEHICLES."

SIR,—You, not I, headed my last communication "Controversy," a thing I have neither taste nor time for. I will make this as short as possible.

The facts are exactly as I have stated them. My friend, Rainier, discovered that the paint of the old masters vitrified. He, on this, vitrified various substances, as a medium to be mixed with oil.

In "Blackwood's Magazine" I published an account of my friend's labours, and one of his recipes, or such as I then took it to be, considering it to be only vitrified borax, though, when analysed, it was thought to contain some other ingredient, but so small as to be of no importance. Subsequently I found a memorandum which, in 1839, the date of my paper in "Blackwood," I knew not that I possessed, giving a detailed process of one of Rainier's vehicles—my really scientific excellent friend Mr. Coathupe made it intelligible for me. Sugar of lead and borax to be washed and filtered and vitrified, and reduced to powder. Mr. Hardy, a perfect stranger to me, seeing my paper in "Blackwood's Magazine," wrote to me, through the editor, expressing the great interest that paper had excited in him. A correspondence took place. I furnished him with Rainier's recipe, as well as many valuable papers on oils and other materials chemically considered, kindly given to me by my friend Mr. Coathupe. Upon these data Mr. Hardy, as well as myself, experimented; and we continued in mutual communication from early in 1840. It was with great difficulty I could persuade him to add water to the oil; but I did so at last, so that he considered himself a stronger advocate for the water than I was. We worked upon the basis of Rainier's recipe. To the two ingredients, lead and borax, he added silica. He varied the proportions, upon compulsion, as silica would not dry without an increase of lead. His addition of silica amounted to 2 parts silica to 36 lead and borax.

I invited him to visit me in the country. He did so; and we worked together. His visit was not very short; yet, during the whole of it, of some weeks, I never heard him speak of the vitrified medium as *his* discovery, much less his solely; on the contrary, when in the presence of

others, I lauded his addition of silica, for I always, and uncontradicted by him, mentioned it as *his* addition; he spoke most deferentially of his humble assistance, in tone, manner, and words disclaiming the discovery. And upon the occasion of a lady writing to him, requesting information respecting his discovery of a medium, I well remember, that he said, with some confusion, "No, not mine, that is not right," or to that effect.

Before he came to me, I had published, in the ART-UNION of June 1841, my paper on Van Eyck and Vehicles; and had written the greater part of the next paper, for August, in which I detailed Mr. Hardy's experiments, giving him credit for the addition, stating the experiments to have been on the basis of Rainier's discovery; and he furnished me with some extracts from Roscoe's translation of Lanzi, which he happened to have with him, as I had but the first volume of the original Italian by me. I gladly availed myself of the extracts; and when my paper for August was finished, I put it into his hands. He entirely approved, suggesting only a slight alteration, and what I thought an odd one at the time, that I had not given him the honour attached to his name of F.M.B.S. So I added F.M.B.S., and the paper was sent off.

He had assented to all I had written; and surely I gave him praise enough for his addition. Rainier is throughout that paper the discoverer, and is so admitted to have been by Mr. Hardy's approval. He then wished the medium to be put exclusively into the hands of Ackermann and Co. I said, No, we will let the public have it. Arts are "liberal." He then discussed the name we were to give it. I thought there was no occasion for any name;—and now I perceive that all along he intended to quack the matter with Ackermann and Co., who were to do all sorts of wonderful wonders with it. He said it must be called some medium, and proposed "silica medium." No, said I, silica is but a very small ingredient in it; if it must have a name, let it be the vitrified medium. He seemingly assented.

I was here called away from my home. I left him in my house, and have not seen him since; nor received the slightest intimation from him that he intended to claim the whole and sole discovery, or any discovery at all, until Messrs. Ackermann and Co.'s advertisement appeared. I confess I was astonished when I saw their advertisement of the discovery of Lieutenant Hardy, R.N., F.M.B.S., unqualified by any allusion to Rainier or myself. There was indeed a sort of reference to the paper in the ART-UNION, but that might have been written by him for aught the world knew; and the reference, as it was, tended to magnify him. I wrote to him in remonstrance. He then claimed the discovery, and wished me to unsay what I had said, and he had approved, respecting Rainier's discovery as being the basis. Again I remonstrated; I thought it morally wrong; I think so still. In my paper in the ART-UNION of October last I expressed my surprise at Ackermann's advertisement. I heard no more from Mr. Hardy until his paper appeared in the last number of the ART-UNION, November 1841.

Here ends the history: I have but little comment to make. It appears that but for Rainier, and, may I add, myself, he never would have thought of the matter—yet he sinks us both; that the real discovery is the vitrifying substance for a vehicle, and that was Rainier's discovery; that the altering the proportions was to make the silica dry. Allowing, for argument sake, that all the praise I had given to the silica addition was just, still, will any one think it more than an addition, or that Mr. Hardy did not, modestly, humbly, consider, or profess to consider, it nothing more whilst with me; and that he did so think it, by his approval of my account of it? He now says, he took his idea from Vigné. Indeed! and nothing from Rainier? And if from Vigné—Vigné's analysis was obvious to every one, for use or experiment, after Rainier's was once known. Yet so far I have only expressed my astonishment at the advertisement; I abstained from all personal attacks on Mr. Hardy, who called me *his* friend. His strictures now upon me require a different treatment from this exposition of the matters of fact, and they shall have it.

He charges me with contradicting myself; and

cunningly enough, after the true puff fashion, quotes my praise of his silica addition, his formula, which he considers I afterwards disparage. Yet do I that? Not exactly. I only doubt, and he knows that I did doubt; that even while he was my visitor I doubted; and in my doubt, at my request, we tried Rainier's medium and the silica separately, Rainier's medium, which I had, as I stated, kept as a reserve, as too precious to use, and in lieu of which I had wrongly used uncalcined borax. We tried them separately: I took his word, in my simplicity, that there was a difference, yet the strips of colour are now by me; and I declare that, without reference to the marks, I cannot tell which is which. I have privately expressed to him the same doubt in the interval between the two papers in the ART-UNION; and referring to my account of the effects of Rainier's medium, I have been surprised to find how closely Mr. Hardy has described *his* discovery, as he calls it, after that description; and in his formula, his very method of washing it, is taken from that furnished by me from Rainier's memorandum. My "contradiction," then, is a doubt. I do doubt—truth is truth; and if I more than doubted, I should prefer contradicting myself to any other person, nor feel shame in doing so; and I will do so whenever I find myself mistaken. The very humbug used in the bringing out of this medium, accompanied as it has been by extreme presumption, has led me to reflect, and to doubt the more; for humbug is always intended to deceive, in some point or other, and creates suspicion.

I asserted, he says, that Rainier's medium preserved the colour of Naples yellow under the steel palette-knife. I did so, and do so still; nor can I trust to his experiments or assertions to the contrary. The medium I tried was that which I considered only vitrified borax, and which Mr. Coathupe said contained a very small portion of something more; be that what it may, or nothing, that medium does preserve the Naples yellow. And if it be true that nothing but silica will have that effect, why then that something more may have been silica; the smallness of the proportion may favour the idea. Mr. Hardy had a portion for experiment. If he has not used it all in his analysis, he may try it now, and he will find it as I say. With very apparent candour he says, "It is but fair to state, that the circumstance of my silica medium preserving the purity of the colour of Naples yellow when in contact with the steel palette-knife, was communicated to me by an intelligent lady, practically acquainted with the preparation of oil-colours." Now, who would not suppose that he had some valuable information quite apart from me: but this lady is no other than my own daughter, living in my own house, and daily preparing my palette, and who tells me the very same fact with regard to Rainier's medium; and so, too, I have found it. But when he asserts that this is entirely owing to pure silica, and that only, he strangely forgets what he had said in the commencement of his paper, or is ignorant of the composition of colours. Speaking of pure silica, he says, "I have ascertained that the presence of even a very small portion of alumina will vitiate the medium. This shows the absolute necessity of using pure silica." Yet he, after this, speaks of mixing the medium largely with alumina, and Naples yellow too, in its admixture with "the ochres, light red, venetian red, &c.," which contain, with most other colours in use, a very great proportion of alumina, which, according to him, vitiates his medium. Here is forgetfulness or ignorance, or both. "Don't try to appear wiser than you are" is no bad rule. It is no great wonder if I contradict myself. I have all along said that I am utterly ignorant of even the most elementary part of chemistry. I trust to what I am told by competent persons: I have foolishly trusted to incompetent. I have always disclaimed the being a discoverer. I am too ignorant to be one; but my friend Rainier was a discoverer, and nobody knows that better than Lieutenant Hardy, R.N., F.M.B.S. If I stand first in the school of ignorance, F.M.B.S. may be second best, and he carries it off with a better presumption.

He fancies that he has a talent at annihilating, and shoots forth his arrows pointed with all the deadly sins. Here he lets off one of spite. He steps out of his way to show that the use of borax is not new. Who said it was? Have not I published the statement that it had been long in use

in India, and combined with lac, an account of which may be found in the "Philosophical Transactions." Did I not say that the mode of purifying it had been long a secret in Venice and Holland, drawing the inference that it had been applied to the Arts. He says it is in Fielding's work—that I have not seen; but when he thinks to bring Field, a powerful champion indeed, against my poor deceased friend's fame, he knows not his man. Field will not take that part. He respected Rainier, and knew he *did* make discoveries, and calls the borax medium *his* medium; and here I offer a passage from a letter from Mr. Field, dated June 1839, in which he says, "Mr. P. Rainier I knew very well, as I did *his* medium of borax, and instructed him in the preparation of the lac vehicle mentioned in my Chromatography 14 or 15 years ago." Now what has he got by quoting Field's Chromatography? But as he doubtless thinks Mr. Field's testimony important, he may as well learn, though I believe he knows it already, what Mr. Field does think of the advantages of borax, that "pernicious ingredient" of R.'s medium. Further says Mr. Field, "I am accordingly ready to admit all the uses and advantages of Mr. E.'s medium (Rainier's), and go with him, in believing the old painters may have employed it. The Venetians in particular, who were at that time the *medium* between Europe and India, in the latter of which country borax had been employed in painting time immemorial." Mr. Field will, I am sure, pardon my publishing these extracts, from a letter bearing date June 1839. Yet, following up his own notion, if the not being new be a demerit, why silica is not new. I had myself used calcined flint 30 years ago. Rainier had used flint glass; and Lieutenant Hardy, R.N., F.M.B.S., knows that I had recommended him the use of China clay, for which I was indebted to my friend Mr. Coathupe, who thus described it:—"It is a natural combination of silica, alumina, and potassa, and it will form a glass by the application of great heat. I gave a little of it to just before he left England, who liked it so well that he begged all I had of it." And elsewhere he speaks of the rendering the paint exceedingly hard. Verily, Mr. Coathupe might with some truth declare himself a discoverer; for this recommendation on his part *was* original. He then knew nothing of what Rainier had done. Yes—but humbug will step in with "pure silica." Pure nonsense—for as I have shown alumina must mix with it, being in most of the colours in use. But then this "pure silica" more seemingly gives the claim to Mr. Hardy, and to make the seeming greater, he here doubles the quantity of it to that which he considered *his* perfect medium; as four is, unquestionably, twice two. But with this "pure silica" do not let him talk of Van Eyck, who could not have had pure silica, nor of Vigne, who says, fine sand. The "pure" is to appropriate. A very nice distinction indeed he makes, but without a difference, that *he* uses borax as a flux. A flux to what? to silicas out of 36? And did not every one use it as a flux—a flux into glass? Yes; glass, glass. Vitrified medium is the discovery; work it as he will, there is no other. Then he tells us that borax comes up on the surface of the picture. I showed him that it did, and how, and why—because I had used it carelessly, in immoderate quantity, and bodily mixed with the colours, and that too unvitrified, even uncalcined borax; and I suppose for that reason Rainier vitrified it. But he omits to say that, even so used, it may be removed with warm water. I never yet saw that effect with vitrified borax, and what does he say here that I have not said before him. The fact he thinks to bring against me was one told to him by me, nay more, published by me.

Here is another spiteful arrow. "It is impossible to admit J. E.'s claim to *originality* in respect to the introduction of water in oil vehicles." In the first place J. E. makes no such claim, and Mr. Hardy knows he does not; for J. E. has told *him*, and published it too, that the old masters did mix water with oil; and moderns too, for Stothard did. But Mr. Hardy is indebted to J. E. for the use of water, as he has used it, if there be any advantage in it. All that J. E. asserts is, that he suggested to Rainier the mixing with water, not as an original idea, but, as may be seen on reference to the passage, in conformity with the supposed practice of the Venetian masters. If water

did not too easily slip through his fingers, I dare say Mr. Hardy would make that his own too. He is welcome to it; and let it be "pure." So there the spiteful envious weapon lies; and like its fellows has done no harm.

Next comes a tangle of "pure" nonsense, in which nothing is clear but malignant intention. What can he mean by recommending "to the deep consideration of J. E. a whole ode of Horace," of which he incorrectly quotes one stanza?

"Crescit indulgens sibi dirus hydrops,  
Nec s' tim pellit, nisi causa morbi  
Fugit venis—(et) aquosus albo  
Corporis languor."

Let us have a schoolboy's translation—"The dire dropsy increases by self-indulgence, nor, unless the cause of the disease be driven from the veins, and the watery languor from the pale body, does it expel thirst." To my "deep consideration," and the "whole ode"—I have known it by heart these forty years, and really I must be pardoned if I doubt *his* knowing it at all; and if, seeing nothing whatever in it applicable, I suspect that, according to the humbug system, F. M. B. S. has applied to some Latinist for a quotation something about water, and the Latinist gave him one in which is "watery;" and that Lieutenant Hardy, R.N., though F. M. B. S., is not scholar enough to know the meaning, but down went the stanza with a boggling pen, and a hazard shot, that something or other in "the whole ode" might hit, if one stanza did not; and so, with an air of mysterious accusation, he puts scholars leg foremost, and it proves a halting one. I make this supposition in "pure" charity; for if he really can translate it and understand it, the only possible attack upon me must be a personal, and therefore a disgraceful one. The ode in Horace is against avarice. Certainly he was a pretty long while a visitor in my house, and might have measured my avarice and inhospitality. He knows best—then why did he remain? Oh, you will say, he cannot mean that—then what does he mean? Oh! exactly what the words say, that you are an ugly figure, and dropsical. Oh! is that it?—to quiz my figure—to ridicule my person, as pale and dropsical. It is not good taste—but learn from an enemy. So I shall call in a physician, taking especial care that he is not an F. M. B. S., "Fellow of the Medico-Botanical Society." But as some who read this may not take my word for the ode, nor think my translation fair, I will try to get a Smart's Horace, and give the literal in a note. And as, if he does not mean either of these things, he can mean nothing, and not know the meaning; and as I have at his request "*deeply*" considered it, I recommend it to his deeper study, together with a grammar, a dictionary, and a gradus, to show him how to make his quotation scan. And if, after due pains, he cannot be a *discoverer* here of any meaning, he may not be the worse for a little Latin. Whatever may be the examination of a candidate for the F. M. B. S., it is quite clear that Latin is not an indispensable qualification. In the meanwhile I must be content to stand, as represented in his paper, before the world as a horrible figure—a pale, bloated, dropsical monster, to which he kindly solicits me to put my name (which he knows very well), simply to subscribe to this monster-caricature of myself, to receive my last stab from his friendly hand, which had before completely blinded me—the last compliment of a guest—much after the fashion of Ulysses to the Cyclop—

"He ate his mutton, drank his wine,  
And then he poked his eye out."

Now, that is pretty well.

After this comes an arrow case-hardened in vanity—the very *hardhood* of presumption. When he "allowed" J. E. to publish his recipes and experiments, and to embody his extracts from Lanzi, he did not think I should "*repay his kindness with injustice*." What kindness does he mean?—(here is a kindness with a vulgar epithet). For if he intended by my use of them nothing more than that I should puff him as the discoverer and an F. M. B. S.; that I should be his secretary merely, or amanuensis, the *kindness* was to be all on my side, and where the injustice is every one can see. It feeds, however, a vain mind to let the world know of its doings in any way. It reminds one of an old epigram—

"To Tom I owed great obligation,  
Till on a day friend Tom thought fit  
To publish it to all the nation—  
Then surely Tom and I are *quit*."

An F. M. B. S. might be mortified to have it known that he owed anything to anybody. But it is of no earthly consequence to me. I should be glad to give him the extracts from Lanzi in the paper that followed, if I could—but really I cannot, so his claim must there end. Yet I will make the honour to him as great as I can, by telling him that he has supplied with extracts from Roscoe's translation, though not an F. M. B. S., a real *bona fide* M. A., and that at any rate stands for MASTER OF ARTS.

He presumes to think it a wondrous thing that I did not in 1839 publish Rainier's recipe, which he knows I had not in 1839; and when I had that recipe I sent it to him. The real wonder might be that he, Mr. H., did not publish it; yet no, that can be no wonder, it suited his purpose better not to do so. It was due, he gravely says, to the memory of his departed friend; then quoting me, "who could not speak for himself." He may be quite sure that I know much better than he does what is due to the memory of my departed friend; and, when occasion serves, what is due to a false friend.

Now here follows another shot of "pure" spite. My poor recipe of starch and oil can have nothing to do with this discussion. The audacious man snatches that too from me, and he is welcome. It is a pity he did not do it with a little more truth; and if he can stiffen his now somewhat limp presumption with my starch, let him wear it, and "with a difference." But in fact J. E. claims no such thing as starch grounds; and is now so disgusted with claims, that he would not call the apple he holds to his mouth his own, lest a discovery-monger should snatch it out of his hand, and claim the whole orchard because he had planted a pip. In the very passage in my paper of 1839, in which I speak of starch, I mention it as having been discovered in a ground of Titian's, as told by Merimée; and even when I proposed it as a vehicle to paint *with*, and which might have seemed a novelty, a *discovery*, I state that it is probable the Venetian masters so used it, or something of the same kind, in the passing from distemper to oil. As Mr. Hardy says, and I have said before him—  
"Palmam qui meruit ferat."

Let him construe that fairly, then the palm will be over poor Rainier's monument, and Lieutenant Hardy, R.N., F.M.B.S., if deserts are to be rewarded, will come in for a twig of quite another tree. That he will *claim* the palm, and does claim it, there can be no doubt. He is not the man to put his little light under a bushel; he will put it in the finest candlestick he can get, brass or silver, as it may be, his own or his friends; he will make it fit, by stuffing in paper, and plenty of it.

I follow *seriatim* all his attacks; if they appear not in very good order, that is not my fault. Blind rage is a sad unconnected and unconnecting fury. He finds for me an excuse, that I did not give my approval to Mr. Miller, the colour-maker, because I am not "*practically* acquainted" with the method of preparing his vitrified silica medium. If not practically acquainted, his formulae must be impracticable things; and how can he tell whether I am or not? Now the fact is, I am. But no one knows better than he does, that I might have passed myself off very fairly to Mr. Miller, or any other person, as wondrously wise in the matter. Nothing easier—"Pure silica, and silicated oil," a little mystified, would have done

\* "Silicated oil." What Mr. H. means by "silicated oil," it is difficult to say; but certainly it does not require silica to render oils glutinous; I have several bottles now by me, some prepared before Mr. Hardy's visit, and some while he was with me, clear, yet as thick as honey. I have made it with simple borax, calcined and uncalcined, with the vitrified medium, and with sugar of lead; but, I suspect, all these materials do no more than serve to purify, by breaking the pellicles, and drawing with them the impurities—to thicken, nothing is necessary but exposure to atmosphere. If the oil be exposed in a phial, in a very short time a thin ring will be formed at the top, of a clear dark brown. I have not met with any one who could tell what this ring is. I have now by me some beautiful linseed oil, perfectly clear, and very glutinous—in fact a varnish such as Leonardo da Vinci speaks of "thickened in the sun." In the next ART-UNION I will describe the process of making it, as given to me by the kind friend who made me a present of the oil.

all the business; such things are done every day. Besides, as I actually supplied Mr. Hardy, R.N. and F.M.B.S., with Rainier's recipe, and my real friend, Mr. Coathupe, had instructed me how to make it, I might have presumed to know something about it.

Then he assumes that he has caught me tripping in "inaccuracy." Although he must know better, because I say, in 1839, "We do not *certainly* know what Rainier's medium was, but we give it as we had it analyzed." He knows very well there is no inaccuracy here; it is extreme accuracy, in not pretending to know what I did not know; I wish others would be always as accurate. But how can he say that I knew not how to prepare the recipe which I afterwards discovered of Rainier's subsequently to that paper of 1839, and which I let him have, and which enabled him to make what he calls *his* own?

Now, it happens that in speaking of vehicles, he they invented by whom they may, I mean to speak with as much distrust as may be due to modesty and truth, so I said, "Let every artist try it for himself." The proposed vehicle may or may not turn out a good thing. I had said that Rainier may have rediscovered the old vehicle, "Veterem revocavit artem;" and in this spirit I spoke of his discovery, thus, "if it be one."

There are people to whom the name of a discovery may be of great importance, and such little people will fight for it, "per fas et nefas;" but the memory of my good friend, as all who knew him will testify, with his real and great acquirements, and strict virtue, will bear the qualifying expressions, which would be death to the general dealer in inventions and dreamer over old "Family Receipt Books" a century old. Yet upon these qualifying expressions does Mr. Hardy really charge me with stabbing, murdering the reputation of my dearest, best of friends, and that, too, when he is no more. He makes me a monster of ruffianism. His allusion to the "infamous Andrea del Castagno" is an atrocity—an atrocity not to be excused by a treble dose of maddening gas, working upon a brain not gifted with wit, and throwing off nothing but rage, whose impotent vehemence is but the greater and malignant folly. I murder the fame of my friend whom I so dearly loved and esteemed? I, whose sole offence against Mr. Hardy is, that I stand as his champion to avert stabs from another quarter. To set this atrocity in its glaring truth, let us see what this Andrea del Castagno, "the Infamous," did. "Andrea del Castagno, from his treachery called the Infamous, out of envy of admiration bestowed upon the works of Domenico, that he alone might possess the secret (Van Eyck's medium), stabbed his benefactor at a corner of a street, and escaped unobserved to his own house, and sat down composedly to work; and shortly after, for they lived together, Domenico was conveyed home to die in the arms of his murderer. This, Andrea, through remorse, disclosed upon his death-bed." Such was the "Infamous Andrea." I would not for the world so blacken Mr. Hardy. If there be an Andrea del Castagno in the world, surely I am not he. This is atrocious indeed; and no terms of animadversion can be too severe. I suppose Mr. Hardy can tell the English of the words he uses, "nome infame nella storia"—"a name infamous in history." If he does, I hope, long before *his* death-bed, he will feel some portion of Andrea's remorse.

I have done with Mr. Hardy, and would wind up in a lighter vein. I have gone through all his charges—his attacks. There lie his arrows of deadly hate, envy, spite, and malice, and I feel not a scratch. Let him pick them up; they may serve him for the next archery where any prize is to be snatched from the legitimate owner. For my own part I claim not an iota of merit of discovery, I only vindicate my friend: I am a discoverer of nothing but of other people's humbug, and have been foolishly enough coaxed out of the morsel like the cock in the fable; and that I have discovered; agreeable discoveries! and there it ends. So, Mr. Editor, you may, if you please, continue the controversy as you have called it, I will not. Mr. Hardy, R.N. and F.M.B.S., is henceforth no more to me than, as Falstaff says, "The man who died of Wednesday." Of his correspondence voluminous, his papers, his recipes, his formulae, (his extracts if I had them) I make a holocaust. Up they flare—pleasant is

the blaze to the eye, but they leave no agreeable odour; and there I dedicate the smoke to P<sup>R</sup>E<sup>S</sup>ENTATION, and that is, I am quite sure, all it is entitled to.

J. E.

[We have, as in duty bound to do, given insertion to the reply of J. E. But, hope, it will not be necessary for us to pursue the subject further; neither are we called upon to offer any opinion of our own in reference to it, inasmuch as our readers are as fully able to judge concerning the "discovery" as we are.]

#### FOREIGN ART.

ITALY.—ROME.—*Works of Art.*—Some very interesting publications are at present in progress here; among them we may notice especially, "Le quattro Basiliche principali di Roma" ("The four principal Churches of Rome.") The work is in folio, with descriptive letter-press; and it presents us with the most correct plans and elevations of the several buildings, with outline engravings of the interiors; and in the same style the chapels, altars, principal statues, and pictures are executed: to the extreme care, grace, and spirit with which the outlines of the pictures and statues are given, we should particularly direct the attention of the artist or amateur. They are, indeed, exquisite, conveying the expression and feeling of the original works in a wonderful manner. Signor Biglioli has drawn many of them; others are by Guglielmi, Bianchi, &c.; and several of the most beautiful architectural drawings are both drawn and engraved by Signor A. Fontana. The churches selected are those of St. Peter, of St. Paul, of St. John of Lateran, and Santa Maria Maggiore. The work is edited by Signor Valentini. "L'Ape Italiana," a beautiful periodical, also in folio, with letter-press description, published by the Academy of St. Luke, gives admirable outline engravings of works of Art in Rome, ancient and modern. Among those which sustain the glory of modern times, we may direct the reader's attention to a picture by Camucini—"The Entrance of Francesco Sforza into Milan, in 1460." How admirably is this picture composed; how varied and graceful are the attitudes; the horses, how full of life and fire, and how true the drawing! This work is under the direction of the Marquis Melchiori: it is also published at Paris with a French text, and title—"L'Abeille Italienne."

FLORENCE AND NAPLES—are not behind in splendid works: besides those formerly mentioned here, the first continues a series of line engravings of the whole of the "Pitti Gallery," and the latter boasts her "Museo Borbonico," which contains so many antiquarian treasures, and which still continues to be published in parts. The success of all these works has been, and is, great; they are diffused over Belgium, France, and Germany. The patronage given to such undertakings by the Kings of France and Belgium is indeed magnificent; we trust that in England the agents employed by the directors may meet an equally good reception.

Masini's Picture, "The Thirst of the Crusaders."—Here we have another fine picture by this young artist, representing the Crusaders exhausted by the fatigues of war, and a march across the desert, attacked by a yet worse evil, the pangs of thirst. Masini has taken advantage of all the varied effects which this subject offers; so fertile to a poetic and inventive genius. Fine grouping of the principal figures, well chosen episodes, beautiful countenances, and great attention to the costumes of the period, aided by good drawing and colouring, combine to give effect to the imposing scene. But the figure which predominates over the whole, and which breathes true inspiration, is that of Peter the Hermit, who, in this trying moment, seeks to rouse the courage of the Crusaders. Truly, Masini has recognized that the hermit of Amiens was in himself the spirit of the Crusades, or at least was their symbol; and wonderfully does this figure represent the idea. A poet, Gaetano Rosetti, seeing this picture, was so struck by its power, that he has composed three elegant cantos under the same title, which do equal honour to the poet and painter.

BOLOGNA.—V. Pizzoli's Cupola.—Very great has been the concourse of visitors, amateurs, and

others, to the church of San Marino, where a cupola has recently been painted by a young artist, called Vincenzo Pizzoli. He has adopted the style of Guido and Domenichino in the lightness of his transparent tints; in the lovely symmetry of the composition, and in the beautiful expression of the figures. The subject the painter has chosen, is a group of Angels poised on their wings listening to the prayers of mortals that they may bear them to heaven. The allegory is well expressed both in the esthetic and material parts of Art; presenting graceful movement, good drawing, pure style, bold foreshortening, but not of that exaggerated kind it is disagreeable to look at; in the four angles formed by the arches supporting the Cupola, the four cardinal virtues are painted.

Academy of Fine Arts.—Professor Lanci.—The celebrated Cav. Michael Angelo Lanci, professor of the Arabic language, and interpreter of the Eastern tongues in the academy at Rome called "La Sapienza," has been travelling over Italy in search of Arabic monuments for his great work, "Coptica," of which a part is already published. Many fine and important monuments have been found at Pisa, Lucca, Milan, and Bologna; and, of secondary importance, in Brescia, Verona, Vicenza, Venice, Padua, and Ferrara. Before his departure from Bologna, the Academy of Fine Arts sent him their honorary diploma as a mark of the gratitude all men deserve who with learning and pains, contribute to extend the empire, and encourage the study of the history, of the Fine Arts.

Bolognese Gallery.—His Imperial Majesty the Emperor of Russia has sent a Russian painter, formerly a pupil of this academy, to make a copy of that sublime picture called "La Pietà" of Guido Reni, for the Imperial Gallery of St. Petersburg. At the same time copies are to be made by other young artists, students of our academy, of the *chef-d'œuvres* of the Caracci, Albani, Cavedoni, Domenichino, Tiarini, in short of all the greatest masters of the Bolognese school.

FRANCE.—PARIS.—*Public Monuments.*—The municipal council of the city of Paris has ordered that the architecture of the Barrière du Trône should be completed: among other arrangements it is determined that the two great columns already erected should be fluted, and that on the one the statue of Commerce should be placed—on the other that of Agriculture.

Halls of the School of Fine Arts.—*Exhibition of the Models of the Tomb of Napoleon.*—Great is the concourse of persons of all descriptions that crowd to examine these models—above eighty in number. Some are the work of architects, others of sculptors. This is alone sufficient to make two rival camps of the exclusive partisans of the sister Arts; but, besides, there is the war of opinion arising from the individual friendships and enmities, personal and political tendencies, national, even provincial, prejudices of all who give their judgments, as well as the whims of some, and the different manner of observing works of Art in others. Listening to oral opinions, and reading the journals, it is almost impossible to guess what will be the result; to our case the Latin proverb may be truly applied, "*tot capita, tot sententiae*."

We shall not attempt the description of the various models—a most tedious labour; it has been best executed by M. Delecleuze, an artist and a man of much learning. He maintains, and it appears the king and the government are of his opinion, that the model of M. Visconti, the architect, somewhat modified, will be the one chosen. The plan of M. Visconti does not spoil or alter the architecture of the grand cupola of the Invalides; on the contrary, everything is preserved intact, as it now exists. Behind the altar he opens a space for a square staircase, with ornamented balustrades; this descends to a magnificent catacomb, opening to a gallery richly adorned, near the end of which is placed a plain square tomb of Corsican granite, on which is inscribed the name of NAPOLEON, without any ornament or other inscription. A little behind the tomb is placed a statue of the Emperor; and this gallery terminating in a tribune and cupola, just above where the statue is placed, the light falls for many hours of the day in such a manner that the whole gallery is in shade, except where the light strikes the imperial statue, producing a most imposing

and poetic effect—a sort of apotheosis. Some critics are of opinion that M. Visconti has not complied with the conditions of the program; and though we hold the opinion which we have mentioned above to be the general one, we give, on the other side, the judgment of two men of talent and taste; the one, Pierre Durand, treats the subject with *légèreté Française*, and sees it in a comic view; the other is the Comte d'Espagnac, who treats the matter seriously. We begin with the lively critic: "The competition for the tomb of Napoleon has inspired a crowd of sculptors, architects, and amateurs; the models are deposited in the great halls of the School of Fine Arts, where, from noon till dark, multitudes of the curious may be seen sauntering. Some of the plans are modelled in plaster, others are only drawings; amongst the whole we should select five or six as being very good—thirty as being ludicrous. Some are intended, according to the program, to be placed in the Church of the Invalides; others are of such grand proportions that the church must be placed in the tomb. Some would have the hero reposing under a shield, like a large tortoise-shell; others would raise a pyramid piercing the dome of the Invalides. The fault of the greater number is an excess of ornament. We have all sorts of genii, grenadiers, trophies, columns, and whole battles. The hero is represented in all his various fortunes, at every age of his life and glory. Here, a child in the cradle; there, a Roman warrior carrying on his horse, like a rider at the Olympic circus. Further on, a fallen Emperor in a reverie on the rocks of St. Helena. All this is more or less fine, more or less well executed; and we find many monuments to the glory of the Emperor, but few that belong to his tomb. The funeral character disappears under all this pomp of ornament. We have in one place, a triumphal arch; in another, a pendulum; here a temple of Victory, there a sugar box; here a spectre; there a Savoy cake. From the sublime to the ridiculous there is but a step, and many of these models will be preserved to the Arts as models for works in paper, sugar, and pastry." It is said M. Visconti has the taste of the powerful in his favour; his work offers beautiful parts, and unpardonable defects. We may mention, particularly, a door awkwardly placed in the pedestal of a statue; and connoisseurs find the light architecture of the crypt crushed under the masses above. The majestically simple monument of M. Dantan—the plans of Messrs. Batard, Felix Dobau, and Isabelle—and the two plans of M. Feuchere, have each many suffrages in their favour. After this serious appreciation, we venture to propose another plan, namely, that all the monuments be executed and placed together in the Champs Elysées, forming a Necropolis in honour of Napoleon. The artists, we trust, will approve us.

In the letter of M. Espagnac, we read as follows:—"It would be happy for us if France possessed, like Italy in old times, accomplished artists, such as Brunelleschi, Ghiberti, Donatello, and Michael Angelo. The question being to place a monument in the centre of a cupola, perfect in its proportions, and which is but an elegant appendage to the Church of the Invalides, the first requisite is respect to its fine forms and harmonious lines. This wish, we will not call it a regret, expressed, we think that the idea of a monument with crypts is a mistake in the present circumstances. The much-admired monuments in this style in St. Peter's at Rome, at St. Charles's in Milan, and elsewhere, are peculiarly in the region of pious influences; here, on the contrary, the symbol of the apotheosis decreed to the most renowned warrior of modern times, cannot be raised too high. However, this may be, it remains for us to consider, according to the system proposed, which of the numerous competitors have most succeeded in a field of which, not France alone, but this world, will be the judge. We shall begin our summary with the architects. In the conception of such a monument, the artist ought to seek to address the imagination powerfully, as far as is consistent with the unchangeable laws of science and good taste; for France will never behold without some recollections of the deepest kind—this superb monument which she dedicates to these heroic remains. I abstain from criticising the learned model of M. Visconti, because in it the conditions of the program are so entirely neglected, that it pronounces its own ex-

clusion. The plan of M. Labrousse is but a strange error. M. Garnaud has shown elegance and taste; but he has fallen into prodigality. I consider the plan of M. Bouchet the most attractive of the first category; but the style is not sufficiently severe. Have the sculptors obtained the object? I must confess that in this category are to be found plans, not only the most insane, but the most inapplicable, to the Dome of the Invalides. I must also add, that the execution of the greater part of the models shows such a degree of negligence, that one turns from them with contempt. Artists should remember that if they seem to consider their ideas unworthy some care in the execution on their own part, others will be very apt to do so also. I may mention one model to which the preceding remarks does not apply; and which, with a few rectifications, perfectly fulfils the conditions of the program: it is the work of M. Triquetti; the plan is simple, imposing, and severe; and it shows alike the study and skill and reflective mind of its inventor. On a quadrangular base, on three steps of Corsican granite, rises a majestic pedestal of the same material, supported by four lions, couchant in a grand style. The pedestal exhibits, in bas relief in bronze, the principal events of the life of Napoleon. The pedestal is surmounted by a sort of altar or bier, on which reposes, in a calm and sublime attitude, the great man, who has just expired, directing his last gaze and last wish to France; with one hand he supports the immortal civil code, the other rests on his glorious sword. The draperies surrounding the figure are standards. The statue to be in white marble, the height of the whole monument ten metres. Such is our opinion simply expressed, without wishing to impose it on any one. We only desire that the jury who are called to decide, and thus to become the organ of France, should deeply feel the weight of their mission; for the right execution of which, they are answerable to their country, to Europe, and to posterity."

M. Espagnac's opinion deserves much consideration; he has great taste and experience in the Fine Arts; having liberally employed a part of his fortune in forming one of the best collections of pictures in Paris.

We have thus placed before our readers the principal opinions in every sense, and we shall hereafter give the judgment of the committee, and a description of the monument chosen, which is not only interesting as a work of Art, but as marking an epoch, not only in the history of France, but of the world.\*

\* We have received from another correspondent the following notices of these Designs:—

"For more than a twelvemonth past the subject of this competition has occupied attention in the artistical circles of Paris, and numerous are the brochures to which it has given rise. In the first instance it was understood that an artist would be named by the government; in fact, the appointment was considered for some time as settled. A strong effort, however, on the part of the 'Société libre des Beaux Arts,' and of the whole of the French press, led to the abandonment of this intention, and ultimately to an invitation on the part of the Minister of the Interior to all artists to send in designs.

The instructions given were very meagre, and the time allowed was short; which points, coupled with an entire silence as to the probability of a public exhibition of the designs, and as to the parties to whom the selection would be entrusted, induced great discontent. This discontent was exhibited, amongst other shapes which it took, in a letter from M. Allier, sculptor, and member of the Chamber of Deputies, wherein was stated, that understanding the selection was left wholly with the minister, he refused to send a design which he had prepared. Ultimately the time for sending in designs was extended, much to the annoyance of those who had inconvenienced themselves and hurried to finish their drawings; and when the doors were finally closed against competitors, above 80 *projets*, exemplified by drawings and models, were found to have been received.

Immediately afterwards, to the great satisfaction of the artists, they were arranged in the galleries at the *Ecole des Beaux Arts*, and thrown open to the public, PREVIOUS TO ANY DECISION BEING MADE, or even any consideration being given

*Delaroche's Picture.*—When the models for the monument of Napoleon shall be removed, there will be opened to the public in the amphitheatre of the School of Fine Arts, the great picture of M. P. Delaroche, painted on the hemicycle, representing, in eight separate groups, the principal schools of painting—Italy, Florence, Spain, Germany, Holland, France, Poland, and Russia.

**BELGIUM.**—BRUGES.—Cornelius and his five friends, artists and literary men, stopped here to examine the masterpieces we possess. They were charmed with the works of Hemling, and the statue by Michael Angelo.

**GERMANY.**—VIENNA.—*New Town.*—It is the intention of the Government here to erect on a spot of barren ground at the eastern extremity of this city a new town, intended to contain sixty

with that end in view, a course so proper and so likely to lead to a good result, that it may almost serve to excuse the bungling character of the previous proceedings.

The collection on the whole is not so strikingly good as, reasoning from the acknowledged architectural talent to be found in the French capital, might have been expected: still there are many very beautiful designs amongst them, exquisitely drawn and developed. The want of some uniform scale is greatly felt in examining the designs, and certainly increases the chances against a just decision.

We should premise that the place selected as the site of the proposed monument is the church of the Invalides, beneath the great dome, and that a subterranean chapel was hinted at in the instructions as likely to be regarded with favour.

In No. 3, by M. Labrousse, this idea is adopted, as it is in many others, a subterranean chapel being formed beneath the dome to contain the sarcophagus of the Emperor, with the standards of Austerlitz at the head of it. Over the chapel, some few feet above the present level of the paving of the church, is placed an enormous elliptical shield of gilt bronze, about 50 feet long, supported on four eagles of white marble, and richly adorned on the surface. This is an exceedingly bold idea, and if carried out would produce a striking effect.

Greater than this in boldness, but altogether inferior to it in taste, is a proposal by M. Bidon, No. 34, to construct a ponderous bronze eagle, suspended beneath the dome by the tips of its outstretched wings, and bearing the sarcophagus of the Emperor in its talons, like Mahomet's coffin, between heaven and earth, to the imminent dread of those who might be walking below. The eagle, framed together in a catenary curve, would be nearly 80 feet from one extremity to the other.

M. Visconti has a very elaborate plan, No. 20, for a subterranean chapel, open at the top and surrounded by a balustrade. The entrance to the chapel would be in the *Cour Royale* of the hospital, from beneath a bronze equestrian statue of the Emperor, whence a long gallery passes under the whole of the church to the sarcophagus placed in the centre of the chapel. The expense of this design would be very great, and the effect would hardly be commensurate. M. Battard's plan (No. 1) has a similar entrance to a subterranean chapel. One objection to the arrangement is, that the monument is too much distributed, being made to consist of three parts, viz., in the court, in the vaults, and beneath the dome.

M. Duc (No. 11) exhibits a very charming design for a porphyry sarcophagus, within an enclosure of gilt bronze-work, surmounted by an elaborate canopy. In advance of the tomb are two sitting figures of white marble, the whole being surrounded by a marble balustrade.

M. Felix Duban (architect of the *Ecole des Beaux Arts*) has a very clever design of bold and severe outline, the character of which is too Grecian for the building in which it is to be placed; the same may be said of the design sent by M. Bouchet.

M. Victor Lenoir, M. Morey, M. Feuchere, and M. Isabelle, have each designs worthy of separate notice. Several have adopted the globe, with various adjuncts, as the main feature of their designs, and others have proposed colossal figures of enormous height, savouring more of the decline of Art than its fulness. There is, nevertheless, much to admire in the exhibition."

thousand inhabitants, with churches, exchange, theatres, courts of justice, and other public buildings. This town is to be called *Ferdinandstadt* (Ferdinandstown), the plans have been prepared by the Court architect, the Cav. Foester, who, before laying them before the Austrian Government, will send them to the principal academies of Europe, requesting their judgment.

**FRANCIS I.**—The Cavalier Marchesi has been invited here by his Imperial Majesty to execute a design for the monument in memory of the Emperor Francis. This distinguished artist will, probably, also have the charge of the execution of the work.

**DETMOID, Sept. 8.**—*Herman's Statue*.—The laying the foundation stone of the monument of Herman was a national festival, and celebrated with the greatest enthusiasm. The name of Herman awakens the love of country in every German bosom. The scene was impressive, and the *visas* to the prosperity of the people of Germany and their princes were overwhelming.

**BAYREUTH.**—*J. Paul Richter's Statue*.—A statue has been erected here by the King of Bavaria in memory of Jean Paul Richter, who passed his last days in this place. It is the joint production of Sevankhalen and Stiglmaier.

**PRUSSIA.**—**BERLIN.**—**NECROLOGY.**—The celebrated architect Tonlink, also the author of various publications and a painter of landscapes, is dead.

### THE TEMPLE CHURCH.

OUR readers are already aware of the unfortunate misunderstanding between the Benchers and their architect, Mr. Savage, with regard to the cost of the repairs and decorations, which led to the stoppage of the works a few months since, the dismissal of the latter, and the employment of Messrs. Burton and Smirke, to advise on the best course to be pursued in finishing the building. Whether or not Mr. Savage did mislead the Honourable Societies, we will not inquire; but we cannot avoid saying, that how they should have imagined for one moment that the fine scheme of restoration and adornment submitted by Mr. Savage could be carried out for anything like the ridiculous sum which it has been stated they proposed alone to spend, seems to us difficult to tell. Even, however, if they have been deceived, we cannot say we are very sorry for it: their revenue is enormously great, and the arts of decoration and the public at large will benefit by the mistake.

Under the direction of the newly-appointed architects the workmen are now again actively employed; and it may not be uninteresting to our readers to be told the present state of the building. The organ, and screen which separated the circular or western portion of the church from the part appropriated to divine service, is removed, as is also the whole of the modern pews, or pewing, which disfigured the body of the building, and obscured the bases of the clustered columns which support the beautiful groined roof. The small columns of each cluster, as well as those against the side walls, were found to be of Purbeck marble encrusted with whitewash, and have, in part, been repolished, and made to play their original part in the decoration of the building, by contrast of colours. The operation of polishing them has been a tedious undertaking up to this time; machinery, however, is now resorted to, so that the operation will be greatly expedited. The former floor, partly wood, partly marble, has been taken up, and the level of it being first altered, so as to expose the whole of the columns in their original proportions, will give place to painted tiles and tessellated pavement, in keeping with the other portions of the structure. All the modern monuments which disfigured the walls of this building, as they do of every other Gothic building where they are admitted (Westminster Abbey to wit), have been taken down, and will be placed in a sort of *Campo Santo*, formed to receive them, adjoining the church; at least this was the original intention, and it is to be hoped it will be adhered to. The stone-work, generally, is being restored throughout where defective; the east end, indeed, may almost be regarded as new. Some of the stalls with which it was proposed to replace the pewing, running from east to west on

the two sides of the church, as in our cathedrals, are finished. They are elaborately carved, at a great cost; whether, however, now that economy is talked of, the whole will be completed in the same manner remains to be seen.

The introduction of colouring to increase the effect of the architecture has excited much comment, and its propriety has been admitted by many only with great reluctance. The fact that the vaultings had been originally painted all over in very vivid tints led to the determination, in the first instance, to resort again to this mode of decoration. Mr. Willemt was the artist applied to in this department, and under his direction the vaultings of the whole of the eastern portion have been adorned with arabesques and armorial insignia in a very elegant manner. To make this perfect, however, and harmonize the whole, stained glass in the windows is absolutely necessary.

Painting, as an architectural accessory, has been employed from the earliest times, and is still to be found in Egyptian, Grecian, Pompeian, and Byzantine buildings. The churches of the middle ages appear to have been universally painted, at all events those of any consequence. At the Reformation whitewash cured what was considered an offence. Every day fresh vestiges of the use of colour are found; amongst which may be instanced those at Rochester Cathedral, Durham Cathedral, Barfreston Church in Kent, Shoreham Church, Sussex, and St. Stephen's Chapel at Westminster. In France they have recently commenced some important restorations of this description of adornment, namely, at the *Sainte Chapelle* adjoining the Palais de Justice in Paris (for which purpose a very large annual sum has been voted by the city), and at the Cathedral of St. Denis. In the latter case only the aisle and chapels of the choir are at present in progress; but more will be commenced as funds are available. The vaultings are blue, with, in some cases, silver stars, and in others quatrefoils, and trefoils of red and gold. The clustered columns are picked out in various colours, or are covered with leaves, branches, and shields in all tints, the capitals being gilt and heightened with red colour. Exteriously M. Hittoff, who was the first to prove that colour was used systematically on the architectural members of Grecian buildings, has employed it on the *Cirque National*, in the Champs Elysées; and at Munich it has also been used in a like position.

To return, however, to the Temple Church, we sincerely hope that the Benchers will not be scrupulous regarding expense, but will fulfil the expectations that have been excited in the public mind, by rendering this interesting edifice a perfect specimen, as well of ancient Art, as of modern decorative skill. The effect of one good model of this sort in the metropolis, would be to give an impetus to this department of Art, which could but prove useful. If they cannot complete it in two years, let them take four: let them do it piecemeal, in fact in any way they may think proper, provided they resolve to make a perfect thing of it, and never abandon the intention.

### THE FRESCOS OF MICHAEL ANGELO.

**STR.**—Having been lately favoured with a copy of an interesting document relating to Michael Angelo's principal work, the ceiling of the Cappella Sistina, I am anxious, through the medium of your valuable paper, to communicate it to those whom it may interest.

The Buonarroti family of Florence are in possession of several letters, sonnets, and other papers in the hand-writing of their great ancestor. Some of the more recently discovered are as yet unpublished. One of the most important of these hitherto inedited documents is Michael Angelo's acknowledgment of the first payment on account of his undertaking in the Sistine Chapel. The evidence thus afforded settles the often-disputed question when these works were begun, and serves to define the period in which the great artist was employed on them.

Ricordo chome oggi questo di dieci di maggio nel mille cinque cioto octo io michelagnolo scultore orricievuto dalla S. del nostro S. papa iulio sechodo duchati cinque cioto di camera e quali mi chotò messer charlino cameriere e messer charlo degliabititi

p choto della pictura della volta della chappella di papa sisto p laquale chomicio oggi allavoraro cho quelle chodicione epacti che apariscie p una scritta facta da mo S. Rmo di pavia essotto schritta di mia mano.

The spelling and abbreviations are to be read as follows:—

Ricordo come oggi questo di dieci di maggio nel mille cinque cento otto, io Michelagnolo Scultore ho ricevuto dalla Santità del nostro Papa Julio Secondo, ducati cinque cento di camera, e quali mi contò Messer Carlino cameriere e Messer Carlo Degli'Albizzi per conto della pittura della volta della cappella di Papa Sisto per la quale comincio oggi a lavorare, con quelle condizioni e patti che apparisce per una scritta fatta da Monsignore Reverendissimo di Pavia e sottoscritta di mia mano.

Michael Angelo, as is well known, finished and placed the bronze statue of Julius the Second, in Bologna, in December 1507. In May 1508, it now appears—a very short time before the arrival of Raffaele in Rome—he began the cartoons (*per la quale*) for the Cappella Sistina. When the ceiling was half done (at what period is uncertain) it was publicly shown for a short time. The whole work was completed, according to Vasari and Condivi, by All Saints' Day (Nov. 1) 1512; but from the Diary of Paris de Grassis, it appears that on Christmas Eve in that year the scaffolding was not entirely removed. The close of 1512 may, however, be safely assumed as the period of completion. Thus the great painter was employed about four years and a half. The twenty months assigned by the biographers above quoted (not to half the ceiling but to the entire work), must, of course, be understood to refer to the frescoes, as distinguished from the remaining two years and nine or ten months occupied by the preparation of the cartoons.—Yours, &c., \*\*\*

[The writer of the above letter, has sent us his name and address; we require no other guarantee for the accuracy of his statement; nor would any one of our readers if he were aware of the party from whom we have received it.]

### IMPROVEMENTS IN LITHOGRAPHY.

It is with the greatest satisfaction we have it in our power to announce the completion of an invention in the Art of Lithography, which, as regards richness of effect and variety of power, throws into distance, as it very likely will into disuse, all the recent improvements in this very elegant and popular mode of multiplying works of Art, and enable it to stand in competition with the best style of engraving; while, as regards the lower modes, it must take a position very much in advance. Engraving and lithography had their commencement in producing, singly, the two opposite extremes only of those qualities which, in part, constitute the rare excellencies of the works they had occasionally to imitate; and it would not be too much to say, that the polished and metallic effects of the early engravers were as far removed from fine art and nature, as are the dryness and opacity of the first masters in lithography.

Both qualities have, under judicious management, an intrinsic value. Etching grew to engraving on copper, and the present invention places within the now wide grasp of lithography, the hundred intermedia which lie between transparency and opacity, by which only can be produced a satisfactory imitation of the complicated, yet harmonious, transitions at these two opposite and latent elements of accomplished Art, and offer anything approaching an equivalent for the absent glories of a fine piece of colour.

The present developed power has not only been considered the philosopher's stone of all the eminent speculative lithographers, but the Académie Française, always on the *qui vive* in matters of Art, appointed a commission to report on the probability of such a desideratum ever coming within the range of lithographic process—who pronounced it impossible, and at variance with the nature of the art, and its chemical and mechanical resources.

Mr. Hulmandel, however, in defiance of this combined, scientific, and influential opinion, may be considered to have negatively prophesied its future realization; for in his early work on the subject of lithographic drawing, he says, Litho-

graphy being a chemical Art, and chemistry in its infancy, there is no knowing to what extent of improvement it is susceptible. In the mean time, Monsieur Mott, to whom succeeded Ducôté, of St. Martin's-lane, lost much time in its search; and, as many as twelve years back, succeeded in printing a few specimens of what he designated "washed lithography," that is, executed upon stone, with a lithographic ink, in precisely the same manner as that pursued in making a sepia, or any other monochromatic drawing on paper. The result was highly satisfactory for about eleven impressions, when the masses became confused, deepened, and ultimately printed an uniform black surface. One impression formed part of the attractions of M. Ducôté's establishment until some months ago; but to the untiring and indomitable research, and energy of purpose of Mr. Hulmandel have the many difficulties surrounding the subject ultimately succumbed; and he has already printed from one drawing as many as 900 impressions, with increased instead of diminished brilliancy and distinctness.

The process in which lies the very great advantage to artists (aside from the results which must ever, in a work of Art, take precedence of every other consideration), is the most simple that can be conceived; and an artist, or amateur, possessing any power on paper, may produce by it a clear and brilliant drawing on stone, in one-fourth the time formerly consumed in executing what one-half at least of the lovers of Art considered at best but a very humble apology for an engraving.

The great powers of this invention, we should say, from the specimens already produced, are only capable of full development in the hands of a consummate artist; and for its success with the public, which has always a thirst for things excellent, it is to be hoped that the introductory work will be conducted on a spirited and judicious scale, by which the inventor shall reap the *ecclat* so merited in struggling through a mechanical and chemical difficulty with so much perseverance. And as to its claims to public attention, if brilliancy is to be preferred to dullness, transparency to opacity, facile manipulation to a lame and hobbling execution, and an artist's own conceptions, rendered by his own hand, to the best even of imitations, then must this invention rank with, if not take precedence, of every other improvement of this age of progression connected with the Fine Arts.

#### VARIETIES.

**FINE ARTS COMMISSION.**—The following important information, dated Whitehall, Nov. 22, was contained in a *Gazette Extraordinary*, of Nov. 23: "The Queen has been pleased to appoint—His Royal Highness Prince Albert, K.G.; the Right Hon. Lord Lyndhurst, his Grace the Duke of Sutherland, K.G.; the Most Noble the Marquis of Lansdowne, K.G.; the Right Hon. the Earl of Lincoln, the Right Hon. the Earl of Shrewsbury, the Right Hon. the Earl of Aberdeen, K.T., the Right Hon. Lord John Russell, the Right Hon. Lord Francis Egerton, the Right Hon. Viscount Palmerston, G.C.B.; the Right Hon. Viscount Melbourne, the Right Hon. Lord Ashburton, the Right Hon. Lord Colborne, the Right Hon. Charles Shaw Lefevre, the Right Hon. Robert Peel, Bart.; the Right Hon. Sir James Robert George Graham, Bart.; Sir Robert Harry Inglis, Bart.; Henry Gally Knight, Esq.; Benjamin Hawes, jun., Esq.; Henry Hallam, Esq.; Samuel Rogers, Esq.; George Vivian, Esq.; and Thomas Wyse, Esq., her Majesty's Commissioners for inquiring into the best mode of promoting the Fine Arts in the United Kingdom." It is singular that in the *Gazette* of the 24th Nov. there was a very important alteration in the paragraph copied above, the following passage being substituted for that which appeared on the 22nd:—The list is printed as of "Her Majesty's Commissioners for the purpose of inquiring whether advantage might not be taken of the rebuilding of the Houses of Parliament for the promoting and encouraging the Fine Arts." This is, indeed, a very essential limitation of the powers of the commission. Nevertheless, it is a huge step in advance for the interests of the Arts; we accept it as an arguement that the Nation will be at length roused to do something; and can have no fear

that its first act will be to discourage, dishearten, and dishonour British Art, by importing artists from abroad. We have an additional guarantee that a decision so humiliating, if not ruinous, will not be made. To this Commission, not being a paid Commission, Sir Robert Peel could not with justice ask the leading British artists to assist; but this difficulty he has fully met by the appointment of C. L. Eastlake, Esq., R.A., as its Secretary, by which means the Commissioners will obtain the very best advice and information, and the artist be rewarded for his services—the Secretary and his assistants being of necessity paid. This nomination has given the greatest satisfaction to the artists of the United Kingdom. They are willing to trust their interests to a man who, besides being an eminent painter, a scholar, and a gentleman, stands so high for honour, integrity, and freedom from prejudice of any kind, that the shadow of a wrong motive can never be imputed to him. The only fear is that he may impair his health by his exertions to benefit his country.

**ROYAL ACADEMY.**—On the 1st of November, the members of the Royal Academy elected three associate-members:—J. R. Herbert, Esq. (historical painter); Watson Gordon, Esq. (portrait painter); P. Mc Dowell, Esq. (sculptor). The selection appears to have given very general satisfaction. Mr. Herbert was certainly foremost among the candidates, and we believe his election was all but unanimous. Mr. Gordon holds, and is entitled to, high professional rank; and although, certainly, not equal to his accomplished countryman, Mr. Grant, there are very few, if any other, who could with justice have been preferred before him. Among the rising sculptors of our age and country there are, perhaps, none who give better promise than Mr. McDowell: his works at the last exhibition were such as could not have failed to secure his advancement. Three appointments, therefore, more entirely satisfactory could not have been made. We trust, with full confidence, that the judges by whom professional honours are to be distributed will always act with equal discrimination and impartiality, and not permit the judgment to be biased by personal and private regards.

**THE ARTISTS AND AMATEURS' CONVERSATION.**—The arrangements for the season 1841-2, have been made; and the first meeting of the members will take place on the first Wednesday of December. There were seven vacancies, occasional by retirements; and seven gentlemen, five artists and two amateurs, were elected in their stead. Mr. Sidney Cooper is again President, and Mr. Henry Graves, for the fourteenth time, kindly undertook the duties of Hon. Sec. We have often had occasion to comment upon the advantages conferred by this and similar societies (having referred to this, more especially, as the one with which we are best acquainted); they bring together, in a very pleasant and profitable manner, persons of like tastes, habits, and pursuits, and who, but for the opportunities thus supplied them, would rarely meet. Social intercourse is thus promoted, and objects of still higher importance are attained; for occasions are found for communicating to each other the results of study and experience; and persons about to appear in public may here, in comparative safety, test the effects they are likely to produce. We shall, consequently, consider it part of our duty to be regular in our attendance at these monthly meetings.

**SIR FRANCIS CHANTRY, R.A.**—The world, and Great Britain in especial, has sustained another loss, which at present appears irreparable. The greatest of our modern sculptors died suddenly on Thursday, the 25th. We must, this month, content ourselves with a bare announcement of the melancholy fact.

**DRAWINGS BY M. ANGLO AND RAFFAELLE.**—The collection of drawings by these wonderful men, which was formed by the late Sir Thomas Lawrence with great judgment and without regard to expense, are in danger of being dispersed and passing out of the country, the owners of them having failed in the arrangement for their purchase, which was commenced with the trustees of the National Gallery. Several of them have been sold to the King of Holland, and it is clear that unless some strong effort be made to retain them amongst us, other of our foreign neighbours more

sensibly alive than we are to the importance of the Fine Arts generally, and of the value of this extraordinary collection in raising the character of Art amongst the people by whom they might be studied, will speedily possess themselves of those which remain. The collection now consists of sixty drawings by Michael Angelo, and one hundred and fifty by Raffaele, all in good order, framed and glazed for exhibition, and would form a gallery, the value of which would be inestimable. Warmly alive to the importance of these works, and to the necessity of preventing their dispersion if possible, a meeting was held in Oxford at the beginning of last month, and a resolution passed to endeavour to obtain them for the university by subscription. The sum required for their purchase is ten thousand guineas. About a thousand pounds were contributed within two days after the meeting, and there will be little difficulty in raising the whole amount, if the lovers of Art throughout the kingdom will give their aid to the praiseworthy effort of the university in ever so small a degree. For this aid we call urgently on our readers, entreating them not to allow such an opportunity of improving the public taste, and raising the character of the English school of painting, which the acquisition of these drawings will afford, to pass away for ever. England has enough already to reproach herself with in this respect. The Randolph Galleries, now in course of erection, will be an admirable place of deposit for these drawings: indeed, in all points of view, since it seems we cannot have them in the metropolis, where they *ought* to be, Oxford, the nursery of mind, and training-place of the rising generation, is peculiarly the city for their reception.

**PUBLIC MONUMENTS.**—We print a return of the number of monuments erected in Westminster Abbey and St. Paul's, at the public expense, from the year 1750 to the present time; specifying the names of the persons in whose honour they were erected, and the sums paid for each, with the aggregate amount:—*Westminster Abbey*—General Wolfe, 3000*l.*; Lord Chatham, 6000*l.*; Lord Robert Manners, Captain Bayne, and Captain Blair, 4000*l.*; Captain Montague, 3675*l.*; Captain Harvey and Captain Hutt, 3150*l.*; William Pitt, 6300*l.*; Spencer Perceval, 5250*l.*—*St. Paul's*—Lord Rodney, 6300*l.*; General Lord Heathfield, 2100*l.*; Earl Howe, 6300*l.*; Major-General Dundas, 3150*l.*; Captain Faulkner, R.N., 4200*l.*; Earl St. Vincent, 2100*l.*; Lord Duncan, 2100*l.*; Captain Burgess, R.N., 5250*l.*; Captain Westcott, R.N., 4200*l.*; Captains Moss and Rivers, R.N., 4200*l.*; Sir Ralph Abercrombie, 6300*l.*; Lord Nelson, 6300*l.*; Lord Collingwood, 4200*l.*; Captain Cooke, R.N., 1575*l.*; Captain Duff, R.N., 1575*l.*; Captain Hardinge, R.N., 1575*l.*; Major-Generals Mackenzie and Langworth, 2100*l.*; Lieutenant-General Sir John Moore, 4200*l.*; Marquis Cornwallis, 6300*l.*; Major-General Houghton, 1575*l.*; Lieutenant-Colonel Sir William Myers, 1575*l.*; Major-General Bowes, 1575*l.*; Major-General Le Marchant, 1575*l.*; Major-Generals Crauford and Mackinnon, 2100*l.*; Major-General Sir Isaac Brock, 1575*l.*; Colonel Cadogan, 1575*l.*; Major-General Hay, 1575*l.*; Major-Generals Gore and Skerrett, 2100*l.*; Major-General Gillespie, 1575*l.*; Major-General Ross, 1575*l.*; Lieutenant-General Sir Thomas Picton, 3150*l.*; Major-General Sir William Ponsonby, 3150*l.*; Major-Generals Pakenham and Gibbs, 2100*l.* Aggregate amount, 132,175*l.*

**GREENWICH HOSPITAL.**—With respect to the free admissions to this institution, a singular anomaly has existed; soldiers having, during many years, been admitted free of charge to see the Painted Hall, while to *seamen* the same privilege has been denied. This unjust regulation was in force up to the 7th May last, when, by an order of the Lieut. Governor, it was directed that seamen should be admitted gratis. The Painted Hall and Chapel are exhibited on "week days" from seven in the morning until sunset; and on Sunday afternoons, after one o'clock, on payment of three-pence by each person for admission to each place. The Painted Hall, which was decorated by Sir James Thornhill, contains a collection of paintings, consisting of representations of naval actions and portraits of admirals and naval men, some sculpture, and other objects interesting to the public, and chiefly to persons in the naval service.

The annual amount of exhibition money during the last four years, averages something above 1300*l*. In 1837, it was 1381*l*. 3*s*.; 1838, 1288*l*. 4*s*.; 1839, 1259*l*. 2*s*.; 1840, 1305*l*. 7*s*. 6*d*. These are the orders:—"7th May, 1841: *Mem*. It is the Lieutenant Governor's directions that sailors, as well as soldiers, be permitted to see the Painted Hall and Chapel free of any expense. The boat-swains will use their discretion in seeing that they are sober, and conduct themselves orderly.—(Signed) J. Rivers, Adjutant-General.—To the boatswain of the Hall and Chapel." The verbal orders given to the boatswain of the Painted Hall are as follows:—"First, No naval officer, except in uniform, to be admitted without paying. Second, No one to be admitted free, except by a card from an officer of the institution, with the date of the month. All pensioners allowed in on a Tuesday, and at all times with their friends. Soldiers admitted free. Three-pence to be charged to each visitor for the benefit of the school." The boatswain's orders relative to showing the Painted Hall are as follows:—"The porters are directed to take three-pence each from all persons, and as much more as such persons may think proper to give for showing this Hall.—Extract from the Minutes of Board of Directors, 1st October, 1791. In the execution of the above duty, the porters and their assistants are required by their instructions to be civil and respectful to all strangers.—R. G. Keate, Governor."

**HAMPTON COURT.**—It is of course generally known that this collection consists rather of curiosities than of gems of art. With the exception of the Cartoons, which by the way are exhibited in a very bad light, there is little to gratify a cultivated taste, and perhaps even less to satisfy an ordinary one. With the exception of a few which are really works of price, the pictures at Hampton Court are the refuse of all the royal palaces. The collection at Windsor is really superb; and when George the Fourth was improving it the best pictures were removed from Hampton Court to contribute to its enrichment, and these have never been returned. The national collection is poor in Flemish pictures, but there are none even of this school at Hampton Court that would advantage the Gallery; the best of them having been added to the collection of George the Fourth, now at Buckingham Palace, and which is in the excellence, if not in the number, of its works equal to any other in Europe. The fees for visiting the apartments at Hampton Court have been abolished since November 1838. The present regulations are:—"1st. The apartments are open to the public from ten o'clock in the morning until six o'clock in the evening, during the summer months; and from ten o'clock to four o'clock during the winter months, except on each Friday, when they are closed, in order to be cleaned, and until two o'clock on Sundays. 2nd. There is no distinction whatever as to admittance, every one enjoying the privilege of entering the rooms during the above-mentioned hours, and of continuing in them till they are closed. 3rd. There are seven attendants and two porters: the duty of the latter is to take charge of the sticks, umbrellas, &c., and to return them to the several owners. No fee or any perquisite whatever is allowed under any pretence to be received from the public by any of the paid servants. 4th. The attendants are required to show the utmost civility to every one; not to enter into conversation unless they are first spoken to, and to prevent any improper or disorderly conduct. 5th. Any student or artist, or indeed any individual may procure an order to copy pictures, on application to the Chief Commissioner of her Majesty's Woods, &c., or to the Deputy Surveyor for the time being. Every facility is afforded to persons desirous of copying pictures, by supplying them with stages, &c. if required."

**EGYPTIAN TYPE.**—We have lately had our attention called to a new and most curious invention in the art of typography, which has been completed by Mr. Nies an enterprising publisher at Leipsic, and which promises to be of the greatest service to a most important branch of literature; we allude to the reproduction of Egyptian inscriptions by means of moveable types. It is obvious that this will materially reduce the enormous expense attending the publication of works on the palæography of Egypt, an expense which has rendered them so costly as to be inaccessible to a vast ma-

jority of the literary world. The trustees of the British Museum are now publishing in lithography fac-similes of the papyri in our national collection, and the inscriptions of the museum at Leyden are being given to the world in the same dress; but the price of these works renders them scarcely more easily or generally to be consulted than the originals themselves. Would it be too much to expect that new and cheaper editions may be issued by means of Mr. Nies' admirable invention? It should be remembered, that it is of the utmost importance that the Egyptian inscriptions in the various public collections should be placed in the hands of the many who are willing to study them, but have not the means. Our informant tells us that Mr. Nies has already cast more than 3000 types, and that he is continually adding to their number as fresh characters are discovered: the types are well designed, and the impression is very sharp and clear. We may add that Mr. Nies has also cast founts of types of the Hieratic and the Euchorial or Deuotic hieroglyphs, as well as of many other characters which till now have not been represented in typography.

**"CASTLES AND ABBEYS OF ENGLAND."**—We see announced under this title a work by W. Beattie, Esq., M.D., author of "Scotland"—"Switzerland," &c., which promises to be highly useful to all who feel an interest in the ancient architectural remains of England. According to the advertised contents, its descriptions extend to antique furniture, statues, fountains, and other fragments of Art.

**THE FLOATING BREAKWATER.**—We purpose next month to give a notice of this admirable invention of Captain Tayler, whereby it is estimated that 180 harbours of refuge may be formed, at an expense not exceeding that of constructing three according to the old method. Operations are to be immediately commenced at Brighton, in furtherance of which the Admiralty have granted the use of moorings, anchors, &c. The article will be illustrated with cuts.

**DISCOVERY OF OLD PAINTINGS.**—A discovery has been made of some old paintings, which are at this moment highly interesting on account of the pending subject of the decorations of the Houses of Parliament. They exist upon the wall of the Chapter-house of Westminster Abbey, and were first observed by Mr. Devon. The subjects are of course sacred, like those of all the paintings of the period of their execution, and illustrate the life of the Evangelist St. John. Much care has been bestowed in the execution of the heads; but otherwise the figures, which are small, are extremely ill drawn. The colours are still powerful, and some of the abundant gilding is yet in tolerable preservation. A portion only of the wall is exposed, and it is probable that the remainder may describe the leading events in the life of our Saviour, or in those of some of his disciples. The Chapterhouse has been fitted up for keeping records, and it is by the removal of the shelves and boarding that these paintings have been exposed.

#### PUBLIC EXHIBITIONS.

**POLYTECHNIC INSTITUTION.**—This deservedly popular Institution presents to the visitor a mass of information which a very long period of reading would fail to supply. Practical science is here familiarized, and almost every department of industrial Art is illustrated. The lectures on the eye, the steam-engine, and the electrotype, describe in a plain style the causes of results so common, as to escape the inquiry of ordinary observers; and the natural and artificial curiosities amount in number to 1599; even a brief account of which would form a synopsis of the history of the earth, and of every known Art. The submarine operations, which have been for some time past in action against the wreck of the Royal George, are practically illustrated by sub-aqueous explosion—a model of a ship being charged with gunpowder, sunk to a considerable depth in the canal, and blown to pieces through the agency of voltaic electricity. The model of the Undercliff of the Isle of Wight, executed by Captain Ibbetson, affords an extraordinary example of industry and perseverance. The geology of this section of the island is remarkable, as presenting singular appearances of volcanic action;

and so accurately has the surface been surveyed, that an inspection with a magnifying-glass is necessary to the due appreciation of the work.

The series of dioramic pictures comprehends many novelties, one of the most striking of which is a 'View of the Tower from the Thames.' The first effect is that of daylight: the river is occupied by merchantmen, small craft, boats, &c., backed by the wharves and ramparts, above which rises the White Tower. The light gradually fades with the most perfect illusion—twilight comes on, and finally night ensues, when every prominent object is defined in strong shadow. A gleam of light is soon discernible arising from the extreme back ground; this strengthens into a lurid glare, and at length a fearful conflagration is represented with much force of effect. This department of the Institution cannot fail to attract its share of visitors, for the views are selected and varied with much taste and judgment. Some of the interiors are admirably represented; we may instance particularly that of a Cathedral, which is first shown in vacant solitude, and afterwards filled with a devout congregation. Among the other interesting scenes were the 'Tomb of the Capulets,' 'The Campo Santo at Pisa,' 'Interior of the Church of Santa Maria at Naples,' 'The Grand Cave of Ellora,' &c., &c. Other departments of this most useful Institution we shall take future occasion to notice.

**BURFORD'S PANORAMA.**—This Exhibition consists of three grand views; two of which, those of Damascus and Jerusalem, we have already noticed. The third represents the 'Bombardment of Acre' at the moment of the explosion of the magazine. The point of view is within the walls of the town, close to the seaward fortifications, over which the spectator sees the allied fleet drawn up in line, and partially veiled by smoke. The wall on the sea-side of this famous stronghold is not so high as might be imagined from accounts we read of its strength and formerly-supposed impregnability, as the guns on the ramparts ranged no higher than the upper-deck guns of the flag-ship. Parties of the Egyptian artillery are seen working the wall pieces, surrounded by the dying and dead. Bulwarks for the protection of the garrison were formed of piles of bags filled with sand; but these, in the heat of the action, obstructed the movements of the men; for being struck by the shot from the ships, they so encumbered the embrasures, as to render the working of the guns impossible, and create a confusion which conveys the idea of a battle lost.

The views of Damascus and Jerusalem have been highly popular, as the subjects, and masterly treatment, have merited. The former picture is about to be withdrawn, and to be replaced by another the subject of which is yet unannounced.

**THE COSMORAMA.**—Many of the views of this exhibition possess great historical interest. They are 'The City of Baden,' 'The Temple of the Sun at Palmyra,' 'The City of Grand Cairo,' 'The City of Berne,' 'Interior of the Pantheon at Paris,' 'The Ruins of Paestum in the Kingdom of Naples,' 'Monastery of the Grand Chartreuse near Grenoble,' and 'The Iron Gate at Antioch, in Syria.' The view of Grand Cairo like that of so many of the Eastern cities, presents the appearance of a city of tombs—"a place of skulls." The foreground is strewn with ruins, and there is little to remind the spectator of a habitable locality, save on one hand a mosque and the other a citadel. The dilapidated foreground gives repose to the distance, where are discernible to the very verge of the horizon the waters of the Nile, during the periodical inundation, covering afar the face of the country. Baden is seen embosomed among hills under the shadowed effect of a coming storm. By a dioramic arrangement, spots of the landscape are occasionally lighted by fugitive gleams of sunshine so skillfully managed as to approach the force and reality of nature. The Interior of the Pantheon is a picture faultless in execution and natural truth. The light is much subdued, yet the whole of the architectural detail comes forward with such force as at once to show that the picture has been painted on the spot. These pictures are all painted in oil, and seem to be coloured strictly after the nature of the scenes they represent.

## GLASGOW WELLINGTON MEMORIAL.

ON the 27th of October, at twelve o'clock, was held, in the Portico-room of the Royal Exchange, Glasgow, a meeting of the General and Sub-committees of the Glasgow Wellington Memorial, called, at the requisition of thirty-three of their number, by Archibald M'Lellan, Esq., sub-convenor, for the purpose of considering the means of carrying out the following resolution adopted at a previous meeting, viz., "That an absolute identification of the person, features, and expression of the Duke of Wellington, in the prime of his life, in the statue to be erected of his grace in this city, is expected by the subscribers, and will form its chief value in the eyes of posterity." This meeting was convened at the instance of the above number of requisitionists, who entertained a well-grounded impression, that the work of Marochetti outraged the expressed terms of the resolution, and they were therefore of opinion that it ought not to be accepted.

Previously to the chair being taken, Mr. Alexander Morrison read, in the names of himself, Mr. Dalglish, and the other gentlemen forming the majority of the sub-committee, a protest "against the *legality*" (?) of the meeting, and setting forth the inability of such an assembly to question the exercise by the sub-committee of those powers which in former meetings had been so amply delegated to them.

Mr. M'Lellan stated that, in compliance with the wishes of many gentlemen interested, he had called the meeting, observing that he could not on the instant frame replies to the contents of the protest. He condemned the proceedings of the protesting party, as showing a disposition to prevent an investigation of abuses on the part of certain members of the sub-committee. He deprecated legal proceedings, which might develop a useless tissue of difficulty and complication; but he hoped that the committee would that day resolve, that it was their strict duty to enter into the merits of the unfortunate discussion, and deliver a cool and deliberate decision between the parties into which the sub-committee was divided.

After a brief discussion on the subject of the election of a chairman, it was proposed and carried, that the Dean of Guild should take the chair.

The Dean of Guild took the chair accordingly, when a copy of the protest above-mentioned was put into his hands by Mr. Morrison. The Dean, in inviting the proposition of resolutions, expressed a hope that the proceedings of the day would lead to such an issue as should set aside the necessity of having recourse to legal proceedings.

The business of the meeting was opened by a motion on the part of Mr. W. Stirling, to the effect that the instructions given to the sub-committee be read; which having been acted upon, Mr. W. Stirling moved the following resolution:—

"The meeting having heard read the instructions to the sub-committee, given at the meeting of the general committee on 20th Nov. 1840, of which instructions a copy was transmitted to Baron Marochetti; and considering, 1st, That the model furnished by that artist does not represent the Duke 'either in person, features, or expression,' as was required by these instructions; 2ndly, That the bust ordered by the sub-committee, so far from representing the Duke in the prime of life, professes to represent his grace at his present advanced age; 3rdly, That the sub-committee have themselves disapproved of the likeness, and instructed Baron Marochetti to alter it, recommending him to 'follow out the instructions of the general committee as to the identification of the Duke in the prime of life from the bust which he has now made, and the other materials which he may obtain; 4thly, That the sub-committee have also disapproved of the 'details of the monument' and 'dress of the figures,' and have been obliged to recommend to the artist in these particulars, 'to attend to the suggestions of the sub-committee, and particularly to those of his Grace the Duke of Hamilton, of which last no record appears to be in existence; and lastly, That 'a series of recommendations for the sculptor, to be considered along with such others as any member of committee may suggest,' are still lying on the table of the sub-committee for consideration—the meeting are therefore satisfied that the model (which has been sent away by the

Convenor without authority) was not according to the judgment and conviction of the sub-committee itself, and was not, in point of fact, in conformity with the instructions given to the artist; that, in so far as the model and bust represent the Duke at an advanced age, they are in direct contravention of the resolutions of the general committee, and of the instructions given to the artist, while mere alterations and amendments suggested by the sub-committee, and plainly implied in the numerous 'instructions' and 'recommendations' of the sub-committee, and individual members thereof, afford palpable evidence of a want of skill in the artist, which renders his employment to execute the statue highly inexpedient."

Mr. John Pollock seconded the resolution.

Mr. Robert Findlay defended the proceedings of the sub-committee. He declared the statements made with respect to the bust sent by the Baron Marochetti to be devoid of truth, and denied that there was any foundation for the statement that the horse was incorrect in design. He alluded to a pamphlet written by Mr. M'Lellan, which he characterized as intemperate. He attributed the opposition to the employment of the Baron Marochetti to motives of jealousy; he vindicated the proceedings of the sub-committee; and concluded by an attempt to demonstrate that, from the ample powers vested in the sub-committee, they were entitled to proceed as they had done, in concluding an arrangement with the Baron Marochetti.

The correspondence which had taken place during the early proceedings of the committee was then called for, when the letter addressed to Marochetti on the 22nd of April was read, as also one from that artist in London, bearing date May 22; and a third to Mr. Dalglish. A letter from Mr. Banks of the 19th of May was also read, after which some discussion arose on the impropriety of omitting to submit the correspondence to the consideration of a general meeting. The letters were replied to on the plea that there was no time for summoning a meeting.

Sir W. M. Napier asked why the sub-committee were not called together on such an occasion; to which Mr. Lamond replied by stating, that he had communicated the letter to Mr. Dalglish, by whom he was requested to write to the Duke of Wellington.

Mr. Findlay then defended at length the measures of the sub-committee, and lauded the Baron Marochetti as a distinguished sculptor, quoting, in support of his advocacy, the opinions of many competent judges.

Mr. M'Lellan regretted his difference of opinion with Mr. Findlay, and proceeded to question many of that gentleman's statements. He quoted the resolution which he contended had been set at naught by the sub-committee. Nothing, he said, could be more decisive or perspicuous than the terms of that resolution; and no man would presume to say, that the model of the statue which had been placed before them contained such an identification of the person and features of the Duke of Wellington as was demanded in the resolution; that the abortive *caput mortuum* which had been exhibited, representative of the mere remains of what that noble man once was, would be of no value in the eyes either of the subscribers, or of posterity. A false impression influenced the majority of the sub-committee—they believed themselves vested with the full power of selecting an artist and approving his work. But this was a delusion; for their duties were defined by the general committee, and they were as imperatively bound by these instructions as if they were regulated by an Act of Parliament. He had heard with surprise from Mr. Findlay, that the model was not expected to be a likeness, which was proceeding immediately in the teeth of the resolution. What was the use of a model at all if it was not to be a likeness of the work when finished? It was called by these gentlemen a sketch, but they had no instructions to procure a sketch; the artist was to produce "a model of the statue he proposes."

Much do we lament that a want of space prevents our following Mr. M'Lellan through his very able dissection of the proceedings of the men who have lent themselves to this infamous business. He has, single-handed we may say, fought the battle of British Art; and had won it too, but for the Hunnish ignorance and cowering servility

of this patriotic committee. He alone has watched keenly the advancement of the business, and he alone seems to have possessed sufficient knowledge of Art to know what was wanted in a statue of the Duke of Wellington.

Mr. A. Morrison then moved an amendment to the effect that as it was the opinion of the meeting that the sub-committee had carried, and was carrying the injunctions of the general committee into effect, that the matter be remitted anew to the sub-committee, and that they be recommended to proceed in procuring a statue of the Duke without delay.

Mr. Bain seconded the amendment.

After a few words of explanation from Mr. M'Lellan, a division took place, when there voted—For Mr. Stirling's motion: Messrs. A. M'Lellan, Charles Hutchinson, George Mackintosh, A. Ranken, William Stirling, John Pollock, W. L. Ewing, J. F. Dennistoun, J. Neil, D. Goodsir—10.

For the amendment of Mr. Morrison: Messrs. Thos. Spiers, D. Walkinshaw, A. Morrison, D. Ferguson, James Dalglish, jun., James Smith, William Aird, William Middleton, James Wingate, James Bogle, Major Monteith, Alexander Fletcher, John Bain, R. Baird, J. Browne, R. Findlay, A. S. Dalglish, R. Lamond, A. Alison, James Campbell, of Moorepark, J. D. Hope, J. Houldsworth, H. Dunlop, K. Finlay—21.

The amendment was then carried by 24 to 10.

Mr. Mackintosh then protested against the decision, to which Mr. M'Lellan and Mr. Stirling adhered.

The following is the protest given by Mr. Mackintosh:—

"The resolution proposed by Mr. Stirling having been negatived, and no redress to be obtained from this meeting, I hereby, in my own name, and that of the minority now present, and of other members of the general committee and subscribers who may adhere, protest, that the whole proceedings complained of by the minority have been illegal and incompetent, and in violation of good taste and feeling; that they form a gratuitous insult to the British School of Art; that they will tend to compromise injuriously and permanently the honour and reputation of this great city; that they are likely to occasion great dissatisfaction to the majority of subscribers; and that they will have a most pernicious influence in marrying the success of any future subscription for local or national objects. I protest, moreover, that it does not appear to have been the intention of the subscribers, in conferring the general and formal power of naming sub-committees, to authorize the general committee to delegate to a sub-committee the important duty of not only selecting an artist, but also of deciding conclusively regarding the statue which he is to execute; that, to enhance this irregularity, the sub-committee actually delegated to irresponsible individuals of their own body the onerous powers of preparing indefinite, and perhaps vital, alterations on the work; that through these irregular channels, Baron Marochetti has been instructed to execute the statue without the sub-committee having ever seen a model of what it is to be; and, in particular, he has been required to attend to the suggestions of the Duke of Hamilton—which suggestions are, as yet, unknown—and, so far as this meeting knows, may involve a total alteration of the statue; and, finally, that so late as the 4th of August last, when the majority of the sub-committee ordered a draft of the contract with Baron Marochetti to be prepared, Mr. Sheriff Alison 'laid upon the table a series of recommendations for the sculptor to be considered, along with such others as any member of the committee may suggest at the next meeting of this committee,' which recommendations have never yet been taken into consideration. For the foregoing, among other reasons, I protest, that I, and those who adhere to this protest, hold ourselves as not implicated in the results of the proceedings complained of; and that we shall be at liberty to adopt such measures as we may judge proper, for obtaining redress, reserving to the general body of the subscribers, with whom the decision of this question must ultimately rest, to vindicate their own views and assert their own rights."

How conspicuously ridiculous do men become in adventuring upon duties for the discharge of which their habits of life have never fitted them. This untoward employment of a "little leisure"

by the gentleman of the majority, has gained for them a celebrity, of which we cannot think any one of them so profligate, that he will not in his cooler moments be heartily ashamed. They are of course misled—a set of intelligent men would not have answered the purpose of those who pull the strings in this case. These pseudo-sages are only playing tail under the motto

“Chapeau bas—chapeau bas  
Au Marquis de Carabas.”

They are adhering to the wrong Duke, and in justification of such adherence, we would that they would publish their reasons. But not one of them can offer a plausible pretext for the part he has taken in this nefarious transaction, originally administered (*proh pudor!*) by Mr. Bankes, a man whose opinions and views with regard to Art (Vide his evidence before the Fine Arts Committee), are absurd and extravagant to a degree: but let our sculptors bide their time; all those who banquet at this festival of fools will not readily digest the after-service.

### ART IN THE PROVINCES.

[It is scarcely necessary to observe, that for this department of the “ART-UNION,” we must in a great degree depend upon correspondents; exerting as fully as we can do our own judgment over their communications, with a view to determine their value, their general interest, and more especially in reference to the *spirit* by which they are dictated. This duty is, however, often embarrassing; and if the reader has at any time detected a wrong, he cannot be aware of the many errors we have avoided. With regard to provincial exhibitions, our difficulties are great; and we shall endeavour to remove them hereafter, by ourselves visiting those that are likely to prove most important and interesting.]

LIVERPOOL.—Circumstances prevent our offering our readers any detailed critical remarks upon the pictures in this excellent and successfully-conducted Exhibition; we must confine ourselves to little more than an enumeration of the number, and some of the names of the contributors. There are 671 works of Art, many of which have been previously exhibited in London, and have had our share of notice; they, however, lose nothing by their present situations, and are as justly esteemed as ever. Among them we find the following members of the Royal Academy—Etty, Uwins, Howard, Lee, and Witherington. Of the associates—Patten, Webster, Drummond, Arnold, and Herbert. Out of the Academy, we find, M<sup>r</sup> Innes has sent his ‘Venice,’ F. Stone, ‘Charles the First’s Interview with the Infanta of Spain;’ Von Holst, ‘The Raising of Jarius’s Daughter,’ and his ‘Condemned Culprit;’ F. P. Stephanoff, ‘Answering the Advertisement,’ and ‘Sir Toby, Sir Andrew, and the Clown in the House of Olivia;’ Cope’s ‘Poor-law Guardian;’ Creswick has several sweet little pictures; Sidney Cooper’s are all small, and, although less attractive than his larger pictures, are yet excellent. We must not omit to mention that our attention was arrested by two exquisite ‘Evening Effects,’ by Havill; one, just as the sun is sinking behind the horizon, and the other shortly after; they are full of fine feeling and the poetry of Art. W. P. Frith’s ‘Amy Robsart,’ his ‘Dolly Varden,’ and the ‘Beaux Stratagem,’ are striking proofs of the improvement of this accomplished young man—we look to his occupying a high station in his Art and in public estimation. G. Lance’s ‘Portrait of Mr. Eglington’ is painted with truth and fidelity to nature, and is an admirable representation of the indefatigable Secretary. We shall hope, when we visit Lancashire next year, to have better opportunities of doing justice to the first provincial exhibition in England.

The following artists have received the Liverpool prize of £50:—Robert Lander, in 1830; William Boxall, in 1831; D. MacLise, R.A., in 1832; George Patten, A.R.A., in 1834; S. A. Hart, R.A., in 1835; Charles Landseer, A.R.A., in 1836; George Lance, in 1837; T. Sidney Cooper, in 1838; J. R. Herbert, A.R.A., in 1839; C. W. Cope, in 1840; T. Webster, A.R.A., in 1841.

GLASGOW.—From the *Scottish Guardian* we extract the following—“In taking a general review of the Exhibition we would say, that there is a great want of figure compositions and historical pictures; landscapes and portraits have too great a preponderance. The introduction of at least one historical painting of the highest class, and of sufficient size to occupy the most prominent place, would have been a distinguishing feature in the Exhibition, and would have given tone and character to those around it. By the time another Exhibition season arrives, we trust that this defect will be supplied, not by one great historical work, but by several. The Exhibition, as a whole, is very satisfactory, considering that it is the first that has been attempted for several years, and that it was not generally known over the country in sufficient time to enable many artists to forward their contributions. We are in hopes that the next Exhibition will present a marked improvement, both in the works of the artists who have this year contributed to it, and in the number and status of its contributors from a distance. We are sorry to see so few pictures are marked *sold*, as unless public support is granted in the way of making purchases, no Exhibition, however excellent, can continue long to exist. Artists will have no inducement to send their works, and consequently the collection will yearly become less attractive. But we augur better things, as we understand that subscriptions to the Association for the Promotion of the Fine Arts have been obtained to a fair amount; and we trust that the patronage which they will be enabled to bestow, may, in some measure, compensate for the want of purchases by private individuals.

DUBLIN.—Copies of the beautiful print issued by the Royal Irish Art-Union have been presented to her Majesty and Prince Albert. The work has been dedicated, by express permission, to the Queen.

An address has been presented to his Excellency the Earl De Grey by the Royal Hibernian Academy. His Excellency’s reply contains the following passage:—“You do me no more than justice in stating that I have ‘an ardent desire to promote arts of peace and civilized life;’ and I know no more efficacious mode of fulfilling that desire, than by encouraging what, by common consent, are called the ‘Fine Arts.’ No one can follow up the course of study required to attain eminence in them without a warm admiration for the works of nature, and of the great and glorious beauties which Divine Providence has laid open to us. The natural tendency of this is to induce the student to depend upon the resources of his own intellect, and to withdraw him from the scenes of strife and contention which so often disturb society. With these persuasions and feelings, I can have no hesitation in assuring the members of the Royal Hibernian Academy of my best wishes for their advancement and prosperity, and of my willingness to take every opportunity of showing my zealous anxiety in their behalf.”

CORK.—An Exhibition has been opened in this city, of which we perceive the journals speak in satisfactory terms. It is formed exclusively by native artists and amateurs, and is designed to second the object of several gentlemen who have succeeded in establishing an Art-Union Society.

### CORRESPONDENCE.

#### ON FRESCOS.

SIR,—As the question is at present being agitated respecting the mode of executing pictures upon the staircases and apartments of the new Houses of Parliament, a few gleanings may possibly be of service, although in so practical a matter it is somewhat difficult to be altogether of the service one might wish; and as it is acknowledged that we have not in England a great experience or excellent taste in so embellishing palaces and public buildings, I shall only draw my observations from the works of the Italians, and chiefly from Vasari, who has written some valuable chapters upon the art of embellishing buildings; and in respect of the information they contain, I do not apprehend that any better could be given, and am confident the artist need consult no other guide for the practical part of his work. One important question must, however, be borne in mind, which is the subsequent effect

of time upon some of the modes which he recommends, particularly that of painting in oil upon walls, which was his particular walk; and experience proves that such works do not last nor maintain any reputation, whereas fresco painting remains perfect, and its character is unassailed. Of the causes why oil paintings on walls perish: they are numerous, but the chief are the want of affinity between the medium used, and the ground, walls being extremely sensible of atmospheric change, causes a constant war between the oily picture and the damp of the bricks or stones, so that the picture peels off, even though defended in the manner Vasari recommends; and were even the canvass strained or incorporated upon the wall, the constant transitions in the wall from damp to dryness affect it notwithstanding. Of numerous instances I need only mention the picture of the ‘Last Supper,’ by Leonardo da Vinci, which perished in a very short time after the execution: every one, too, must have remarked, in old buildings as well as upon new, this peeling off of the paint from damp; if not, abundant examples may be found in Westminster Abbey, of all periods, in the coat of arms and other paintings upon the tombs and walls: and if the works of Art should be executed in this manner in the new Parliament Houses, which, from their situation near the river, will be still more exposed to damp, a very speedy destruction of them may be looked for. Here it may be remarked, that pictures on canvass, which are no part of the wall, though hung against it, are very different things, and pictures so preserved will even outlive fresco.

This latter mode of painting, on the contrary, being assimilated in its nature with the plaster, will undergo daily or yearly changes without perceptible injury, as endless examples prove; the works in ancient Egyptian tombs and temples bearing signal testimony, besides the great works of Raffaele, Michael Angelo, Andrea del Sarto, and many others, of which no complaint has been made as yet of any symptoms of decay. This argument, however, it is not my intention to pursue in all its details, but to offer some remarks upon the different modes in which paintings may be executed on a wall; for, in whatever way it may be arranged, they are to be done. The best way in any mode should be first ascertained. That English artists are ignorant, or incapable, of executing works in fresco, is the most absurd idea possible; but if it became in use, or, I may say, the fashion, there are hundreds capable of practising it. As to the mechanical part, it is clearly explained to the artist’s comprehension by Vasari; and though he gives a more accurate account of his own way of painting in oil upon a wall, and his chapter on fresco is short, as he was not a great painter in that manner, yet he praises fresco above all other styles of painting; as is best understood by his own words, of which I shall introduce some of the practical directions, in the 19th chapter of his ‘Essay on Painting.’ “Of all the modes (he says) used by painters, that of painting on a wall is the most masterly and beautiful, for it consists in doing in a single day that which in any other mode requires many retouchings of the work. Fresco was much used by the ancients, and the moderns also have followed it. This fresco is worked upon the fresh plaster, which is not left till it is finished, as much each day as may be executed; for lengthening the time of painting makes the lime into a kind of crust, so that heat or cold, or wind or frost, would mould or spot the whole work; so by this the wall should be kept continually damp, and the colours used should be earths and not lead (ed il bianco di trevertino cotto).” It requires also a resolute hand and quick, but, above all, a judicious solidity; for the colour, whilst the wall is soft, shows the thing in one manner, that when dry is different; and therefore it is necessary in this painting in fresco for the painter to have an excellent judgment, and that he should be guided by a great style, for it is highly difficult to carry to perfection. It is also necessary to guard against retouching the work with colour that has colla di carnici (size), or yoke of egg or gum, which, in a short space of time, will become black; so that those who paint upon a wall should work truly whilst it is fresh, and not retouch when dry, for such practice will render the picture but short-lived, as has been said in another place.” Instructions that should follow the above are the modes in which the drawings for fresco are to be executed, and the manner of transferring the outline to the wet wall, which is of importance; this is explained in Vasari’s 16th chapter.

\* Trevertino is a species of petrification which is used in Italy as a sort of plaster, and is something similar in texture to plaster of Paris. It is also found in England, and is in abundance on the banks of the river Derwent, in the county of Durham.

It requires that three drawings should be executed: the first, of course, the sketch; the next is a small but highly finished drawing of the intended fresco; for it is necessary before a work be transferred in a durable manner that the approbation of those concerned should be obtained; and when that end is accomplished, the artist proceeds to make the third drawing, the size of the intended fresco. For this purpose a number of sheets of paper are pasted together till of the requisite size, and the reader may bear in mind the two drawings on the staircase of the National Gallery, which are true fresco drawings, as they bear evident marks of having been used. The small drawing is then squared in the manner used by engravers, and a corresponding number of squares are lined upon the larger; then, with a piece of charcoal fastened on the end of a long cane, the artist makes a careful drawing, which will be by means of the squares an enlarged transcript of the smaller one: when this is done to his satisfaction, he may proceed to paint it in fresco; for this purpose he begins by cutting off a strip from his charcoal sketch, as much of it as he believes he can finish in one day. A piece of the wall the size of this strip being then thinly plastered, he places his charcoal sketch with the face downwards upon the plaster, and by going quickly over the back with a trowel, a perfect impression is conveyed to the plaster, upon which he then begins to paint; before removing the cartoon, however, he must take the precaution to countersign the wall, because the following day when desirous to place another piece, he will know its appointed place and no error can take place. The following are Vasari's own words:—"Questo pezzo del cartone si mette in quel luogo, dove s'ha a fare la figura, e si contrassegna: perchè l'altro di, che si voglia rimettere un altro pezzo, si riconosca il suo luogo appunto, e non possa nascere errore. Appresso per i dintorno del pezzo detto. Con un ferro si va calcando in su l'intonaco della calcina, la quale per essere fresca, acconsente alla carta; e così ne rimane segnata. Per il che si leva via il cartone, e per que'segni, che nel muro sono calcati, si va con il colori lavorando, e così conduce il lavoro in fresco, o in muro."

I should have before stated, that when the smaller drawing is copied it should be copied reversed, and when transferred it will come off upon the wall in the same way as the original design, unless indeed the artist prefers it reversed, a case which may very possibly occur. In the present day, however, I cannot help thinking that, with our great varieties of plasters, artificial stone, &c., a plaster might be mixed which would keep moist for a week or ten days, so that cutting up a cartoon into strips might be avoided, and if the whole could be conducted together it would be a great advantage; at present the only medium that offers itself is plaster of Paris and lime very finely sifted, which retards the progress of the drying; of this one third part only of lime should be used, if more it will crack in every direction. The Portuguese use considerable quantities of pipe-clay in their ordinary frescoes, but it is a soft material though not given to crack, and might produce a tolerably hard surface if the colours were mixed with an extra portion of gum arabic; a wall done with it will, however, wash like any other fresco. Of course the question of what plaster is the best is a very important one; and should any of your readers be practical men, if a few receipts were published it would be a great advantage: great accuracy is of course necessary, as a fresco painter must lay his own ground, for it is not a matter which can be left to an ordinary workman, the artist must therefore mix it with his own hand, or it should be done under his own immediate superintendence.

Trevertino appears to be the favourite plaster of the old masters, and is, doubtless, the ground of many of their pictures: it is necessarily extremely fine, being produced by infiltration; and a well-informed friend has enlightened me as to its locality. It is satisfactory, therefore, to know that the same material is to be had that the old masters have used; it cannot possess any deleterious quality, having been thoroughly washed; it may therefore be used in any quantity; and I have little doubt that from its nature it will in time become extremely hard. Whatever the material to be used is, it should be extremely fine; if not, the work will have a sandy appearance, the case even with the best frescoes. An ordinary plaster may be made of a very beautiful appearance, as fine and glossy as a piece of card paper; but the brush of the artist very speedily produces a rough appearance, as a portion of the plaster must be taken up with the brush; in short, it is nothing more than a plentiful body-colour. Any sandy particles, therefore, soon become apparent, and it prevents very fatally any finishing in detail.

Fearing I shall be trespassing too much on your time and space, I shall reserve my remarks on painting in distemper and in oil upon a wall for another communication, should the present prove of any service.

Yours, &c.,

WELD TAYLOR.

## REVIEWS.

L'ESPAGNE ARTISTIQUE ET MONUMENTALE. Director, DON GENARO PEREZ DE VILLAMIL. Published by A. HAUSER, Boulevard des Italiens, Paris.

This is the most important foreign work that has as yet been produced on the model of our own lithographic histories. In size it is large folio, and consists of views of the most remarkable specimens of the architecture, &c., of Spain, accompanied by descriptive letter-press, and prefaced by a brief review of the progress of the Arts in that country, from the dark ages until the period of their perfection. The descriptive matter is entrusted to native literati, who thus far (four numbers) acquit themselves with much ability. The page being divided into two columns—the one of which contains a French translation of the original Spanish, given on the other—will open the interest of the work to Europe generally; an object which the proprietors seem to have had in view, since they have established a correspondence in every city where it may be understood and appreciated. The original drawings have been made by Spanish artists, but the lithography has been executed in Paris by persons long distinguished by the excellence of their productions. At the head of the list of these appear the names—Victor Adam, Assineleau, Bachelier, and others favourably known to the world from the number and talent of their works.

We have already made acquaintance with the gorgeous architectural remains with which every province of the Peninsula is studded, through the works of British artists; but the subjects of the work before us are new, as might be expected from a source which has been only recently drawn upon. The views selected are generally those which recommend themselves from their highly picturesque character; and they are chosen with competent judgment; for it will be understood that Spain, having successively bowed to the Roman, Gothic, and Moorish yokes, must contain monuments of each period of oppression, many of which can interest the archaeologist alone. After the disruption of the Roman empire, Saxon architecture took its rise, but prevailed less in Spain than in other countries: we are in these numbers, therefore, presented with nothing in this style, with which we are so familiarized at home. The Gothic dominion endured three centuries without interruption, but at the end of that period it was superseded by the Arab power after a struggle of three years. Seven centuries were then passed in incessant warfare before the descendants of the Goths recovered the territories which their ancestors had enjoyed and lost. History can supply no example of progress comparable with that made by the Arabs after their invasion of Spain, in the arts, sciences, and moral refinement. The caliph of Cordova was especially distinguished by the intelligence and civilization of its inhabitants; and from that province, even under the Mussulman yoke, arose the light of science which irradiated by degrees the entire land. The Spaniards attribute the superior refinement of the Arabs during their sojourn on the Peninsula to the amenity of the climate: whether this be true or not, it is worthy of remark, that at no period of their history have they shown a disposition to improvement equal to that which characterized their dominion in Spain: on their expulsion from which country they were no longer signalized by the same spirit of advancement, but retrograded to their former position in the moral scale of nations. The barbarity which marked the early warfare of the Moors and Christians, yielded gradually to the forms and courtesies of chivalry, the ordinances of which, the former people were even more prepared to acknowledge than the latter, who were less civilized than their Arab conquerors; in short, such relations arose between them, that the Mussulman architects entered Castile, and scrupled not to erect temples to be dedicated to the God of the Christians, whose faith they at the same time repudiated: yet in these works they consulted even the sympathies of our religion, but left in their ornamental style a sufficient warrant of their origin.

It was not until towards the middle of the Eleventh century, that the general condition of the Spaniards improved—the conquered became in their turn victors, and the general misery of the

people was alleviated. It is from that epoch that the influence of the *Mauresque* taste may be dated; for then the society of the Christian kingdoms of Spain began to acquire an intelligence which declared itself especially in the architecture of the time. It is, therefore, during the interval between such period and the age of Ferdinand and Isabella, that the most famous monuments of Spanish grandeur arose—a term whence are selected the subjects contained in the numbers under notice. Remains of a more remote time are wisely rejected, as their representation would be inconsonant with the plan and purpose of the work. Setting aside, therefore, the Iberian, Celtic, and Phœnician remains, the later erections are to be treated of under three divisions: as those of the Gothic-Roman, or the style of the Romans, rudely imitated by the Goths; those of the period of the re-conquest; and those subsequent to the perfect restoration of Spanish dominion. Structures of the first division are rare; but the edifices of the middle term very numerous. The style, distinguished as such, that prevailed during and after the eleventh century, was the Byzantine, in which were made the first essays of the Goths, and the nation subdued by them, in acknowledged architecture. This taste yielded to the Gothic, which in turn was superseded by the *Mauresque-Gothic*; both styles prevailing during the middle period.

With the sixteenth century commences the last term, throughout which the Arts were especially influenced by the temper of the times. A taste for the study of the classics, and an imitation of the models of antiquity, were adopted from Italy, to which country the Spanish monarchy extended after the union of the crowns of Arragon and Castile; and then it was that an amalgam of the florid Gothic, the *Mauresque*, and the classic styles produced, what is called in Spain the *renaissance* of architecture. In time the classic taste increased until it amounted to a passion, regulated with severity, according to the feeling of the models of the best times of ancient Art. The result of this was a style, undoubtedly very beautiful, but little in harmony with the manners, wants, moral habitudes, and religious faith of the people among which it had been introduced. After the irruption of the Arabs, many of the *reliques* of the Goths perished, and Art was extinct in Spain, until the conquest subsided into an equilibrium of the two nations in power and intelligence. During the wars of the great work of the restoration of the monarchy, Fortune was impartial, for she decreed measures of success and reverse to each party. This struggle, protracted through a series of ages, produced in the two nations an approximation of feelings and habits; and architecture advanced at length equally on each side, terminating in the amalgamation of the Gothic and the *Mauresque*. During the reigns of Isabella and Ferdinand, and of the Emperor Charles V., the architecture of Spain attained its utmost grandeur, having received enrichment in the best tastes, antique and modern. The Escorial is the great monument of the reign of Philip II., a true type, in its sombre magnificence, of the temperament of that monarch. That spirit which had thus exalted the character of Spanish architecture, flagged under the succeeding weaklings of the House of Austria, and yielded at length with the declining fortunes of this once vast and powerful empire.

The views are given upon tinted paper, having the lights put on with the usual preparation of white. This manner of treating such subjects is one of the subordinate triumphs of our own school, and has become extensively popular throughout Europe. Some of the most remarkable of the plates are, 'The Claustro de las Huelgas,' at Burgos; 'Grand Chapel of the Cathedral of Toledo'; 'Transparent Altar,' at Toledo; 'Entrance of the Choir of the Huelgas Monastery,' Burgos; 'Interior of the Chapel of St. Isidore,' Madrid; 'Tombs in the Cathedral of Toledo'; 'The Huelgas Monastery,' Burgos; 'Court of the Palace of the Dukes del Infantado,' Guadalupe; together with one or two street scenes, illustrating the outdoor life of the lower classes of Spaniards.

The Huelgas Convent was originally a residence of the Kings of Castile, to which they retired to forget for a time the cares of state, and to seek repose after the fatigues of war. Its sacred foun-

dition dates from the time of Don Alphonso VIII. The Claustrilla, or Little Cloister, the subject of one of the plates, is a fragment of Byzantine architecture, presenting a series of arches supported on columns, the capitals of which are ornamented with much elegance of design.

The architect of the 'Transparent Altar,' seems in his work to have had no view but that of covering a given space with ornamental sculpture. From the pavement to the lofty vaulting, the eye is distracted by the confused assemblage of images of saints, angels, cherubim, and a wilderness of florid carving. We cannot believe the drawing of the artist from whose work this plate is supplied to be incorrect: crediting therefore, the fidelity of the version before us, the greater proportion of the sculpture of this certainly stupendous undertaking, exhibits glaring imperfections in design, which is somewhat surprising, as this Altar is one of the wonders of the sixteenth century.

We have already said that the authors of 'L'Espagne Artistique,' are numerous in each of its departments; the lithographs, consequently (as well as doubtlessly the drawings after which they are executed), have various degrees of merit. A few of the Spanish artists have, we believe, exhibited in the Louvre, but the names generally of their brethren engaged in the work are new to us. But not so those of the French lithographers, whose works have been long familiar to us, and have achieved for them a merited and well-won reputation. Many of our own artists have made known to us the majesty of Spanish architecture; and have taught the native painters the value of the mine of precious ore stored up for them in the lustrous period of the greatness of their country, which is now by the alchemy of the pencil, being transformed into gold. The spirit and energy with which these four numbers have been brought forward must meet with due reward—the subject-matter is highly interesting and the fund inexhaustible.

**LETTERS and NOTES on the MANNERS, CUSTOMS, and CONDITION of the NORTH AMERICAN INDIANS.** 2 Vols. By GEORGE CATLIN. Published by the Author at the Egyptian Hall. We have rarely examined a work, at once so interesting and so useful as this; the publication of which is, in truth, a benefit conferred upon the world; for it is a record of things rapidly passing away, and the accurate traces of which are likely to be lost within a brief time after they have been discovered. Hitherto our acquaintance with the tribes of North American Indians has been very limited: and now that we are fully introduced to them, they are about to "depart and be seen no more;" for civilization is, as it were with steam power, rubbing them out of existence. Of the mode in which their extinction is to be produced, it is not, here, our business to speak; but Mr. Catlin justifies us in characterizing it as iniquitous to the last degree. As a contribution to the history of mankind, these volumes will be of rare value long after the last of the persecuted races are with "the Great Spirit," and they may even have some present effect; for they cannot fail to enlist the best sympathies of humanity on the side of a most singular people. The book is exceedingly simple in its style; it is the production of a man of benevolent mind, kindly affections, and sensitive heart, as well as of keen perceptions and sound judgment; of his indomitable perseverance, courage, and fortitude, he has supplied ample proof; for his narration naturally and necessarily carries him into the recital of dangers and difficulties which very few indeed would have dared to encounter. It is needless to say more upon this branch of the subject, than that he passed no fewer than eight years of his life among the tribes. It is impossible to read his graphic and interesting details without respecting, we had almost added loving, the author—he is emphatically a good man! To his marvellous collection of matters, brought to Europe from the Indians, and exhibited at the Egyptian Hall, we have frequently referred, as well as to the lectures by which they were described and explained. In this work all the information he has gathered is conveyed; and there is scarcely a page of it that has not the excitement of romance. If we attempted to do justice to its merits, we should fill a number of our work, instead of a column of it: we must content our-

selves with recommending the perusal to all who covet knowledge or desire amusement; for its advantage is, that it supplies both in a manner very rare in this age of book-making, when the tourist is compelled to tread again and again over ground, every inch of which has been trodden by a score of predecessors. No library in the kingdom should be without a copy. It is, however, with Mr. Catlin as an artist that we have most to do; and in this view, we are not called upon to bate a jot of our high praise. If it be great merit to do well and thoroughly that which is attempted to be done—to this, of a surety, is Mr. Catlin entitled. His studies have been made in the prairie instead of the galleries; his models were indeed the "human form divine," but his "vehicles" for transferring them to canvass were confined to the corner of his portmanteau. He was not, therefore, placed under circumstances which enabled him to make acquaintance with the great masters; although he possessed advantages which very few tyros in Art enjoy. His portraits are "originals" in every sense of the term; they are admirable for accuracy of character; for producing a conviction of truth and reality; for showing us, exactly as they are, the persons and places depicted; they manifest, indeed, no inconsiderable ability as mere works of Art—but this is a merit very secondary to their marvellous fidelity. The two volumes contain four hundred illustrations, engraved in outline by the artist himself from his own paintings. The subjects are of course varied—exhibiting the war dances, the fights, the sports, the wig-wags, the scalping knives, the buffalo hunts—in short, every incident and object connected with Indian life, as well as portraits of all the chiefs of all the tribes.

**THE OLD FOREST RANGER.** By Capt. W. CAMPBELL. Published by Messrs. How and PARSONS, Fleet-street.

This attractive volume deals with the wild sports of the Indian jungle, and is illustrated abundantly with admirably executed lithographs from sketches supplied by the graphic writer himself. The contents describe, in a most agreeable and spirited style, tiger hunting, deer stalking, bison shooting, bear shooting, and all the circumstances and incidents of Oriental sporting, pursued with that keen relish known to none but the sportsmen of our own country, whether they take the field abroad or at home. The lithographs are printed upon tinted paper by Messrs. Day and Haghe, a sufficient guarantee for the excellence of this department of the work. The subjects are taken from some of the most extraordinary adventures ever related in the annals of the perilous and exciting sports of the jungle. "The Old Forest Ranger" is a work which will be extensively read by all lovers of the chase.

#### THE ANNUALS.

We can say but little for the Annuals this year. As usual, "The Book of Beauty" takes the lead, both in literary contents and pictorial embellishments. The "Forget Me Not" maintains its position; it was always a neat and pleasant volume, with no high pretensions, and it has preserved its good character throughout. "The Keepsake" is very mediocre; and the publisher has completely defaced it by the introduction of several miserable substitutes for wood-cuts, according to the invention of some unhappy patentee. The "Friendship's Offering" is exceedingly wretched. The "Drawing Room Scrap-Book" supplies a large number of agreeable and useful prints, judiciously varied; and although familiar to many, to the great mass of purchasers they are quite as "good as new." The poems of Mary Howitt, too, are graceful and vigorous; and taken altogether, this is a very appropriate Christmas and New Year's gift. Another, and of a somewhat similar description, is also issued by Messrs. Fisher—"The Rhine, Italy, and Greece;" and a pretty little juvenile book, edited by Mrs. Ellis, courts the acceptance of the young, for whose pleasure and profit it is admirably calculated. The "Picturesque Annual" smacks of the old spirit of Mr. Charles Heath; it contains 21 line engravings from the drawings of Mr. Allom, carefully selected and well engraved. The letter-press is little more than a guide to Paris—the wonders of which are pictured by the artist; but for this purpose it is

admirably calculated, Mrs. Gore having described it very graphically, and noted all its principal attractions. If she had allowed greater scope to her imagination she would have made the volume more interesting; she has, however, produced a very valuable companion to the French capital. The frontispiece to "The Book of Beauty" is a portrait of her Majesty; but more genuine copies of British beauties have been supplied by the pencils of Mr. John Hayter, Mr. Grant, Mr. Drummond, and Mr. Fisher, the last being a comparatively new name; it is attached to some works that give assurance of great ability in the artist. The volume contains one print after Mr. Chalon—of her Royal Highness the Princess of Capua, which cannot fail to call to mind the nurse who took charge of Gulliver in the island of Brobdignag. The book is edited by the accomplished Countess of Blessington, and is certainly a graceful and elegant assemblage of literary trifles.

There is no use in concealing the fact, that the public have grown weary of these annual "samenesses;" and that, consequently, the publishers do not feel justified in producing them by expending large sums of money. A few years ago, the cost of a single sheet of "The Keepsake," added to but one of its plates, amounted, we imagine, to the full sum that has been this year laid out upon the whole volume. This will be readily credited by those who recollect that some authors received at the rate of 10 guineas a page for their contributions; that 150 guineas was paid for the copyright of a picture, and about 200 guineas more for the engraving of it. Mr. Heath is now as able as he ever has been to exercise upon his publication the judgment, taste, and liberality for which he has been long celebrated; but the public are not as ready with the necessary recompense, and the adage holds good in this as in all other matters—"We must cut the coat according to the cloth."

#### TO CORRESPONDENTS.

With the January Number we shall issue—of course, *gratis*—a Title Page and Index to the Third Volume of the ART-UNION. The necessity for introducing into it the contents of the December number, precludes us from publishing it as an accompaniment to that number. Subscribers who may have mislaid any particular parts, can have their volumes perfected by the publishers.

W. H. is informed, that we are precluded by the Stamp Act from publishing the prices of books and prints that are reviewed. Strictly construed, indeed, it would compel us to omit also the names of their publishers.

It will, we apprehend, be some weeks before the *prints* of the 'Highland Drovers' are issued. Hitherto the "proofs before letters" only have appeared.

We stated erroneously last month, that MacIse's famous picture of 'The Sleeping Beauty,' exhibiting at Birmingham, was unsold; forgetting at the moment that it was selected by Mr. Fry (at the price of £300), who won the prize of £300 in the Art-Union last year.

We have several letters in type, for which we have been unable to find room this month.

In 1 Vol. Imperial 8vo., containing Five Engravings on Steel, after Drawings by D. MACLISE, R.A., and about Fifty superior Woodcuts, price 25s. half-morocco.

#### SKETCHES OF IRISH CHARACTER.

BY MRS. S. C. HALL.

New Edition, with Additions.

The Woodcuts embrace Scenes, Portraits, and Landscapes from Nature, by the following artists:—

PAINTERS.		ENGRAVERS.	
W. H. Brooke, F.S.A.		T. Armstrong	
N. T. Crowley		J. Bastin	
Geo. Cruikshank		M. A. Cook	
W. Evans		F. Delamotte	
J. Franklin		E. Evans	
J. Gilbert		T. Gilks	
W. Harvey		W. J. Green	
J. R. Herbert, A.R.A.		J. Jackson	
D. MacIse, R.A.		K. Landells	
R. McLan		W. J. Linton	
Mrs. McLan		A. J. Mason	
H. McManus		J. Nugent

G. F. Sargent		S. Sly	
J. C. Timbrell		J. O. Smith	
J. H. Townsend		J. Thompson	
C. H. Weigall		J. Walmesley	
W. Wiles		J. Wakefield	

## MESSRS. HOW AND PARSONS

Are preparing for Publication, a Series of PERSONAL SURVEYS of the ENGLISH COUNTIES (commenced during the Year 1841), under the Title of

## ENGLAND IN THE NINETEENTH CENTURY.

It is proposed to combine in this Work (which will be, in fact, a Pictorial Itinerary of England), the living aspect of the English Counties, with amusing and useful information; and, by descriptive accounts of their existing features, embellished with Engravings of the first class, to produce a body of Pictorial Topography, upon a plan both novel and interesting.

Every County will be personally visited, and nothing described but from actual observation, the Illustrations being drawn upon the spot. Wherever reference for an historical purpose is required, the authority will be the best extant. The local customs, legends, personal habits, social peculiarities, agricultural and manufacturing details will, in like manner, be grounded upon personal observation of their existing state; in carrying out which, every effort will be directed to combine the agreeable with the useful.

For the last object it is intended to annex, at the conclusion of each County, standing references, which will be matter of permanent record and of great utility. This part of the Work, occupying very little space compared with the descriptive portion, will condense information only otherwise to be gathered from numerous and unwieldy documents.

The Illustrations will consist of Landscape Scenery, chiefly by Mr. CRESWICK, Palaces, Castles, Churches, Costume, Machinery, &c. &c.

The Work will be issued in Monthly Half-crown Parts, similar in size and appearance to Mr. and Mrs. HALL'S Work on IRELAND, now in course of publication. It will be divided into two districts of the Kingdom: Northern Division, Part I., commencing Lancashire; and Southern Division, Part I., commencing Cornwall, will be issued on the 1st of January.

A Prospectus and Plan of the Publication may be had on application to the Publishers, or of any Bookseller in the Kingdom.

## PATRONS OF THE FLOATING BREAK-

WATER, invented by Captain TAYLER, R.N., C.B.  
Rear-Admiral John Allen  
Capt. C. J. Austen, R.N.

Capt. W. Wilmott Hender-  
son, R.N., K.H.C.B.

National Floating Breakwater and Refuge Harbour  
Company. Capital £300,000, in 30,000 Shares of £10  
each; deposit £2 per share. To be incorporated by  
Act of Parliament.

## DIRECTORS.

Rear-Adm. N. Tomlinson | Rear-Admiral Sir Samuel  
Sir Thos. Grey, F.R.S. | Pym, K.C.B.  
Capt. P. McQuhae, R.N.  
Montague Gore, Esq., M.P.

Trustees—Chris. Pearce, Esq.; Benj. Williams, Esq.  
Bankers—The Bank of England; Messrs. Cockburn  
and Co., Whitehall.

Auditors—Mr. Jonathan Hall; Mr. Jas. Chas. Hardy.  
Secretary—John Charrette, Esq. Solicitor—Ambrose  
Clare, Esq.—Office, No. 61, Moorgate-street, City.

The reports of the Government Commissioners, and the deep interest which has been expressed in Parliament, and by all who have the safety of our navy, the success of our commerce, and the protection of our seamen and fishermen at heart, prove incontestibly the absolute necessity which exists for the immediate reparation of all our present harbours, and for the formation of at least 250 new ones. The expense which has hitherto been one of the insurmountable impediments no longer offers any obstacle, as by Captain Tayler's meritorious invention this Company can form 180 harbours at a less expense than that certified by the Government Commissioners as the sum required by the old modes for the formation of three. The facility of construction enables this new Floating Breakwater

to be affixed, and harbours of refuge formed, on the most exposed parts of our coasts, where not only none at present exist, but where also none other than by this method can be constructed; and smooth water for the safe landing of goods and passengers by steamers can be ensured at all.

That the Government of this country will avail itself of the ready means which this invention alone affords there can be no doubt. The Directors have great satisfaction in stating that they are in active negotiation with several places of the highest maritime importance; and that the Admiralty, zealous for the promotion and success of the undertaking, have already granted the use of anchors and ground moorings to enable Captain Tayler's plan to be put in immediate operation at Brighton; and we may fairly rely that there is scarcely a single port in the United Kingdom which will not avail itself of the benefit now presented, by having some sections of the Breakwater laid down, the cost being so comparatively small and the advantages so great.

The result to the Shareholders on the employment of the Company's works and means in this meritorious cause, cannot fail to ensure a return in a pecuniary view which will far exceed the most sanguine expectations.

Prospectuses and other particulars may be obtained at the Company's Office; at the Solicitor's, 5, Sise-lane, Bucklersbury; and at the office of Somers Clarke, Esq., Brighton; where also applications for Shares may be made until the 15th of November next, when the allotment will be made.

## PAINTING IN OIL.—BROWN'S COLLAPSIBLE TUBES, FOR COLOURS, OILS, VARNISH, MAGYLP, &amp;c.

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

THOMAS BROWN, COLOURMAN to ARTISTS in OIL and WATER, begs to return his sincere thanks to his numerous Customers for the kindness with which they made a trial of the above Tubes, merely on his recommendation, and for the approbation they have so universally bestowed on them.

To the Members of the Royal Academy in particular, he wishes to express his great obligations; he, his Father, and his Predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

To those Artists and Amateurs who have not tried the Collapsible Tubes, he begs to state a few of their advantages.

They are more economical than bladders; for though the price is a little more, the saving they make in colour more than balances the extra price.

They will preserve colour for years; any portion may be pressed out at a time, and the remainder (if ever so little) will keep good, by reason of the air and light being completely excluded.

They can be conveniently used with one hand, during painting, without putting down the palette and brushes; which is the great inconvenience of syringes of any sort.

They are free from smell, from danger of bursting and exuding, which is so disagreeable in bladders.

They are particularly adapted, by their economy, for ultramarine, and all the expensive colours; also, for magylop and asphaltum, so difficult and inconvenient to keep in all other forms.

They are as light as bladders, more portable, enable colour boxes to be made much smaller, are most convenient for sketching from nature, and may be safely packed among linen or paper.

They offer the only perfect mode of sending prepared colours to warm climates.

They may be had of any capacity, from the eighth of an ounce to seven pounds and more.

Their cleanliness is such that the most delicate Amateurs may now practise Oil Painting without even soiling their fingers, thus removing the great nuisance of the old method of using Oil Colours, which deterred so many persons of taste from indulging in so noble an Art.

Manufactured and Sold, at 163, HIGH HOLBORN, London; where, also, may be had every Material for Painting in Oil and Water.

The trade supplied with Full or Empty Tubes upon liberal terms.

Orders by post attended to immediately.

VOLATILE FIXER, a Preparation to fix and secure Coloured Crayon and Chalk Drawings, to prevent their rubbing. Sold in bottles, price 2s. and 3s. 6d.—S. and J. Fuller particularly call the attention of Artists, Amateurs, and Drawing-Masters to the above useful Preparation; likewise to their permanent Coloured Crayons, for Portrait and Landscape Painting, fitted up in boxes, price 25s. and £2 10s. each. Specimen Drawings to be seen, and Portraits painted in Crayons.—Temple of Fancy, 31, Rathbone-place.

## GEORGE ROWNEY AND CO.'S PRESERVING ENVELOPES to supersede the use of the Bladder for Oil Colours.

This mode of putting up Oil Colours for the use of Artists, will be found much more cleanly and portable than the old plan of employing the bladder or weasand, besides possessing the advantage of preserving the colour for an indefinite period of time.

Also a new red, called Palladium Red, which possesses a similar tone to Chinese Vermilion, but of greater brilliancy; it is perfectly permanent with a semi-transparent body; and having neither sulphur or mercury in its composition, it is not liable to form a black sulphuret when used in combination with white or any other colour.

And a new and permanent Blue, price 4s. the oz., equal in tone and colour to Ultramarine of the best quality.

Canvasses prepared with Indian Rubber, Flemish, and other grounds. Panels, Millboards, and all other articles connected with the Fine Arts, at the lowest possible prices, and of first-rate qualities.

Sold, wholesale, retail, and for exportation, at the Artists' Repository, No. 51, Rathbone-place, Oxford-street.

WARING AND DIMES, 91, GREAT RUSSELL-STREET, BLOOMSBURY, have to return thanks for the patronage bestowed upon them by their friends, and state that they endeavour to render every Article manufactured and sold by them of the first quality.

PREPARED CANVASS, WITH INDIA RUBBER GROUND.—This article is the exclusive manufacture of W. and D., and the increase of its consumption attests its superiority over the old method; no cracking or peeling can possibly take place on the surface.

METALLIC ZINC TABLETS for Oil Painting were originally prepared by W. and D. Their advantageous properties for highly-finished subjects over wood or mill-board is generally acknowledged, the surface produced being of the finest and most even texture.

ANTI-TUBE BLADDERS OF OIL COLOUR, which have been so much admired on account of their simplicity and saving.

WATER COLOURS IN CAKES AND BOXES.—At the present season, those intending to make presents to their young friends are invited to inspect the stock of Drawing Boxes at W. and D.'s establishment, which combine elegance and durability, and may be had from the price of 5s. upwards.

W. and D. have also established a Circulating Portfolio of Drawings and Prints, containing Specimens of the best Masters.

An assortment of Lithographic Studies, by Julien, Harding, Prout, and other masters.

White and Tinted Drawing Papers, Chalks, Crayons, and all other Articles for Drawing and Painting.

An assortment of Drawing Boards.

T Squares and other Mathematical Instruments, just received from Paris.

## POOLCOO'S CHINESE CEMENT.—The

extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFIELD and Co., Cutlers and Razor-makers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFIELD'S London made Table Knives, at BLOFIELD and Co.'s, 6, Middle-row, Holborn.

## HENRY GRAVES AND COMPANY

Have the honour to announce that they have published, during the present season, the following

## SPLENDID WORKS OF ART,

of which Impressions or Proofs may be had of all respectable Printsellers in the kingdom :—

## THE PORTRAIT OF NAPOLEON DURING THE HUNDRED DAYS.

Most exquisitely engraved in the line manner, by ARISTIDE LOUIS, from the original picture by PAUL DELAROCHE.  
 Prints . . . £1 1s. India Prints . . . £1 11s. 6d. Proofs before Letters, India, . . . £3 3s.

THE PORTRAIT OF HIS GRACE  
 THE DUKE OF BUCKINGHAM  
 AND CHANDOS.

Engraved by JOHN PORTER, from the original picture in his Grace's possession,  
 painted by JOHN JACKSON, Esq., R.A.  
 Prints . . . £1 1s. Proofs . . . £2 2s. Proofs, before letters, . . . £3 3s.

THE LAST PORTRAIT OF HIS GRACE  
 THE DUKE OF WELLINGTON, K.G.,  
 AS CHANCELLOR OF THE UNIVERSITY OF OXFORD.

Engraved in the finest style of Mezzotinto, by G. H. PHILLIPS, from the original  
 picture painted by H. P. BRIGGS, Esq., R.A., for the Right Hon. the EARL OF ELDON.  
 Prints . . . £2 2s. Proofs . . . £4 4s. Proofs, before letters . . . £6 6s.

DEDICATED TO HER GRACE THE DUCHESS OF SUTHERLAND.

## THE MARQUIS OF STAFFORD AND LADY EVELYN GOWER.

Engraved in the most exquisite manner by SAMUEL COUSINS, Esq., A.R.A., from the very beautiful picture painted by EDWIN LANDSEER, Esq., R.A.,  
 for His GRACE THE DUKE OF SUTHERLAND.  
 Prints . . . £2 2s. Proofs . . . £4 4s. Proofs, before letters . . . £6 6s.

ZUMALACARREGUI  
 AND THE CHRISTINO SPY.

Engraved in the finest style of Mezzotinto by F. C. and C. G. LEWIS, from the  
 splendid original drawing by J. F. LEWIS, Esq.  
 Prints . . . £3 3s. Proofs, before letters . . . £6 6s.

THE TRIAL OF CHARLES THE FIRST  
 IN WESTMINSTER HALL.

Engraved in the finest style of Mezzotinto by JOHN BURNET, Esq., F.R.S., from  
 the splendid picture painted by himself.  
 Prints . . . £3 3s. Proofs . . . £5 5s. Before letters . . . £8 8s.

## THE HIGHLAND DROVERS DEPARTING FOR THE SOUTH.

Engraved in the line manner by J. H. WATT, Esq., from the splendid Picture exhibited at the Royal Academy, painted for J. SHEEPHANKS, Esq., by  
 E. LANDSEER, Esq., R.A.  
 Prints . . . £3 3s. Proofs . . . £6 6s. India Proofs (now printing, with only one line of inscription) . . . £10 10s.

QUEEN VICTORIA  
 AND THE PRINCESS ROYAL.

Painted by A. COLE, and engraved in the finest style of Mezzotinto  
 by G. H. PHILLIPS.

Prints . . . £1 1s. Proofs . . . £2 2s. Autograph Proofs . . . £3 3s.

SIR ROBERT PEEL, BART., M.P. &c.,  
 AND HIS GRACE  
 THE DUKE OF WELLINGTON, K.G.

Engraved the full size of life by F. C. LEWIS, Esq., from the very beautiful original  
 Drawings by SIR THOMAS LAWRENCE, P.R.A.  
 Prints . . . £1 1s. Proofs, with Autographs . . . £2 2s.

## THE MELTON HUNT.

Engraved by W. HUMPHREYS, from the very beautiful picture in the collection of His GRACE THE DUKE OF WELLINGTON, K.G., painted by F. GRANT, Esq., S.A.  
 This very interesting Picture contains Portraits of the most distinguished Sportsmen assembled for the enjoyment of the Chase.  
 Prints . . . £3 3s. Proofs . . . £5 5s. Proofs, before letters (now ready) . . . £6 6s.

## THE YOUNG SHAVER.

Drawn on Stone by THOMAS FAIRLAND, from the original drawing by W. HUNT.  
 Prints . . . 7s. 6d. Coloured . . . 12s.

THE CORN QUESTION;  
 OR, THE PUZZLED POLITICIAN.

Drawn on Stone by THOMAS FAIRLAND, from the original drawing by W. HUNT.  
 Prints . . . 7s. 6d. Coloured . . . 12s.

## MÜLLER'S SKETCHES OF THE AGE OF FRANCIS I.

UNIFORM WITH HAGHE'S SKETCHES IN BELGIUM AND GERMANY.

Price, Imperial Folio tinted, half-bound . . . £4 4s. Coloured and mounted, in a Portfolio . . . £10 10s.

## WORKS OF THE LATE SIR T. LAWRENCE, P.R.A.

Part IX., containing,

THE POPE,  
 LORD LONDONDERRY,  
 AND THE

## DUCHESS OF SUTHERLAND AND CHILD.

Prints . . . 12s. Proofs . . . £1 1s. Proofs, before letters . . . £1 11s. 6d.

## WORKS OF THE LATE SIR T. LAWRENCE, P.R.A.

Part X., containing,

HIS MAJESTY GEORGE IV.,  
 THE DUCHESS OF GLOUCESTER,  
 AND LADY DE TABLEY.

Prints . . . 12s. Proofs . . . £1 1s. Proofs, before letters . . . £1 11s. 6d.

## THE STATE PORTRAIT OF

HER MAJESTY IN THE IMPERIAL DALMATIC ROBES,  
 SEATED ON THE THRONE IN WESTMINSTER ABBEY.

Painted by Command, for Windsor Castle, by GEORGE HAYTER, Esq., Her Majesty's Historical and Portrait Painter,  
 And Engraved in the finest style of Mezzotinto by H. T. RYALL, Esq., Her Majesty's Historical and Portrait Engraver.  
 Prints . . . £3 3s. Proofs . . . £5 5s. Proofs, before letters . . . £8 8s.

## THE PORTRAIT OF HER GRACE

## DOWAGER DUCHESS OF BEAUFORT.

Engraved in Mezzotinto by W. HUMPHREYS, from the original picture  
 painted by F. GRANT, Esq., S.A.  
 Proofs . . . £1 1s.

SCENIC BEAUTIES  
 OF THE ISLAND OF JERSEY.

BY PHILIP JOHN OULESS.

Price . . . £1. Half-bound, India paper . . . £1 10s.

London: Published by HENRY GRAVES and COMPANY, Printsellers and Publishers in Ordinary to Her Majesty,  
 and His Royal Highness Prince Albert, 6, Pall Mall.

	R. Z. S. Troughton, Esq.
	Samuel Wilson, Esq., Ald.
	Edward Wyndham, Esq.

### HONORARY SECRETARIES.

George Godwin, Esq., F.R.S., F.S.A., 11, Pelham-crescent, Brompton.  
Lewis Pocock, Esq., F.S.A., 29, Montague-street, Russell-square.

The ART-UNION was established in 1836, to aid in extending the love of the Arts of Design through the United Kingdom, and to give encouragement to Artists beyond that afforded by the patronage of individuals.

1. It is composed of Annual Subscribers of One Guinea and upwards.

2. The funds, after paying necessary expenses, are devoted to the purchase of Pictures, Drawings, Enamels, Sculpture, or Medals.

3. Every Member, for each Guinea subscribed, is entitled to one chance of obtaining some work of Art at the annual distribution, the selection of which rests with himself.

4. In addition to the equal chance annually afforded to each Subscriber of becoming the possessor of a valuable work of Art, by the result of the allotment, a certain sum is set apart every year to enable the Committee to procure an Engraving; and of this Engraving each Member will receive one impression for every Guinea subscribed.

An Engraving of Mr. LANDSEER's picture, 'THE TIRED HUNTSMAN,' by Mr. H. C. SHENTON, is now in course of distribution to the Subscribers of the year 1840, at Messrs. P. and D. Colnaghi's, 14, Pall-mall East.

Mr. J. P. KNIGHT's picture, 'THE SAINTS' DAY,' is in the hands of Mr. W. CHEVALIER, to be engraved for the Subscribers of 1841.

The Subscribers of the current year, ending March 1842, will receive impressions of an Engraving by Mr. W. H. WATT, of HILTON's fine picture, 'THE RETURN OF UNA.'

Prospectuses may be obtained at the Society's Office, 73, Great Russell-street (corner of Bloomsbury-square), where the Clerk is in attendance daily, from Twelve till Five o'clock, to afford any information that may be required, and to receive Subscriptions.

By order, T. E. JONES,  
Clerk to the Committee.

## LITERATURE AND ART.

## ASSOCIATION for the PROMOTION of the FINE ARTS in SCOTLAND.

FOUNDED IN 1834.

Committee of Management for the Year 1841-42.

The Hon. Lord Jeffrey.	Sir Gilbert Stirling, Bart.
Sir G. M'Pherson Grant, Bart.	Right Hon. Sir Geo. Warrender, Bart.
Right Rev. Bishop Terrot.	Professor Wilson.
William Murray, Esq., of Henderland.	R. Bell, Esq., Advocate.
J. T. Gibson Craig, Esq.	G. Dundas, Esq., Ditto.
M. Napier, Esq., Advocate.	Arthur Forbes, Esq.
Edward Piper, Esq.	Sir W. Forbes, J. Hunter, and Co., Bankers.

J. A. Bell, Esq., Architect.

### HONORARY SECRETARIES FOR LONDON.

T. M. Nelson, Esq., Architect, 3, Charles-street, St. James's-square.  
Messrs. Smith, Elder, & Co., Booksellers, 65, Cornhill.  
John Stevenson, Esq., 11, Aldersgate-street.  
John Leslie, Esq., Bookseller, 62, Great Queen-street, Lincoln's-inn-fields.

The object of this Association is to advance the cause of Art in Scotland, by affording additional encouragement to its professors, in the following way:—

A Subscriber of ONE GUINEA becomes a Member for One Year; has a chance of gaining a valuable Work of Art; and the certainty of receiving a valuable Engraving.

An Annual General Meeting of Members is held in May, for the purpose of electing a Committee of Management, who are entrusted with power, for one year, to purchase what may appear to them the most deserving Works of Scottish Art annually exhibited. At this Meeting, likewise, the different Works purchased for the Association become, by lots publicly drawn, the property of individual members.

This Association, the first established in the United Kingdom for the encouragement of Art upon these principles, has progressively increased in its annual fund, from the sum of £738, subscribed in the year 1834, to the sum of £6767, subscribed in the year 1841.

Last year, the Works of Art purchased for the Association amounted to One Hundred and Forty in number, at a total expenditure of nearly £5000. Besides this large sum, which, in the form of Paintings and Sculpture, was distributed among Subscribers, a large amount was reserved with a view to meet the expenses incurred by the execution of a very talented Engraving, to copies of which all Subscribers are entitled.

At the Annual General Meeting of the Association, held in May 1841, the Hon. Lord Jeffrey, who, on the motion of the Right Hon. the Earl of Seafield, was called to the chair, said, "That the great aim of the Members of this Society was to advance a taste for Art, and to extend the fame and honour of artists; and he was happy to say, that, to a great degree, they had accomplished both these objects, by diffusing a taste for Art among the Scottish public, and by raising a higher standard of excellence among artists themselves."

In conformity with the sentiments expressed in the above quotation, the Committee of Management take this opportunity of earnestly requesting the attention of all those who have not yet enrolled themselves as Members of the Association, to its great importance and usefulness as a National Institution. The plan of uniting the efforts of individuals, by a small Annual Subscription from each, into one large fund for the benefit of all, has established in favour of Art a new and most valuable source of encouragement.

Members for this year, 1841-42, will be entitled to copies of the Line-Engraving now being executed by

Mr. John Burnet, after Mr. William Allan's admirable Historical Picture of 'An Incident in the Life of Robert the Bruce.' As both the painter and engraver have acquired for themselves high professional distinction, it is not to be doubted but that this Engraving will prove a fine specimen of combined native talent.

The Members for last year, 1840-41, will receive, early in the course of next year, copies of the Engraving executed by Mr. Charles Rolls, after Mr. Fraser's talented Picture of 'The Moment of Victory.' An impression from this Plate, which is now in the hands of the printer, may be seen on application to any of the Local Honorary Secretaries.

These Engravings will cost the Association a large sum; and every copy will in itself be worth more than the usual Annual Subscription of One Guinea.

It is confidently anticipated that the various Works of Art to be purchased by the Committee will this year surpass in merit and value those of any former year; and they will, as usual, be distributed by lot among the Members at the Annual General Meeting in May.

Subscribers' names are now received; and upon application to the Secretary, 69, York Place, Edinburgh, or to any of the Honorary Secretaries in Town or Country, reports may be obtained, information given, and subscriptions paid.

Edinburgh, Nov. 1841.

## ROYAL IRISH ART-UNION.—

President—The Marquis of ORMOND.

The beautiful Engraving of 'THE BLIND GIRL AT THE HOLY WELL,' now issuing to the Members of this most flourishing and successful Society, may be seen at Messrs. Colnaghi's, Cockspur-street; Messrs. Graves's, Pall Mall; or at Mr. Robertson's, 51, Long Acre; where Tickets for the current year, One Guinea each, may be obtained; or the same may be transmitted by Post-office order, to

STEWART BLACKER, Esq., Hon. Secretary, 20, Gardener's Place, Dublin.

ARTISTS' AND AMATEURS' CONVERSAZIONE.—The Members are reminded that the SECOND MEETING of the Season will take place at the FREEMASONS' TAVERN, on WEDNESDAY, the 5th of January.

Now ready,

EUROPA. Exquisitely engraved by CHARLES HEATH, after W. HILTON, R.A. Price—Prints, £1 1s.; Proofs, £2 2s.; before Letters, £4 4s.

This charming Print, from one of the finest Pictures of the late Historical Painter, W. Hilton, R.A., has just been finished, after seven years' incessant labour, by Mr. Charles Heath. The Proofs before Letters are nearly all subscribed for.

F. G. Moon, Printseller and Publisher to the Queen, 20, Threadneedle-street, London.

NOTICE TO PRINTSELLERS, PUBLISHERS, &c.

MESSRS. H. GRAVES AND COMPANY, 6, PALL MALL, beg to inform the Trade and the Public in general, that the celebrated

Portrait by PAUL DE LA ROCHE,

'NAPOLEON DURING THE HUNDRED DAYS,' is THEIR COPYRIGHT, and any person engraving from, or selling any pirated copy of the said Portrait, will be subjected to an INJUNCTION IN CHANCERY. The original Engraving, by Aristide Louis, may be had of all respectable Printers.

Prints £1 1s. Every proof sold.

## MILLER'S SILICA COLOURS.

In introducing these Colours to the notice of Artists and of the Public, it will not, perhaps, be deemed obtrusive, if the Manufacturer presumes to offer a few remarks upon the subject, seeing that, by the application of many years' experience, aided by numberless experiments, he has, at length, most successfully accomplished his object, in bringing back to light a long buried secret of ancient Art.

The countless and laborious efforts that, from time to time, have been made by modern Artists, to produce Colours that might bear comparison in point of brilliancy and durability, with those of the Old Masters, are sufficiently known to need further comment. It is likewise, unfortunately, but too well acknowledged how fruitless these efforts have been. For although, at first, their works might appear to vie successfully with the antique originals, yet when placed, a twelvemonth afterwards, by the side of their prototypes, how great a falling off was there! What an universal degeneracy of tint and tone! While the ancient productions seemed as fresh and vivid as if they were the creations of yesterday, and appeared by their undecaying brilliancy and clearness to deride alike, the attacks of time and the feeble composition of modern Art.

The injurious effects of light and atmosphere on the colours of the present day, are very clearly evidenced by the contrast of Ultramarine, which being manufactured on the same principle as the Colours of the Old Masters and the Silica Colours, has been erroneously supposed to have derived an accession of brilliancy from age. Such, however, is not the fact. The phenomenon of its apparently increased vividness, is the result of its simply retaining its original lustre, whilst that of the other colours of the picture has invariably declined and faded. Were any one sceptical of the superiority of ancient colour, every doubt might be easily removed by a glance at the two pictures of Francia, recently added to the collection in the National Gallery, and painted between three and four hundred years ago. The transparency and freshness of their tints have that time-defying character and gem-like lustre, that modern paintings seldom perhaps possess and never retain.

In the early periods of Art, the painter, having no colourman to prepare his colours for him, was compelled to seek and compose them himself, from whatsoever substances were at hand, from earths and stones; and chiefly from their use of such imperishable materials, unimpaired by chemical agency, may be inferred the great durability of his productions.

The present Silica Colours, now confidently submitted to the ordeal of public opinion, have already been severely tested by Artists of the first eminence, and by persons of scientific attainment, whose judgment has been unequivocally expressed in their favour; and who do not hesitate to affirm that they reveal the mystery of ancient colouring; and that they possess all the invaluable qualities of transparency, brilliancy, and durability, which are so eminently conspicuous in the works of the ancient painters.

The Silica Colours are prepared in collapsible tubes, and can be forwarded per post to any part of the country, on receipt of an order, for any of the under-mentioned tints, viz.:

Pale and Deep Red.  
Pale and Deep Blue.  
Pale and Deep Yellow.  
Pale and Deep Orange.  
Pale and Deep Purple.  
Pale and Deep Green.  
Pale and Deep Brown.  
White, Gray, and Black.

### VAN EYCK'S GLASS MEDIUM for OIL PAINTING.

This Medium having been tried by Artists of the first eminence, is found to be the grand desideratum for removing the existing evils of the Modern School; namely, the destructive effects of Varnishes, Oils, and M'guelps, as all pictures painted with them, after a time, lose their transparency and brilliancy, and become horny, spotted, and dark-coloured; whereas those painted with the Glass Medium have a most brilliant effect, and will be found to remain perfectly unchanged, as its durability can only be compared to painting in enamel.

#### Glass Medium in Bottles.

No. 1. For first and second painting, and for mixing with colours already prepared in Medium.

No. 2. For general painting, and for rubbing up powder colours with.

No. 3. For third painting, finishing, and glazing, or mixing with lakes and other colours, requiring strong driers, giving at the same time additional transparency.

Any of the above Media may be thinned, according to the taste of the Artist, with Miller's pure Florentine Oil.

#### Glass Medium in Powder.

Nos. 1, 2, and 3.

If these powders be mixed stiff upon the palette with a small portion of Miller's pure Poppy Oil, it will enable the Artist to lay colour, pile upon pile, and to dip his pencil in water or oil at pleasure. It will also dry so hard that it may be scraped with a knife on the following day.

T. M. would recommend Artists to replenish their Colour Boxes with Colours prepared in Medium, as they will be found better in every respect than those prepared in the ordinary oils.

T. M. would also beg to remark, that while Artists continue to use colours as commonly prepared in oils, they only reap half the advantage resulting from the great improvement in the art—which the Media are acknowledged to be by upwards of one thousand Artists who have already tried and approved it.

T. MILLER, being the original preparer of this INVALUABLE MEDIUM, has the honour of supplying SIR MARTIN ARCHER SHEE, President of the Royal Academy,

Sir A. W. Calcott, R.A.	W. Gush, Esq.
C. L. Eastlake, Esq., R.A.	J. Hall, Esq.
W. Etty, Esq., R.A.	C. Hancock, Esq.
D. Machie, Esq., R.A.	R. G. Hammetton, Esq.
W. Mulready, Esq., R.A.	W. Havell, Esq.
T. Phillips, Esq., R.A.	J. M. Hendric, Esq.
H. W. Pickersgill, Esq., R.A.	T. C. Hodland, Esq.
D. Roberts, Esq., R.A.	James Holmes, Esq.
J. M. W. Turner, Esq., R.A.	F. Y. Hursthouse, Esq.
C. R. Leslie, Esq., R.A.	J. Huskisson, Esq.
H. P. Briggs, Esq., R.A.	— Jenore, Esq.
W. Collins, Esq., R.A.	T. M. Joy, Esq.
W. C. Ross, Esq., R.A.	J. D. King, Esq.
S. Drummond, Esq., A.R.A.	S. Lawrence, Esq.
J. P. Knight, Esq., A.R.A.	J. M. Lea, Esq.
C. Landseer, Esq., A.R.A.	W. L. Leitch, Esq.
R. Redgrave, Esq., A.R.A.	T. Lewis, Esq.
T. Webster, Esq., A.R.A.	J. Lucas, Esq.
A. Aglis, Esq.	J. Lynn, Esq.
W. Allen, Esq.	J. Martin, Esq.
F. W. Andrew, Esq.	R. M'Innes, Esq.
J. Ayton, Esq.	S. Moyford, Esq.
C. Baxter, Esq.	H. Mosely, Esq.
R. Beechey, Esq.	J. Müller, Esq.
J. Bell, Esq.	Sir W. Newton.
W. Boxall, Esq.	R. P. Noble, Esq.
W. Bradley, Esq.	R. Noble, Esq.
J. Byrne, Esq.	R. R. Penson, Esq.
J. Calrow, Esq.	J. T. Parris, Esq.
G. Cattermole, Esq.	A. Penley, Esq.
J. Cole, Esq.	— Raphael, Esq.
W. Collett, Esq.	Ch. Reat, Esq.
C. A. Constant, Esq.	W. Richardson, Esq.
— Cooper, Esq.	G. R. Robinson, Esq.
J. Coventry, Esq.	J. R. Say, Esq.
G. Crookford, Esq.	J. Stark, Esq.
W. Derby, Esq.	Miles Smith, Esq.
— Duncan, Esq.	E. B. Spauling, Esq.
— Dyce, Esq., Royal School of Design.	F. Stone, Esq.
T. Ellerby, Esq.	C. Stonehouse, Esq.
T. Ellis, Esq.	Weld Taylor, Esq.
G. Field, Esq.	Charles Taylor, Esq.
W. Fisher, Esq.	F. Thrupp, Esq.
W. Fisk, Esq.	R. J. Walker, Esq.
Deffell Francis, Esq.	G. Wallis, Esq.
W. H. Freeman, Esq.	G. R. Ward, Esq.
E. A. Gifford, Esq.	W. H. Watkins, Esq.
J. Gilbert, Esq.	S. M. Webster, Esq.
H. Jones, Esq.	S. Wilson, Esq.
	T. Yeats, Esq.

And many other Artists of Eminence.

T. M. would also call the attention of Artists to his new SILICA GROUND CANVASS. This Canvass, not being prepared in the usual method with common oils, causes all colours used on it to dry from the bottom, and not from the surface, as is now the case, thereby, in the painter's phrase, giving a light within.

May be had of all sizes, on frames and in rolls.

Prepared Mill Boards and Panels for Sketching and Painting.

Miller's new SILICA VARNISH. This varnish, not being made of soft gums, like the ordinary varnish, when once dry cannot be removed from the painting; neither is it acted on by the atmosphere, which frequently occasions the effect of a thick bloom, similar to that of a plum, thereby entirely destroying the effect of the picture. All these evils are completely obviated by the use of the Silica Varnish.

Colours prepared with Spirits for Oil and Water-colour Painting in impalpable Powder.

Mahogany Oil and Powder Colour Boxes fitted up complete.

Japanned Tin Oil Colour Sketch Boxes ditto.

### To Water-Colour and Miniature Painters.

#### MILLER'S GLASS MEDIUM.

It is well known that some preparation for giving brilliancy and depth to Water-Colour Painting, and for enabling the Artist to repeat his touches without disturbing the colours already laid on, has been long sought after: this new vehicle possesses all these advantages. When mixed with the colours it has a most brilliant effect, and will preserve delicate tints uninjured; in durability it will approach nearer to Oil Painting than anything hitherto in use.

#### Glass Medium in Bottles.

No. 1. For first colouring or laying on masses of colour. This dries so hard that the second colouring or finishing will not disturb it.

No. 2. For second colouring, glazing, and finishing.

Also the NEW SILICA COLOURS, prepared in Cakes, which possess many and great advantages over the Cake and Moist Water Colours, at present in use. Japanned Tin Water Sketch Boxes, with Bottle, Cups, &c., complete.

T. M. has great pleasure to inform Artists that he has on sale all the Colours made by G. Field, Esq., author of "Chromatography," &c. &c.

T. M. has also all the remaining stock of Ultramarines, manufactured by the celebrated Italian maker, the late G. Arzone.

#### MILLER'S PREPARED LEAD PENCILS

FOR DRAWING, &c.

Of different degrees of hardness, without grit.

#### MARKED

H Moderately hard, used for sketching.

HH A degree harder, used for outlines and fine drawing.

HHH Ditto ditto, used for architectural drawing and short-hand writing.

HB Moderately hard and black, used for sketching and filling in.

B Black, used for shading.

BB Softer, with extra depth of colour.

EBB Ditto ditto (double thick lead).

F Rather soft, but firm for drawing.

FF Ditto ditto (double thick lead).

#### DRAWING AND CRAYON PAPERS.

Crayon and Mounting Boards.

London and Bristol Boards.

French and other Tracing Papers.

#### CHALKS.

Italian, French, and German Black, White, and Red Chalks, in Pencils or Crayons, of the finest selection.

#### BRUSHES AND PENCILS.

Fine French Hog Hair Tools, flat and round.

Goat's Hair ditto ditto.

Sable ditto ditto.

Fitch ditto ditto.

#### MILLER'S NEW PALETTE

Is held in the same manner as the one in general use, but the thumb-hole is dispensed with, thereby obviating the annoyance resulting from oil and colour running through upon the hand, and will doubtless entirely supersede the present one.

#### DISSOLVING VIEWS.

Colours prepared in small boxes, for painting the Dissolving Views as now exhibited at the Royal Polytechnic Institution, with directions for use. The same Colours are also applicable for painting the slide glasses of Magic Lanterns, and devices or ornaments on ground glass, in imitation of the old masters.

MILLER'S PREPARATION FOR CLEANING AND RESTORING OIL PAINTINGS.

In small boxes complete, with directions for use.

Wholesale, Retail, and for Exportation, at  
MILLER'S ARTISTS' COLOUR MANUFACTORY,  
56, LONG ACRE, LONDON.

## THE ART-UNION.

LONDON, JANUARY 1, 1842.

*We cannot enter upon the Fourth Year of our existence without expressing our grateful sense of the extensive support we have received. Our present position is such as to secure us from all the "chances and changes" to which periodical literature is subjected. A large, and increasing, circulation, gives us augmented power of carrying out our original design—"to supply to artists accurate and useful information upon all subjects in which they are interested, and to the public the means of justly ascertaining and estimating the progress of Art both at home and abroad." Our future efforts will be commensurate with our past exertions. But, with the ability to command additional force, and an earnest desire to employ it beneficially, our readers may look for that improvement in the conduct of our journal which they are, undoubtedly, entitled to require and command. We have heretofore attributed our success, mainly, to the "honesty of purpose to which we fearlessly lay claim." We have acted up to our imperative duty—of expressing, in every instance, the opinions we entertain, without regard to the wishes, or the interests, of any person or any party. We have endeavoured to do so, on all occasions, without arrogance or presumption; to be swayed by no prejudice; to be misled by no partiality; to be biased only by generous considerations of the difficulties that embarrass genius at the outset, and by a conviction that we are best employed in removing, rather than increasing, them. We have thus succeeded in obtaining the confidence of the artists and the public; and we are not likely to risk it by a departure from the course by which it has been gained—an earnest desire to think and to act rightly.*

*Unconnected as we are—and shall be—with what is technically termed "the Trade;" with any interest, indeed, that can, either directly or indirectly, control our movements, our line of duty is a plain and straight one:—our prosperity can be secured only by being the upright and consistent representative of the artists of Great Britain.*

*The cause of British Art is, unquestionably, triumphing: at length, the Nation has been roused to consider it worthy of fosterage; the artists must be excited into corresponding energy; to watch with scrupulous, if not suspicious, care, the early bias of National patronage. Upon the first direction the streamlet takes will depend the subsequent course of the river. There has been no period in the history of our age and country, so pregnant with good, or evil, to a generation and its posterity, as that upon which we are now entering. To the accomplished and high-minded Statesman—the first who has given impulse to the Arts of Great Britain—we owe already a debt of gratitude: he has planted the seed that may yield the future harvest.*

*We contemplate certain improvements, that will be manifested as we proceed. We may observe, however, that we desire to promote the purposes of the useful Arts by showing how advantageously they may be influenced by the Fine Arts; and how largely our manufactures may be benefited by the aid of taste and genius.*

*But our business, now, is little more than to express our thanks for the success we have obtained, and the assistance we have received: to deliver assurances of added power and, if possible, increased zeal, in the service of British artists; and to promise that every source of information shall be made available, in order to secure continued prosperity.*

THE NATIONAL COMMISSION.  
BRITISH ART.

EMINENCE in the FINE ARTS is now the one thing wanting to crown the cumulus of England's glory. It is so recognised a truth, that the remark has become almost as trite as a proverb. Like Rome of old, this country, foremost in all the rougher Arts, and craving for herself the grandest mental attributes, has been too content to slake her thirst for the civilizing refinements of the Arts at foreign fountains, while it wanted but a word, like the rod of Moses, to draw forth the "living waters" from the rock at home.

Professional ambition and patriotic ardour in the more enlightened portion of society have long employed the most ardent endeavours to raise among the public an active love and encouragement of the Fine Arts in Great Britain. Project has followed project, effort has succeeded effort, but for a long time all was "void and of none effect;" even voluntary promises of gratuitous artistic exertions failed to rouse any excitement, further than that attending a callous and half-contemptuous refusal of the proffer; and when some high-souled son of genius, like Barry, or Hilton, or Proctor, aimed at following out the high destinies which nature had apparently assigned him, not only did pecuniary recompense desert his studio, but he was too often doomed to see knightly national honours alight, by preference, upon those whose devotion to Art was not unaccompanied by the requisite attention to Mammon! Far be it from us to suppose that the man who claims for himself and manifests to the world the attributes of high genius, is, therefore, to be petted and spoiled, and led to imagine himself exempt from all the ordinary efforts which are imposed upon mortals to maintain their own wants by their own contributions to the common stock of the "utilities." But, if national policy and national gratitude mark out, from other professions, men whose services are said to entitle them to national support and exaltation, we do peculiarly claim these distinctive marks of favour for the devotees of the highest branches in Painting and Sculpture, and consider it a point of great importance to the nation, that such rewards should be distributed with the strictest attention to the intellectual, and not to the mere worldly, elevation of the claimants. If there be men who, in despite of depressing circumstances, spurred on solely by their eagerness to develop what is beautiful and true, have dedicated their lives to works which humanize those who contemplate them, while they glorify the land of their production, how much more might we not expect from the hands of such men, if they were cheered on by the consciousness that a Nation's eyes were upon their labours; and that their success, while it benefited and delighted their fellow-beings, would, at the same time, draw in its train a certain exemption from toil for themselves. The truth, however, is, that we, as a nation, have been lamentably accustomed to treat genius in the Arts as if it were a prolific weed, which "grows apace," and needs no culture; we have afforded hot-bed shelter to the more humble offshoots of the same plant, and they have flourished, while the great stem has never arrived at anything further than a kind of stunted maturity. We have not sufficiently borne in mind the "moral" of the verses:—

"Princes and Lords may flourish or may fade,  
A breath can make them as a breath has made;  
But," &c.

Not thus has it been wherever Art has attained that grand climax which alone reflects true glory on a state, and which, through ages, when other glories have been half forgotten, continues to surround the nation's name with a halo of renown, and to produce a constant stock of pleasure and of high feeling—may we not also

add of commercial profit?—for which successive generations make a grateful return. What would be Italy without her poetry and her Arts? Velasquez and Murillo start forward from the bright age of Spanish glory, on the same parallel with the names of Columbus and Lopez de Vega, and their delightful works still remain, charms for thousands, and a record for themselves; and assist us to fathom the natural depths of Spanish mind, when time and fate have detracted from other jewels of the Spanish diadem. Bavaria in the present day would be but a poor German state, did not her constellations of modern Art attract the attention of all Europe; and France, not content with her martial and other achievements, taking a foremost rank in the works of peace as she shone in deeds of war, proudly encourages the professors of those Arts whose works will be an honourable and joy-evolving fact, when the "system of Napoleon" may be but an historic name. Shall England be the last in a contest for such a palm? She, whose science settled the system of the world, and evoked the powers of steam, and whose literature boasts of that poet whose deep and happy influence is co-extensive with the varied sympathies of the human heart. Happy are we, then, that the epoch of a generous culture of the Arts in Great Britain appears to have now fairly commenced, and with so much of earnest enthusiasm, and under such brilliant auspices, that the good result cannot be questioned except by those who participate in the anti-English notions of Wincklemann, Du Bos, and—others nearer home!

There has sprung up of late years, among the public generally, a wide-spreading interest in the productions of the chisel and the pencil; and there are now institutions rapidly and powerfully organized to give a focus to that interest, and to foster the truest taste. It will be at once perceived that we allude to the *Art-Union Societies* in different parts of the kingdom. Without here entering into the strict merits of the various associations, we rejoice to render our heartfelt thanks to the originators and present promoters of Institutions calculated to exert so wonderful an influence upon the state of the Arts in this kingdom. Their powers will be prodigious, and, rightly exercised, they may supply to the rising generation of artists all the benefits which the patronage of princes formerly afforded, without any of the attendant disadvantages. The great subdivision of the money subscribed is a politic and valuable arrangement, because it not only tends to promote the cause of these societies by extending the number of those who hold prizes, but also to diffuse into a great variety of channels a substantial patronage. We look, however, with great hope to the effect of the larger sums. It is by these that pictures will be purchased whose merits might otherwise have borne the "bright reward of fame" alone, and if (as we have stated it to be in contemplation) the two highest prizes should be made of some unusually large proportions, there may arise a demand thenceforth for works of Art of an importance far beyond that presented by the general average of our exhibitions—a demand which would quickly meet its due response from the artists.

Rapid and important, however, as have been and will be the changes which these Art-Unions will effect for the benefit of Art, it is only a GOVERNMENT that can be looked to for evolving that highest condition of Painting and Sculpture, where they are employed as intellectual ornaments of the public buildings of the State. And here we enter upon a topic that has of late interested society to an extent that bodes well for the lovers of Art.

Year after year, for nearly a century, the demands of British Art upon the care of the Go-

vernment have met with so little attention as scarcely rises above neglect. The distress at one time, foreign wars at another, or the equally embarrassing warfare of "parties" at home, have been at least the ostensible reasons why Painting and Sculpture have obtained few of those fostering aids which were afforded to the Arts bearing more immediately and apparently upon improvements in our commerce. Tardily and coyly, indeed, a School of Design has of late years offered to our manufacturers the means of obtaining a correctness and elegance of designs for the purposes of commerce; and under its present able management, there is no saying to what important results the Institution may lead. The instruction given at Somerset House is as varied as it is complete; and the body of students, whose ideas of "design" will be formed there, will doubtless, ere a few years are over, work a thorough change in the taste displayed in our manufactures, and enable us to compete as successfully as ever with the rapidly-improving works of France\* and other foreign nations.

Singular does it seem, however, to those who look on with a wide scope and philosophic eye, that whilst every other exertion of human power has been adopted to work on the moral nature of the great masses of the community; while mechanics' institutes have opened the doors of science, and society after society have been endeavouring to diffuse the doctrines of morality and of revealed truth, there has been a complete national oversight of one of the most powerful agents that the Government of a country might employ to sway, by a silent eloquence, the minds of men!

In the middle ages PAINTING was the great open book that "all who ran might read." Speaking a language common to all, it was made use of to teach important facts in a most impressive manner; every wall bore its interesting and important lesson, conveyed by that Art whose refining operations are the more effective because its admonitions are accompanied with sensations of pleasure; an Art which appeals to the meaner as well as to the higher intellects of mankind; an Art which, embodying conceptions of the most exalted and spiritual nature, makes them at the same time sensible to all, because it addresses itself through the best and most universal of media—the eye; an Art which is a silent appeal from soul to soul, vividly exciting the feelings, and rousing intellectual action even in the uninstructed.

Those who take the trouble to visit the various national exhibitions, which have now been wisely opened to the public gaze, cannot have failed to notice the immense delight with which many a face of the artisan or the rustic is turned towards the *chefs-d'œuvres* of Art. Nor is it less singular than true, that the grander subjects appear to obtain most of their attention. But if these works contained no fine truth, operated on none of the more admirable of our moral feelings, but were mere causes of innocent gratification to the sense, even then it would be a paramount policy of a wise Government, as it would, undoubtedly, be a welcome boon to the people, to increase, by every reasonable amount of expenditure, the facilities for affording to the public the wholesome luxury of works of Art.

With these impressions we join in the general welcome to the appointment of the Royal Commission, "for inquiring whether advantage might

not be taken of the rebuilding of the Houses of Parliament for the promoting and encouraging the Fine Arts."

Whatever may be the special result of the question propounded in this appointment of the Commission,—exhibiting, as the terms do, so material a deviation from those of the first announcement,—there can be little doubt that the mere agitation of the matter will have an important effect on the general interests of Art; and that whether the senate-house be left to mere architectural simplicity, or be adorned by the united talents of our painters and sculptors, the importance of a general fostering of the Fine Arts by the state is fully recognised in the determination to inquire into one particular mode of its prosecution. This is, indeed, a great point gained, and the more especially if it be true, as we have heard stated, that the Government, during the great administrations of Pitt and Fox, generally sheltered itself from cases of a similar nature by asserting that "the time was not yet come." The time, it seems, has at length arrived, and arrived too with an opportunity which presents to the mind of an artist one of the most glorious means for the employment of his Art for his own reputation and to the credit of his country. Looking at the names composing the tribunal appointed to try this matter, the most gratifying surmises take the place of doubt, and hope already exults in the prospect of the monument likely to be erected to the honour of the Arts in Great Britain, and sees another bright flower entwined with the wreaths of our national renown. Art is too universal to belong to a party, but the public writer has a truly pleasing task when, in rendering a testimony to the intellectual and moral worth of the great leader of a party, he can feel that all will recognise on his feeble applause the powerful seal of truth. It is with this feeling we express our delight, that the Commission emanates from its royal source, under the auspices of Sir Robert Peel. Without thinking that his predecessors would have failed in an enlightened and patriotic view of the question, we have reason to deem it a matter of no small and peculiar import, that the consideration of the subject will be bound up with the other statesmanlike projects of the present Premier. It is in the highly refined taste of Sir Robert, his well-known friendship with certain of our leading artists, and his liberal patronage of the artistical talents of his native land, that we behold the surest guarantees of his promoting the cause of Art to the utmost. The association of Prince Albert, also, with the labours of the Commission, is an augury of the most favourable nature; because, not only does his name bring with it an additional importance, but his well-ascertained love of Literature and Art, combined with (if report speak truly) a practical adoption of the latter as a study, give an assurance that he will look upon the business with no careless or apathetic eye. He has already afforded public instances of his zealous desire to render the assistance of his name and patronage, where the merits of Art laid a claim upon him; and has appeared desirous of surrounding his illustrious station with the halo of a reputation for true and refined taste.

If, then, the Commission prosecute their "inquiry" with that zeal which their previously-proved interest in such subjects induces us to expect, there is abundant reason to look forward to a grand series of historical paintings and sculpture in the Houses of Parliament. As this is a pivot on which much turns, we would venture to suggest the endeavouring, on the part of the artists themselves, to contribute as much as possible to forward the "inquiry" when in progress. Opinions on the various methods in which designs of this peculiar nature might be carried out, if digested with care and founded

on substantial data, together with the means of enabling the Government to form an estimate of the probable expenditure required by the different modes of procedure; the relative length of time which specific plans would require, and the readiness of the profession to enter upon their execution—these are matters for information, respecting which the members of the Commission will of course look to the artists. Upon these topics much remains, if space permitted, to be addressed to our readers, which, however, another occasion may permit us to develop. In the meantime, with the ardour of true lovers of Art, we will conclude by expressing our strong hope and conviction, that an epoch is arrived when this country will be enabled to vindicate her claim to one of the most honourable attributes of a civilized community. Hateful would be the feeling, crooked would be the policy, and bad the taste, that should strive to wrest from the native grasp so inviting and honourable a prize, to throw it among foreigners. Let us adopt the lesson given us by the high-minded and honourable Canova, and whilst we reverence the works of genius abroad, pay no disrespect to the gifts which nature may have lavished upon those of our own clime.

#### ON VEHICLES FOR PIGMENTS.

TO THE EDITOR OF THE 'ART-UNION.'

SIR,—As the subject, "Vehicles for Painting," appears to be one of unusual interest to many of your readers, and as my name has been kindly mentioned in connexion therewith by one of your valuable correspondents, who has long pursued with most enthusiastic zeal a tedious course of research, in order to develop, if possible, the means by which certain of the old masters produced their peculiarly durable and brilliant effects; I beg to offer a few remarks on the modern substitutes which have been recommended to the public, for the real all-important desiderata so anxiously sought, yet so mysteriously obscured, and so unsuccessfully approximated during centuries.

Addressing you and your readers rather as a chemist, than as an artist, I shall sedulously avoid the use of technical phraseology, and endeavour to express myself clearly and intelligibly to all, even at the risk of being considered tedious to some.

The vehicles hitherto commonly used in painting have been linseed oil and spirit of turpentine; but, for certain reasons, these two vehicles *alone* have been by many considered insufficient.

Now, I presume, the insufficiency of oil and turpentine has been inferred, either because the pigments with which they have been blended have, from lapse of time, deviated more or less from their original colours and brilliancy; or, if they have not suffered any alteration in colour, because they have required a covering of some other material, that their original lustre might be displayed, which material has been proved to be objectionable from subsequent imperfections. But if neither of these conditions have resulted from the employment of oil and turpentine *alone*, what more can artists desire?

Let us suppose the first mentioned defect to have attended the use of oil and turpentine *per se*, to which of these two substances should the mischief be mainly attributed? As a chemist, I should say to the oil, which may, under certain circumstances, materially influence the colours of certain pigments (particularly those in which preparations of lead or of bismuth may occur), through the development of gaseous vapours which are liberated during its desiccation.

Oil, in drying, *must necessarily* absorb oxygen; it may, therefore, either deprive a pigment, consisting of a metallic oxide, of a portion of its oxygen, and thus modify its colour; or it may absorb the oxygen necessary for its solidification from the atmosphere. During this drying process, extremely disagreeable effluvia are known to escape, which effluvia have been proved to be competent to affect the colour of white lead very materially, whensoever a free current of atmospheric air is excluded. Every one must have no-

\* "The lustre of our manufactures, and the prosperity which everywhere attended them, corresponded to the degree of influence which *Painting* possessed over them."—"In fact, every vessel of silver and gold, of porcelain or common clay; our jewels, arms, furniture, cartoons for tapestry, chintzes, laces, ribands, *ouvrages de modes* (millinery), embroideries, gold and silver tissues, experience, more or less, in the hands of the workman who fashions them, the salutary effects of that influence."—Dechazelle, "*Discours sur l'influence de la Peinture sur les Arts d'industrie commerciale*."

ticed the discolouration of recently painted white wainscoting, &c., consequent to the suspension of a picture or print, that had been replaced before the painted wainscot had become thoroughly dry and hard.

Now, during the drying of oil there must naturally exist a constant effort to disengage these offensive effluvia throughout the whole mass with which it may be incorporated, both within and without the external film which indicates incipient desiccation; and as they cannot escape from beneath this film with very great facility, it may be imagined they are compelled to struggle for escape in every direction before they can eventually become free; and thus they may, even under favourable circumstances, act in some degree prejudicially upon those metallic pigments which are the most susceptible of injury from such peculiar gaseous emanations.

Admitting all this to be so far correct (or even plausible, if you please), then it follows that if oil must be used by artists, still the less they can possibly use with convenience, the less all the practical or theoretical evils to which I have alluded may preponderate. Hence, probably, the first introduction of turpentine as a diluent. This material, however, appears to have its utility confined within limits much too circumscribed. A slight excess of it causes the pigment to flow too freely from the brush, and to dry without brilliancy, involving the necessity of some subsequent covering that its original lustre may reappear.

From these, or from some such circumstances, the desire of obtaining some other conveniently volatile diluent, readily miscible with oil, and possessing no injurious qualities, has arisen. Pure water would naturally suggest itself to a reflecting mind, provided it could be used; and this, together with the employment of only just sufficient oil *merely to cement firmly the various particles which compose the pigment* after the water has evaporated, would be all that could be required.

But how can this portion of water be introduced? It cannot be mixed with oil without the intervention of some third substance possessing a property analogous to that of alkalis. An alkali, however, would be objectionable, as it would form a species of soap that might never become sufficiently hard, and that might be affected by moisture; moreover, it might alter the colours of several of the pigments in ordinary use.

Alkaline earths, such as caustic lime, although fulfilling some of the requisite conditions, would be inadmissible for very evident reasons; and so would any other earthy material which possessed opacity, such as fuller's earth, &c.

What then will do? Why, borax; and few indeed are the substances that can supplant it for this especial purpose. And here I will quote a few authorities with a view to excite the interest of those artists who would wish to associate some particular "medium" with the works of the most celebrated of the "old masters."

Chaptal, in his "Chemistry, applied to the Arts and Manufactures," published in 1807, has informed us that

"The *natron baurake* of the Greeks, the *borith* of the Hebrews, the *baurach* of the Arabians, the *boreck* of the Persians, the *burach* of the Turks, the *borax* of the Latins, all appear to express one and the same substance.

"The process for purifying borax was long confined to the Venetians; but the commerce with the Levant having been interrupted, in consequence of the war carried on for such a length of time between the Turks and the Persians, the trade fell into the hands of the Dutch, who continued to monopolize it until very lately, when establishments of the same kind were formed in Paris."

In the "Pharmacopœia Universalis," published by Dr. R. James in the year 1747, under the word *Borax* is the following passage:

"These different boraxes are at present refined in Holland; but the way of doing it is not a secret only to the Dutch, for there is a private gentleman in the Faubourg St. Antoine, who did refine it, and deliver it to the merchants as fine, and as pure as that of Holland. In this state of perfect purification it is transparent like rock-crystal."

Fourcroy, an eminent French chemist (whose "System of Chemical Knowledge" was translated into English, and published in 11 vols. by Wil-

liam Nicholson, in the year 1804), has written as follows:

"There is nothing on which more inquiries have been made, than on the origin of borax; yet, perhaps, there is nothing even yet on which less light has been obtained. It seems as if the more has been said and written on the natural history of this salt, the more have its source and origin been involved in obscurity."

Thomson has informed his readers "that it is supposed to have been known to the ancients, and to be the substance denominated *crysocolla* by Pliny;" and that "it is mentioned by Geber as early as the ninth century under the name of borax."

Borax consists of an acid, called boracic acid, united to a base commonly known by the name of soda. Its chemical name is *bi-borate of soda*.

It is a transparent crystalline substance, fragments of which resemble fragments of alum. Its crystals contain a portion of water, which may be dissipated by heat. In a state of purity, it has no tendency to attract or to absorb moisture, like that possessed by common salt; nor has it any peculiar disposition to part with its water of crystallization when exposed to atmospheric influences, as do crystals of sulphate of soda and of carbonate of soda. When its water of crystallization is expelled by heat, it swells enormously, and becomes an opaque, white, spongy, fragile mass.

In this state it is called *calcined borax*. If the heat be continued, and also augmented, this spongy mass will gradually contract, and finally become resolved into a hard transparent glass, which is not susceptible of further change by any increase of heat.

Now, when borax has been converted into glass in this way, it is liable to a slight external alteration from atmospheric influences. Its surface will, after experiencing the vicissitudes of dry and moist air, become opaque to an extent quite sufficient to preclude it from any of the general uses to which glass is applied.

Borax, both before and after fusion, is soluble in water; but after it has been fused, it is much less speedily dissolved than unfused borax. The efflorescent spots which are often noticed upon the crystals of borax, are stated to be attributable solely to an adventitious mixture of carbonate of soda. Formerly all the borax which was employed in the Arts was obtained, by a secret process, from the native crude Indian tincal. Of late years it has been manufactured in France, by the direct commixture of its component parts—boracic acid (obtained in abundance from the Lakes of Tuscany) and carbonate of soda (obtained by the decomposition of common salt). By this latter process the carbonate of soda is decomposed, and the *bi-borate of soda* formed, carbonic acid being set free. As it is an extremely difficult matter to conduct extensive chemical operations in such a way as to obtain absolutely pure results, a minute quantity of carbonate of soda may naturally be anticipated in the crystals of borax thus produced. Berzelius, however, has stated that the borax, thus artificially manufactured, is purer, upon the whole, than that which was formerly obtained from the native tincal.

Such is the description of the material which has been recommended to artists by Mr. Rainier, and by my friend J. E., neither of whom has trodden, or pointed out, the nearest path to ensure success.

We have been told that the borax must be either *calcined*, or (which is still more cogently urged) that it should be *thoroughly fused*; and then, a certain quantity of this glass of borax must be ground to an impalpable powder, and well "rubbed up" with a certain quantity of linseed oil. In this state the mixture is to be used, taking a little upon the end of the palette knife, and mixing it with more oil, and water, *ad libitum*, and finally with the colours.

[We are, very reluctantly, compelled to divide this valuable and important communication, with which we have been favoured by CHARLES THORNTON COATHUPE, Esq., of Wrexham, near Bristol. We recommend it to the careful attention of our readers, because it bears practically upon the various theories to which we have given circulation.]

## OBITUARY.

### THE LATE SIR FRANCIS CHANTREY.

WE announced last month in a few words the death of Sir Francis Chantrey. The melancholy event occurred very suddenly at his own house in Pimlico, on the evening of the 25th Nov. He had on the previous day returned from superintending the erection of the statue of the late Bishop of Norwich; a work that must be remembered by all who visited the Royal Academy Exhibition of last year. Sir Francis complained much during the day of indisposition, but was, nevertheless, busied in directing the progress of his various works. He attempted in the evening to walk, in company with a friend, to Buckingham Palace; but was obliged by acute suffering, to return home, where he derived temporary relief from a mixture administered to him by his medical attendant: he however shortly afterwards fell back and expired while in easy conversation in his drawing-room.

Sir Francis Chantrey had attained the sixtieth year of his age, and had he lived, years of fame were yet before him, for his latest works attest that his powers were in no degree impaired. How unprepared soever the world may have been for such an abrupt announcement of his decease, persons acquainted with his constitution were aware that he suffered from a malady, whence a suddenly fatal result might be expected. It was stated on the inquest that he died from disease of the heart, under which he had for some years been labouring.

But a few months have elapsed since we announced the death of Sir David Wilkie. It is to be deplored that two men, each the most eminent of our school in his branch of Art, should be cut off within so brief an interval of each other. A strong parallel may be drawn between the fortunes of these gifted men; their early histories are similar; indeed, the same as that of most men who have risen to distinction in Art. Without having seen any works of importance in the respective departments they were about to follow—and while yet even unacquainted with the mere manual process each was to adopt in his future profession, both yielded to that mysterious and irresistible impulse by which their future career was determined.

Sir Francis Chantrey was born on the 7th of April, 1782, at Norton, in Derbyshire. His father was a farmer, but it was not intended that he should pursue the same calling. The legal profession was that which was determined upon for him, but, before his indentures of apprenticeship were executed, a predilection declared itself not directly for that department of Art which he afterwards adorned, but in favour of carving. In this bent he was indulged, and apprenticed at Sheffield to a carver, with whom he served three years. But the art of carving as he saw it executed at Sheffield, was not enough to fill the mind of Chantrey, he yearned for something beyond it—and therefore, occupied himself in modelling in clay during portions of the hours allotted to him for refectation and sleep. His improvement was rapid, but singular enough, London was the last of the three capitals of our islands wherein he thought of trying to effect an establishment. He went first to Dublin, with a view of settling; but meeting with no encouragement he proceeded to Edinburgh (which he shortly afterwards quitted), and finally established himself in London. His reasons for thus first turning his back upon the grand mart for all talent must have been eccentric; but be they what they might, they must have been strongly tinged with diffidence of his own merits. Undoubtedly, to many, the anecdote of Nollekens' early patronage of Chantrey is known; but as the first step in the fortunes of the great sculptor we cannot help repeating it here. Having executed a bust of John Raphael Smith, he sent it to the Royal Academy for exhibition; Nollekens saw it, and immediately declared that the author of such a work ought not to remain unknown. "It's a splendid work," he observed; immediately adding, "let the man be known—remove one of my busts, and put this in its place." This admiration of Chantrey on the part of Nollekens was sincere; nothing, it is true, could have kept him in the back ground; but Nollekens assisted materially in basing the structure of his fortunes, for he recommended him always in his own pithy style when occasion served: "If you want a bust Chantrey's the man." Anecdotes might be

multiplied of this celebrated artist, but they all turn on the universally acknowledged excellence of his works—and in these really is his life written.

Chantrey was twenty-four years of age when Nolteken extended his friendship to him, and although at the head of his "troop of friends," Chantrey was by no means in a solitary position, for the wealthy patrons of Art were not slow to acknowledge the merits of the young sculptor; and their approbation was declared in a form so substantial, that he was at once commissioned for works to an extent which rendered the execution of them embarrassing to one so suddenly plunged into the *che fare* of abundant occupation. Not until the year 1819, after having been elected an Academician, did Chantrey visit Italy; he might, perhaps, have made this *tour* before with some advantage; but it will be understood that he went not there to seek style, for his creed was fixed, and we have seen how faithful he has been to his earliest professions. After the rising of Chantrey's star in the firmament of Art, eight years elapsed before he was admitted to the honours of the Royal Academy, of which in 1816 he was chosen an associate, and in two years after an academician. He was also a member of the Academies of Rome and Florence.

The fame of Chantrey has been hymned in loud poems for his monumental sculpture, not only throughout these kingdoms, but in all countries subject to British influence. His most celebrated sepulchral monument, entitled 'The Sleeping Children,' is so well known as to require from us no particular discussion. This work is in the Cathedral of Lichfield, and was erected in memory of two children of the late William Robinson, Esq. Another exquisite work is the statue at Woburn of Lady Louisa Russell, daughter of the late Duke of Bedford—it represents a child on tiptoe, earnestly caressing a dove, which she is pressing to her bosom.\* Well known also to the world of taste is 'Marianne'—a statue so entitled, representing the daughter of Mr. Johnes, of Stafford; and not less so is the devotional statue of Lady St. Vincent. An enumeration of any considerable portion of the remarkable works of Sir Francis Chantrey would demand more space than we are prepared to concede to such a catalogue in a notice brief as this must be; a few, however, we cannot refuse ourselves the gratification of mentioning. Among his most admired are those of Washington, in the State House, at Boston, U.S.; of the Right Hon. Spencer Percival, in All Saints Church, Northampton; of Watt, the engineer, in Aston Church, near Birmingham; of the late Francis Horner, in Westminster Abbey; and of the Right Hon. William Pitt, in Hanover-square. Among his memorable busts were those of Sir Walter Scott, George the Fourth, Lord Castlereagh, Rennie, her Majesty, his Royal Highness Prince Albert, &c.; the two last named were among the latest works he exhibited. It has been stated in the newspapers that a statue of Nelson was to have been executed for erection at Yarmouth. In the announcement of this statue it was described as intended to be of the height of 130 feet; and in the place of the star upon the breast, there was at night to be a light for the guidance of vessels. It is not improbable that Sir Francis Chantrey may have been consulted on such a project, and may have discussed it, but it was assuredly not a work on which he was to have been so shortly busied, as implied in the statements that have gone forth on the subject.

Such has been his state of health, that of late he has been able to do but little more than to superintend the progress of his works after they were in a certain state of forwardness, the completion of them being committed to other hands. The Wellington Testimonial for the City of London is in an advanced state, the head of the duke having been finished before he went to the country for the last time. To his accomplished assistant, Mr. Weeks, Sir Francis committed almost the entire execution of this colossal work; and it cannot be doubted that the design will be felicitously carried out by this rising sculptor.

\* The conception of these works, it is well known, does not belong to Chantrey; the statues were wrought from the designs of Stothard.

## WORKS IN PROGRESS.

### THE PUBLICATIONS OF MR. F. O. MOON.

WE devote this month considerable space to the announced publications of Mr. Moon; they are so numerous and so important, that although we dedicate to them several columns, we shall, after all, be compelled to content him and ourselves with little more than a bare enumeration—sufficient, however, to direct to them the attention of our readers.

It is a leading part of our duty to strive our utmost to uphold a publisher who manifests an anxiety, and exhibits a determination, to aid in the circulation *only* of what is really excellent in Art. The publisher is necessary to the painter; he is the medium by which the world is to form an estimate of merit; for a picture can be seen but by few—a print may, and will, gratify and instruct thousands. It is, consequently, of paramount importance that we should co-operate with him in all his undertakings to improve the character, increase the reputation, and promote the welfare of British Art, by improving, increasing, and promoting the public ability duly to appreciate it; an effect which can be alone produced by the issue of such works—and such only—as shall be calculated to advance the great and important object. The production of an inferior print does mischief, by deteriorating taste, by satisfying with mediocrity, and by discouraging those who would willingly aim at higher achievements, if stimulated by success, instead of discouraged by failure. It is notorious that, in this country, some of the "best selling" engravings have been very worthless things; while some of the finest works of modern times have scarcely yielded enough to pay the printer. We are, however, on the eve of a happier era; the publications now "in progress" are of a far better order than they were; and sure we are, that ere long publishers who issue trash will be rewarded with bankruptcy, while those who furnish what is good will amass fortunes.

This "consummation" has been, undoubtedly, brought about by some of our publishers; certainly to a large extent by Mr. Moon; and we do him only justice when we say, he is therefore entitled to no inconsiderable degree of gratitude from both the artists and the public. We have before us his printed list of works published within the last four or five years; we shall offer them some notice before we direct attention to his "works in progress." First, we reckon no fewer than fifteen prints after E. Landseer—engraved by Doo, Robinson, Gibbon, and Cousins; consisting of works unrivalled in the department of Art in which Mr. Landseer excels. Next, we count eight after Wilkie, including the beautiful print (engraved by Cousins) of the 'Maid of Saragossa,' and a chef-d'œuvre by Mr. Doo (whose valuable name appears nine times in the catalogue) 'The Preaching of John Knox.' After Collins we have six; after Eastlake, three; after Constable, two noble landscapes; after Turner, three or four splendid works in line; with others after Lawrence, Wyatt, Edmonstone, Webster, Bonington, &c.

Yet this highly creditable and honourable list is but as the introduction to a more full volume. We have memoranda of twenty works of the very highest class—in various states of finish—in course of preparation, several of which he is about to issue; these we shall notice more in detail.

1. THE QUEEN'S FIRST COUNCIL; painted by Sir David Wilkie; engraving by C. Fox. As a record of one of the most interesting events of the age, this work cannot fail to become extensively popular. Sir David was not a portrait painter; his genius lay in idealizing facts; and this work will be chiefly valued for its grace of composition and success in grouping. In it, however, are introduced about thirty of the leading worthies of Great Britain in the nineteenth century. The form and features of the young Queen are beautifully and happily rendered. From the burin of Mr. C. Fox it will receive ample justice.

2. THE CORONATION OF HER MOST GRACIOUS MAJESTY VICTORIA. Painted by E. T. Parris; engraving by C. E. Wagstaff.—We have had occasion more than once to refer to this work; it contributed greatly to elevate the character of the painter; it was a huge step in advance; and in many respects deserved the high praise it very generally excited. The difficulties to be encountered were many; and the skill with which they were overcome manifested powers of no common order. The likenesses are for the most part very striking; each individual of the crowded group that surrounds the sovereign is recognized at once. The print will consequently be a valued acquisition to thousands of those who desire to possess a pleasant

record of the event; and, in his style, there is no engraver so able to render it justice as Mr. Wagstaff.

3. THE QUEEN RECEIVING THE SACRAMENT AT HER CORONATION.—Painted by C. L. Eastlake, R.A.; engraving by S. Cousins, A.R.A.—This work combines the excellencies of the two we have noticed; as a composition it is exceedingly beautiful, and for fidelity, as a collection of portraits, it is certainly unsurpassed in modern Art. The group of fair young females—of the English aristocracy—in the foreground is especially attractive; and the figure of the Queen is in itself a picture of the rarest merit. On the whole, perhaps, this will be the favourite of the "National Series"—commemorative of an event which we trust few of the existing generation will live to see repeated. The great advantage of this picture is, that although there are 38 portraits, each is sufficiently prominent.

4. THE WATERLOO BANQUET AT APSLEY HOUSE. Painted by W. Salter, Esq.; engraving by W. Greatbach.—After-times will comment more upon this subject than even our own age. Year after year the "Heroes of Waterloo" are passing away from us, leaving the rich legacy of a glorious memory with which their names are inseparably linked, and occupying for ever a full page in the history of Great Britain. Even the chief of them all must one of these days—God make the period a distant one!—belong to the past. We have, heretofore, spoken of this picture; a perfect triumph of Art, if we refer to the almost insurmountable difficulties to have been grappled with in treating the subject; an assemblage of men only, habited pretty nearly alike; a preponderance of that unmanageable colour to the engraver, scarlet; a long table covered with gorgeous plate; the whole of the figures save one, sitting; the absolute necessity for exhibiting, *clearly*, each portrait, and so grouping the whole, as to make something like a close approach to harmony. He was a bold man who undertook such a subject; and if all the obstacles have not been overcome, Mr. Salter has gone, perhaps, as far to vanquish them as any living artist could have gone. The picture possesses the deepest interest, and may well be classed under the head "National." For centuries to come it will be valued as the record of an event touching to every British subject, and as containing a collection of authentic portraits of the leading "captains of the age." The engraving, too, is in safe hands. Hitherto Mr. Greatbach has produced no plate on a large scale, but he has given abundant evidence of his capability.

No. 5. SIR DAVID BAIRD DISCOVERING THE BODY OF TIPPOO SAIB. Painted by Sir David Wilkie; engraving by John Burnet. This picture was not a favourite at the exhibition; it contains some points, however, worthy of the admirable painter in his best days; and as commemorating an incident honourable to the glory and fame of Great Britain, it possesses very great interest. We rejoice to see again united the names of Wilkie and Burnet.

No. 6. COLUMBUS'S DISCOVERY OF AMERICA. Painted by Sir David Wilkie; engraving by H. T. Ryall. This is a picture of more universal interest;—a touching subject so treated as to reach the heart. It describes the immortal "voyager" discouraged, beaten down, and broken in spirit, upon the eve of a more auspicious prospect—a prospect afterwards realized to the great gain of humankind. Columbus is reasoning of marvels to come, with the friar, Juan Perez, the physician Garcia, and the sea-captain, Martin Alonzo Pinzon, from each of whom he receives hope, in the Convent of Santa Maria de Rabida. His son Diego is standing to his left—a beautiful point in the picture. It is, indeed, a delicious work, a fine reading of history, and a valuable lesson to excite perseverance. The print will be a worthy associate of the best after the great master.

No. 7, 8, 9. In the list, follow three portraits—of two great men, and one beautiful and accomplished woman. The late Lord Chancellor, LORD COTTENHAM, from Leslie's portrait, and LORD LYNCHBURST, from that of W. C. Ross. Both eminent lawyers; and one ranking among the most eminent statesmen of the age and country; a likeness of whom will be acceptable to thousands. The COUNTESS OF BURLINGTON was (for unhappily she is dead) sister to the Duchess of Sutherland and the Lady Dover.

No. 10 and 11. THE QUEEN AND PRINCE ALBERT, from Mr. Partridge's two pleasant portraits; the former engraving by Robinson, the latter by Doo.

No. 12. CHRIST BLESSING LITTLE CHILDREN. Painted by C. L. Eastlake, R.A.; engraving by J. H. Watt. No one who has seen can have forgotten this exquisite work; there will be as many to rejoice that copies of it are to be multiplied. The age has given

birth to nothing more perfect; more sublime in conception, or more truthful in arrangement. It is a great matter, too, to have it placed in the hands of Mr. Watt—who ranks among the foremost of our English line-engravers.

No. 13. CHRIST WEeping OVER JERUSALEM. Painted by C. L. Eastlake, R.A.; engraving by S. Cousins, A.R.A. And will not this be an acquisition to every veritable lover of the Arts, who can feel what is beautiful and appreciate what is excellent! The remembrance of this noble picture is refreshing to us—the chief of a thousand it was in the Gallery of the Royal Academy; one that threw into obscurity all lesser lights—lights that would have been brilliant elsewhere. In characterizing it, we could use no language that would seem exaggerated to those who are familiar with the picture. No work of modern times has gone so far to convert the craving for old Art into a more natural and wholesome appetite; or to induce a conviction that what has been done may be done again. What a glorious theme for the poet as well as the painter—or rather what a *sufficient* reading of the divine prophecy!

The multiplication of this noble work is in truth a public benefaction; for it will make Art subservient to the high purpose of teaching, while yielding the purest gratification and enjoyment.

No. 14. LA SVEGLIARINA. Painted by C. L. Eastlake, R.A.; engraving by J. H. Watt.—This also will be remembered as one of the leading attractions of the exhibitions of 1840. It is a delicious cabinet picture of a young woman with a child.

No. 15. THE COTTER'S SATURDAY NIGHT. Painted by Sir David Wilkie, R.A.; engraving by L. Stocks.—This work was exhibited at the same time, and in the same room, with the 'Sir David Baird'; the one was a picture of great size, the other not too big for a cottage; yet there were many who preferred the smaller to the larger—giving, as it did, once again to the world the accomplished painter with the fine natural feeling of his earlier days. It describes a pure and beautiful episode in peasant life—fitting illustration to an immortal poem. Less full of character than Sir David's first works, but infinitely more so than his later productions; forming as it were a medium between his original and his matured genius.

No. 16. TWELFTH-NIGHT; OR, WHAT YOU WILL. Painted by E. Landseer, R.A.; engraving by J. H. Robinson.—We remember this sweet and graceful picture as the leading gem of an exhibition, although we cannot call to mind the applicability of the title it has received. It is a portrait of the Marchioness of Abercorn in a masquerade dress.

No. 17. NAPOLEON AND THE POPE. Painted by Sir David Wilkie, R.A.—Another of Wilkie's historical pictures. It has not impressed itself upon our memory sufficiently to enable us to describe it; and the etching we were not enabled to examine.

Nos. 18 and 19. ANCIENT ITALY; MODERN ITALY. Painted by J. M. W. Turner, R.A.; engraving, the former by Willmore, the latter by Miller.—These works are of promised excellence, equal to aught that has been produced in the British school of landscape engraving. The accomplished painter is not "in vogue" of late; he does not stand as he has done, alone and unapproachable; and his pictures have been engraved so often, that one too strongly calls to mind another. But these will be noble works and worthy of the artist.

No. 20. A series of Etchings and finished Plates to illustrate DEER STALKING IN THE HIGHLANDS; painted by E. Landseer, R.A. This series will consist of plates etched by Mr. Landseer himself; and several prints from the burins of Robinson, and other eminent engravers. We have already exceeded our limits; and must content ourselves with observing, that the work will be one of the most interesting that has ever been published; and with claims to public patronage surpassed by none.

We have thus noticed Mr. Moon's list; a famous one it is; nearly the whole of these works are to be *in line*; and are in the hands of engravers of established reputation; and, as we believe, we have referred to all actually in progress, it will be observed that there is not a single one that can be classed under the head mediocrity. We feel that apology is unnecessary for devoting so much space to this subject. As we have said, in upholding the publisher of good works, we uphold the painter of good works, and the engravers most competent to copy them; in supporting his interests we support theirs. There is no way better calculated to advance the *true interests* of BRITISH ART.

## SOCIETIES IN CONNEXION WITH ART.

THE GRAPHIC SOCIETY held their first meeting for the season early in December. There was a numerous assemblage of members and visitors, among the latter of whom we noticed Lord Palmerston and Sir Robert Inglis, Mr. Babbage, &c. The evening was one of the most agreeable we remember to have passed at this interesting reunion of able men. Some of the works of Art contributed for the inspection of those present were exceedingly attractive. Mr. Bell the sculptor produced a series of designs abounding in original ideas and full of talent. A portfolio of Rembrandt's etchings afforded that pleasure which so valuable a collection of the great etcher's productions cannot fail to excite. A painting of Venus and Mars, by Mr. Etty, presented one of the most delightful combinations of colour and design we have ever seen from his brush. The figure of the Venus possesses truly graceful lines, and the colouring of the flesh is, as usual with him, exquisite. Specimens of the *litholint*—the new process of Mr. Hullmandel, which offers such peculiar facilities for the multiplication of fac-similes of ancient artists' sketches—were also produced, and, as might be expected, attracted no small share of attention. We were particularly struck by the brilliancy and effectiveness of the lithotints by Mr. F. Tayler and Mr. Nash. Mr. Mc Ian contributed an immense number of sketches in water colour, which he has been making in his native Highlands; and a collection of real interest they form indeed. Independently of the graphic power which this gentleman possesses, there is in his transcripts of nature an evident truthfulness, which adds much to the value of his work; and thus we wandered with him through mountain glens, peeped into the picturesque interiors, and looked at the gray legend-bearing castles, with the peculiar interest inspired by the conviction of their reality. Mr. Mc Ian has brought to the delineation of his Highland scenes the same high degree of talent with which, in another art, he represents the characters who people them.

ARTISTS' AND AMATEURS' CONVERSAZIONE.—On Wednesday, 1st ult., was held, at the Freemasons' Tavern, the periodical assembly of the profession, and gentlemen friendly to the progress of Art. The room was by no means crowded, nor were the works exhibited numerous; but many were of the first order of merit in the various departments. There were only two or three pictures in oil; and these we cannot pass by without a word in praise of the admirable feeling and execution of Frits's 'Dolly Varden'; a single figure, painted with infinite delicacy in the flesh, and crispness and freedom in the drapery. We were much gratified in being enabled to refresh our recollections of Haghe's extraordinary water-colour picture, 'The Oath of Vargas,' contributed by Messrs. Graves and Co. The engravings were few; but such as were hung on the walls we could have wished to have seen more, for no power of eulogy can truly describe their excellence. There was a work by Aristide Louis, from a portrait of Napoleon, by Paul Delaroché, painted during the Hundred Days, and executed in line in the very perfection of that manner. The extreme sharpness of outline prevalent in French engraving, does not, in this specimen, exist to affect in anywise the harmony of the composition. There was also shown the finest proof we have yet seen of 'The Highland Drovers.' Engraved by Egan, there was a work, entitled 'Old English Hospitality,' from a picture by Cattermole, partaking of every charm of that artist's pencil, although in some sort departing from the peculiar style—the unique handwriting by which we generally recognise him. We cannot omit mentioning a most valuable French work, contributed by Messrs. Graves and Co.: it was entitled 'Les Anciennes Tapisseries Historiées,' and consists of an engraved selection of French tapestries, dating from the eleventh to the sixteenth century inclusively; and commencing with the well-known tapestries of Nancy and Bayeux, and terminating with those of Rheims. The engravings are on wood and copper; and nothing that we have ever seen could form so valuable an authority for costume as this work, which is the result of great care and labour.

## PLAN FOR EXTENDING THE ADVANTAGES OF AN EXHIBITION ROOM.

THE importance of removing from hanging committees the onus which, under existing circumstances, attaches to the duty, of avoiding the occasionally, just censure of artists, whose works may be unfavourably, if not unfairly placed; and (what is of infinitely more weight than either) of giving to the public at large the advantage of inspecting conveniently the whole, instead of, with some personal annoyance, snatching glimpses at about one quarter of the works hung in a gallery of pictures—have induced us to republish with some valuable improvements, the annexed plan for arranging an exhibition room, and extending the available space upon its walls, for the exposition of works of Art. It had been supplied to us by Mr. J. B. Pyne, the distinguished landscape painter.

A conviction of the present very inadequate and unsatisfactory mode of showing pictures in a public gallery, is as general as the wish for some arrangement by which a work may be approached, and seen conveniently for a sufficient length of time, to enable the connoisseur to determine with something like certainty upon its character; it is notorious that this cannot now be done, even with pictures placed at the height of the eye, without alternately practising and becoming the object of a discourtesy so gross and palpable, that it would not be tolerated in a cottage, though necessarily practised indiscriminately by all classes of visitors in an exhibition room. The etiquette even of the street, with its "wall" and its curb-stone, surpasses that of the picture gallery.

As this is the case with pictures hung in places of honour, what must become of the unfortunate works which lie sweltering in the tropics of a dusty floor, or hang in the "eternal snow region" of three tier above the line; and yet this anomalous state of things exists in all exhibition rooms arranged after the present manner—if arrangement be a proper term to give to such a melancholy disposal of objects.

Pictures on the line are now, in a full room, examined through the openings afforded by an occasionally moving and halting line of figures, who in self defence take a position of such proximity to the canvases as forces them into an inch by inch examination of that which could only be appreciated from a distance of from three or four to six feet, while between their ankles glimpses may be occasionally caught of what is placed on the floor; and the only works of which there remains an uninterrupted view, are those placed on the upper portion of the walls, the part of a room to which very few direct their attention—as in the very position exists an implied censure, and as the height and distance preclude the arriving at any correct opinion as to the merits or demerits of the class of pictures generally painted in this country.

The broad advantages of OUR PLAN must be at once apparent from the diagram that accompanies this article. Not the least of its recommendations is that which removes the desert-like character of the centre of a large room devoted to pictures, with its complication of nearly empty seats, dotted only with an occasional solitary figure straining after the equivocal or at least ambiguous beauties of the far away and most elevated works.

The few following remarks will elucidate more particularly the advantages to be derived from the adoption of the proposed PLAN.

It is assumed that the platform, from which to examine the upper "line," with its brackets and centre stand would, by a proper diversion of the company from the lower floor, leave that part of a room less crowded, and the pictures on the old line quite free enough for convenient inspection. This of itself would be achieving a great improvement, and it would be difficult to conceive a situation more felicitous for examining pictures on the lower line, than that within the influence of the shade thrown from the brackets. The figures, numbers 5 and 6, would enjoy all the advantages of this arrangement, undisturbed by a single ray of light to distract the vision. Dark tubes in this part of the room would be useless, and the very injudiciously white catalogue would be deprived of its glare.

No. 5 shows the greatest distance that a person could take in viewing this lower line to be 11 feet.

The picture opposite to him is 4 feet high, and 6 feet long. Such a distance would be more than necessary, even for judging of broad effects.

It is suggested that raising the lower tier ("the floored pictures") on a step would answer all the purpose of protection from feet, contemplated in the introduction of a rail. In the place of which a broken

line of seats would enable persons, in the situation of the inclined sitting figure, to pore over, at leisure and uninterruptedly, whatever of consequence may be found in this second-rate situation.

We now turn our attention to the platform (No. 1), the principal feature in the plan.

The facilities here offered are most extensive, perfectly novel, and desirable, as self-evident. Once on its floor, at an elevation of only 5 feet (disregarding the brackets and stand), the available space of the walls of any room is at once doubled, or rather trebled, inasmuch as the old line presents a picture of 4 feet in height, and this one of 16. The full length portrait, a painting which has never been properly exhibited in this country, and the large historical work, are here placed, for the first time, immediately before the eye.

To descend to particulars: Nos. 7, 8, and 9 show the different circumstances under which a picture, No. 10 (16 feet in height), may be examined.

No. 7, by a gentle inclination of the body, may approach to within 9 feet of the canvass, or leaning still more to within 8 feet, while the eye is at a right angle to its surface, at a third of its height; and No. 9 may, for more general purposes, take a distance of 27 feet from its base, or 24 feet from its nearest point, or right angle, allowing this inclination of such a picture admissible; thus presenting a choice of any distance not less than 8 or more than 27 feet, for inspection of a grand work.

A great advantage attending the position assumed by No. 7 is, that no possible interruption can occur from the passing, repassing, or halting of any one before him—a state of things of all others to be desired in a picture gallery. (See No. 10.)

In the event of the stand being rejected, the centre of the platform may be made available for small sculpture, or, indeed, any sculpture of single figures not larger than life, which would shed a brilliant and

imposing effect over this part of the room; and should the light be considered too strong, anything in the way of a semi-transparent awning or medium could be introduced, ranging within the limits of the lines 3 and 3, regulated only as to height, and consequent width, by the dimensions of the picture No. 10.\*

Having said that this mode of arranging a gallery

\* The room is here assumed to be 40 feet wide by 60 feet long, and 28 feet only in height; though any other dimensions not less than 30 wide would be equally available.

No. 1. This platform is 5 feet high only, offering all the advantages expected from such an arrangement; its sides and ends removed 12 feet from the walls, and has a clear floor of 15 feet wide by 24 long, allowing 6 feet for each approach by six steps, indicated by the lines.

The stand running down its centre is equal to the accommodation of 24 pictures, which with their frames shall measure 2 feet by 1 foot 6; or 30 upright pictures measuring, with their frames, 18 inches by 14.

No. 2. Two sets of these brackets would receive, and that in a most advantageous light and position for inspection, either 16 small half-lengths in 5-inch frames, 20 kitcats, 22 three-quarters, or 30 pictures measuring 20 inches by 16, in 4-inch frames.

No. 3. These dotted lines show the last rays of light that can enter from their opposite sides, and that the shadow thrown from the brackets commences only with the floor.

No. 4. That the body of light flowing from the centre would very materially illumine the floor thus far.

No. 10. That the inclination of a picture is of some considerable importance this diagram proves; as in this instance, the inclination removes that point of the work which forms a right angle with the eye of the spectator.

would confer benefits upon Art, as well as the public and artists, it may not be improper to adduce some grounds for such an opinion: they are very simple, and easily produced.

In the first place, while there exists no places for the reception of historical and other large pictures, there will be no such pictures produced.

Taking a retrospective view of Art, it must be felt that temples had been erected to the gods long before the almost immortal sculptures were produced for their embellishment by the ancients; and that had not churches and monasteries afterwards existed under the sway of Christianity, the works which now constitute the glory of the extinct foreign schools, would not have been produced. Therefore, keeping those circumstances in view, the probability is, that after creating a field for their display, the present race of artists will produce as successful works in the higher styles (to which something like magnitude seems essential) as they have already in the poetical, familiar, and domestic styles.

It is fairly to be supposed that from the adoption of this plan, the railing against hanging committees would cease, and the labour of hanging be abridged full half.

There would be no favours to grant, therefore the exercise of favouritism would as a natural consequence expire, and an artist, in any instance of failure, would have to lament only, that his work was too well seen; whilst the public would have to congratulate itself on the newly acquired privilege of seeing the whole in lieu of one-fourth of the pictures in a gallery.

No. 7. From 18 inches, to a third of the whole height, and in the instance of the spectator.

No. 9. From 18 inches to two thirds of the whole height of a picture measuring as much as 16 feet.

## THE ARTS IN CONTINENTAL STATES.

**ITALY.—ROME.—Sculpture.**—A beautiful statue of a 'Nereid bending over a Stream' is now to be seen in the studio of M. Wolff, which was ordered by Prince Albert when he visited Rome. It is a classical, graceful work.

**M. Von Waagner.**—Great regret is felt here at the departure of M. Von Waagner. His love of and knowledge of Art made him be regarded as a sort of oracle; and his valuable collection of books and prints was most liberally accessible to many, to whom also his instructive and pleasing conversation offered no common enjoyment. He has returned to Munich, to fulfil his duties as secretary of the Academy.

**FLORENCE.—Monumental Sculpture.**—Bartolini, the Professor of Sculpture in the Ducal Academy, has finished a bust of the celebrated actor Vestris, recently deceased: it is in white marble, and of exquisite workmanship; the resemblance is perfect. Bartolini has presented it to the friends of Vestris, to be placed on a monument they are now erecting to his memory in the famous cemetery of Bologna. The design for the monument is by Antolini; it is to be executed by the pupils of the Academy of Fine Arts.

**BOLOGNA.—Bibliography.**—There has been recently published a new historical eulogium on the celebrated ancient painter, Innocenzo Francucci, called "Innocenzo da Imola," illustrated by portraits and various engravings. The author of this elegant and most correct work is Tiberio Papotti, known by his various biographical labours.

**FRANCE.—PARIS.—Works of Art purchased by Louis Philippe and by Government.**—Our readers may probably recollect that Louis Philippe was on board the steam-packet, *Le Veloce*, during a violent storm at Dunkirk. This circumstance is the subject of an interesting picture by T. I. Robins, painted with much truth of effect and brilliancy of style and colouring. This picture the King has ordered to be purchased for the Royal Museum at Versailles.—The Minister of the Interior has purchased various statues for the National Museum, namely—'The Odaliskue,' by Pradier; 'Disenchantment,' by Jouffroy; 'The Fawn,' by Brian; 'The Andromeda,' by Lescombre; 'Virgil's Shepherd,' by Aligny; also he has purchased 'Souvenirs des Environs de Bade,' by Marandot de Montegel. The continual purchases by the French Government are certainly a great means of encouraging artists, materially speaking; and morally, it is a sure mode of advancing Art. The Minister of the Interior has also placed in the *Musée Céramique* at Sèvres two beautiful vases of terra-cotta, found at Propiano, in Corsica.

**Judgment of the Committee on the Models for the Monument of Napoleon.**—The following is said to be the report:—The committee began their labours by selecting eighty of the models—this number they reduced to nineteen for examination, and again from those nineteen they selected four—their final decision was, that not one of the models completely fulfilled the conditions of the program. The committee, therefore, having excluded all the models presented, resolved to propose to Government to issue a new program, with different conditions, to be the subject of a new competition.

**Louvre Exhibition for 1842.**—All works for exhibition must be given in by the 26th of February. The gallery of the Louvre, for modern works of Art, opens on the 15th of March.

**The Académie des Beaux Arts** has elected Mr. Cockerill, Professor of Architecture in the British Royal Academy, a foreign member, in the room of M. Antolini, of Milan, deceased.

**M. P. Delaroche's Frescoes.**—Public expectation was so highly raised in regard to this work, that, perhaps, we can hardly give it greater praise than by saying, that all that was anticipated has been more than realized; and that in our memory no picture in the grand style, by a living artist, has excited the same interest, and the same admiration. It is long since, on entering the exhibition of modern artists in the Louvre, we have observed that around the pictures of M. Delaroche a little crowd was always collected—of which we willingly made one. This popular attraction was due, besides the merit of the execution, especially to the rich and poetic mind which inspired the pencil of the

artist; and certainly the fine inventive genius of M. Delaroche was never more triumphant than in the composition we are now going to describe; so admirably adapted to the purpose intended; and treating a subject so difficult, that to escape utter failure, no ordinary genius was required. Our readers will judge for themselves, as far as invention is concerned, how well M. Delaroche has succeeded: it is all that description can convey. The hall which contains this picture is in the new palace of "Les Beaux Arts," and is appropriated to the distribution of prizes to the students in painting, sculpture, architecture, and engraving. Its form is a hemicycle, and the surface covered by the frescoes is about fifteen metres in length, by five in height: there are seventy-four figures introduced. The picture commences from the last row of benches for the students, which are arranged round the semi-circular part of the room, and rises to the vault of the ceiling. The foreground figures are about a third larger than life. The artist will appreciate the technical difficulties unapparent to other eyes in the distribution of the point of sight which M. Delaroche has judiciously multiplied, as in a panorama, in a work like this; suffice it to say, the perspective of the whole is perfect and satisfies the eye. In the centre rises, but a little in the back ground, an Ionic temple, in front of which is a throne, on which are seated Apelles, and on either hand the architect of the Parthenon and the sculptor Phidias. These figures are naked to waist; the character of the countenances calm and majestic; and the whole of the group is expressive of a severe and simple style: we may regard them as the judges presiding at the tribunal of Art. A little further advanced appear four allegorical figures—representing ancient Grecian Art; Roman Art; Art in the middle ages; Art after its revival in the fifteenth century:—of these all are appropriate. We especially admired, for its simplicity and truth, the graceful but elongated form, with her rich vestments and meagre stiff draperies, representing early Christian Art. She looks like a sculptural form escaped from the cathedral, the model of which is at her side; but on the whole, in a work where there is so much of reality, we might have wished the subject could have been treated without allegorical personages—had it not been for one charming creation—the beautiful being who symbolizes modern Art. We mean Art after the renaissance, free and graceful, like nature herself, glowing with the spirit of life—Italian life if you will. In front of these four female figures is another; and in this who but must admire the graceful invention which so elegantly combines the past with the present. This last is as it were the key-stone of the whole; the point of union between the solemn assembly of the great departed who sit in judgment, and the living crowd who wait to receive their award. This female figure is distributing wreaths; and she is in the act of throwing one out of the picture. To the right and left of the tribunal are disposed in animated and varied attitudes of action and repose, the architects on one side, and the sculptors on the other; and it is wonderful what interest and variety M. Delaroche has given to the whole of these groups. Among the sculptors we note—John of Bologna, with Puget and Germain Pillon; Pierre Bontemps, the artist of the tomb of Francis the First; Benvenuto Cellini, walking alone, looking contemptuously around; Peter Fischer, the great German sculptor, is with Baccio Bandinelli and Benedetto da Maiano; while the principal group of the whole is formed of those truly greatest in their art. Donatelli and Ghiberti, with one who rendered it good service in first deviating from the Gothic style: Andrea Pisano and Lucca della Robia. On the other side of the tribunal—to the right—the great architects are grouped. Near Brunelleschi, Bramante, and Balthazar Peruzzi, are seated the architects of the Cathedral of Amiens and that of Florence, who flourished about the same period, early in the thirteenth century. Robert de Luzarches and Arnolfo di Lapothan follow those of later times, of almost every country but England, whose Inigo Jones and Christopher Wren appear to us strangely forgotten. Beyond the architects and sculptors are placed the painters in two groups, one of which we may distinguish as the great masters of form, and the other

of the great colourists. Over this latter group, which is to the left, the artist has poured a wonderful splendour of brilliant colouring and rich costumes. Rubens is seated with Vandyke, while Titian seems to explain some subject to them; around them are assembled Murillo, Velasquez, Michael Angelo, Caravaggio, Paul Veronese, Van Eyck, the great master of colour in the German school; Bellini, the originator of the bright splendour of the Venetian. These all appear to listen—so also does Correggio—in front are Giorgione and Antonio di Messina. The corresponding group on the right presents the painters of form—a more severe and classic school—and treated to our taste, perhaps, less happily than the other. Raffaele, in youth, stands near Leonardo da Vinci seated, an old man—they are conversing together. Raffaele seems to listen with respect; but, as M. Deleclouse justly observes, he seems as if he also thought for himself, and could differ from his instructor. Fra Bartolomeo, in his Dominican habit, is also listening; and near are Albert Durer, Pietro Perugino, and many others; nearer Leonardo we recognise Masaccio; and apart from all, communing as it were with his own thoughts, is seated Michael Angelo, he who opened new paths in painting, architecture, and sculpture, great in all; also alone, with a contemplative expression, stands Poussin.

We cannot conclude without remarking the beautiful unity of design and the entire harmony of thought which pervade the whole of the work, all conduce to one object, easily understood, and most happily varied in its expression—the mind is interested, and pleased without fatigue. The light is also so admirably disposed, that, we believe, nowhere can be found a more advantageous arrangement in that respect; indeed, the architect, M. Duban, and the painter seem to have thoroughly understood each other; the work of each mutually heightening the charm of the sister Art, from the dark ground beneath the picture to the light and beautifully designed vault and cupola above. We leave to time and the world's judgment duly to decide whether the work of M. Delaroche has excelled the frescoes of Schnorr and Cornelius, as the Parisians consider it to have done.

On this subject we may further add from another source. 'The Apotheosis of Art' is, we think, the true and deserved title of M. P. Delaroche's astonishing picture, fitly placed on the walls of the hall devoted to the distribution of prizes to students of the Fine Arts. Crowds throng daily to admire it; and amongst this crowd was seen the celebrated rival of M. Delaroche, M. Ingres, who came with his scholars to see this masterpiece of the French school. M. Delaroche was also there with his pupils; and we have been told that on meeting, M. Ingres cordially embraced M. Delaroche, and, measuring with his eye the vast extent of this glorious picture, he said to his pupils, "Voilà de la grande peinture." M. P. Delaroche is created a peer of France.

**BELGIUM.—BRUSSELS.—Metallurgical Architecture.**—Amateurs are admiring the model of an elegant house entirely made of cast-iron, the work of M. Rigaud. It is an edifice of three floors, with seventeen habitable rooms. The weight is 810,000 killogrammes; the value 28,000f. The house can be moved at once by the railroad to Ghent or Antwerp, the expense of transport being 500f.

**PRUSSIA.—BERLIN.—MM. Steuben and Forster.**—The King has sent the insignia of the Order of the Red Eagle, third class, to M. Steuben, the painter; and to the engraver, Mr. Forster.

**P. Cornelius.**—Peter Cornelius is again here, after his short visit to England, which was saddened by the death of his intimate friend, Lord Monson. He means, however, at the request of the mother of Lord Monson, to complete the order he had received, to paint some frescoes for his house at Gatton Park. The drawings for this work he will prepare here.

**AMERICA.—WASHINGTON.**—The statue of Washington, the work of an American artist named Greenough, has been received from Italy, and placed in the Rotunda of the capitol.

## THE ART-UNION OF LONDON.

We mentioned some time ago that the committee of this extensive and valuable Association, anxious to advance the interests of the Arts, had appointed a sub-committee to consider the future prospects of the Association, and the most efficient mode of working its enlarged means. The committee so appointed entered into correspondence with Messrs. Eastlake, W. Wyon, R. Westmacott, G. Rennie, M.P., J. D. Harding, P. Hurlstone, H. Warren, Copley Fielding, T. Uwins, W. Brockedon, and many other equally eminent men, with a view to assist their deliberations, and have given much consideration to the subject. They have recently made a report to the general committee, which, although not intended for distribution, displays so much ability and such careful investigation of a variety of propositions, and is calculated to effect so much good by leading the public to contemplate properly the important purposes of the Fine Arts, that we do not hesitate to transfer a great portion of it to our pages.

Furthermore, it is valuable as an exposition of the broad and enlightened views with which the committee of the London Art-Union seek to carry out its objects, and cannot fail to inspire artists with much confidence, and to obtain for the authors of it the thanks which they undoubtedly deserve for their laborious and disinterested efforts.

It commences by setting forth their anxious desire to carry out the views of the committee in ascertaining the best mode of encouraging the Fine Arts of this country:—

"As regards the public, this seems the most likely to be effected by directing general attention more immediately to the Arts of Design, by inducing all classes to take an interest in their encouragement, by leading them to consider the Arts in the most elevated and useful point of view, and thus gradually cultivating and instructing the public taste. This is a most important consideration, for the pleasure derivable from the contemplation of the productions of the painter, sculptor, or architect, will always be in proportion to the knowledge which exists of those branches of art, and to the opportunities of observation afforded to the public. In reference to the Fine Arts themselves, and the intelligent and gifted body of men who have devoted themselves to their study and adopted them as a profession, your Committee have felt with you, that it is desirable to offer the greatest possible stimulus to produce works of the very highest class, both as to subject and execution; to ensure to every department all the encouragement within the power of the Society to bestow; and to bring before the public notice, as far as they can, those classes of the Sister Arts which, although hitherto little regarded in this country, may tend to increase its reputation, and to enlarge the sphere of intellectual enjoyment in every grade of society.

"It appears by the report presented at the last general meeting, that the number of subscribers has been progressively increasing; that, in fact, each year has very nearly doubled the amount of the subscriptions of the one preceding. The receipts of 1841 were £5600. Judging, therefore, from past experience, and the information which we at present possess, we may reasonably expect that the subscriptions for 1842 will amount to £10,000, and that ultimately a settled income of at least £20,000 will be at the disposal of our Institution for the benefit of Art.

"It is probable that the annual amount realized by artists from pictures sold at the exhibitions, and not previously ordered, may not exceed £10,000. It is evident that an additional sum of £10,000 or £15,000, applied to the promotion of Art, must afford encouragement and offer a stimulus to artists, who will then doubtless be anxious to produce works on which their reputation may be founded, and which may tend to raise the national character of the Art that they profess. It were an injustice to the members of an enlightened and liberal profession to suppose them instigated by the mere income they derive from the sale of their works. The elevated tone of mind which can alone render an artist equal to his subject, the inspiration which can alone fit him to realize a work of a high order of merit in the highest class, produce a like feeling in his aspirations for fame."

After some remarks on the improvement in our manufactures likely to result from the promotion of the arts of design, and also on the importance of conducting the Association with impartiality and judgment, the sub-committee proceed to set forth the result of their deliberations:—

"Owing to the infant state of our Society, we have not been able hitherto to announce, until the Exhibitions were about to open, the amounts of the prizes that would be obtained by the fortunate prizeholders of the year. The consequence has been, that the mem-

bers who had prizes were obliged to seek at random in the Exhibitions for pictures or other works of Art which they should purchase. It hence resulted that those who held the highest prizes were sometimes at a loss to find works corresponding with their expectations and wishes. This defect may be easily obviated by the Society's announcing each year the larger amounts of £100 and upwards to be awarded to the members, as *principal prizes*, to be laid out in works of Art in the year ensuing. This would afford ample opportunity for those artists who felt so disposed, to prepare their subjects for painting or sculpture, &c., of such a description as would be likely to be purchased by the holders of prizes of the Art-Union.

"We are encouraged to endeavour to carry out these views by the concurrent testimony of all whose opinion we have sought; and we are agreed to recommend that, when the principal prizes for the ensuing year are to be announced at the annual meeting, it should be stated that two of the prizes to be won by the members of the Art-Union will be for the purchase of two pictures, say for £500 and £400 respectively, the subjects to be taken, at the option of the artists, from the Bible, from some incident in British history, or from some English author. In placing a religious subject at the head, we feel that it first commends itself to every well-constituted mind, and that the liberality of the patron and the talent of the artist cannot be more worthily engaged than in illustrating some passage of the Holy Scriptures. But next to this, we desire to mark emphatically the Art-Union as specially animated by the patriotic wish to carry out a great national object, and to enlist British Art more immediately in the illustration of British history and of British literature.

Allusion is next made to a point still undetermined—

"Whether it might be desirable that one of these principal prizes should be selected (under the best advice) by the committee.

"Your sub-committee have been also advised, that the character and usefulness of the Art-Union would be promoted, and the exertions of the artists would receive a much higher reward, stimulating them to greater exertions, if one such picture of the highest class, so selected by the committee, were occasionally presented to a public institution in a provincial town, containing the greatest number of subscribers; to be placed in some building open to general access, and to bear on it an inscription, stating the name of the artist, the subject, and that it was a donation by the Art-Union of London. Mr. C. L. Eastlake called our attention to the fact that the Dusseldorf Art-Union act upon this principle. The committee of management have the right of reserving any picture of extraordinary merit, and presenting it in the name of the Society to some national institution. In this manner the picture of the 'Captives at the Waters of Babylon,' by Hendemann, was presented to the public gallery of Cologne, where it is constantly exhibited to view. Such selections of course are rare." Mr. Westmacott remarks that we best reward the artist by this public appropriation of his work, and induce others to walk in his footsteps, and thus may advance the higher objects of Art. Messrs. Wyon and Uwins also concur in commending this proposition, as an approach to the real and effective plan for the promotion of Art on public principles, distinct from individual benefit or personal consideration."

The attention of the committee is then drawn to the fact that, with the exception of one prize of £60, to which the holder added £20, no portion of the funds has been hitherto expended in the encouragement of sculpture; and the report recommends in consequence that specific prizes, amounting to £200 and £150, should be appropriated annually to that purpose. It is also suggested that casts in bronze of small groups in sculpture should be awarded as prizes.

It is then suggested that the ART-UNION should assist in the encouragement of Medal Die Engraving, by commencing a medallic series of the History of British Art.

"£100 per annum would ensure the execution of the dies of one medal annually, to be of uniform size, to contain on the reverse the head of some distinguished British artist, as Reynolds, Banks, Bacon, Chambers, Wren, Jones, Barry, Wilson, Lawrence, Flaxman, Wilkie, Chantrey; on the other a group, taken from one of his works, if a painter or sculptor; or some building, as Whitehall, St. Paul's, or Somerset House, if an architect. Thus should we at once give some scope to the genius of our countrymen in this important branch, render a just tribute to our departed artists, and best illustrate the history of British Art.

"It has also appeared to us desirable that we should call the attention of our artists generally to that dignified simplicity of composition, that calm expression, that purity and correctness of drawing, and severe beauty of form, abstract qualities, which, apart from colour and all effect of light and shade, exist in the compositions on the fictile vases of the ancients, in the outlines of our own Flaxman, and in the compositions

of Riepenhausen and some later Germans. We venture to recommend this as a subject worthy your favourable consideration, and conceive that we should render an essential service to Art in its very highest department, by awarding a prize for the best series of Designs in Outline of the class above described, of a fixed size and number; each subject to form a continuous series, and so illustrate some epoch in British history, or some work of an English author."

Under the impression of the important sphere which the artist is called on to fill in furthering the intellectual development of society, and the necessity of providing proper incentives, the sub-committee considered the propriety of offering annually a large gold medal to be awarded to the author of the best of all the works of Art exhibited in the year, but found so many difficulties would arise in carrying out the proposition that it was abandoned.

Several gentlemen, with whom the sub-committee were in correspondence, suggested that the Art-Union should have an exhibition gallery of its own; this they do not at present recommend.

How many of the suggestions contained in the report, or what modifications of them the committee will adopt, remains of course to be seen. We shall, perhaps, at some early opportunity, offer some remarks on its various propositions.

## THE GLASGOW STATUE.

THE sub-committee proceed in this matter without stop or stay. The bust professing to represent "the Duke" in the prime of life, has, since our last notice, been under the inspection of the sub-committee; and has, by the majority of these worthies, been adopted for the statue of his Grace.

We are assured, by persons who have had the opportunity of examining this bust, that in it, Marochetti has at once essayed the bold experiment of "grinding down" the "caput mortuum," which, thanks to Messrs. Banks, Alison, R. Findlay, Lamond, and Dalglish, he was afforded the opportunity of making of "the Duke" at Strathfieldsaye, into what he is pleased to imagine must have been a resemblance of his Grace in "the prime of life." In the hands of a skilful artist this would have been no easy task, but in the hands of Baron Marochetti it has, as was to have been expected, been attended with signal and ludicrous failure. The Baron has not even adopted the usual resource of a bad artist, and in order to give a likeness, "driven hard at the defects of the sitter's countenance;" for in this bust, there is scarcely a feature in which resemblance can be traced, either to the Duke as he now is, or to what he ever was in the remembrance of any one. The bust is that of a prominent featured man of about sixty years of age ("the prime of life!"); vulgar, and common-place in a great degree; and the features so feebly delineated, and the whole work so crude, undefined, and imperfectly made out, as to be wholly devoid of all individuality of character or expression,—at the same that it proves, the artist who could put such a production out of his hands, was, in every respect, a mere tyro in his profession. But further attempt at criticism upon this head is a mere waste of time, as it is notorious, that it was sent to Glasgow in compliance with a motion of Lord Belhaven's, intended solely as "a tub to the whale;" and had it been the head of a Carib, or even of an ourang-outang, it would equally well have answered the purposes of the sub-committee.

The devices practised by the majority and their supporters, at the meeting of the 27th of October, of which we gave a sketch in our last number, seem to have been quite in keeping with, and eminently characteristic of, the previous doings of this sapient and conscientious body. Whilst the motion proposed by Mr. Stirling was of so general a character as to be open for all the members of both committees to vote upon it, the successful amendment of Mr. Morrison, was, on the contrary, a vote of approval of the conduct of the sub-committee; and to entrust them with the continued management of the affairs, and funds of the subscribers. A feeling of honour, and even of common decency, should therefore have deterred these gentlemen from voting at all upon the occasion: but how did

they act? Why, the whole of the majority of the sub-committee present, viz.: Messrs. Alison, A. S. Dalglish, K. Finlay, J. D. Hope, R. Findlay, J. Campbell, J. Houldsworth, R. Lamond, and H. Dunlop, unhesitatingly voted for themselves; thus, at once, giving nine of the majority of fourteen. Mr. Bain signed the requisition disapproving of the conduct of the majority, but seconded Mr. Morrison's amendment, and voted against his friends! Major Monteith, Mr. Bogle, and Mr. Fletcher, who had previously been in the habit of acting with the British party, deserted their friends, and voted for the foreigner! Thirteen of the majority are thus accounted for! Mr. Houston, late M.P., for Renfrewshire, and Mr. Nesbit, of Cairn Hill, declined to vote, they also having previously been in the habit of voting with the British party. Had these last named gentlemen voted, and the others, who have been named, acted in the way in which, in accordance with every principle of honour and common sense, it was to have been expected they would have done, the British party would at this meeting have been in a majority of one (even without the casting vote of the Dean of Guild, which might have been calculated upon), instead of in a minority of fourteen! But we are given to understand, that complaints of treachery upon the occasion do not stop here! Thus, appended to the requisition calling the meeting, we find the names of Messrs. Donald Smith, William Campbell, William Gilmore, John Smith, L.L.D., James Hunter, William Brown, A. Edmiston, Andrew Wingate, W. Mathieson, D. Cuthbertson, W. Connall, John Mitchell, Sir W. M. Napier (unavoidably absent when the vote was taken), C. D. Donald, and Charles Macintosh (absent through ill health), none of whom (with the two exceptions mentioned), although they did not directly oppose Mr. Stirling, seem to have had the courage and good faith to give to the artists of their country a vote upon the occasion. We publish their names to intimate to the artists of Britain, who amongst the gentlemen of Glasgow they may again trust to in the hour of need; and at the same time, to read to the gentlemen themselves a little lesson on consistency and good faith; and to show the grounds on which the minority calculated on having had an overwhelming majority in the cause of British Art at the meeting of the 27th of October.

Dissatisfied with the published report of his speech at the meeting in question, it appears that Mr. Sheriff Alison has, about a month after the meeting, printed an oration, occupying four closely printed columns of a Glasgow newspaper. The regular reporters present at the meeting, one and all, affirm that this oration contains a large amount of matter that was never delivered; and many extraordinary alterations affecting vitally and materially the sense and meaning of the harangue. This printed oration seems to be chiefly confined to fulsome and scarcely intelligible laudations of Marochetti, and vituperations against those opposed in opinion to the learned sheriff, the members of the London press (of all shades whatever) in particular; whom the sheriff stigmatizes as being "no gentlemen!" On the other hand, the friends of the minority seem disposed to designate this style of argument as savouring of Billingsgate; and however usual with "footmen out of place," to have been hardly such as was to have been expected from the learned sheriff; and, even as coming from him, to be too contemptible to merit an answer. Mr. Patrick Park, the well-known sculptor, has, in some excellent letters published in the *Glasgow Argus*, most effectually demolished the artistical pretensions of this "printed, but never-spoken," effusion of the sheriff; whilst Mr. Howden has also subjected the baron, the sheriff, and their friends, to a style of castigation under which it is probable they may "wince" for some time to come.

In conclusion, we have to remark, that the minority have finally withdrawn their names from the list of both committees; so that the subscribers, and the artists of Britain, must, in the future progress of matters in connexion with "the Glasgow Statue," exclusively rely on their own energies and exertions.

In our last number there occurs a passage in which it may not appear sufficiently clear to our readers, that we had not the most remote intention of inculcating the gentlemen who have sup-

ported Mr. McLellan, in our censure of the majority of the Glasgow sub-committee. The direct reverse must have been our wish and intention; and we feel perfectly assured that our readers, and the artists of Britain, will respond in this case to our sentiments; being satisfied that these gentlemen are deserving of the utmost consideration for the zeal which they have throughout this business manifested in the cause of British Art.

## RECENT ARCHITECTURE.

### COMPANION TO THE ALMANAC for 1842.

Unlike almanacs themselves, the "Companion to the Almanac" contains matter of permanent interest, and materials that will hereafter be found valuable to the historian of Art—at least of architecture. Putting aside the rest of the contents as having no connexion with the objects of our own journal, we have to consider the "Companion" only in regard to its annual reports of public improvements and new buildings—a feature almost peculiar to that publication. That it has also been found a popular one, may be presumed, since much greater attention has been paid to it in the later volumes than was the case in the earlier ones; and manifest improvement has taken place in the wood-cuts, which are this year more carefully drawn and neatly executed than they used to be. We do not say that they have any pretension to be looked upon as productions of Art: it is sufficient that they satisfactorily illustrate and explain the descriptions, and that they exhibit unedited subjects. Since the commencement of the work, a great number of contemporary buildings have been described and represented in it, so that it now affords a tolerably complete, though condensed, architectural history of the last ten years. In proportion to the space occupied, the information is unusually full, for the descriptions are well drawn up; are perspicuous and exact, the measurements of the buildings being almost invariably given. Yet while due attention is given to technical accuracy, without which they would be of comparatively little value as records, the descriptions are by no means confined to dry and formal details, but, on the contrary, are frequently interspersed with critical comments and remarks, that recommend them to the general as well as to professional readers.

We fancy, indeed, that the writer does not always speak out as freely as we, or perhaps, as he himself could wish; and no doubt in many cases he must trust to such materials as he can obtain, since it is hardly to be supposed that every description is founded upon *autopsy* and actual examination of the respective buildings themselves. Still it is not very difficult to gather, both from what he does say, and from what he does not say, which way his own taste inclines; and that it is not at all in favour of the style, or rather utter want of style, which prevails in the generality of the newly-erected churches, admits of no doubt. Although, except in some few instances, as that of the new Public Libraries at Cambridge, by Mr. Cockerell, he seldom expresses disapprobation, it may generally be inferred from the absence of aught that can be mistaken for commendation, or even acquiescence. Most certainly it is not to be supposed but that, out of the great number of buildings which have thus passed under his notice, there are several of which the writer in the "Companion" thinks that the less said the better, although, either from their importance in other respects, or from their pretension, they may have sufficient claim to be spoken of.

Among the public buildings and improvements passed under review in the present volume, two of the most important—the new Houses of Parliament and the Royal Exchange—do not admit as yet of being fully described; for even of the first, that portion which is actually in progress is very far from being completed, even externally; while of the other the superstructure is not yet commenced. Of course, therefore, they will come under notice again, perhaps repeatedly; and in the mean time it is satisfactory to learn, that the terrace front of the "Houses" will be no less admirable for excellence of construction and beauty of material and workmanship, than for the general magnificence of the design, and the im-

posing magnitude of the entire façade. What is already done there may be taken as earnest for the execution of the rest of the exterior; and most gratifying is it to be thus assured, that we shall at length have one truly grand national structure that will reflect credit on the English architecture of the nineteenth century, and vindicate it from the reproach thrown upon it by such unfortunate productions as Buckingham Palace, the National Gallery, and the British Museum; of which last, the exterior at least is plain even to meanness, and has no other than the poor negative merit of making no sort of pretence whatever, to either beauty or grandeur: whether the façade, when it comes to be erected, will fulfil the greater promise made by it, it is with us matter of doubt; for the architect must greatly excel all his former works, if he means now to give us what will maintain for him in the middle of the century any thing like the reputation he acquired nearly at the commencement of it.

In regard to the Royal Exchange, a tolerably full general description of the building as now intended, is given in the "Companion;" and we learn from it that it has now been determined to enlarge the portico at the west end, by making it *diprosyle* instead of *monoprosyle*, that is, advancing out two intercolumns from the building (like the portico of St. Martin's church), instead of a single one, as is the case with most of our modern porticoes. It will further surpass all other examples of the kind in the metropolis, in the magnitude of the order, the height of the columns being 41 feet, and likewise in having inner columns, which will certainly produce unusual richness of character. We therefore hope since it is intended to do so much, that the architect will not be compelled to stop short of giving complete effect to this leading feature of his edifice, by decorating it both internally and externally as we find here suggested. We do not learn, however, that after-consideration of the design has led to any alteration as regards the merchants' area, which is still to be merely an open court quite exposed to the weather, except beneath the arcades on its sides. So far, no advantage will be taken of the opportunity now offered for improving upon the former Exchange; on the contrary, the "area" in the new edifice will be, in some degree, inferior to that in the old one, inasmuch as it will be narrower than the latter by about fifty feet, and a double square in plan, viz., 120 by 60 feet; whereas, the other was nearly square (144 by 117), a much more suitable form for such a place of assemblage, where concentration is desirable. Yet, whatever obstacles may have prevented greater width being given to the central area, the leaving it uncovered and exposed to the weather, in a climate where it has lately rained for weeks together, is entirely matter of choice, and a most injudicious choice we consider it to be, and one very likely to be repented of too late. Putting comfort out of the question, one strong reason in favour of roofing in the area of the Exchange, is that it would make the place appear more spacious, for what will seem very narrow and confined as an open court, would appear considerably larger as an internal hall within the building—which it might be, and yet be perfectly ventilated, either by lanterns in the roof left open on their sides, or by unglazed windows around the upper part of the walls. Happily it is not yet too late for the architect to reconsider this very material point, and to impress it upon the Gresham Committee; which must be our excuse for speaking of it so much at length as we have done.

One projected work of public embellishment, the particulars of which are given in the "Companion," is the Statue of William IV. about to be erected on the wide open space facing the north end of London Bridge. It being at the termination of several streets, this spot has been found so exceedingly dangerous for foot-passengers, that the inhabitants of the neighbourhood petitioned that some obelisk or lamp-post should be put up on the crossing. In consequence of this representation, the Common Council very spiritedly voted that a Statue of his late Majesty shall be erected there. The figure, which has been modelled, and will be executed in polished granite by Mr. S. Nixon, will be 14 feet high, upon a bold circular pedestal and substructure, making the

entire height forty feet. Notwithstanding the scale of this monument, and the difficulty of working the material to be employed, it is stated that the whole is agreed to be executed for £2200—a very moderate sum indeed, when compared with the cost of some other public statues upon an inferior scale. What is not the least remarkable part of the matter is, that a work of the kind should have been managed so quietly, and with such good taste on the part of the citizens, while the Nelson Monument seems to be in every respect a failure—or if ever completed, will be a work certainly not worth the bustle of two competitions for it.

[We shall conclude this article next month.]

## CORRESPONDENCE.

### THE BIRTH-DAY OF RAFFAELLE.

SIR,—It may perhaps not be foreign to the object of your instructive Journal, to notice an error which has been generally adopted in regard to the birth-date of Raffaele.

While travelling, about three years ago, through the less frequented parts of Central Italy, in search of remains of the Umbrian school of painting, I arrived at Citta di Castello. Signor Andreozzi, the historiographer of that town, and a gentleman imbued with much taste for Art, conducted me, among other attentions, to see a portrait which had shortly before been found by an artist of the place, in a village near Urbino, and of which I became the purchaser. It is the profile head and shoulders of a boy, painted *a tempera* on a thin panel, 16 inches by 11: it was in perfect preservation excepting a partial fissure, but the mean black frame was wormeaten, and tenanted by bugs. The head is small, the neck long; the slight figure is clothed in a tunic tight to the throat, from which it hangs straight and loose, after the Italian fashion of the fifteenth century; and though ill adapted for elegance of drapery, its deep crimson colour and gold embroideries give a certain richness to this meagrely designed costume. The sandy hair is carefully but simply smoothed over the eye-brows, and primly adjusted upon the ears. In the small regular features there is a staid character and self-possession unusual at so early an age, while in the clear hazel eye, and in the calm smile that plays round a mouth of rare beauty, may be traced much promise of genius and refinement. On a white ledge under the figure is written this inscription, in the usual Italian hand of that date: "Raffaello Sanzi d'Anni Sei, nato il di 6 Apr: 1483. Sanzi Padre Dipinse." The back of the panel bears these words, also in old characters: "Ritratto del piccolo Raffaello Sanzi d'Anni sei, nato in Urbino il di sei di Aprile 1483. Sanzi Padre Dipinse."

Although there could be no question I had acquired a rare and pleasing specimen of that age of Art, I was not a little sceptical as to my good fortune in procuring an original portrait of 'the divine Raffaele,' especially on finding that the Abbate Pungileone, his latest Italian biographer, states his birth-day as on the 28th of March, instead of the 6th of April. But on visiting Urbino a few days after, I there read on the wall of a house these lines,

Nunquam moriturus  
Exiguus hisce in edibus  
Eximius ille pictor  
Raphæl  
Natus est

Oct: Id: Apr: an: MCDXXCIII.

This date agrees with the 6th of April, and though of uncertain authorship, the Latin inscription may be presumed to express the traditional belief of his native place. Still however this was only presumptive proof, and seemed to me quite insufficient.

On further examination, I found that Vasari mentions Raffaele's birth as occurring on Good Friday 1483, which was the 28th of March, and which has consequently been since generally received by his biographers as correct, sometimes the church holiday, and sometimes the day of the month being adopted. Conceiving that the most authentic evidence was the epitaph on the painter, written by his friend Cardinal Bembo, and placed over his tomb in the Pantheon at Rome—I there found these words.

Vixit annos XXXVII integer integros  
Quo die natus est eo esse desit,  
VIII: Id: Aprilis MDXX.

The meaning of this somewhat mannered phrase clearly is that "he lived precisely thirty seven years, and died on the 8th ides of April 1520, being, the anniversary of

his birth," and in a letter from Rome written five days after the sad event, it is stated to have occurred on his birth-day, "nel suo istesso giorno natale."—Now the 8th ides was the 6th day of April, so that if Raffaele lived the exact period of thirty-seven years, as Bembo asserts, he must have been born on the 6th of April, as the inscription on my portrait bears. Nor is it difficult to detect the origin of this mistake, which has become a "vulgar error." The 6th April, 1520, on which Raffaele died, was Good Friday, and Vasari, applying Bembo's inscription, without recollecting this to be a movable feast, arrived at the untenable conclusion that, as he died on Good Friday, and on his birth-day, he must also have been born on Good Friday. Now Good Friday 1483, falling on the 28th of March, had that been his birth-day, he must have lived thirty-seven years and nine days, instead of "exactly thirty-seven years," and could not have died on the anniversary of his birth.

Being curious to ascertain the documents which Pungileone appears to refer to (Elogio di Raffaello, p. 2), as fixing the artist's birth on the 28th of March, I waited upon him at Rome in 1839, with this view: but I found him quite unable to give me any distinct account of his authorities, and unwilling to hear any doubts on the subject.

These observations, which I have endeavoured to condense, seem to establish the true date of Raffaele's birth. Were I not unwilling to trespass longer on your valuable pages, I might adduce some curious points of resemblance between my portrait of Raffaele, and all the supposed likenesses of him which have been introduced in the larger works of his father Giovanni Sanzi, of his master Peruzino, and of his comrade Pinturicchio. As to the other alleged easel portraits of that great man, none are now considered genuine but that in the Florence Gallery. I shall only add, that none who have read the Elogio di Giovanni Santi by Pungileone, or have examined his works at Cagli, Urbino, Milan, or Berlin, will fall into the absurd mistake so constantly repeated, of considering him either a mediocre artist, or a mere dauber on pottery.

Yours, &c., JAMES DENNISTOUN.

5, Forbes-street, Edinburgh, Nov. 9, 1841.

P.S. My friend the Chevalier Kestner, Hanoverian Minister at the Papal court, pressed me to send an engraving of my portrait to Passavant, for his life of Raffaele, then preparing for the press; but I received a hint that, if I allowed it to be seen there, the government would probably prevent so interesting a curiosity of Art from leaving Rome. By the by, why has not Passavant's work been translated into English?

### THE WILKIE TESTIMONIAL.

SIR,—Without wishing for a moment to detract from the worth of Wilkie, or lower him as an artist in the estimation of his country, I cannot consider him so pre-eminently entitled to a public testimonial as many painters—his contemporaries—who have adorned our school, and who, for the sake of principle and high Art, sacrificed health, and the dazzling allurements of present wealth. To merit the greatest honours which a grateful country can render, the genius, I think, should be as nearly as possible of the highest class; as it is from that class emanates the power, which in its progress, fashions and moulds the national taste and feeling. Raffaele and Teniers were both artists; but can there be a doubt as to which of the two is most deserving of a "Testimonial." I have been induced to adopt this opinion from observing in how few instances the real worth of the man or merit of the artist has experienced the posthumous honours that a great and civilized nation should always bestow. To strengthen my argument—within very few years past, the English school of Art has been deprived of many of its greatest ornaments, as artists and as men; for example, to mention only the names of two—Stothard and Hilton; no public meetings have been convened to do honour to either of them. Yet surely there is no one who will deny the greatness of these two painters—a greatness, not achieved by pandering to fashionable fripperies, or being merely the "Lion" of the day, but based upon a power and worth which time will but serve to strengthen, and which must always be appreciated as long as Art shall have existence among mankind. Stothard has been dead but a few years; Hilton scarcely two, yet no displays of public eloquence nor bursts of enthusiastic admiration marked their descent to the grave! They were permitted to pass from among us unnoticed; regretted only by those who knew how to appreciate them as men, and honour them as

\* Longhena, Istoria di Raffaello p. 561.

artists. To regard Wilkie as a man is one thing; to consider him as a great genius is another. Private feelings and sympathies may be strong, but they never should be called forth to influence the judgment, when merely the merit or greatness of an individual is under consideration.—Yours, &c., S. S. N.

### MISPLACED ANCIENT PICTURES.

SIR,—A gentleman returning (more, I believe than half a century ago) from the Mediterranean, on board a King's vessel, threw himself overboard, and was drowned, leaving behind him, with other property, several pictures by different masters. These were placed in the King's stores, but no claimant ever appeared; and at the period when my informant saw them by accident, about 12 months since, they were deposited in Deptford Victualling-yard. Affixed to one of the pictures he noticed the name of Carlo Maratti. I doubt not, but that if their existence were known to the proper authorities, they would, if found worthy, be placed in the National Gallery, instead of being allowed to rot where they are.—Yours, &c., Stonehouse, Nov. 1841. A FELLOW ADMIRER.

### THE CONTROVERSY CONCERNING VEHICLES.

SIR,—I trust to your sense of justice—indeed, I consider I have a right to demand from you the insertion in the next number of your valuable paper, of the accompanying extracts from a letter which I received from "J. E." before he published my recipes for making the Silica Medium.—Yours, &c., Dec. 10th, 1841. R. W. H. HARDY.

Extracts from "J. E.'s" letter to Lieut. R. W. H. Hardy, R.N.

"MY DEAR SIR," "April 17th, 1841.  
"If you allow me to mention the experiments you have made and the results, I will do so—or do you mean to do it yourself? If I do it, I shall mention your name as the inventor, in fact, tell the truth, the whole truth, and nothing but the truth. I have more than half a mind to write instantly all the preliminary matter."  
"I must again say how delighted I am with your Silica Medium. It is every thing one could wish."  
"Believe me ever yours, most truly," "J. E."  
"To R. W. H. Hardy, Esq., R.N."

### TESTS.

We are indebted to Mr. Miller, of Long-Acre, for answers to two questions put by "Correspondents." First, with respect to his "Medium," he states that he has been enabled greatly to improve it. He adds—

"Too much, however, must not be expected from it when used with colours already prepared in oil, which may not be pure; but if colours prepared in medium be used, it will entirely answer the expectations of the artist."

Next, Mr. Miller states,  
"Since addressing you on the subject of a 'Test for Lemon Yellow,' I have had several applications from first rate artists for a Test for Constant White; these gentlemen having had some of their most valuable works destroyed by the changes that have taken place in them, namely, from white to brown or black. It will be proper here to state the cause whence this effect almost always arises, which is this: artists frequently express a wish to have a white with a stronger body than is usually made; and inexperienced colourmen, to humour this wish, are often induced to mix with it white lead or some other changeable pigment, not knowing the fatal results that must inevitably follow. The Test I recommend for Constant White is the same as that I gave for Lemon Yellow, to which, I beg leave to refer your readers. I have merely to add that Constant White, if pure, is unchangeable under any circumstances whenever it is confined to water painting or drawing."

[We hope it will be obvious to our correspondents that it is utterly impossible for us to publish all the communications we receive. At the present moment, there are lying upon our desk letters enough to fill a number; some of them of no inconsiderable value and concerning subjects of much importance; yet for which we cannot find room. Our judgment must be exercised in selecting only such as are most interesting or will give greater variety to our journal.]

We must also express a hope that our correspondents will not, upon all occasions, demand even the courtesy of "a reply." To say merely such and such a communication is rejected, would be more discourteous than to say nothing; and to explain our motives for omissions would occupy too much time and space.]

## VARIETIES.

**BIENNIAL DISTRIBUTION OF MEDALS.**—As long as English Art shall hold rank among the schools of Europe; nay, as long as Art shall exist in the world, the 10th of December will be remembered with interest and pleasure. The anniversary of the establishment of the Royal Academy—that Institution which has given a local habitation and a name to the painting, sculpture, and architecture of Great Britain, is a holy day. On the biennial recurrence of this day were delivered those eloquent discourses of the first president, Sir Joshua Reynolds, which were listened to with delight bordering on enthusiasm; which have been translated into all languages; and have formed the basis of the theory, and the guide to the practice of the student wherever taste is cherished and beauty recognized. The popularity of Reynolds, and the value of these discourses, gave a publicity to the day which was not originally contemplated by the academy. Many persons of rank and literary eminence solicited permission to be present on the occasions of their delivery; and the students had the additional stimulus of knowing they would receive their honours in the presence of Burke, Johnson, Goldsmith, and others, who, by their works, had given a character to the age; as well as the noblemen and gentlemen who had stood forward as the promoters of taste and the patrons of Arts, which embellish and dignify humanity. The Presidents who followed Reynolds, sensible, perhaps, they could add nothing to what had been so well done by their predecessor, confined themselves to some friendly admonitions to the students. In the hands of West and Lawrence the ceremony had dwindled away, till its publicity was lost. It was reserved for Sir Martin Shee to restore it to its original splendour. The eloquent discourses delivered from the chair, since the election of this gentleman, have been listened to by an audience composed of the most distinguished characters in the political and literary world. On the late occasion, however, the distribution was strictly private. The president, with feeble voice and faltering accents, told the students the reason of this change: the recent sudden death of a valued member of the Academy required it. All those distinguished individuals whose presence would have graced the ceremony were personal friends of the deceased, and could hardly be expected to enter with any pleasure into a *fete* which must recal so forcibly to their feelings the great public and private loss that they had sustained. Without any laboured eulogy on Sir F. Chantrey, the president devoted a few words to his memory. He dwelt, especially, on the truly patriotic and British character of all his thoughts, words, and works; and he assured the students that the honest convictions of his mind were carried out in the provisions of his will, inasmuch as his whole fortune was ultimately left for the purchase of works by British artists, which might do honour to the country of his birth and extend the fame of the school he loved. The President then proceeded to award the Prizes, in the following order:—For the best historical painting, a gold medal to Mr. Henry le Jeune. For the best original model, a gold medal to Mr. W. Calder Marshall. For the best architectural design, a gold medal to Mr. Hinton Cambell. The first silver medal in the school of painting to Mr. Safford; second, Mr. J. Price. Architectural drawings, Mr. Garnin. The best drawing from the life, Mr. Gildorsen. The next degree in merit, Mr. H. le Jeune. Model from the life-school, Mr. Nelson. Drawings from the antique—first, W. A. Wageman; second, A. D. Cooper; third, H. Boyce. Models from the antique—first, Mr. Merit; second, Mr. Adam; and third, Mr. Gattie. Copies of the discourses of Reynolds and West were delivered with the gold medals; and with the first silver medals the lectures of Barry, Opie, Fuseli, and Flaxman.\*

\* In the class of historical painting, the subject for which was, 'Sampson Bursting his Bonds,' there were four candidates; in that of original models, the subject of which was 'Venus protecting Æneas from the Wrath of Diomed,' there were two; and in that of architecture, the subject being an original design for a British senate-house, there were three. There were also five copies in oil from the Dulwich picture of 'St. Sebastian,' eleven drawings, and one model from the life; twenty-two productions from the antique school; and two drawings from the portico of St. Paul's.

After the ceremony, the President read a lecture, which principally consisted of a careful examination of the works of Wilkie, in which the development of the mind of this great artist, and the formation of his character, were traced with a master hand, from his earliest beginnings at the Fifehire manse, through the splendid achievements of his pencil in London, in Spain, and Italy, until his visit to the Holy Land, where the excitement of treading the same ground that had been trodden by Christ and his Apostles, proved too much for him, and he sank into the arms of death at the moment of the fruition of his longest-cherished hopes for fame and immortality.

**THE GENIUS OF CHANTREY.**—We have elsewhere given a memoir of this distinguished artist, and accorded to his memory the respect to which it is justly entitled; but it is impossible to speak of his genius and character as an artist, without some reservation; they cannot receive from any just historian entire and unqualified praise. In one department of the Arts, unquestionably, he had no rival; and has not left an equal—but that department is not the highest. In "bust-modelling" he was a giant; but in works of invention less than a dwarf. The modelling of busts merely, will hardly preserve his memory beyond the age embellished by his chisel; while the names of Banks and Flaxman—the latter especially—will become greater as time rolls onward. Chantrey was a man of tact and observation; Flaxman was an epic poet. It must not be denied that Chantrey struck out a new path in marble portraiture. There was a dryness, an inanimate rigidity in all busts, ancient and modern, before his time. In the hands of Nolkenens the Art had attained the perfection of common-place insipidity. Chantrey was bold enough to break through the trammels which had bound his predecessors, and ventured to give an air of truth and nature to his works, which was perceived and felt by all. This was the legitimate source of his popularity. Imagination he had none! Sensible of this deficiency, he declined or delayed commissions for poetic subjects; and for his monumental groups he always called in the aid of a painter or a draughtsman. One of the noblest subjects ever proposed to a sculptor was offered as a commission to Chantrey by the late Earl of Egremont—'Milton's Satan addressing the Sun.' But the "good earl" had mistaken his man. Had such a proposal been made to Gibson, a work might have been produced that would have done honour to British Art. So confined was Chantrey's genius, that it did not even embrace the conception of beauty. Character was sure in his hands—the mechanist, the philosopher, or the politician, stood out in all the force of individual resemblance, and Walter Scott came from his chisel the arch story-teller rather than the poet; but beauty, female beauty, was as much beyond his reach, as it was foreign to his perceptions. He left this bow of Ulysses to be bent by some more gifted successor. Sir Francis left no children, and we understand no very near relations; he has bequeathed, therefore, it is said, the great bulk of his fortune to the promotion and encouragement of British Art—a noble termination to a useful and honourable life. His will is not yet proved, and it would be premature to give circulation to the various rumours on this subject.\* It is certain, however, that the extent of his wealth has been greatly exaggerated; in-

\* We may state, however, as pretty certain, on the death of Lady Chantrey, the yearly sum of about £2500 will be at the disposal of the President and Council, not the full body, of the Royal Academy. This sum is to be laid out, not in prizes, as has hitherto been understood, but in the purchase of pictures and statues, executed, be the artist who he may, entirely within the shores of Great Britain. The dead are admitted to contend with the living, and the council, while they are allowed to purchase the works of a sculptor like Roubiliac, who had his studio in London, are prohibited at the same time from purchasing the works of an English sculptor residing at Rome, and sending his works, as Gibson does, for exhibition in this country. The admiration that Chantrey had at all times for both Roubiliac and Gibson may have prompted this part of the bequest. It further appears that the trustees are prohibited from spending any part of the fund in the erection of any building beyond a temporary one for the reception of the works of Art already purchased; and this prohibition is made in the hope, as Sir Francis Chantrey expresses it, that the government of his country will erect a building worthy of the works which his money has procured, and is every year procuring.

deed it must have occurred to all who gave the matter consideration, that he could not have left a very large sum; the expenses incident to his profession are enormous, and increase in the ratio of his commissions. Sir Francis had an exceedingly pleasant and good humoured countenance, not indicative of high intellect, but remarkable rather for *bon hommie*; he was above the middle size, and somewhat stout.

**THE SOCIETY OF PAINTERS IN WATER COLOURS** have, very wisely, we think, resolved upon adding to its number; they will now consist of *thirty* members and *twenty* associate-members. The extension, we believe, originated in the suggestion of Mr. Hills, the oldest member of the body, and its secretary—whose proposition was unanimously adopted. It is somewhat singular, however, that the Society never has been full; and this fact is adduced as a proof against its "exclusive" character, for it is affirmed they are anxious to attach, as well as interested in attaching, to it all artists of undoubted talent. But of late years, artists in this branch of the profession have largely increased in number and in ability; and the limitation that would have been satisfactory twenty or thirty years ago, can scarcely be characterized as justifiable now. We rejoice, therefore, to record this very judicious and, we must add, generous, augmentation. We hope, ere long, to see the example followed by a higher—by the highest—Institution for promoting the Arts of Great Britain.

**FRESCO-STUDIES.**—Several artists have been already stimulated, by the prospect of honourable and profitable occupation, hereafter, in decorating the Houses of Lords and Commons, to make studies in this department of the Arts—a department, comparatively new to England. They have prepared walls and are working vigorously, to ascertain the nature and power of the "materiel" in their hands; and to become familiar with its use, when the time of trial has arrived. They are pursuing a very wise and proper course; if we are to have Frescoes to any great extent, and this is by no means improbable, sure we are that our British painters will be as able to execute them as the painters of Germany;—not perhaps at a day's notice, but certainly after time for preparation has been allowed. There can be as little doubt that "the commission" will be equally ready and willing to give the preference to our own artists, if they can afford proofs of their capability for the due performance of the duty. All circumstances, therefore, combine to give us the assurance, that an importation from the Continent will be as unnecessary as unwise, as inexpedient as unjust.

**THE PONIAWOWSKI GRMS.**—It appears that John Tyrrell, Esq., is about to publish a series of casts from these famous gems, to the amazing number of 1200. We have not yet had an opportunity of inspecting any of them, but they have received an extended notice in the columns of our able contemporary, the *Spectator*—a journal that we rejoice to perceive is devoting greater space than formerly to subjects connected with the Fine Arts.\* An explanatory catalogue accompanies the cabinet of copies. The opinion of the critic is unfavourable to their authenticity; he considers them to be, "not copies from the antique, but inventions of modern Italian artists," and gives at length his reasons for so deeming them. We shall most probably have an opportunity of examining the collection before we again publish; but it is only just to remark, that several accomplished connoisseurs place implicit credit upon the "genuineness" of by far the largest portion.

**T. L. DONALDSON, Esq.,** the eminent architect, whose works have obtained for him a very high reputation, has been appointed Professor of Architecture to the London University College. We have elsewhere noticed the election of Mr. Cockerill, R.A., as foreign member of the "Academie des Beaux Arts."

\* The number of the *Spectator* for December the 18th contains part of a very able article on the subject of frescoes, under the signature of S. R. H., which, if we could consider it fair play so to do, we would gladly transfer to our columns. We strongly recommend its perusal to all persons who are interested in this important subject. Indeed, when the paper is concluded, if we can obtain the permission of the writer and the editor, we shall, perhaps, reprint it. The article was continued in the journal of the 25th.

**J. R. HERBERT, Esq., A.R.A.**—This accomplished painter has made a commencement in a class of Art in which he of all other British artists is likely to arrive at eminence. He has engaged to paint, in fresco, the altar end of the Roman Catholic Church, dedicated to St. George, in the Borough: the subjects will be taken from the life of the patron saint of England.

**NEW SOCIETY OF PAINTERS IN WATER COLOURS.**—The election of new members will take place on the first Monday of February in each year. We understand there are several candidates for admission in February next.

**THE 'CHRISTENING.'**—A picture, with a view to engraving, is of course to be painted of the ceremonial of baptizing his Royal Highness the Prince of Wales. The task has been consigned to Mr. George Hayter—it is said by direct command of her Majesty; and the work, on its completion, is to be placed under the charge of Mr. Moon.

**GEORGE ARNOLD, Esq., A.R.A.**—The venerable landscape painter, whose works obtained so much repute, before the introduction of a higher style in the Art, has just died at a very advanced age. We shall obtain some particulars of his life for our next number.

### ON THE INFLUENCE AND EFFECT OF TASTE IN THE USEFUL ARTS.

**COLERIDGE** was the first who pointed out the vast extent and variety of the elements necessary to constitute a system of national education which would be truly worthy of its name. He saw that all the circumstances which surround a people have an influence more or less direct in determining the course and direction of mental development; that society is a large school in which men never wholly escape from the state of pupillage; and that artisans of every degree are incessantly giving us lessons on objects which, however trivial in appearance, become highly important in reality. The influence of the material on the spiritual is one of the most fixed laws of our nature; we begin life as the slaves of form, and it requires many and repeated struggles to emancipate us from their bondage. Every one of these forms generates its peculiar habit; the soul with all its innate strength becomes like Gulliver chained down by the Lilliputians—it could easily tear away any single bond, but it is securely held by the aggregate. "Despise not the day of small things," is an aphorism not less worthy the attention of the statesman than of the Christian: a drop of water will not injure the softest pumice, but a continued succession of drops will wear through the hardest marble; a grain of sand will not deface a baby-house, but an assemblage of these grains has overwhelmed the noblest monuments of the gigantic architecture of Egypt. In the physical world such aphorisms are received as truisms, but in the moral life they receive only an otiose assent; men recognise their unquestionable truth, and act as if they were the most arrant falsehoods.

It needs no laboured disquisition to prove that taste is a moral power, and that the cultivation of taste is a powerful means of elevating the intellectual condition of humanity. The knowledge which we derive from the discriminating functions of taste is not the same in kind as the knowledge derived from the applications of mechanics, chemistry, and experimental philosophy, or from the study of the sciences, of politics, or of religion: but it is the same faculty which is brought into play, which is strengthened by use and invigorated by exercise in every artistic, moral, or scientific display of mental energies. It is the capacity of feeling the adaptation of means to effect the desired ends, availing itself of the knowledge of the past in determining the fitness or unfitness of the objects to produce results which it would be advantageous to attain, that enables the mechanist to devise schemes for accelerating or retarding motion—the chemist to form his compositions and decompositions—the politician to plan his schemes for extending and securing the happiness of nations—and the man of taste to produce delightful emotions by arrangement and contrivance.

This truth has escaped notice from a very common but mistaken notion that our ideas of beauty, whether in form, colour, sound, or significance,

are perfectly arbitrary. Why should we attempt to cultivate a national taste, it is asked, when all the objects on which it will be exercised must be illimitably varied according to the caprices of fashion? The short answer to such an inquiry is, that fashion itself is nothing more than an imperious display of influential tastes, and that the co-existence of good public taste and bad public fashion is a sheer contradiction in terms. But we are asked, do not tastes vary so much in different times and countries, as to prove that there is no original and definite standard of beauty by which its relations to taste can be justly estimated? Here the error arises from supposing that there can be no standard but one that is fixed and definite, which is notoriously untrue in all the sciences and in all the arts of life; all that need be contended for, is the existence of a standard admitting of variations to any extent consistent with known, or at least ascertainable limits. Now that such a standard does actually exist, may at once be demonstrated by referring to a very simple and intelligible object of taste—popular music. It is an object which we think peculiarly valuable, and too long neglected in such inquiries as that in which we are engaged, for illustrating the influence of original tendencies to a definable series of means for producing the desirable end of pleasing emotions, and at the same time showing the modifying power of contingent circumstances in diversifying the original feelings.

We find different casts, or perhaps we should rather say schools, of music prevailing in different nations; the variety of these national melodies is very great, probably as great as any instance that could be found of the influence of circumstances in diversifying the objects of a common taste, or the pleasures resulting from the perception of external objects. Indeed, it is a common remark, that the ear is not less capricious than the eye; but a close examination will show us that there are limits to this diversifying power; for, however different the spirit of the national melodies may be, we find that in all nations certain successions of sound alone are pleasing, viz., those which admit of certain mathematical proportions in their times of vibration. It is not every serial succession or combination of sounds, then, that is capable of exciting in human minds the emotion of beauty, or, what is the same thing, producing perceptions of melody; but only certain series of sounds, capable, indeed, of great variation, but still leaving their variations confined within the rigid limits of mathematical laws.

Here, then, is an instance of an universal law of beauty known, recognised, and easily understood in the perceptions arising from one of our senses, in which delight is felt from the mere arrangements or successions of sounds when the series conform to an established order; and hence analogy affords us a fair ground of presumption that the same may be true of the other senses; and that in them the perceptions of beauty may not all be contingent, but may be regulated by a law which, though perhaps not so stringent as the law which governs musical beauty, still has limits to which we can approximate, if we cannot ascertain them with mathematical precision.

We are aware of the danger of pushing analogies too far, and we know that many persons have pushed the analogy between sight and sound to a most ridiculous extent. We have had before us a grave proposal to construct a pianoforte for painters! the author averred that the colours of the rainbow were not merely analogous to the notes of the gamut, but fundamentally the same in principle, and he therefore proposed to attach coloured slips of wood to the wires, which would shoot up when the corresponding keys were struck, and thus give harmony of colour to the eye, while harmony of sound was presented to the ear. Without going to any such absurd length, we still venture to assert, that a certain harmony of forms and colours as really and as truly exists as a harmony of sounds, and that there is as natural a taste for the perception of beauty in one as in the other.

That our ideas of the beautiful are originally and primarily derived from our ideas of the useful, is a notion that never could have entered into the head of anybody but a dreaming speculator, too dull to perceive beauty, and too stupid to practise utility. But it is quite a different thing to contend that there are definite relations and a certain

connexion between the forms most pleasing to the eye and most profitable to the hand. The vase of greatest capacity united to greatest convenience, is absolutely that which the world recognises as the most graceful in form; and the most delightful ship to the un instructed eye, is that whose shape most closely approximates to the solid of least resistance. Everybody knows that a clumsy implement is not less inconvenient in use than it is ungraceful in sight; and all the recent contrivances which have most enlarged domestic comfort have contributed most to domestic ornament. We must be thoroughly convinced that beauty is as real a thing as utility, before we can profitably enter on the inquiry how far the Fine Arts have helped to advance the Useful Arts. Two very opposite errors have arisen from the notion that beauty is a mere ideal, subject to no law but the caprices of fancy or the vagaries of imagination; it has led the artist to look upon the artisan as a mere mechanical instrument for supplying necessities, and the artisan to regard the artist as a minister only to useless luxuries. But there is an Art-Union profitable to both, and the closer that union is drawn, the more will the interests of all parties be advanced. There are common elements in their several labours, distinct and remote as are their several employments. Both must rest their hopes of success on contrivance and adaptation; and there never was any mechanical contrivance which did not soon extend its improving influence beyond the sphere of that department of business for which it was originally and specially invented. Contrivances introduced in the lathe, to improve the ornaments of household furniture, have aided in giving perfection to the steam-engine and the locomotive: the first hint of the improved chain-cable was taken from a jeweller's happy thought in adding novel ornaments to a necklace.

Little more need be said to show the importance of this Art-Union—this desirable combination of the Fine with the Useful Arts. The establishment of a school of design has associated the artisan with the artist, elevating the former, and not degrading the latter. But the work is only begun; much, very much, remains to be accomplished before this Art-Union attains the desirable consummation of which it is evidently susceptible. Every branch of mechanical trade must have the desire of higher Art than direct and immediate result circulating through its entire system. Every artisan must learn to feel that he is himself a teacher, a guide, or a perverter of taste, in every article that passes through his hands. If he produces barbaric forms and disproportioned shapes, he habituates those who use them to barbarism, and the influence of such an habituation has a much wider range than those who have not considered the subject would readily believe. But the artisan who neglects form, does immediate mischief to himself—he neglects the most pregnant source of invention, and shuts against his own business the road which in every age has most directly led to improvement. In the present state of society there must be an increasing disproportion between the wages of skilled and unskilled labour; mere bone and muscle cannot stand in competition with steam and iron. But no combination of shafts, wheels, and driving straps can ever be brought to think; and consequently the artisan who infuses thought into his work, can alone bid defiance to the competition of machinery.

Looking, as we do, to the closer junction of the Fine and the Useful Arts as a desirable element of National Education, inasmuch as it will multiply, to a limitless extent, silent teachers of good taste in every article of domestic use; and regarding the more intimate connexion of the artist and the artisan as the means by which so desirable an object may be attained, we have determined to devote our attention to a subject so very important; and the importance of which is beginning to be extensively felt and appreciated. We shall look around us, therefore, for all matters that may fall within the scope of our purpose—and turn particularly to "the School of Design" in London, and the branches from it that exist in various parts of the kingdom. For the present we content ourselves with thus intimating our intention.

### THE HOLY LAND, EGYPT, ARABIA, AND SYRIA\*.

THE publication of this work has been anxiously looked forward to, since its first announcement. In late exhibitions all the works contributed by Mr. Roberts have been representatives of Eastern scenery; and the singular merits of these have attracted attention largely to the present production. Mr. Roberts has been long known to the world as a painter of uncommon power, and unimpeachable accuracy in architectural subjects; and had the interest of his Moorish architecture never been exceeded, his name would rank among artists of the most honourable reputations. The drawings of the French Commission in Egypt were regarded as authorities on matters relative to the scenes of the great events described in the Sacred History of our religion: but they have been pronounced incorrect; so has also De Laborde's *Petra*. It was, therefore, the enthusiastic hope of representing faithfully the modern aspect of the Holy Cities, that urged Mr. Roberts to the arduous and really perilous enterprise of traversing the deserts, amid which the sites of many of them must be sought. But even were previous works irreproachably correct, tastes, however inveterately national (we allude to the French themselves), must be raised from them to the present, which in real worth leaves them all at an immeasurable distance. And this, be it remembered, is not the work of a Government Commission, but of an individual who thus in a manner surpassingly beautiful illustrates the prophecies and miracles—the indestructible citadels of Christian Hope.

We cannot omit some mention of the journeys undertaken by Mr. Roberts for the purpose of making the sketches, from a selection of which this work has resulted. He left London on the 31st August 1838, and arrived at Alexandria on the 24th of the following September, provided with introductions from the Foreign-office to Colonel Campbell, the British Consul General in Egypt and Syria, by whom every facility was afforded for the accomplishment of the enterprise. He proceeded to Cairo with letters from Colonel Campbell, which were the means of procuring him a courteous reception and protection while sketching. In his searches for scenery worthy of his pencil, he was everywhere attended by a guard, and such was the distinction with which he was treated, that he was permitted to visit such of the mosques as he desired—a privilege never before granted to any Christian. To this immunity only one condition was appended, and that was, that he should not, in working, employ any implement made of *hog's-bristles*. From Cairo, Mr. Roberts attended by an Arab servant, went up the Nile in a boat with a crew of eight men under a commander, and provisioned for three months. Thus accompanied, he ascended the river to the second cataract Wady Halfa; and before he again reached Cairo had made drawings of every object of interest from the extremity of Nubia to the Mediterranean. He then prepared to visit Petra, called by the Arabs Wady Moosa. He had intended originally to enter Palestine by El Arish and Gaza, but he pursued the route of the Israelites to Mount Sinai through the desert. He was on the 8th of February 1839, joined at Cairo by Mr. Pell and Mr. Kinnear: and the party having assumed the Arab dress, they proceeded on their journey with a train of twenty-one camels, and escorted by several Arabs, all well armed.

They arrived on the 27th at the fortress of Akaba on the Red Sea, where the Arab guard which had conducted them thus far returned, and was replaced by men of another tribe. On the 6th of March the party reached Mount Hor, at the base of which lies the excavated city of Petra—the Idumea of the Greeks—the Edom of the Scriptures, exhibiting an awful fulfilment of the prophecy of Jeremiah.—“Also Edom shall be a desolation; every one that goeth by it shall be astonished, and shall hiss at all the plagues thereof.” Mr. Roberts and his companions were the first that had been permitted to encamp within Petra, and they were admitted only after a violent dispute, and the payment of a sum of money. Their stay there was limited to five days, which

term had not even expired before they were compelled to quit the place, being assailed by the inhabitants, between whom and the tribe forming the escort, there existed a spirit of enmity. During, however, this brief space, Mr. Roberts was indefatigable in his labours, and it is to be hoped that he bade farewell to the Arab dwellers in the rocky eyries of Petra, having accomplished the objects of his visit. He then journeyed towards Jerusalem, but the plague prevailing there he proceeded to Gaza, Askalon, and Jaffa; and visited Jerusalem when that city was pronounced in a more healthy state. He afterwards proceeded to the Dead Sea, the Lake of Tiberias, the sea-coast and mountain range of Lebanon, and the ruins of Baalbec. On his return home, the exhibition of the contents of his portfolio excited admiration so general as to give rise to the publication of a selection of the drawings in the present form.

The work appears in large folio, with descriptive letter-press, and a History of the Jewish People, written by Doctor Croly in a strain of the purest eloquence. Even the title of it is grand, being the lion of the whole, the simple word “Israel.” The drawings are appropriately preceded by a wood engraving of the armorial ensigns of Jerusalem as assigned to Godfrey of Bouillon and his successors, by the leaders of the Crusade.

Some of the drawings are taken off the stone on tinted India paper, and to the style of the lithography no praise of ours can do merited justice. The ample title-page is enriched by a very large vignette—“The Entrance to the Holy Sepulchre,” the façade of which has two large arched portals, but one of which has been walled up, and above these two windows corresponding. The architecture is made out of a marriage of the Greek and Gothic. These entrances have on each side a triad of lateral pillars, supporting friezes occupying the span of the arch, on which is carved the triumphant entry of our Saviour into Jerusalem. The doors are thronged with figures, and others are upon the top of the building extending draperies over the façade, as is customary during the celebration of the great festivals of the Greek Church.

The body of the number contains—“The Gate of Damascus at Jerusalem”—“The Greek Church of the Holy Sepulchre”—“The Tomb of St. James”—“Jerusalem from the Road leading to Bethany”—“The Entrance to the Tomb of the Kings,” and “The Mosque of Omar on the ancient Site of the Temple.” Of these, “The Gate of Damascus,” “The Tomb of St. James,” and “The Entrance to the Tomb of the Kings,” are plain, with the lights heightened with white, and although large lithographs, are treated as vignettes. The others occupy the entire page, and are coloured after the original drawings.

The gate of Damascus is one of the gates of Jerusalem, and is so called because it opens on the road to Damascus: this, however, is the name given to it by Europeans—by the natives it is called Bab-el-Amud, or the Gate of the Pillar. The architecture is Saracenic, and although more ornamented than the others, it has yet a plain appearance. The immediate foreground is occupied by men and camels; apparently the *rendezvous* of a caravan about to travel to the north. The lithographer imitates admirably the spirit with which Mr. Roberts usually puts in his figures, which here, on examination, display the varieties of Turkish, Greek, and Arab costume. “The Greek Church” is an interior, and is of necessity gorgeously coloured, as it contains a profusion of richly variegated marbles, gilding, and gold and silver lamps, which are kept continually burning. This plate represents the ceremonial of Greek worship, as witnessed by the artist on Palm Sunday, 1839, and at the point of time when the bishop has taken his place in front of the altar.

The “Tomb of St. James” is one of the four sepulchres in the valley of Jehozaphat, on the eastern side of the Kedron, and is an excavation with an ornamental portal of Greek and Egyptian architecture.

“Jerusalem from the Road leading to Bethany” is a sketch reminding us much of another work of Mr. Roberts—his exhibited view of Jerusalem of the last year. The foreground is occupied by the rocks and chasms of the Mount of Olives, and the city rises bounding the horizon at no great distance above the spectator. The mosque of Omar is of course the principal object, and the line of

buildings is on every hand cut by minarets rising from all quarters of the city. “The Entrance to the Tomb of the Kings” is so named because it is believed to have been the burial place of some of the Jewish monarchs. It is situated north of the Damascus gate, on the slope to the valley of Jehozaphat, and strikingly resembles the sepulchres of Thebes. It is also much like the tombs of Petra, and thence supposed to have been the work of Herod, who was of Idumean descent. The stone is richly sculptured, but the ornaments are broken, and the whole derives much of its effect from contrast with the rugged and hanging brows of rock which rise above it.

In the view of the mosque of Omar, it is seen as from a terrace, which looks down upon the Pool of Bethesda. The mosque is on the Mount Moriah, and occupies the ancient site of the Temple, which is thus accounted for by an Arab historian:—When the Caliph Omar took Jerusalem, he inquired of the Patriarch Sophronius, the most suitable situation for a mosque, when the latter pointed out to him the ruins of the Temple. The mosque, however, in all its modern magnificence was not entirely the work of Omar, having received adornments and additions from succeeding Caliphs. This edifice is called by the natives Sakhara (or “shut-up”); and is a regular octagon of about sixty feet aside. It has four gates, and the walls to a certain height are faced with marble; but its glory like that of the crescent, which soars above its cupola, is passing away; for, like all the remarkable Mahomedan structures, it is falling into decay.

In the foreground are grouped a party of Greek Christians on pilgrimage to Jerusalem. They stand on a terrace of the dilapidated Church of St. Anna, which is built over the grotto, shown as the birth place of the Virgin; and are turned in devotion towards the Holy Sepulchre.

It is impossible adequately to describe the beauties of this work in all its departments. The execution and printing of the lithography places us, in this particular style, at the head of the list of Nations that value and cultivate the Art. It is careful, yet decided; and withal soft to an extraordinary degree. The general shadows are pure and clear; and the accidental shadows with other degrees of depth not less so. The serenity and repose of the Eastern sky are expressed by the treatment of main objects—these throw off a sky which sufficiently proclaims the climate, if other things were wanting to bespeak the land.

Coming before the world with the highest claims to consideration, as well in respect of its literary, as of its pictorial department, this work cannot be considered as of that mere temporary interest which is begotten of novelty; but it must remain a GREAT STANDARD WORK of reference in all questions concerning the subject-matter of which it is constituted. It sets before us as facts of yesterday, the events described in the New Testament; and illustrates the invincible truths of the Old. The objects described by the pencil of Mr. Roberts, are bound up in association with things most sacred; they are scattered throughout lands wherein our religion was first preached; and where had prevailed the older rites of the Jewish nation, of whom Dr. Croly says, “In language astonishing for its vividness, awful for its divine indignation, and appalling for its historic reality, we see their successive sufferings; first, in the pestilences and famines of the land; then in the captivity; then in the Roman invasion, and the horrors of the siege; and finally in the great dispersion; the whole prediction, like some vast picture in the skies, giving us, at a glance, the portraiture of those most powerful changes and deep calamities, which for three thousand years have gone on beneath, realizing on the surface of the world.”

The impressive eloquence of the accomplished writer, the master-genius of the great painter, the unrivalled skill of the ablest lithographer, and the ability displayed by the subordinate labourers in the production of this noble and beautiful work, combine to class it foremost of the productions of the age and country. It is, in truth, a publication of which the nation may be proud; which in other countries the nation would assist in rendering successful. We trust—and with entire confidence in the issue—that the enterprising publisher will be recompensed as he deserves.

\* The drawings by David Roberts, R.A. The letter-press by the Rev. George Croly, LL.D. Lithographed by Louis Haghe. Published by F. G. Moon.

## ART IN THE PROVINCES.

MANCHESTER.—The Exhibition has closed. Considering the depressed state of trade, in this trade-emporium, the results are by no means discouraging. The "Art-Union" subscriptions amounted to £875, being an increase on those of last year; the sales altogether reached £1200. The following is a list of the pictures sold, with the names of the artists and purchasers:—  
 'An Interior,' W. Müller, T. W. Winstanley, Esq.  
 'On the Thames—Moonlight,' E. Childs, S. Lowcock, Esq.  
 'Borrowdale, Cumberland,' T. Baker, E. P. Thomson, Esq.  
 'Rocky Landscape,' J. Tennant, J. Atherton, Esq.  
 'Vale of Avoca,' T. Creswick, J. Holland, Esq.  
 'A Shady Lane,' H. Jutsum, E. P. Thomson, Esq.  
 'Landscape, Composition,' J. Tennant, B. Hick, Esq.  
 'Sancho's Feast,' F. P. Stephanoff, W. Archer, Esq.  
 'A Little Beggar Boy of Rome,' F. Y. Hursthouse, G. Nelson, Esq.  
 'Barnmouth Sands,' A. Clint, R. Christie, Esq.  
 'On the Rhine,' J. B. Crome, B. Hick, Esq.  
 'A Village Alehouse,' H. Jutsum, T. W. Winstanley, Esq.  
 'A Moonlight,' J. B. Crome, J. Wooliam, Esq.  
 'Returning from Pasture,' H. J. Boddington, S. Pincoffs, Esq.  
 'Boats off Lowestoffe,' M. E. Colman, W. McClure, Esq.  
 'Autumn,' H. Jutsum, S. Partridge, Esq.  
 'Calais Pier,' J. Wilson, B. Hampson, Esq.  
 'Waiting for the Boat,' W. Shayer, J. Coats, Esq.  
 'Irish Hospitality,' J. Zeitter, Dr. Slack.  
 'A Road-side Inn,' C. Hanson, T. Gerrard, Esq.  
 'Dead Game,' G. Stevens, E. Tittle, Esq.  
 'Erith on the Thames,' J. Tennant, T. W. Winstanley, Esq.  
 'Pastoral Figures,' H. Le Jeune, J. Satterfield, Esq.  
 'The Poultry Cross,' E. Hassell, Lot Gardner, Esq.  
 'Reflection,' W. S. P. Henderson, S. Webster, Esq.  
 'The Engaged Guardian,' W. Kidd, T. Gerrard, Esq.  
 'On the Thames,' J. W. Allen, P. Martin, Esq.  
 'The Killing Twist,' W. P. Frith, T. Pickford, Esq.  
 'The Belgian Church, Bontong,' G. Bury, Esq.  
 'Autumn,' H. J. Boddington, G. Bury, Esq.  
 'Near Ramsgate,' Miss C. Nasmith, Miss Eckersley.  
 'A Lane at Nacton,' A. Vickers, G. Armstrong, Esq.  
 'End of the West Pier, Calais,' H. Lancaster, J. Smith, Esq.  
 'Distant View of Ryton,' T. Baker, J. P. Westhead, Esq.  
 'The Sands at Dieppe,' H. Gritten, R. Stuart, Esq.  
 'Village Scene,' H. J. Boddington, R. Chaffler, Esq.  
 'A River Scene—Moonlight,' T. C. Hoffman, T. Boardman, Esq.  
 'A Scene Looking to Gloucester over the Forest of Dean,' R. R. Reinagle, R. A. E. P. Thomson, Esq.  
 'The Heart that can feel for Another,' W. Kidd, U. Cooke, Esq.  
 'Profit and Loss,' R. J. Hamerton, H. Pooley, Esq.  
 'Falstaff, Bardolph, and Dame Quickly,' W. K. Keeling, J. B. Statham, Esq.  
 'An Old Staircase at Rouen,' G. H. Hine, T. W. Winstanley, Esq.  
 'Vicar of Wakefield,' Miss E. Sharpe, Dr. Slack.  
 'View of Durham,' T. M. Richardson, Dr. Slack.  
 'Regardes,' T. S. Robins, H. Birch, Esq.  
 'Uncle Willy's Workshop,' R. K. Scanlan, W. Mould, Esq.

The prize offered by the Institution of £50, and the Heywood medal in gold, have, it appears, been adjudged to Mr. Fisk, for his picture of the 'Conspiracy of the Pozzi,' (it will be remembered in the Royal Academy) as "the best Interior entitled to contend for the prize." Now, the impression left upon our minds by this painting makes us somewhat astonished at the decision; a work of high class it certainly is not; and as certainly there are paintings of a much better order in the collection; but the committee, very unwisely, we think, limited the competition to "Interiors," and it was pretty nearly "Hobson's choice." There was one interior by Mr. Muller, of surpassing merit; but as this, we understood, was not sent by the artist, it was excluded from selection—a great mistake, we very humbly submit; for although a society may not, and perhaps ought not, to purchase pictures forwarded to them by dealers, the principle cannot apply to the minds that produced them. The Heywood medal, in silver, and £10, have been awarded to Mr. E. Corbould for his drawing of 'The Tournament,' as "the best water-colour drawing entitled to contend for the prize." The engraving selected for distribution to subscribers to the Art-Union is 'The Gentle Shepherd,' engraved by Bromley, from a painting by Johnstone; it was published some months ago.

BIRMINGHAM.—The Exhibition of the Birmingham Society of Arts has also closed. The sales of works of Art have amounted to £1800. The following is a list of the pictures sold:—  
 'Moonlight,' W. Enoch; 'Cattle,' J. Willis; 'Near the Zuyder-Zee—Moonlight,' J. B. Crome; 'The Tagus, Lisbon in the distance,' J. Holland; 'River Scene, Derbyshire,' T. Baker; 'Landscape—Scene in Lathkill Dale, Derbyshire,' H. Harris; 'St. Cecilia,' J. Hollins; 'Italian Peasant Boys—card playing,' F. Y. Hursthouse; 'View of Ben Lomond, seen over Macfarlane's Island from the upper end of Loch Lomond—Evening,' C. Fielding; 'Market People crossing the Lancaster Sands,' David Cox; 'Italian Girl,' R. Rothwell; 'Hoar Frost,' H. H. Horsley; 'The last Sigh of the Moor,' F. P. Stephanoff; 'The Prisoner—an Incident in the time of Philip and Mary,' J. H. Houston; 'An Interior,' H. Smith; 'Landscape and Figures,' E. Bowley; 'Keswick Lake, Cumberland,' Miss J. Nasmith; 'Imogen Sleeping, Iachimo comes from the trunk,' W. P. Frith; 'Portrait of a Lady,' Miss A. Mundy; 'An old Weir on the Medway,' H. J. Boddington; 'Sunset,' W. Havell; 'At Beccles—Moonlight,' J. B. Crome; 'Nature's Toilet,' A. J. Woolner; 'Study of a Tree,' Mrs. Apeland; 'Wash Mill, near Yardley, Worcestershire,' F. H. Henshaw; 'Giddy Youth in Ancient

Garb,' T. Clater; 'Fishing Trap, Berkshire,' J. B. Pyne; 'The Political Barber,' T. Clater; 'Village Girls at a Spring,' Wm. Shayer; 'A Smuggler looking out,' H. P. Parker; 'A Detachment of Cromwell's Cavalry surprised in a Mountain Pass,' T. Woodward; 'Fishermen on the look out,' W. Shayer; 'Cottage Scene near Tunbridge,' H. J. Boddington; 'High Tor, Matlock,' T. Baker; 'Landscape,' W. Enoch; 'The Quartette,' C. Dukes; 'View from near the summit of Helvellyn, Cumberland,' A. Vickers; 'Trout Stream at Seniole, North Wales,' J. B. Pyne; 'Hamstead Heath,' Miss C. Nasmith; 'At Water Gate, near Newport, Isle of Wight,' A. Vickers; 'Entrance of the Medway at Sheerness,' A. Vickers; 'The Luncheon,' G. Wallis; 'Landscape,' E. Bates; 'Landscape,' W. Enoch; 'Dolly Varden,' W. P. Frith; 'Fruit,' J. C. Ward; 'The Rabbit Fancier,' J. Bate-man; 'Tired Companions,' W. Shayer; 'Brood of Chickens,' T. Woodward; 'The Cowherd,' William Shayer; 'The Young Dairymaid,' P. F. Poole; 'Sheep Washing,' H. J. Boddington; 'Contented Cottagers,' W. Shayer; 'St. Giorgio Maggiore, Venice,' J. Holland; 'Breaking up of the Wreck—Morning, dead calm,' R. Macreth; 'Carefulness, water colour,' A. H. Taylor; 'Negligence,' ditto, A. H. Taylor; 'The Lake of Zurich,' Switzerland, A. Vickers.

NEWCASTLE-UNDER-LYNE.—An Art-Union is in progress in this populous and prosperous town. The neighbourhood of "the Potteries" is especially interested in promoting the Fine Arts, for they cannot fail to produce a moral salutary effect upon its articles of manufacture. An annual exhibition is to be associated with the Institution. The subscription is no more than 5s.; and it appears that a print in lithography is to be executed from one of the pictures exhibited.

PLYMOUTH.—Second Annual Exhibition of Water Colour Drawings. This Exhibition has closed. A provincial Exhibition of Water Colour Drawings only has, we believe, never been attempted in any other town, and we are glad to learn that the experiment has been a successful one in Plymouth. The attendance was good; and drawings to the value of sixty pounds were sold. The prize offered for the best drawing by native artists, was awarded to Mr. Samuel Cook, of Plymouth; and the prize for the best amateur drawing to Miss Lavers, for a very splendid group of flowers from nature. Many fine drawings were contributed by Carbould, Penley, Fahey, Oliver, Brierly, and other distinguished London artists.

SCOTLAND.—The Royal Scottish Academy have published their Fourteenth Annual Report; it is a very gratifying document, informing us that "there has been evinced a greater interest and increasing intelligence in those objects for which the Academy exists;" that "sales" in Scotland have been considerably augmented; that the "schools" are prospering; and that "in establishing a life-academy, and in furnishing eminent examples for the study of their students, the views of the Academy have been in some degree realized." It refers, in a very touching manner, to the loss sustained by the death of Wilkie, and alludes to the appointment, in his stead, of Mr. Allan to the office of limner to her Majesty for Scotland. The report concludes with this important passage:—"Perhaps on no former occasion in this country, did so many circumstances concur in calling forth the energies of Art; for, whilst large numbers of all classes have of late years come forward to manifest their interest in Art and its promotion, in a variety of ways, the attention of the public has been directed with much interest to the inquiries of a Special Committee of the House of Commons recently appointed, with a direct reference to the decoration of the New Houses of Parliament by means of Painting and Sculpture; from whose report the most sanguine grounds of hope are afforded, that a great national work of Art is to be demanded by the country at the hands of its artists. Should such hope be realized, it requires little foresight to be enabled to predict, that from such a great public work would spring very many emulative efforts in the decoration of public buildings and private mansions, not to mention the necessary and attendant effects which would result in every department of Art."

FIFTH ANNUAL EXHIBITION OF THE EDINBURGH SOCIETY OF ARTISTS.—The members of this body, although considerably reduced in number by the intervention of death in some instances, and desertion in others, are not apparently dismayed by this circumstance, but are sufficiently energetic and talented to fill up most satisfactorily the voids left by those whose contributions were generally more numerous than valuable. Their exhibition, which opened on the 25th of December, is not only better than any which preceded it, but it manifests so decided an improvement as cannot escape notice from even the most casual observer. The proportion of portraits is unusually small, compared with that of any exhibition which has been opened in Edinburgh. In addition to a number of very excellent works by the members, there are some exquisite pictures by a number of English and Scottish artists, who have no further connexion with the body than simply as exhibitors; many productions, by the English contributors in particular, are of a very high character in their respective styles of Art. The whole arrangements of the Society, so far as can be judged by a casual glimpse, are indicative of a well-concerted plan and a most judicious application of the resources within control of the body, and have

resulted in a collection of works richly entitling it to a large share of public patronage.

Report of the Committee of Management of the Association for the Purchase of British Engravings for the year 1840-41. This report affords gratifying evidence of the success of the institution, by the great number of new members who have joined it during the past year. It is, however, to be regretted that the report maintains a most mortifying silence upon the subject of its financial arrangements, not even the most distant allusion being made to any of these very important details. How is this? The Scotch are generally considered to look pretty sharply after the "bawbers," and the total absence of any hint as to their whereabouts in this report looks rather ominous.

DUBLIN.—The Royal Irish Art-Union progresses "famously;" and there is good reason for believing that its funds, this year, will amount to between £3000 and £4000. The appointment of Earl de Grey to the Lord Lieutenancy has contributed greatly to forward the object of its founders; his Excellency has become its Patron; and has aided in making the "Arts" fashionable where a few years ago they were utterly neglected. But no doubt the success of the Institution has been largely advanced by the issue of the beautiful print of 'The Blind Girl at a Holy Well;' for a copy of which we have reason to know many persons have given three guinea tickets for the next drawing, to the few possessors of it who were willing to part with it on such terms. The print now in the hands of Mr. Sangster (engraving in line) from Mr. Rothwell's picture of 'Noviciate Mendicants,' will, we are assured, be of equal value and interest; and become, hereafter, equally scarce. We hope, therefore, that many of our English readers will be "wise" enough to subscribe to this Society, for they may secure a certainty of obtaining a print fully worth a guinea with the chance of securing a valuable picture. Especially, we entreat the English artists to bear in mind that the Institution will have at least £2000—perhaps £3000—to expend on the purchase of Paintings; and that the selection is not limited to the works of Irish Artists. Irish Artists will be, we trust, as they ought to be, preferred; but we are certain that if good pictures be contributed, they will remain in Ireland.

## THE PAINTER'S HOME.

By the dark lake, deep and still,  
 While the mist creeps o'er the hill;  
 By the rippling, gurgling, brook,  
 Where lilies gladden many a nook;  
 In the wild and fierce ravine,  
 Where Nature in her wrath has been,  
 And angry rivers rush in foam;  
 There—there the Painter finds his home!

By the cottage few can see,  
 Where sweetly sings the breeze, or bee;  
 By aged oaks, and waving willows;  
 —Or on the shore of surging billows;  
 Where, in the light of morning grey,  
 The tall trim vessel sails away,  
 Thousands of unmark'd miles to roam;  
 There—there the Painter finds his home!

Or on the hoary mountain high,  
 Whose topmost crags have met the sky,  
 And the eagle lives alone—  
 The barren rocks are all his own;  
 Or in some gentle moon-lit scene,  
 Where fairies trip it on the green,  
 Unscared by satyr, saint, or gnome;  
 There—there the Painter finds his home!

Where the crystal fountains run,  
 Through brakes half hidden from the sun,  
 Dancing and surging through the glen,  
 To cheer the souls of studious men;  
 Or rushing onward, bright and free,  
 Like young life full of strength and glee,  
 Headless and careless where it roams;  
 There—there the Painter finds his home!

By towers, with tokens of Old Time,  
 To tell of glory, grief, or crime;  
 By tombs, that owe tradition all,  
 When men their tenants' fame recall;  
 And where the ivy, thick and dark,  
 Rolls round a broken wall, to mark  
 The ruins of some sacred dome;  
 There—there the Painter finds his home!

Where Nature, in eternal youth,  
 Still teaches beauty, grace, or truth,  
 And opens the book where all may find  
 Sweetness for the senses, heart, and mind;  
 Where pleasant fancies, lessons sage,  
 The student meets in every page,  
 Who reads her full and fertile tome;  
 There—there the Painter finds his home!

S. C. HALL.

## REVIEWS.

**PILGRIMS COMING IN SIGHT OF ROME.** Painter, C. L. Eastlake, R.A. Engraver, G. T. Doo. Publisher, F. G. Moon.

Mr. Doo deservedly ranks at the head of our British engravers; and has obtained an European reputation; he blends, in the happiest manner, vigour with delicacy. There are, in the productions of his burin, no hard lines cut in for effect; yet he makes no undue sacrifice of strength to softness. Every touch bespeaks the master; and while the more important parts are wrought with marvellous care and finish, there is not a portion, however comparatively insignificant, that bears tokens of a "prentice han". Industry is a valuable attendant upon Genius; to complete a great undertaking, they must labour together. They have done so to produce the work under notice. It is an acquisition to the Nation; an important gift to mankind; and will go very far to test the universality of an appreciation of entire excellence in a production of Art. If this print be not successful beyond precedent, we shall almost abandon hope that enduring worth will ever be preferred to the mere ephemerides of a season. It is an honour to have published it.

We have commenced by noticing the engraver. What shall we say of the painter? No living artist surpasses him in the higher qualities of Art—invention and composition; in conceptions of the sublime and beautiful, and in arrangements natural and true. Mr. Eastlake is, indeed, a painter for painters; one who must be held in the highest respect and esteem by the best of his compeers. But by the comparatively uninitiated he will be admired none the less, because he obtains the suffrages of accomplished judges; for, happily, he has not forgotten that the grand object of the artist is to teach by affording enjoyment. While, therefore, his execution is of the finest and purest character, the subjects he selects are such as will please universally. We may refer, for example, to any one of the works he has of late years exhibited—"The Christ blessing little Children;" "The Monks"—exhibited in 1840 (we forget the title, but the picture lives in our memory): "Christ weeping over Jerusalem," or this—one of the most touching of them all—"Pilgrims arriving in sight of the Holy City."

The pilgrims are described in the picture as having just reached the summit of a hill that overlooks the "seven-hill'd city." The hill is crowned by the ruins of a villa of old Rome; the broken walls of which shelter a shrine of the Madonna. The group consists of the aged and the very young—even to the babe in the basket-cradle; with men in the prime of life, women with their children, and girls on the verge of womanhood. Each countenance has its own peculiar expression; but all manifest the same feeling of joy mingled with devotion on approaching the goal of so many hopes. The party is led by a young mother; one arm is round her child; the other points out the distant city to those who are climbing the steep; immediately behind her stands a pilgrim, his hands crossed over his bosom, gazing down with solemn awe and reverence; kneeling near him is an old white-headed man, beside whom his grand daughter, it may be, kneels and prays; at her feet is the only indifferent spectator of the exciting scene—an infant calmly sleeping. In the centre of the picture is a noble and beautiful group: an eager boy hastens his mother onward; a young girl, half fainting with ecstasy, is upborne by her parent. All have some offering to lay upon the shrine of the Apostle.

There is no part of the picture that will not yield delight; it is so full of character and fine feeling—and the incidents are so touchingly related, that one may examine it again and again with increased enjoyment.

As we have said this picture will in a great degree determine the question whether what is really and truly excellent can be appreciated so extensively as to stimulate to the issue of works of the highest merit. We have very little fear for the issue. Independently of its unquestionable value as a work of Art, the picture is one that will afford only pleasure. It is, indeed, a production that cannot fail to elevate the character of the British School.

**OLD ENGLISH HOSPITALITY.** Painter, GEORGE CATTERMOLLE. Engraver, J. EGAN. Publisher, F. G. Moon.

A Baronial Hall furnished, according to the good fashion of "the olden time," with guests who have come to ask and receive the rites of hospitality! It is a noble, and beautiful, and deeply interesting picture of a custom that, long ago, distinguished England; when the table was laid for the poor as regularly as for the rich; and no one demanded food and shelter in vain:—

"Nor was the houseless wanderer e'er driven from his Hall,  
For while he feasted all the great he ne'er forgot the small,  
Like a fine old English Gentleman all of the Olden Time."

Few subjects have ever been more happily treated; the artist has admirably preserved all the characteristics of a glorious, though gone-by, age; the hall of carved stone, with the armorial bearings of the ancient house; the falconer indicative of the time, and of the rank of the family; the tables to which the servitors are conveying substantial dishes; the cheerful tankards; the yule-log gracing the broad fire-place; the varied guests—from the white-haired pilgrim, who with uplifted hands "blesses the meal," to the nursing in its mother's arms; and the Lord and Lady of the mansion glancing, from an inner corridor, proudly and gladly, over the happy scene! A more emphatically agreeable picture was never painted; it is positive refreshment to look upon it. As a work of Art it possesses very high merit. The figures, although numerous, are admirably grouped and arranged; the boy in the foreground, watching with half-wonder the tasselled gent on the falconer's wrist, is one of the most graceful and effective "bits" the artist ever painted; and it is skillfully made to contrast with the young mother who, heedless of aught else, feeds her infant babe. The heads are finely expressed; and every portion of the work is in excellent keeping. Few modern publications are calculated to be more extensively popular. It renders justice, too, to the acknowledged genius of George Cattermole, the productions of whose pencil have been, heretofore, usually met as mere miniature copies. Mr. Egan, the engraver, has performed his part with very great ability; indeed he has toned his work so highly as to render it uncertain whether the original is a drawing or a painting; the result of his labours cannot fail to be satisfactory to the publisher, who will be justified in consigning any picture to his hands; and this is no small advantage when, although we have so many mezzotint engravers, the number of artists of real power is very limited.

**THE HIGHLAND BREAKFAST.** Painter, E. LANDSEER, R.A. Engraver, J. OUTRIM. Publisher, F. G. Moon.

A capital example of the talent of Mr. Landseer; full of truth and character, and painted with marvellous accuracy. It represents the interior of a Highland keeper's cottage, where a young mother sits nursing her babe, in utter indifference to the wranglings of the group assembled as the breakfast party. The guests are three rough terriers and a brace of hounds; the two latter are struggling for the possession of a bone, which a little sharp-set rascal is evidently bent upon obtaining in the melée. The other two are making sure of the bird in the hand—devouring rapidly the contents of a large tub. The print is an excellent one; the more acceptable, perhaps, because the subject is one that no living artist can so completely master.

**EUROPA.** Painter, W. HILTON, R.A. Engraver, C. HEATH. Publisher, F. G. Moon.

This is a print that will surely satisfy the critic: if not an engraving of the very highest character, it is admirably wrought, and elaborately finished—perhaps, indeed, it is refined to a fault, and bears too prominently the marks of labour. As a composition it is one of the finest and most effective of the great painter, who, in his efforts to elevate the Arts, and direct them *rightly*, never encountered a subject that presented no difficulties. He has treated this with amazing delicacy; contrasting, in the happiest manner, the horror expressed in the countenance of Europa,

with the voluptuousness of the admiring water nymphs, and the joy of the hovering cupids, who ride or gambol round the bird of Jove. The publication is a most desirable acquisition to the admirers of the artist's genius—and they are becoming more numerous every day; in time, the list will include all who can appreciate what is truly valuable and excellent in Art.

**DOVER.** Painter, Sir A. CALLCOTT, R.A. Engraver, J. PYE (the etching by the late George Cooke). Publisher, F. G. Moon.

This is a print of a very pleasant character—a scene purely and essentially English; representing the white cliffs of Britain, with one of her bulwarks floating past them. In the centre a stout sloop is stemming the waves. The engraving was left unfinished by the late Mr. George Cooke, an artist of high and deserved eminence, who brought the finest feeling to bear upon professional skill.

**PAIR OF LANDSCAPES.** Painted by J. CONSTABLE, R.A. Engraved by J. LUCAS. Publisher, F. G. Moon.

The world is learning every day to estimate the genius of Constable—one of many who lived in hope of honours from posterity. These prints cannot fail to extend his reputation. Great merit is always certain to receive justice from Time; and although the object of it is removed from the influence of either praise or censure, the conviction that it must come is the grand sustainer and encourager of energy, but for which power and life would both sink under the pressure of conscious excellence unperceived or, at least, undervalued. These are delicious publications—full of pure truth recorded in rich poetry. The one represents a peasant opening a causal lock in an open country, its vicinity to some populous town indicated by the distant spire of a church; the other is a lane scene leading to a green meadow, along which the sheep are pacing, leisurely followed by the shepherd's dog. Fine and flourishing trees shadow it on either side; and a clear well, at which a boy is drinking, skirts the path. They are fine engravings, and will afford abundant pleasure to all who look to them either with affection for Nature or admiration for Art.

## TO CORRESPONDENTS.

It will be at once perceived that four pages of the extra half sheet given with this number belong to the volume for the past year—the title page and contents; and that the other four pages form part of the present number. They will fall according to the numerals.

We have arranged with Mr. Pugin for the publication of a series of papers, entitled "Modern British Architecture," to be continued monthly—the first of which we hope to introduce into our next number with illustrations explanatory of the text.

Our correspondents must really excuse our publishing, for some time to come, any further "speculations" on VEHICLES; we feel that the subject is for the present exhausted; and while so many other matters press upon our attention, we cannot go on treating of this until it has become wearisome.

"An Original Subscriber" is assured that the sketches to which he refers, in a gratifying manner, would have been continued, but that we felt persuaded our readers preferred details of a more practical character. If we found our correspondent's opinion at all general, they should be resumed.

We request attention to our plan of introducing monthly, or as frequently as we can, notices of improvements in manufactured articles—in order to show the great advantages they may derive, or have derived, from the influence of the Fine Arts. We desire to introduce, somewhat extensively, explanatory wood-cuts; and shall gladly avail ourselves of assistance to advance this very desirable purpose.

For reasons, which we have explained elsewhere, we are compelled to postpone the publication of several reviews of works of Art, illustrated books, &c., which we have in type.

We shall give some details concerning Capt. Taylor's Plan for a Breakwater next month.

Ratcliff's Inkstand is an exceedingly ingenious one; we shall describe it in our next.

We are compelled to let several articles stand over till next month;—among others, a Letter from Mr. Weld Taylor, on the subject of Oils and Frescoes; some remarks on Professor Green's Lectures; Miseries of Portrait Painting; and Clay for Modelling.

COMPANION PRINT TO THE EARL OF STRAFFORD GOING TO EXECUTION,  
BY THE SAME ARTISTS.

## KING CHARLES THE FIRST IN THE GUARD ROOM;

After sentence of death was passed upon him, the fallen, but yet dignified monarch, calmly enduring the taunts and insults of the brutal soldiery.  
From the beautiful Historical Picture painted by PAUL DE LA ROCHE, for Lord FRANCIS EGERTON,  
to whom this Print is, by permission, dedicated.

Engraved in the most highly finished style of Mezzotinto, by GEORGE SANDERS.  
Prints, 12s. .... Proofs, £1 1s. .... Before Letters (of which only fifty are taken), £1 11s. 6d.  
ACKERMANN AND CO., STRAND; AND TILT AND BOGUE, FLEET-STREET.

**ARTISTS' COLOUR WAREHOUSE, 339, OXFORD-STREET, LONDON.**  
JABEZ BARNARD begs to inform his Friends and Artists generally, that he has opened the above Premises with an entirely new and extensive Assortment of every requisite for OIL and WATER-COLOUR PAINTING; comprising Metallic and other Tubes for Oil Colours, and all the new Vehicles at present in use. J. B. respectfully solicits a trial of his fine White, prepared for Oil Painting, which is unequalled.—The Trade supplied.—January 1842.

### WINSOR AND NEWTON'S COMPRESSIBLE METALLIC TUBES TO SUPERSEDE BLADDER COLOURS FOR OIL PAINTING.

**THE principle on which this Tube is constructed** is that of squeezing or compressing between the thumb and finger, so that the colour is always kept gathered up in a compact state, and the empty part of the tube remains closed, or compressed behind it.

This tube requires the use of one hand only to eject the colour, thus equaling in simplicity the common bladder, but without any of its numerous objections.

The tube is formed of thin metal, which, being impervious to air, preserves the colour in a perfect state for any length of time, and is lined inside with a membranous substance, which effectually protects the most delicate colour from any chemical action that might otherwise arise from its contact with the metal.

*The advantages of these Tubes may be thus enumerated.*

The preservation of the colour free from skins.  
The cleanliness with which the art of oil painting may be pursued, either by artist or amateur.

The readiness with which the colour may be pressed from the tube without the necessity of laying down the palette and brushes.

Freedom from smell, and from danger of bursting or breaking.

Economy in use, and moderate price.

TO BE HAD WHOLESALE AND RETAIL AT

**WINSOR AND NEWTON'S  
ARTIST'S COLOUR MANUFACTORY,  
38, RATHBONE PLACE, LONDON.**

Price 6d. each Tube filled with Colour. (Cobalt, Madder Lakes, &c., extra, as usual.)

PAINTING AND DRAWING MATERIALS.

**ROBERSON AND Co., 51, LONG ACRE.**  
Artists' Colourmen and Pencil Makers, beg to call the attention of Artists and Amateurs to their New List of materials for Drawing, Painting, &c., manufactured and sold by them.

In addition to every article hitherto used, it comprises all the New Colours and improved methods of preparing them, both for Oil and Water Colour Painting.

**OIL COLOURS** of the finest quality, in Metallic Collapsible Tubes, Glass Tubes, and Bladders.  
**WATER COLOURS** in Cakes and in the Moist State for Sketching, &c.

**PREPARED CANVAS** for Oil Painting, with Indian-rubber, Oil, or Absorbent grounds.  
**Flemish ground MILLBOARDS and PANELS.**

**VEHICLES and MEDIUMS**, prepared from Silica and Borax, in bottles and powder, after the recipes of Lieut. Hardy, and J. Eagle, Esq.

Macgillivray, Gum Medium, Gumption, and Preparation of Copal for Oil Painting.

**WHATMAN'S DRAWING PAPERS**, London and Crayon Boards, and Harding's new pure Drawing Paper.

**FRENCH BLOCKS** for Sketching in Oil and Water Colours.

**SABLE and CAMEL HAIR PENCILS**, Goat, Hog, and Badger Hair Brushes.

**FINEST PURE CUMBERLAND LEAD DRAWING PENCILS**, of various degrees of hardness, at the recent reduction in price.

**ROBERSON AND CO.** have much confidence in respectfully stating, that they continue to supply the above, and every other article connected with their business, of the very first quality and at the lowest possible prices.

MANUFACTORY, 51, LONG ACRE, LONDON.

**DRAWING AND PAINTING, No. 14, TOTTENHAM COURT-ROAD.**—Artists, Artisans, and others, are respectfully informed that a Large Room, furnished with Casts from the Antique, Ornaments, &c., has lately been opened for STUDY, every Monday, Tuesday, Thursday, and Friday evenings, from 6 o'clock till 10. Subscription, 4s. per month.

A Class for the Study of the Living Model meet on Wednesday and Saturday Evenings.

**TO MINIATURE PAINTERS, &c.—W. WARRINER, 39, GREAT CASTLE-STREET, REGENT-STREET.** Manufacturer of OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES, of all sizes, shapes, and patterns.

W. Warriner, having been established more than a quarter of a century, begs to return his sincere thanks to those Artists and others who have unobtrusively patronised him, begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses always ready, or speedily made to order.

The Trade, Merchants, and Captains of Ships supplied on the most advantageous terms, and with the greatest punctuality.

**BY THE QUEEN'S ROYAL LETTERS PATENT. SPILSBURY'S WATER-COLOUR PRESERVATIVE.**—It has always been considered a desideratum to possess a means of giving to Water-colour Drawings the durability and fixedness of Oil Paintings, without lessening that clearness and brilliancy which are the especial characteristics of the former. This has at length been achieved by the invention of the above valuable preparation, which, without injury to the most delicate tints or change of their appearance, and without any false glare of varnish, will render Water-colour Drawings capable of being washed with Soap and Water, and so impervious to dirt, that Ink may be spilled upon them and washed off again without leaving a stain.

Crayon and Pencil Drawings, Coloured or Plain Engravings, may in like manner be fixed and made washable without any change in their appearance. It will be found not less important for giving durability to the numerous articles fabricated on fancy paper and card-board; to Music and Berlin Patterns; to Shop Tickets and Show-boards; and, indeed, to every other object of paper exposed to dust and dirt.

Sold in packages, 4s. each, by the Sole Appointed Agents, Reeves and Sons, 150, Cheapside; and by the Inventor and Manufacturer, Mr. Spilsbury, 17, Pall Mall; where also may alone be seen and had the washable Kalsomine Paper-hangings, which possessing greater softness and beauty than ordinary papers are yet capable of being washed like oil-paint; price from 2d. a yard and upwards.

**WARING AND DIMES, 91, GREAT RUSSELL-STREET, BLOOMSBURY.** have to return thanks for the patronage bestowed upon them by their friends, and state that they endeavour to render every Article manufactured and sold by them of the first quality.

**PREPARED CANVASS, WITH INDIA RUBBER GROUND.**—This article is the exclusive manufacture of W. and D., and the increase of its consumption attests its superiority over the old method; no cracking or peeling can possibly take place on the surface.

**METALLIC ZINC TABLETS** for Oil Painting were originally prepared by W. and D. Their advantageous properties for highly-finished subjects over wood or mill-board is generally acknowledged, the surface produced being of the finest and most even texture.

**ANTI-TURE BLADDERS OF OIL COLOUR**, which have been so much admired on account of their simplicity and saving.

**WATER COLOURS IN CAKES AND BOXES.**—At the present season, those intending to make presents to their young friends are invited to inspect the stock of Drawing Boxes at W. and D.'s establishment, which combine elegance and durability, and may be had from the price of 5s. upwards.

W. and D. have also established a Circulating Portfolio of Drawings and Prints, containing Specimens of the best Masters.

An assortment of Lithographic Studies, by Julien, Harding, Prout, and other masters.

White and Tinted Drawing Papers, Chalks, Crayons, and all other Articles for Drawing and Painting.

An assortment of Drawing Boards.  
T Squares and other Mathematical Instruments, just received from Paris.

**PAINTING IN OIL.—BROWN'S COLLAPSIBLE TUBES, FOR COLOURS, OILS, VARNISH, MAGYLP, &c.**

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**THOMAS BROWN, COLOURMAN to ARTISTS in OIL and WATER**, begs to return his sincere thanks to his numerous Customers for the kindness with which they made a trial of the above Tubes, merely on his recommendation, and for the approbation they have so universally bestowed on them.

To the Members of the Royal Academy in particular, he wishes to express his great obligations; he, his Father, and his Predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

To those Artists and Amateurs who have not tried the Collapsible Tubes, he begs to state a few of their advantages.

They are more economical than bladders; for though the price is a little more, the saving they make in colour more than balances the extra price.

They will preserve colour for years; any portion may be pressed out at a time, and the remainder (if ever so little) will keep good, by reason of the air and light being completely excluded.

They can be conveniently used with one hand, during painting, without putting down the palette and brushes; which is the great inconvenience of syringes of any sort.

They are free from smell, from danger of bursting and exuding, which is so disagreeable in bladders.

They are particularly adapted, by their economy, for ultramarine, and all the expensive colours; also, for magylyp and asphaltum, so difficult and inconvenient to keep in all other forms.

They are as light as bladders, more portable, enable colour boxes to be made much smaller, are most convenient for sketching from nature, and may be safely packed among linen or paper.

They offer the only perfect mode of sending prepared colours to warm climates.

They may be had of any capacity, from the eighth of an ounce to seven pounds and more.

Their cleanliness is such that the most delicate Amateurs may now practise Oil Painting without even soiling their fingers, thus removing the great nuisance of the old method of using Oil Colours, which deterred so many persons of taste from indulging in so noble an Art.

Manufactured and Sold, at 163, HIGH HOLBORN, London; where, also, may be had every Material for Painting in Oil and Water.

The trade supplied with Full or Empty Tubes upon liberal terms.

Orders by post attended to immediately.

**ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.**

**C. J. ECKFORD, 45, FLEET-STREET,** corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

**SPLENDID AND SUPERIOR GILT FRAMES.**

**CHARLES M'LEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

Just published,  
**SKETCHES IN NORWAY**, Etched by W. J. BLACKLOCK, from Sketches by BRUCE SKINNER, Esq., B.A., Trin. Col., Cam. Prints, 8s.; fancy cloth, gilt lettered, 10s. 6d.; proofs on India paper ditto, 15s.

London: J. Robinson, 40, High Holborn.

**THE RIGHT HON. LORD STANLEY, M.P.**  
Early in January will be published a highly-finished  
**PORTRAIT** of the Right Hon. LORD STANLEY, M.P. Engraved by Mr. H. COUSINS, from the original Picture recently painted by H. P. BRIGGS, Esq., R.A., for the Right Hon. the Earl of Derby.—Size of the Engraving, 16½ inches by 12½ inches.

This Portrait is the exact size of Lawrence's celebrated Portrait of Sir Robert Peel, Bart.  
London: Messrs. Colnaghi and Puckle, Cockspur-street. Manchester: Mr. Agnew, Repository of Arts, Exchange-street.

Just published, in demy 8vo. (490 pages), price 21s., elegantly bound in cloth, or 30s. in morocco,

**THE BOOK OF THE POETS**, from Chaucer to Bentley, with Biographical Notices, and a History of the Rise and Progress of British Poetry. Embellished with 45 Vignette Illustrations by the most eminent Engravers.

It contains an entirely new selection from the ample range of our National Poetry, in which an attempt has been made to give a distinct idea of the excellence of each poet, combined with the most scrupulous attention to admit nothing that might in the slightest degree unfit it for universal perusal.

\* On December 26, was published a Companion Volume, containing **THE MODERN POETS** (of the Nineteenth Century), with the same number of Embellishments, on precisely the same plan.

London: Scott, Webster, and Geary; and sold by all Booksellers.

Now publishing, beautifully printed and neatly bound in cloth, price 7s., or in six parts at 1s., illustrated with Water-coloured Engravings.

**THE COMPLETE GUIDE to the FINE ARTS**, containing full Instructions in Drawing, Oil and Water-colour Painting, Portrait Painting, Landscape Painting, Miniature Painting, Perspective, Crayon Painting, Grecian and Persian Painting, Flower Painting, Lithography, Engraving on Wood, Copper, &c., and valuable Recipes.

Part 1. contains—The Whole Art of Oil Painting—2. Drawing and Sketching from Nature—3. Drawing in Perspective—4. Miniature Painting—5. Engravings on Wood, Copper, and Lithographic Drawing—6. Landscape Painting in Water-colours, &c. Each part complete in itself.

T. Sloper, 19, High-street, Marylebone; and W. Brittain, Paternoster-row.

#### CHILDE HAROLD ILLUSTRATED.

Now ready, royal 8vo., 2s. 2s., or India Proofs, 2s. 3s.,

**CHILDE HAROLD'S PILGRIMAGE**. By LORD BYRON. A New and beautifully Illustrated Edition, embellished with Sixty Vignette Engravings by Emden, from original Drawings made by eminent Artists, and a Map of the Author's Route through Spain, Portugal, Holland, &c., with Picturesque Border, and a Portrait of Lord Byron in his Albanian dress, never before engraved.

II.  
In royal 8vo., with Engravings, price 31s. 6d., elegantly bound,

**THE OLD FOREST RANGER;**  
Or, **WILD SPORTS OF INDIA**, on the NEILGERRY HILLS, in the JUNGLES, and on the PLAINS.  
By Captain WALTER CAMPBELL, of Skipness.

THE FOLLOWING SUPERIOR WORKS ON THE ART OF DRAWING ARE NOW PUBLISHING BY S. & J. FULLER, 34, RATHBONE-PLACE.

**BRIGHT'S ELEMENTARY LANDSCAPE DRAWING-BOOK**, in Eight Nos., 1s. each; cloth bds., 9s.

**CIPRIANI'S RUDIMENTS for DRAWING the HUMAN FIGURE**, engraved by F. BARTOLOZZI, Two Parts, 12s. each.

**D. COX'S TREATISE on LANDSCAPE PAINTING**, and Effect in Water Colours, from the First Rudiments to the finished Picture, in Twelve Nos., at 5s., 7s. 6d., and 10s. each, folio super-royal; or half-bound, complete, containing 56 Plates, price 45s.

**D. COX'S YOUNG ARTIST'S COMPANION on LANDSCAPE PAINTING in WATER COLOURS**, price 42s.

**T. S. COOPER'S STUDIES of CATTLE and RUSTIC FIGURES**, in Ten Nos., 4s. each; cloth bds., 42s.

**T. S. COOPER'S ELEMENTARY STUDIES of CATTLE**, in Eight Nos., 2s. each; cloth bds., 16s.

**T. S. COOPER'S COLOURED IMITATIONS of DRAWINGS**, in Two Folios, price 52s. 6d. each.

S. and J. Fuller beg to call the attention of the Admirers and Collectors of Water-Colour Drawings to their Rooms, in which will be found beautiful specimens by the following Masters:—Cattermole, Stanfield, Harding, Poole, Bright, T. S. Cooper, Allen, Bentley, Pyne, Richardson, Prout, Cox, and all the leading Artists of the day.

**POOLOO'S CHINESE CEMENT.**—The

extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razor-makers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

**THE CHEAPEST MANUFACTORY for GILT and FANCY WOOD PICTURE FRAMES.**

**P. GARBANATI, WORKING CARVER**  
P. and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane, respectfully informs Artists, &c., that as he manufactures entirely on his premises every description of ORNAMENTED GILT and FANCY WOOD PICTURE FRAMES, he is enabled to offer them at such low prices that he defies competition. A most extensive assortment of every size Picture Frames kept ready. Re-gilding in all its branches in a most superior manner, cheaper than by any other gilder in the kingdom. Estimates given free of charge.

P. G. having a large assortment of Picture Frames that have been some time on hand, will dispose of them at an immense reduction.

A list of the prices of Plate Glass, Gilt and Fancy Wood Picture Frames, &c., sent, pre-paid, to any part of the kingdom.

**VOLATILE FIXER**, a Preparation to fix and secure Coloured Crayon and Chalk Drawings, to prevent their rubbing. Sold in bottles, price 2s. and 3s. 6d.—S. and J. Fuller particularly call the attention of Artists, Annateurs, and Drawing-Masters to the above useful Preparation; likewise to their permanent Coloured Crayons, for Portrait and Landscape Painting, fitted up in boxes, price 25s. and 210s. each. Specimen Drawings to be seen, and Portraits painted in Crayons.—Temple of Fancy, 34, Rathbone-place.

#### GLOBE INSURANCE, FALL MALL and CORNHILL, LONDON.

Established 1803.

#### DIRECTORS.

Edward Goldsmid, Esq., Chairman.	Wm. Tite, Esq., F.R.S., Deputy Chairman.
Henry Alexander, Esq.	Sheffield Neave, Esq.

John Hodgson, Esq.	B. G. Windus, Esq.
Boyd Miller, Esq.	

For FIRE and LIFE INSURANCE, and ANNUITIES, and the PURCHASE of REVERSIONS and LIFE CONTINGENCIES.

#### CAPITAL, ONE MILLION STERLING.

The whole paid up and invested, and entirely independent of the amount of premiums received; thereby affording to persons Assured an immediate available fund for the payment of the most extensive losses, without liability of partnership, and free from uncertainty as to the result of their engagements—which the Directors consider to be highly important to those who effect Insurances in the capacity of Trustees, or otherwise in the performance of a specific trust or duty.

Insurances may be effected with this Company to the extent of £10,000, on a single life, if approved.

(By Order of the Board)

JOHN CHARLES DENHAM, Sec.

Rates and Conditions of Fire and Life Insurance, or other information, may be obtained at the Offices in London, and of the Company's Agents in the Country.

Fire Policies due at Christmas must be paid on or before the 9th of January.

#### UNDER THE MOST DISTINGUISHED PATRONAGE.

**NATIONAL FLOATING BREAKWATER,** and REFUGE HARBOUR COMPANY.

Capital £300,000, in 30,000 Shares of £10 each: deposit £2 per share. To be incorporated by Act of Parliament.

#### DIRECTORS.

Rear-Adm. N. Tomlinson	Rear-Admiral Sir Samuel Sir Thos. Grey, F.R.S.
Capt. P. M. Quhae, R.N.	Pym, K.C.B.
Montague Gore, Esq., M.P.	George Dacre, Esq.
Trustees—Chris. Pearce, Esq.; Benj. Williams, Esq.	Captain Wm. Holt, R.N.
Bankers—The Bank of England; Messrs. Cockburn and Co., Whitehall.	

Auditors—Mr. Jonathan Ball; Mr. Jas. Chas. Hardy. Secretary—John Charretie, Esq.

Solicitor—Ambrose Clare, Esq.

Office, No. 61, Moorgate-street, City.

The reports of the Government Commissioners, and the deep interest which has been expressed in Parliament, and by all who have the safety of our navy, the success of our commerce, and the protection of our seamen and fishermen at heart, prove incontestably the absolute necessity which exists for the immediate reparation of all our present harbours, and for the formation of at least 250 new ones. The expense which has hitherto been one of the insurmountable impediments no longer offers any obstacle, as by Captain Tayler's meritorious invention this Company can form 180 harbours at a less expense than that certified by the Government Commissioners as the sum required by the old modes for the formation of three. The facility of construction enables this new Floating Breakwater to be affixed, and harbours of refuge formed, on the most exposed parts of our coasts, where not only none at present exist, but where also none other than by this method can be constructed: smooth water for the safe landing of goods and passengers by steamers can be ensured at all, even the most exposed piers.

The Directors have great satisfaction in stating that they are in active negotiation with several places of the highest maritime importance; and that the Admiralty, zealous for the promotion and success of the undertaking, have already granted the use of anchors and ground moorings to enable Captain Tayler's plan to be put in immediate operation at Brighton.

Prospectuses and other particulars may be obtained at the Company's Office; at the Solicitor's, 5, Sise-lane, Bucklersbury; and at the office of Somers Clarke, Esq., Brighton; where also applications for Shares may be made until the 30th of November next, when the allotment will be made.

MR. MOON, HER MAJESTY'S PRINTSELLER AND PUBLISHER, has the honour to announce

## ROBERTS'S HOLY LAND.

THE FIRST PART, **JERUSALEM**, NEARLY READY; CONTAINING

THE ENTRANCE TO THE HOLY SEPULCHRE.  
THE DAMASCUS GATE.  
THE GREEK CHURCH OF THE HOLY SEPULCHRE.  
TOMB OF ST. JAMES.

JERUSALEM, FROM THE ROAD LEADING TO BETHANY.  
TOMB OF THE KINGS.  
MOSQUE OF OMAR.

This Work will be published in Parts, each containing six fac-similes of the original Drawings (taken on the spot), executed in Lithography by LOUIS HAGHE, Esq. with an Introductory View of Jewish History, and Historical and Descriptive Notices, by the Rev. Dr. CAOLY, at £1 1s.; Proofs, £1 11s. 6d.; and a few copies, coloured and mounted in imitation of the original Drawings, £2 2s.

This Work is dedicated, by express command, to her Majesty.

## ITALIAN PILGRIMS COMING IN SIGHT OF ROME,

From the ORIGINAL PICTURE by C. L. EASTLAKE, R.A., in the Possession of the RIGHT HON. EARL GREY, at Howick Hall;

Engraved in the highest style of Line, by GEORGE THOMAS DOO, who, upon the completion of this Work of Art, received the distinguished appointment of Historical Line Engraver to her Majesty, as a mark of high consideration of the great talent he has displayed on this refined subject.

Price—Prints, £4 4s..... Proofs, £8 8s..... Before Letters, £12 12s.

Mr. Moon begs to direct attention to the circumstance of this Engraving being uniform in size with 'Landseer's Highland Drovers,' 'Wilkie's Knox Preaching,' 'Cattermole's Baronial Hall,' 'Bolton Abbey,' 'Maid of Saragossa,' 'Eastlake's Christ Blessing Little Children,' and 'Christ Weeping over Jerusalem.'

## A BARONIAL HALL IN THE OLDEN TIME;

OR, OLD ENGLISH HOSPITALITY.

Engraved from the celebrated Picture by GEORGE CATTERMOLLE,

AS THE COMPANION TO BOLTON ABBEY IN THE OLDEN TIME; BY SAMUEL COUSINS, A.R.A.

This National Work has excited intense interest from the scene being so truly English. The First Proofs being nearly all sold, early application must be made for the remainder.

Prints, £3 3s..... Proofs, £5 5s..... Before Letters, £8 8s.

## DEPARTURE OF REGULUS.

Engraving in line, by DANIEL WILSON, late pupil of WILLIAM MILLER of Edinburgh, after the magnificent Picture by J. M. W. TURNER, R.A.—Size, 21½ inches by 17½.

Prints, £1 11s 6d..... Proofs, £3 3s..... India Proofs, £4 4s..... Before Letters, £6 6s.

## THE CORONATION.

Painted by E. T. PARRIS, Esq., Historical Painter to the QUEEN DOWAGER.

A Combination of Circumstances, equally flattering and gratifying, enables Mr. Moon now definitely to announce that, by *Special Authority*, this Grand Historical Painting of the Coronation is entrusted to him for immediate Publication.

This Work of Art will, with the PORTRAIT of HER MAJESTY, by CHALON, and the QUEEN'S FIRST COUNCIL, by SIR DAVID WILKIE, form a part of the *Regal Gallery of Pictures*, illustrating the incidents of the Reign of QUEEN VICTORIA, which Mr. Moon has arranged to produce as events may transpire.

## THE QUEEN RECEIVING THE HOLY SACRAMENT

AT HER CORONATION.

By C. R. LESLIE, R.A.

*This beautiful Work belongs to Her Majesty, and Mr. Moon has been honoured by Her Majesty's gracious Commands to have it engraved by Mr. Samuel Cousins, A.R.A.*

The Price of the Proofs and Impressions will necessarily bear proportion to the great cost of the production of the Engraving, upon which no expense will be spared; and by Mr. Moon's arrangement with Mr. Cousins, every impression will be delivered through him—a guarantee that they will not be unworthy to display his great talent, and support his distinguished reputation. The Price of the Impressions from the Engraving of this Work, which it is just to reiterate contains nearly forty portraits, will be, to Subscribers, Prints, with the Dedication, £12 12s.; Proofs, with the Royal Arms and Title, £15 15s.

## THE WATERLOO BANQUET

AT APSLEY HOUSE.

From a PICTURE by WILLIAM SALTER, Esq., Member of the Academies at Florence, Rome, &c., which he has had the high privilege of painting by the especial permission of HIS GRACE THE DUKE OF WELLINGTON,

From the actual scene in Apsley House, and has since been honoured with sittings for the portraits by the DISTINGUISHED GUESTS.

This most interesting of National Subjects represents the Annual Banquet at which the surviving heroes of that glorious Victory meet to commemorate, on the 18th of June, the most celebrated event in the Military Annals of our Country. Prints, £10 10s..... Proofs, £12 12s..... Before Letters, £15 15s.

THE LAST WHOLE-LENGTH MILITARY PORTRAIT OF

## HIS GRACE THE DUKE OF WELLINGTON, K.G.

IN HIS UNIFORM AS FIELD-MARSHAL.

Painted by J. LUCAS, Esq. at Walmer Castle, in November last. The Noble Duke, in expressing his approbation of this work, addressed the Artist in nearly the following words: "Mr. Lucas, I have been torn to death by repeated sittings, and I will never sit for my Portrait again. Those who wish to have my likeness must have a copy from this."

ALSO,

## THE PORTRAIT PAINTED FOR THE UNIVERSITY OF OXFORD,

By the same celebrated Artist. Engraved by S. COUSINS, Esq. A.R.A.

Present prices to Subscribers: Proofs with Autograph, £6 6s..... Lettered Proofs, £4 4s..... Prints, £2 2s. For which an early application is requested.

NEARLY READY,

A FULL-LENGTH PORTRAIT OF THE LATE

## COUNTESS OF BURLINGTON,

Painted by JOHN LUCAS, for His Grace the DUKE OF DEVONSHIRE, K.G., as a Companion in size to SIR THOMAS LAWRENCE's full-length Portrait of the DUCHESS OF SUTHERLAND and CHILD. Engraved by SAMUEL COUSINS, A.R.A.

Prints, £2 2s..... Proofs, £4 4s..... Before Letters, £6 6s.

THE FULL-LENGTH PORTRAIT OF

## THE RIGHT HON. LORD COTTENHAM,

IN HIS ROBES AS

LORD CHANCELLOR OF ENGLAND.

Painted by C. R. LESLIE, R.A., and engraving by H. T. RYALL.

Prints, £2 2s..... Proofs, £4 4s..... Before Letters, £6 6s.

FULL SIZE HALF-LENGTH PORTRAIT OF

## THE RIGHT HON. LORD LYNTHURST,

LORD HIGH CHANCELLOR OF ENGLAND.

Just painted by W. C. ROSS, and to be engraved by H. T. RYALL.

Prints, £1 1s..... Proofs, £2 2s..... India Proofs, £3 3s.

Before Letters, with Autograph, £4 4s.

**THE FLORIST'S JOURNAL**, No. 25, with a coloured plate, 6d.  
**CHARLES DIBDIN'S SONGS COMPLETE**, Part VI., 2s. 6d.

How and Parsons, Fleet-street.

**GOLDSMITH'S DESERTED VILLAGE, WITH ETCHINGS.**

This day is published, in 1 vol. imp. 8vo., price Five Guineas, in extra boards, or in quarter coloumbier in portfolio; Proof Impressions, Ten Guineas; Proofs before Letters, Thirteen Guineas.

**GOLDSMITH'S DESERTED VILLAGE;** with Eighty Etchings, by Members of "The Etching Club."

\* Only 220 copies of this Work have been printed; no more impressions will be taken, and the plates will be destroyed.

London: Longman, Brown, and Co.

Now publishing, beautifully printed and neatly bound in cloth, price 7s., or in six parts at 1s., illustrated with Water-coloured Engravings.

**THE COMPLETE GUIDE to the FINE ARTS:** containing full Instructions in Drawing, Oil and Water-colour Painting, Portrait Painting, Landscape Painting, Miniature Painting, Perspective, Crayon Painting, Grecian and Persian Painting, Flower Painting, Lithography, Engraving on Wood, Copper, &c., and valuable Recipes.

Part 1. contains—The Whole Art of Oil Painting—2. Drawing and Sketching from Nature—3. Drawing in Perspective—4. Miniature Painting—5. Engravings on Wood, Copper, and Lithographic Drawing—6. Landscape Painting in Water-colours, &c. Each part complete in itself.

T. Sloper, 19, High-street, Marylebone; and W. Brittain, Paternoster-row.

## ART-UNION OF LONDON.

PRESIDENT.

His Royal Highness the DUKE OF CAMBRIDGE.

COMMITTEE OF MANAGEMENT.

Henry G. Atkinson, Esq., F.G.S.	Edward Hawkins, Esq., F.R.S., F.S.A.
Chas. Barry, Esq., A.R.A.	Henry Hayward, Esq.
John Ivatt Briscoe, Esq.	William Leaf, Esq.
John Britton, Esq., F.S.A.	Wm. C. Macready, Esq.
Benjamin Bond Cabbell, Esq., F.R.S., F.S.A.	T. P. Matthew, Esq.
William Collard, Esq.	Thomas Mist, Esq.
Robert Dickson, Esq., M.D., F.L.S.	T. Moore, Esq., F.S.A.
Charles Palmer Dimond, Esq., Treasurer.	George Morant, Esq.
Thos. L. Donaldson, Esq.	Richard Morris, Esq.
William Ewart, Esq., M.P.	John Noble, Esq., F.S.A.
J. S. Gaskoin, Esq.	Lewis Pocock, Esq., F.S.A.
George Godwin, Esq., F.R.S., F.S.A.	The Right Hon. the Lord Prudhoe.
Thos. Griffith, Esq., M.A.	W. J. Smith, Esq.
Sir Benj. Hall, Bart., M.P.	Arthur Wm. Tooke, Esq., M.A.
T. Charles Harrison, Esq., F.L.S., F.G.S.	R. Z. S. Troughton, Esq.
	Samuel Wilson, Esq., Ald.
	Edward Wyndham, Esq.

HONORARY SECRETARIES.

George Godwin, Esq., F.R.S., F.S.A., 11, Pelham-crescent, Brompton.  
Lewis Pocock, Esq., F.S.A., 29, Montague-street, Russell-square.

The ART-UNION was established in 1836, to aid in extending the love of the Arts of Design through the United Kingdom, and to give encouragement to Artists beyond that afforded by the patronage of individuals.

1. It is composed of Annual Subscribers of One Guinea and upwards.
2. The funds, after paying necessary expenses, are devoted to the purchase of Pictures, Drawings, Enamels, Sculpture, or Medals.
3. Every Member, for each Guinea subscribed, is entitled to one chance of obtaining some work of Art at the annual distribution, the selection of which rests with himself.
4. In addition to the equal chance annually afforded to each Subscriber of becoming the possessor of a valuable work of Art, by the result of the allotment, a certain sum is set apart every year to enable the Committee to procure an Engraving; and of this Engraving each Member will receive one impression for every Guinea subscribed.

An Engraving of Mr. LANDSEER's picture, 'THE TIRED HUNTSMAN,' by Mr. H. C. SHENTON, is now in course of distribution to the Subscribers of the year 1840, at Messrs. P. and D. Colnaghi's, 14, Pall-mall East.

Mr. J. P. KNIGHT's picture, 'THE SAINTS' DAY,' is in the hands of Mr. W. CHEVALIER, to be engraved for the Subscribers of 1841.

The Subscribers of the current year, ending March 1842, will receive impressions of an Engraving by Mr. W. H. WATT, of HILTON's fine picture, 'THE RETURN OF UNA.'

Prospectuses may be obtained at the Society's Office, 75, Great Russell-street (corner of Bloomsbury-square), where the Clerk is in attendance daily, from Twelve till Five o'clock, to afford any information that may be required, and to receive Subscriptions.

By order,

T. E. JONES,  
Clerk to the Committee.

Just published, in 8vo., price 2s.,

**BRITISH, FRENCH, and GERMAN PAINTING;** being a reference to the Grounds which render the proposed Painting of the New Houses of Parliament important as a Public Measure. By DAVID SCOTT, Esq., Member of the Royal Scottish Academy of Painting, Author of "The Peculiarities of Thought and Style in 'The Last Judgment' of Michael Angelo," "The Genius of Raffaele," &c. Edinburgh: the Edinburgh Printing Co. London: Smith, Elder, and Co.

Just published in royal 4to., price £1 5s. bound,

**RUSTIC ARCHITECTURE—** PICTURESQUE DECORATIONS OF RURAL BUILDINGS in the Use of ROUGH WOOD, THATCH, &c. Illustrated by Forty-two Drawings, consisting of Plans, Elevations, Sections, and Perspective Views; the Doors, Windows, Chimney Shafts, &c., drawn geometrically to a large scale; with descriptions and estimated costs. By T. J. RICAUTI, Architect.

"We have repeatedly and strongly recommended this elegant and useful Work, and can safely say, that we think no gentleman who purchases it will be disappointed."—London's Gardener's Magazine.

James Carpenter, Old Bond-street.

Published in 4to., Price £4 10s. in French Boards; and on Royal Paper, 4to., with proof impressions of the Plates, and a Portrait of the Author, Price £7 7s.,

**A TREATISE ON PAINTING.** In Four Parts. Illustrated by One Hundred and Thirty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNET, F.R.S.

1. On the EDUCATION of the EYE. Second Edition. Price £1 5s.
2. On COMPOSITION. Fifth Edition. Price 15s. in boards.
3. On LIGHT and SHADE. Fifth Edition. Price 18s. in boards.
4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This work is particularly recommended to the Students in Art in the New Edition of the Encyclopedia Britannica—See the article on Drawing.

James Carpenter, Bond-street.

BROCKEDON'S VIEWS IN ITALY.

**ITALY, HISTORICAL, CLASSICAL, and PICTURESQUE;** described and illustrated in a series of VIEWS, engraved in the highest style of art, from drawings made and selected expressly for this work. By WILLIAM BROCKEDON, Esq., F.R.S., Member of the Academies of Fine Arts in Florence and Rome; author of the "Passes of the Alp," "The Road-Book to Italy," &c. &c. In monthly parts, imperial quarto.

The work will be regularly published in monthly parts, each containing three highly-finished line engravings, with descriptive letter-press, printed on imperial quarto paper—size, fifteen inches by eleven, and will extend to twenty-four parts. The price of each number will be, Prints, 5s.; India paper, proofs, 8s.; India proofs, before letters, 12s. Of this latter the impression will be strictly limited to 25 copies.

Part I. will be published on February 1, 1842.

London: Duncan and Malcolm, Paternoster-row; and Blackie and Son, Glasgow and Edinburgh.

ON THE FIRST OF FEBRUARY 1842, WILL BE PUBLISHED,

Volume I., Price 10s. of

## THE WORKS OF SHAKSPEARE:

A NEW LIBRARY EDITION.

EDITED BY CHARLES KNIGHT.

THE "Pictorial Edition of Shakspeare," by the same Editor, is now completed, as far as regards the publication of the *undoubted* works of the Poet. It now comprises two Volumes of COMEDIES, two of HISTORIES, two of TRAGEDIES and the POEMS. The two doubtful Plays, and the Analysis of the ascribed Plays, with a full Index, or Indexes, will form the Seventh Volume.

In the original announcement of "The Pictorial Shakspeare" a LIFE OF THE POET was necessarily proposed; but the materials which the Editor has collected require an extension of his plan; and he contemplates such a Biography (scanty as the personal authorities may be), as may regard Shakspeare in connexion with his Age,—its Literature, its Politics, its Religion. This will form the greater portion of an Eighth or Introductory Volume: with a brief HISTORY OF OPINION on Shakspeare's writings,—during the course of two centuries and a half,—in our own country, in France, and more especially in Germany.

It is intended to commence the publication in February 1842, of a new edition of the "The Works of Shakspeare, edited by Charles Knight." This will *not* be a "Pictorial Edition," in the former sense of the term; although those wood Engravings will be introduced which really illustrate the author better than any verbal explanations. The Works will be handsomely printed in demy octavo, and the Life, and other Introductory matter, will form part of this edition.

In entering upon this undertaking, the Editor relies upon the same support which he has already so abundantly received, for the production of an edition in a form more convenient to the student and general reader, though less attractive as an embellished book. It is his intention to make the LIBRARY EDITION as complete and as correct, in a literary point of view, as his most assiduous care will allow. In the "Pictorial Edition," the text was subjected to a more careful collation, not only with reference to verbal accuracy but in the important matter of versification, than had been attempted for many years. And not only for the detection of typographical errors was this careful collation with the original copies undertaken; but the corruptions of the text, produced by a long course of unscrupulous changes, called corrections, were in this way searchingly examined, and in most cases set aside.

Since the publication of the posthumous edition of Malone, by Boswell, in

1821, there had been no attempt to produce a new critical edition, which should sedulously examine the ancient texts, instead of revelling in conjectural emendation—should avail itself of any improved facilities for illustrating the author—exhibit something of what had been done to that end in foreign countries—and, above all, casting aside the ignorant spirit of all that species of commentary which sought more to show the cleverness of a depreciating criticism than the confiding humility of a reverential love, should represent the altered spirit of our literary tastes during the last quarter of a century.

To carry forward his labours in the same spirit, aiming also at the attainment of the utmost accuracy, will be the great object of the new edition. In deciding upon doubtful texts, the principle which has already been the Editor's guide will be steadily kept in view. That *principle* has been to make the folio of 1623 the FOUNDATION of the text; to resort to the quartos whenever that edition was evidently incorrect, or gave a doubtful sense; if the quartos did not solve the difficulty, to adopt what was thought the best of the conjectural emendations of Shakspeare's editors, English and Foreign. There is a wide difference between making one edition the *foundation* of a text, and servilely adhering to that edition.

With this view, it is the Editor's intention to collate the matchless collections of Shakspeare's plays in the BRITISH MUSEUM and the BODLEIAN LIBRARY. The necessary facilities for so doing have been extended to him with the most ready kindness. Having made the folio of 1623 the *foundation* of his edition, it is now his duty to spare no care that may correct any mistakes into which his confidence in that edition may have led him. He believes that he will not have much to correct.

The work will be comprised in twelve volumes; but the circumstance that the greater portion of editorial labour has been accomplished, and that the heavy cost of *illustrative* engravings has already been incurred, will enable it to be sold at a comparatively low price, namely the WORKS, 10 volumes, FIVE POUNDS; the LIFE, &c., 2 volumes, ONE POUND.

It is intended to publish a list of those supporters of the undertaking who will have the kindness to give in their names to their respective booksellers, either in town or country; and the number printed will in some measure be regulated by the number of those who thus intimate their intentions before the appearance of the first volume.

LONDON: CHARLES KNIGHT AND CO., LUDGATE STREET.

## ARTISTS' COLOUR WAREHOUSE,

339, OXFORD-STREET, LONDON.

JABEZ BARNARD begs to inform his Friends and Artists generally, that he has opened the above Premises with an entirely new and extensive Assortment of every requisite for OIL and WATER-COLOUR PAINTING; comprising Metallic and other Tubes for Oil Colours, and all the new Vehicles at present in use.

J. B. respectfully solicits a trial of his fine White, prepared for Oil Painting, which is unequalled.

The Trade supplied.—January 1842.

**RATCLIFF'S PATENT INKSTANDS,** the most complete yet offered to the Public, in which the usual faults of Inkholders—Mouldiness, Corrosion, Evaporation, and thickening of Ink, are completely avoided.

Sold by L. Booth, Duke-street, Portland-place, and by all Stationers, in a variety of Mountings, suitable for the Office and Drawing-room. Merchants and Foreign orders supplied on Liberal terms.

**ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.**

**C. J. ECKFORD, 45, FLEET-STREET,** corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

**POOLLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So firm is it in its hold that a new fracture is certain to take place rather than a severance in the cement. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Jewels in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFIELD and Co., Cutlers and Razor-makers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFIELD'S London made Table Knives, at BLOFIELD and Co.'s, 6, Middle-row, Holborn.

## TO MINIATURE PAINTERS, &amp;c.—W.

WARRNER, 39, GREAT CASTLE-STREET, REGENT-STREET. Manufacturer of OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES, of all sizes, shapes, and patterns.

W. Warrner, having been established more than a quarter of a century, begs to return his sincere thanks to those Artists and others who have undeviatingly patronised him, begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses always ready, or speedily made to order.

The Trade, Merchants, and Captains of Ships supplied on the most advantageous terms, and with the greatest punctuality.

## WARING AND DICES, 91, GREAT RUSSELL-STREET, BLOOMSBURY,

have to return thanks for the patronage bestowed upon them by their friends, and state that they endeavour to render every Article manufactured and sold by them of the first quality.

**PREPARED CANVASS, WITH INDIA RUBBER GROUND.**—This article is the exclusive manufacture of W. and D., and the increase of its consumption attests its superiority over the old method; no cracking or peeling can possibly take place on the surface.

**METALLIC ZINC TABLETS** for Oil Painting were originally prepared by W. and D. Their advantageous properties for highly-finished subjects over wood or mill-board is generally acknowledged, the surface produced being of the finest and most even texture.

**ANTI-TUBE BLADDERS OF OIL COLOUR,** which have been so much admired on account of their simplicity and saving.

**WATER COLOURS IN CAKES AND BOXES.**—At the present season, those intending to make presents to their young friends are invited to inspect the stock of Drawing Boxes at W. and D.'s establishment, which combine elegance and durability, and may be had from the price of 5s. upwards.

W. and D. have also established a Circulating Portfolio of Drawings and Prints, containing Specimens of the best Masters.

An assortment of Lithographic Studies, by Julien, Harding, Prout, and other masters.

White and Tinted Drawing Papers, Chalks, Crayons, and all other Articles for Drawing and Painting.

An assortment of Drawing Boards.

T Squares and other Mathematical Instruments, just received from Paris.

## TO ARCHITECTS, BUILDERS, &amp;c.

## PAPIER MACHE' WORKS, 15, WELLINGTON-STREET NORTH, STRAND—

CHARLES F. HIELEFELD begs to inform Architects, Builders, &c., that in addition to the Volume of Patterns already published, he has now produced 40 New Engravings, which may be had, separately at 6d. each. The complete work now comprises nearly 850 patterns of works in every style, actually manufactured in Papier Mâché and on sale: consisting of Picture and Glass Frames, Cornices, Mouldings, Flowers, and every species of decoration for ceilings, walls, &c. The excellence of the improved Papier Mâché Ornaments in architecture is now fully understood and admitted by the first architects, and by the most eminent builders in London and the provinces.—The above folio volume is sold, bound complete, with a tariff of prices, at Three Guineas, which will be remitted to persons ordering goods to the amount of £50 or upwards.

BY THE QUEEN'S ROYAL LETTERS PATENT.

## SPILSBURY'S WATER-COLOUR PRESERVATIVE.

—It has always been considered a desideratum to possess a means of giving to Water-colour Drawings the durability and fixedness of Oil Paintings, without lessening that clearness and brilliancy which are the especial characteristics of the former. This has at length been achieved by the invention of the above valuable preparation, which, without injury to the most delicate tints or change of their appearance, and without any false glare of varnish, will render Water-colour Drawings capable of being washed with Soap and Water, and so impervious to dirt, that Ink may be spilled upon them and washed off again without leaving a stain.

Crayon and Pencil Drawings, Coloured or Plain Engravings, may in like manner be fixed and made washable without any change in their appearance. It will be found not less important for giving durability to the numerous articles fabricated on fancy paper and card-board; to Music and Berlin Patterns; to Shop Tickets and Show-boards; and, indeed, to every other object of paper exposed to dust and dirt.

Sold in packages, 4s. each, by the Sole Appointed Agents, Reeves and Sons, 150, Cheapside; and by the Inventor and Manufacturer, Mr. Spilsbury, 17, Pall-Mall; where also may alone be seen and had the washable Kalsomine Paper-hangings, which possessing greater softness and beauty than ordinary papers are yet capable of being washed like oil-paint; price from 2d. a yard and upwards.

## THE ART-UNION.

LONDON, FEBRUARY 1, 1842.

## ART APPLIED TO MANUFACTURES.

## NO. I.—CONNEXION OF BEAUTY AND UTILITY—USES AND PROGRESS OF SCHOOLS OF DESIGN.

IN commencing this series of papers, a brief statement of their scope and plan may be desirable. Our aim is to awaken the attention of all who take an interest in the promotion of the Useful, as well as the Fine Arts, to the importance of studying the beautiful, both in form and colour; to exemplify the true principles of beauty in relation to common things, no less than to the rarest products of ingenuity; and to point out the right way of developing, by educational means, those perceptions of elegance and fitness which are known by the name of taste. With a view to accomplish this end, we shall arrange the subject under two divisions: the first, and principal one, being devoted to an exposition of the general principles that govern the art of design, as applied to useful and ornamental purposes; the uses of Schools of Design, and the direction and nature of the instruction they should afford. In the second and subordinate division, we propose to record the proceedings of these Institutions; and especially to report the progress of the Central School of Design, recently established by Government at Somerset House, under the direction of Mr. W. Dyce. In this latter branch of the subject we shall be indebted for our information to the able and zealous director of the school; but the writer, in his capacity of reporter, will assume the privilege of commenting upon the plans and results of instruction, in the frank and kindly spirit of friendliness, as a fellow labourer in the field of popular education in Art.

The pleasure derived from the contemplation of beautiful objects is an inborn desire, the gratification of which is as much a want of our common nature as the grosser necessities of daily existence. It was implanted in us by the Divine Creator, for the beneficent purpose of gladdening and refining the exercise of our senses. Every object in nature ministers to it, and its enjoyment is as exquisite as it is blameless and beneficial: it is an appetite that knows neither surfeit nor vicious excess; and its indulgence, to use the expressive terms of the Latin poet, "softens the manners, and suffers not men to be brutal." In our pursuit of the means of delighting this fine sense, the most intellectual of all, we are apt to look too exclusively to the gifted sons of genius, the poets, artists, and musicians, as the sources whence ideal images of grace and loveliness are diffused around, overlooking the numberless beauties that exist in the wondrous realities of creation, and the humbler class of artificial objects where elegance is subservient to utility. The commonest jug, if it be of a pleasing shape, is gratifying to the cultivated taste; and to make it of a comely form costs no more than if it were ugly, while in that case it is not merely an indifferent but a disagreeable object: the cheapest cotton print may present an harmonious mixture of colours, that shall cause it to be preferred to the most costly satin of ill-assorted hues. We are all of us more or less sensible to such impressions, though often unconsciously; and if these sensations be slight and transient they are also frequent, and not the less real for being unrecognised. Indeed the character of the material objects by which we are surrounded, influences the mind and disposition through the outward senses; so that the beautiful exerts a moral as well as an intellectual sway over mankind: we need go no further than this general remark, that the most cheerful and happy people delight in ornament and gay colours, to prove the efficacy of ocular perceptions on human character. There is a numerous and active class of persons,

who are constantly occupied in surrounding us with objects of daily use, that are either agreeable to the eye, or the reverse: these are the artisans, or skilled craftsmen, the designers of the shapes and patterns of dresses, furniture, and utensils; they have the power of contributing extensively, if not materially, to our momentary enjoyments; and as purchasers mostly prefer a pretty thing to an ugly one, according to their degree of discrimination, it is the interest of this vast body of producers to please the public: they strive to do so to the best of their ability; but they are not taught how to accomplish their intention effectually. To give them this teaching is the object of Schools of Design; and in this view alone it is an important object. But in a commercial point of view, it is a question that concerns national wealth, the prosperity of our manufacturers, and the feeding and clothing of the working population. Let those who doubt this, ask the shopkeepers who deal in any description of "fancy goods," or the manufacturers who produce them. The want of a scientific knowledge of Art, of education for the eye, of cultivated taste in short, kept the people of this country, from the time when the gloom of Puritanism repressed the national vivacity until the present, in a state of insensibility to the beauties of form, proportion, and colour in common things, and generally speaking in rarer objects; and the plain, dogged, practical understanding of John Bull takes so strong a hold of the tangible idea of utility, that he was prone to regard beauty as a quality not only fanciful and superfluous, but inimical to use, and which at any rate added to the cost of a thing. John left the study of elegance to "foreigners;" and when ornament was wanted he supplied expensive finery; the consequence has been, that foreigners have taken some of John's best customers from him, and he is now forced by the loss of his trade to set up a taste: the breeches-pocket, that most sentient nerve in honest John's organization has been touched; and conviction has reached his brain through this influential channel. As the shortest way of laying in a stock of this (to him) strange article, taste, he has been borrowing from his neighbours; but in so bungling a way that he cannot rival them, and does but increase by his clumsy imitations the demand for the genuine originals: he cannot even copy a beautiful article correctly for want of a knowledge of first principles. First principles: yes, these are what our countrymen want to know; for this knowledge is essential to enable them to "steal with judgment" from others, much more to invent for themselves. It is not enough to know that the shape of a Grecian vase is beautiful, that the colours of a Persian carpet or an Indian vase are rich and agreeable to the eye; an understanding of what constitutes their peculiar beauties is essential, in order to preserve the character of the original in the imitation: a still more scientific acquaintance with their characteristics is requisite to adapt their fine qualities to other purposes, or to vary the application of the main principles on which

they are designed; for a very slight deviation may vitiate the reproduction. It is not uncommon to see the characteristic feature of a beautiful vase ignorantly exaggerated into deformity by way of improvement; and pattern specimens of handiwork, where the craftsman has lavished his utmost labour and ingenuity, are not unfrequently monstrosities in point of design. There is no greater fallacy than the vulgar notion, that "taste is arbitrary choice;" this error has been the prolific parent of ugliness; for if the fancy be not guided by right principles it wanders into all sorts of incongruities. Whoever admires a beautiful object ought to be able "to give a reason for the faith that is in him," that shall satisfy a rational questioner: how much more necessary is it for the manufacturer to know in what consists the beauty he aims at producing? Science is the rudder and compass of Art, by which the daring inventor is enabled to discover new worlds of beauty without running on the rock of deformity. Beauty and utility go hand in hand, and those who divorce them separate a pair joined by nature; whose union, cemented by "the eternal fitness of things," is the means of filling the world with shapes of loveliness strung with nerves of power. As in the man the easiest attitudes are also the most graceful, so with artificial objects the most serviceable may be rendered the most becoming: when a thing is essentially ugly, the chances are that it is not so handy for its purpose as it might be made; and as mechanical inventions are improved they become more shapely. Ugliness is an evil to be avoided whenever possible, which it is in most cases. Utility engrafted on simple beauty gives rise to endless varieties of form, that are pleasing because they are fitted for their purpose: as examples of this we may instance the commonest agricultural implements; the plough, the scythe, the sickle, and the basket with which

"The sower stalks, and lib'ral throws the seed  
Into the faithful bosom of the ground."

So with dress; the Greek mantle or chlamys, the Roman toga, the Turkish turban, the Arab bourgeois, and the mat of the New Zealand savage, are each graceful after their kind.

"But what is meant by beauty?" it may be asked. "Is it a positive quality to be defined?" We reply, Yes. There is an abstract beauty of form and proportion as well as of colour, which always delights the eye: but the mind to be fully satisfied demands also expression of character or purpose; that is, the combination of fitness and utility with beauty. An object is beautiful because of the ideas excited by it; these constitute its attractiveness, for they are the fruition of beauty: those persons who have most lively imaginations, therefore, derive the greatest amount of pleasure from the contemplation of beautiful objects. Hogarth's "Line of Beauty" is a mere figment; for though undulating curves are pleasing to the eye, they convey no meaning to the mind, unless their contour expresses some intelligible form. Beauty has been well defined to be the combination of uniformity and variety: let us

apply this definition to the simplest geometrical forms. The square (fig. 1) is a uniform figure,

solid, compact, and conveying an idea of stability and strength: it is satisfactory from its symmetry, every one of its sides being alike, and each contributing in an equal degree to the integrity of the form: the square has only one element of beauty, uniformity. The oblong square, or parallelogram (fig. 2), is also solid, compact, and uniform, and, equally with the square, conveys ideas of stability and strength; but it includes, in a degree, the element of variety, the just proportion of the height to the breadth of the figure, producing an additional pleasure: the height of this, "the parallelogram of beauty," as it is called, is equal to the diagonal of the square of the base (vide fig. 2); this graceful proportion blending the characteristics of altitude and squareness in one form. In the parallelogram (fig. 3) the idea of altitude or length predominates; this figure is in a less degree suggestive of compactness and stability, and strikes the sense as not so justly proportioned as figure 2. Rectilinear figures, however, are far less agreeable to the eye than curvilinear; for besides that straight lines have no variety in themselves, the angles are harsh: regularity, strength, and stability are their leading characteristics. The sphere (fig. 4) combines compactness, solidity, and strength with uniformity, rejecting the harshness of angular figures; the unbroken regularity of the form, which presents the same outline in whatever way it is viewed, is not only satisfactory but pleasing. But the eye quickly runs the round of the circular outline, and soon comprehends the beauty of the figure; hence the heightening grace of variety is wanting in the sphere, which is supplied by the ellipsis (fig. 5); the regularity of this figure, however, in which the two ends and two sides precisely resemble each other, is soon apparent, and its variety quickly exhausted. It is in the oval or egg-shape (fig. 6) that the two elements of beauty—uniformity and variety—are combined in perfection, without any diminution of the ideas of compactness and solidity: the devious contour of the oval presents a variety of curves in its flowing line; and graceful proportion is superadded, the relative width and length of the figure corresponding with that of fig. 2. In this attempt to estimate the comparative beauty of these simple geometrical forms, and to demonstrate the surpassing elegance of the oval, while testing the definition of beauty, only some of the abstract ideas of form awakened by each have been adverted to; the qualities of surface, for instance, have been purposely overlooked, as unessential to the indication of the characteristics of form and proportion. The constructive fitness of the form of the egg, with its two domes or arches of unequal dimensions blended together, so as to support each other, develops the new ingredient of beauty, the principal of utility. This standard of beauty is equally applicable to complex forms, in enabling us to form a judgment of the proportions in the masses and of the shapes in the outline. The balance of rotund and tapering form, of solid bulk and projection, of curves and right lines in a vase, are equally determinable by this simple test: but the question of fitness enters so largely into the consideration, that abstract beauty of form and proportion is greatly modified, though its laws never can be directly contravened without detriment. The problem to be solved, in all cases of the invention of new forms, or the adaptation of old ones to useful purposes, is this—given the precise kind of utensil, it is required to find the shape best suited to fulfil its uses, and at the same time to develop the utmost degree of appropriate beauty.

The application of this standard of beauty to ornamental design is infinitely more complicated; and a new element, colour, here comes into operation. Ornamental art is unjustly, or rather ignorantly despised; the investigation of the principles of beauty in ornamental design requires more recondite research than in the instance of natural forms, where the forms are not arbitrary. In the conformation of natural objects there is a reason for everything, if we could but find it out; and in controlling the exercise of invention by a rational exercise of scientific knowledge, man is following, though at an immeasurable distance, the order of the universe. In painting and sculpture the artist imitates the perfection of nature; in ornamental design he is licensed to deviate from the natural ideal into the fantastic ideal; and his invention is only controlled by the laws of abstract beauty, and the conditions of his particular

branch of decorative art. The knowledge of these laws and conditions, and of the natural characteristics of the divers objects which the decorative artist impresses into the service of ornament, ought to be acquired in Schools of Design.

The institution of Schools of Design has been regarded as only serviceable in teaching the artisan to draw, and making him familiar with what has been already done in the way of ornament, so as to be able to produce new modifications of known devices. This is taking a very superficial and imperfect view of the nature and scope of the course of education required to produce skilled inventors; and, without the scientific exercise of invention, ornamental design is of no worth, and will do little towards establishing or maintaining our national equality in ornamental manufactures. To be able to draw is obviously an essential, but the least part, of the education of the designer of ornament: in the science of form and colour, and their application to the purposes of decoration, the artisan ought to be proficient. He should not only know what has been done in ornament, and how it is done, but why it was done; that he may be able to do something new, and as good or better than his predecessors: for novelty in ornament is incessantly demanded, not only by the caprices of fashion, but by the competition of manufacturers; and the designer who supplies it in the greatest variety, and of the most beautiful kind, will be most prized. Study cannot teach the dull brain to invent, but it will restrain alike the plodding and the lively fancy from falling into errors of judgment, and vitiating the popular taste. So little has the subject of artisan education been considered, that we find writers, eminent for their love and knowledge of Art, not only at variance with each other as to the course of instruction, but entirely wrong in their notions on the subject. Mr. Haydon advocates drawing the human figure as the one thing needful; on the principle that the greater includes the less, he contends that when an artisan can draw the figure, he can draw anything. Mr. Allan Cunningham, on the contrary, ridicules the notion of making artists of artisans by teaching them to draw the human form; and humourously observes, that "we don't want to have the Greek warriors of the Elgin frieze galloping round the rims of plates and dishes." With deference to both these distinguished men, they are alike beside the point: it is not the being able to draw the human figure that makes an artist or an artisan; the human form is one of the objects that both have occasion to represent—the painter and sculptor principally, the designer of ornament incidentally. To a certain point, the education of both artist and artisan—to use the broad distinctive terms commonly recognised—proceeds in the same way: both require elementary instruction in the art of drawing, modelling, and painting; for the use of the pencil or modelling-tool is as necessary to both as it is for the bookkeeper and the author to be able to use the pen. When this power of imitating natural objects is acquired, the course of education of the painter and sculptor takes a totally different direction from that of the ornamental designer. The painter and sculptor study and imitate nature with a view to represent scenes and persons, whether real or ideal, in the aspect of life; their aim being not only to delight the sense by the imitation, but to influence the mind, by communicating their ideas through the exercise of their so potent art. The object of the ornamental designer is simply to gratify the eye, subordinately to some useful purpose which he serves by the means of appropriate embellishment; his invention has a wider latitude, but a more limited influence than that of the painter or sculptor. The treatment of the same object by the pictorial and ornamental designer, is essentially different: take the honeysuckle for example; the studies of the flower itself by the landscape painter and the decorator may be similar; but how different the use they make of it. The one gives to the entire plant the pensile lightness, the luxuriance, and movement of nature: the other detaches the flowers from their stems and sticks them flat and upright, side by side, or with some fanciful shape intermixed; giving to them rigidity, and regularity, and altering both shape and colour. The one presents the natural characteristics of the plant in the most picturesque aspect: the other takes the hint of a beautiful form, and applies it to an arbitrary use,

according to a conventional necessity. The designers of ornament for architecture, for carpets, for damask hangings, for cotton prints, for vases, for arabesque scrolls, for lace work, for glass painting, for paper hanging, &c., would each treat the honeysuckle in a different way, according to the requirements of his peculiar branch of decoration: neither would imitate nature exactly, but each in his deviation should preserve the beautiful characteristics of the original, whether in form or colour; and in order to do this he must know in what these characteristics consist.

The most common and glaring mistake made by our designers, is that of introducing pictorial imitations of natural scenes and objects as ornaments: it is not only an infraction of the first principles of the art of decorative design, but a source of the most monstrous absurdities. Tigers crouched on hearth-rugs, lapdogs on foot-stools, parrots perched on chair-seats, swans sailing on the floor of a drawing-room, snakes and lizards crawling into cups, flower stalks blossoming with wax-lights, Corinthian columns supporting tall candles, walls opened with myriad repetitions of the same view in every conceivable distortion of false perspective, grates like castles, gothic crosses doing duty as door-keepers, and Grecian urns stuck up for chimney-pots—these are among the most flagrant instances of that want of scientific acquaintance with the principles of decorative Art, which it is one great object of schools of design to supply.

These introductory remarks have extended to such a length, that our mention of Schools of Design must be very brief, and limited to the Metropolitan School at Somerset House, and its offshoot in Spitalfields; and we must be content to give a mere sketch of these. The School of Design at Somerset House, was established by the Government on 1st May, 1837, in pursuance of a parliamentary grant of money for that purpose; under the direction of Mr. Papworth; Mr. Dyce was appointed Director in August 1838. The instruction given may best be described in the words of the Prospectus.

#### BRANCHES OF INSTRUCTION.

**Section I.—ELEMENTARY INSTRUCTION.—I. Drawing.** 1. Outline Drawing, Geometrical Drawing, Freehand ditto; 2. Shadowing, the use of Chalks, &c.; 3. Drawing from the Round; 4. Drawing from Nature. II. Modelling. Modelling from the Antique, &c.; Ditto from Nature. III. Colouring. 1. Instruction in the use of Colours; 1. Water-Colours, including Water Body-Colours, and Fresco; 2. Oil Colours; 2. Copies of Coloured Drawings; 3. Colouring from Nature.

N.B. The Instructions in Colouring are given only in the Morning School.

**Section II.—INSTRUCTION IN THE HISTORY, PRINCIPLES, AND PRACTICE OF ORNAMENTAL ART.**—This Section will embrace, according to circumstances, the study of, 1. The Antique Styles; 2. Styles of the Middle Ages; 3. Modern Styles. In this department Lectures will occasionally be given to the students.

**Section III.—INSTRUCTION IN DESIGN FOR MANUFACTURES.**—1. Study of the various processes of manufacture, so far as may be requisite, including those of Silk and Carpet Weaving, Calico Printing, Paper Staining, &c., &c., &c.—N.B. The Class for Silk Manufacture is open every Tuesday and Thursday, from eleven to two. 2. The Practice of Design for Individual Branches of Industry.—1. Subject considered generally; 2. With reference to the prevailing modes. Masters, under the general superintendence of Mr. Dyce, are engaged to afford instruction in the various branches above enumerated.

**ADMISSION TO THE SCHOOL.**—Such persons as are desirous of attending, must apply at the School between twelve and three. Candidates for admission will be reported to the Council, by whom the students are admitted. Mr. Dyce, however, is vested with a discretionary power of admitting, as probationers, such applicants as may be considered by him qualified, until the decision of the Council be ascertained.

**FEES OF ADMISSION.**—To the Morning School, per month, 4s.; to the Evening, 2s. Morning students have permission to attend the Evening School free of payment. The fees of admission are payable in advance from the 1st of each

month; but students may be admitted in the course of the month on making the fractional payment.

**HOURS OF ATTENDANCE.**—The Morning School is open from ten till three every day, except on Saturday, when the School closes at two o'clock. The Evening School is open from six till nine every evening, except Saturday.

The school is supplied with a variety of examples for study, consisting of prints and drawings, casts from antique sculptures of the human figure, animals, and architectural ornaments; specimens of paper and silk hangings. Of these a great variety has recently been brought from Paris by Mr. Dyce, who at the same time made arrangements for purchasing two valuable and extensive collections of casts from the antique, which are in course of transmission to this country. These are the collection of sculpture in the Louvre, which comprises the most celebrated statues, groups, bas-reliefs, busts, and fragments of Greek and Roman Art; and that at the *Ecole des Beaux Arts*, consisting of a prodigious quantity of ornamental work of all kinds, styles, and dates, from the Egyptian to the time of Louis XV. These collections, formed at great expense by the French Government, require a considerable annual outlay to keep the moulds from which casts are taken in proper order, by renewal or otherwise. When the casts arrive, which will be so soon as a suitable place has been prepared for their reception, it is intended to have moulds made from the finest and most useful, from which other casts can be taken for supplying branch Schools of Design, and other Institutions, at the cheapest possible rate; the original collection remaining at the central School for study and exhibition. The purchase of these two collections is £600, independently of the cost of package and carriage, and the expense of making moulds from them.

Mr. Dyce is also preparing an Elementary Drawing Book, for the use of the students; the two first parts of which, with directions for the teachers, may shortly be expected. Mr. Dyce's appointment of Professor of Fine Arts to King's College, will afford him the opportunity of giving the more advanced pupils of the Somerset House School admission to a course of lectures on Ornamental Design that he is preparing to deliver to the students of King's College.

The School of Design at Somerset House opened this year with 150 pupils, of various ages, juvenile and adult, including those in the Normal School, who are candidates for six exhibitions to masterships in provincial Schools.

Preliminary to the formation of Branch Schools, the following circular, and string of queries have been addressed to the proper authorities of the following places: viz, Aberdeen, Belfast, Birmingham, Coventry, Derby, Dublin, Glasgow, Leeds, Liverpool, Macclesfield, Manchester, Newcastle, Norwich, the Potteries, Sheffield, and York.

SIR,—A Parliamentary grant has recently been made for the encouragement of Branch Schools in connexion with the School of Design already established in London, for the purpose of teaching Ornamental Design as applicable to manufactures, both to those employed as Pattern Designers and to Artisans generally, and also for the formations of collections of casts of works of Art, for the purpose of instruction in such Branch Schools: such collections to be gratuitously accessible under certain regulations to the inhabitants of towns in which they shall be placed.

The council of the School of Design with a view to obtaining the information necessary to guide them in disposing of the above-mentioned grant, request to be furnished with answers to the subjoined queries.

The council also request, that if their be any School or Institution now existing in \_\_\_\_\_, in which Design is taught with a view to its application to manufactures, you will acquaint them with the fact at your earliest convenience, as in that case they would be desirous of procuring from you some additional particulars of information in reference to such School.

By order of the Council,  
&c. &c. &c.

#### QUERIES.

1. Are you of opinion that if a School of Design were established in \_\_\_\_\_, the Artisans engaged in any, and what particular kinds of manufacture, or the persons employed in the preparation of Patterns or Designs for manufacture, or any other class of persons, would be disposed to receive instruction in such School, in Ornamental Design as applicable to manufactures?

2. Are you of opinion that such Artisans, or other persons would be disposed to send their sons to such school for such instruction?

3. Are you of opinion that the parties would be willing to make a moderate payment for such instruction?

4. Can you give any opinion as to the probable average number of persons who would avail themselves of such instruction?

5. Are there any public buildings in which such school could be established?

6. Are there any town funds already subscribed applicable to this purpose?

7. Are you of opinion that if aid were afforded for the establishment of a School of Design in \_\_\_\_\_, out of the funds provided by Parliament, upon condition of a proportionate subscription on the part of the inhabitants, such subscription could be obtained?

8. Are you of opinion that a proper building would be provided at the expense of the town funds, or by a subscription of the inhabitants, for the reception of casts of works of Art for gratuitous popular exhibition under proper regulations, if a donation were made to the town of such a collection, or if aid were given towards its formation?

Only six Schools will be established, in the first instance, at those towns which are most in want of the assistance to be afforded by the council.

Meanwhile the progress of the Spitalfields' Branch School gives earnest of the advantages that the country Artisans will soon share: the number of pupils is 110, and the average attendance is 85. The work of National Education for workmen is fairly begun, and will progress steadily; and it will be the constant endeavour of this journal to aid its advancement.

W. S. W.

#### ON VEHICLES FOR PIGMENTS.\*

From a long course of experiments which I have been induced to make through the stimulus of "J. E.'s" communications to the ART-UNION, I find that glass of borax, even when reduced to an extreme state of mechanical comminution, and then ground again and again with linseed oil, is but very sparingly soluble in the oil; consequently, unless borax is added in a degree exceeding its solubility in the oil, the quantity of water that can be blended with it will be very limited. If, however, I abandon all the trouble of calcining, vitrifying, and grinding the prepared borax, and neither mix it with the oil previous to, nor at the time of using it—but simply dissolve the ordinary borax, as it may be purchased, in clean rain water, taking care that the water be perfectly saturated with the borax (which may be always known by dissolving an ounce of it in 20 oz. of hot water)—I obtain at once, and with ease, a medium containing a constant definite quantity of borax, which will unite with linseed oil in any proportions, without the slightest trouble, and with apparent avidity.

The artist, therefore, possesses unlimited control over this medium; and a little experience, and observation, will indicate the most advantageous combinations for specific or for ordinary purposes. There is, however, a certain definite combination which *appears* perfect, and which admits of no subsequent alteration from long repose. It has the consistency of cream or liniment, and is composed of four measures of linseed oil and one measure of the solution of borax.

There is also another apparently definite combination, which will be found to exist between the limits of from four to five measures of the saturated solution of borax to four measures of oil. This will be much more fluid, and will resemble milk rather than cream. If the solution of borax be mixed with linseed oil in any other proportions than those which I have specified, the mixture, although complete at the time of its preparation, will, after some hours or days, become separated into the two definite combinations which I have described; the more fluid compound occupying the lower portion, and the more creamy, the upper portion of the vessel that may contain them; and if the proportion of the boracic solution should exceed that of the oil, then a small quantity of oil will rise to the surface above the two definite mixtures.

It may not be amiss to describe here the borax with which I have been operating. It was a portion, taken at random, from a quarter of a hundred weight of the ordinary borax of commerce, that had been procured from a wholesale and retail druggist.

Twenty-two grains were broken from a clean crystal, and carefully fused in a platina crucible that weighed 196.14 grs., over a lamp furnace. The total weight of the borax and crucible, being

\* Continued and concluded from page 5.

218.14 grs. before the fusion of the borax, became 207.6 grs. after its fusion; consequently, the loss (which was water) amounted to 10.54 grs., or 47.9 per cent. This result accords with tolerable accuracy with many of the published statements on this subject: I will quote a few, for the benefit of the sceptical. The per-centage of water in pure, crystallized, hexahedral borax is stated—

By Brande	to be	47.35 parts.
Kirwan	"	47.00 do.
Turner	"	47.09 do.
Barnes	"	47.80 do.
Gmelin	"	46.60 do.
Berzelius	"	47.10 do.
M. L. S. Thillaye	"	48.00 do.
Dumas	"	47.10 do.

This point being settled, I tried its solubility in clean rain water. To 1 oz. (avoirdupois) of borax I added 22 fluid ounces of water, at 100 deg. Fahr., and placed the vessel that contained these ingredients by the fire during two hours, and stirred the mixture repeatedly, until the whole of the borax was dissolved.

The loss of water occasioned by evaporation was ascertained by a mark scratched upon the glass vessel, and it was supplied. Two other fluid ounces of water were added as the solution cooled; making the total quantity of water 24 oz. No crystals appeared upon the interior surface of the glass until several hours had elapsed, and then only a very few minute brilliant crystals had been formed upon the bottom of the vessel. The temperature was then 42 deg. Fahr.

The solution was again gradually warmed, and the crystals were redissolved, upon its attaining the temperature 60 deg. Fahr.: the specific gravity of the solution, at 60 deg. Fahr., was 1.020. It was therefore evident that 24 fluid ounces of water were saturated by 1 oz. of borax, at the temperature 42 deg. Fahr. I would, therefore, recommend these proportions, because they are adapted to every temperature at which an artist can work. If reference be made to chemical authors upon the subject of the solubility of borax in distilled water, it will be found expedient to have recourse to experiment: thus—

	Water at 60 deg. Fahr.	Boiling Water.
Berzelius says it is soluble in	12 parts, or in 12 parts.	2 parts.
Brande	" 12 do.	" 2 do.
Ure	" 12 do.	" 2 do.
Foureroy	" 12 do.	" 6 do.
Chaptal	" 18 do.	" 6 do.
Wallerius	" 20 do.	" 6 do.
Turner	" 20 do.	" 6 do.
Reid	" 20 do.	" 6 do.

Under such conflicting assertions, the artist cannot be deceived if, after boiling 1 oz. of borax with an imperial pint of rain water, in a covered vessel, he finds that, as the liquid cools, crystals, how minute soever they may be, are deposited upon the sides or bottom of the vessel. He may then be quite sure that the water is saturated, and that it cannot dissolve more borax at the existing temperature.

Having agitated together seven measures of the saturated solution of borax with four measures of linseed oil, merely because this mixture happened to possess an agreeable consistency, I set it aside as an experimental vehicle for pigments. A drop of this vehicle, although creamy and opaque, dried upon a piece of glass, without very materially diminishing its transparency. Spirit of turpentine can be readily mixed with this vehicle, without any separation of the constituents occurring for a considerable time; finally, however, the turpentine will float in combination with a portion of the oil. If the vehicle be blended with white lead ground in oil, more oil may be added in any proportion, and spirit of turpentine also, if required.

The aqueous solution of borax alone will not unite with spirit of turpentine. If equal quantities of each be agitated together in a glass tube, the whole will present a milky appearance for a few moments; but by allowing a little more time, the water will ultimately subside to the lowest portion of the tube; a slimy, white, opaque film will float upon the water, and above this film the turpentine will rest, perfectly clear, and completely isolated. Hence the oil was the medium through which the boracic solution became blended with the turpentine in the first instance.

As the very peculiar property which a saturated solution of borax possesses of uniting so readily with oil in any proportions has never yet been noticed by chemical writers, I experimented with its

constituents, boracic acid, and soda separately, with a view to determine whether the results were to be attributed to the acid, to the alkaline base, or to the particular salt formed by their union.

One hundred parts of borax may be said to consist of

Boracic acid.....	35.80 parts.
Soda .....	16.83 parts.
Water.....	47.35 parts.

Consequently, 24 fluid ounces of water holding in solution 1 ounce (avoirdupois) of borax, will contain about 4.16 per cent. of borax, or 0.702 per cent. of soda only!

I first tried the effect of a saturated aqueous solution of boracic acid with linseed oil. They would not unite. I then prepared some caustic soda, by boiling a solution of carbonate of soda with quick lime, decanting the clear caustic liquor, evaporating in a silver crucible, redissolving in alcohol, and then distilling the spirit, and heating the residual pure soda to redness. Even in this state, soda contains 23 per cent. of water, and only 77 per cent. of pure anhydrous soda.

Ten grains of this soda were dissolved in 1000 grs. of distilled water. But as 10 grs. of this soda contained only 7.7 grs. of anhydrous soda, the 1000 grs. of water would contain just 0.770 per cent. of soda,—a quantity that differs very little from that contained in the saturated aqueous solution of borax.

Seven measures of the soda solution were added to four measures of linseed oil. This mixture differed so little in appearance, that it might have been mistaken, by any casual observer, as identical with that produced by a similar proportion of the solution of borax. It had, however, a more soapy odour, and a considerable separation of its constituent parts occurred almost immediately after agitation. This separation increased for many days. The lower liquid was of a foxy brown colour, and, after a week's repose, it amounted to 38 parts out of 59. The upper 21 parts were white and saponaceous. I tried other proportions of soda solutions with oil, but none resembled the results obtained from solutions of borax with oil. Fancying that solutions of the bi-carbonate of soda might be more analogous to those of the bi-borate of soda in their effects upon oil, than solutions of caustic soda, I tried many mixtures of solutions of the bi-carbonate with oil, but they were all di-similar in appearance, odour, and properties, to like mixtures prepared with the bi-borate of soda.

In remarking that an apparently perfect combination ensues from certain mixtures of a saturated aqueous solution of borax with linseed oil, I do not mean to recommend the use of such a mixture as a perfect vehicle for pigments; for, strange to say, although it can be freely mixed with as much more oil, or as much more water, as may be added to it, it cannot be very readily blended with colours ground in oil, or with dry colours. Its peculiarities in this respect can be best noticed by experiment.

It is the use of a saturated aqueous solution of borax that I recommend, and the mode of using it is simply this: mix the pigment (whether ground in oil or otherwise) with as much oil as may be considered necessary, and then add the aqueous solution of borax "ad libitum;" the union will be instantaneous, and complete. The quantity of borax that can be thus used, will not be sufficient to act specifically as "a drier."

Glass of borax does act as a drier, and so does the borate of lead (which is the precipitate described at p. 132 of the ART-UNION, resulting from the mixed solution of borax, and of acetate of lead, and recommended by P. Rainier, Esq., for imparting extraordinary hardness to paint).

Considering that oil dried solely by absorbing oxygen from every available source, I attempted to render it drying by the direct application of oxygen gas. Through a column of linseed oil 3 inches high, and 1½ inch in diameter, I passed a continuous stream of oxygen gas (prepared from the chlorate of potassa) during 15 minutes; and having then closed the tube which contained the oil, and which, at this time, contained about 3 cubic inches of oxygen gas above the surface of the oil, I agitated the oil for some minutes with the gas, and then left it to settle. This oil possessed no greater tendency to dry than it had previous to the experiment. It appears, therefore, that linseed oil possesses some constituent prin-

ciple that must either be wholly abandoned, or united chemically with some metallic oxide, before it can become dry.

I tried the effect of hydrogen gas in a similar manner: it did not facilitate the drying of the oil in the slightest degree. Chlorine gas was also tried, both dry and combined with aqueous vapour. In the latter form it had an extraordinary chemical effect upon the oil, which is still the subject of experiment.

Amongst other matters, a compound "silicated medium" has been lately advertised as an important discovery, and recommended to artists as productive of effects similar to those that have been observed in the works of Van Eyck. It has also been stated, in reference to its peculiar properties, that this medium, when "rubbed up" with Naples yellow upon a slab, by means of a steel palette knife, does not in any way affect the colour of the Naples yellow; whereas all the other media that have been noticed in the ART-UNION, when similarly treated, do affect this particular colour. Having procured a bottle of the "silicated medium" in its fluid form, and a packet of it in its pulverulent form, and also some Naples yellow, both in bladder and in powder, from Messrs. Ackermann and Co., I proceeded to experiment with them. I found that Naples yellow might be mixed either with oil alone, or with the "fluid vitrified silicated medium," or with an aqueous solution of borax, and left in contact with a bright steel surface until the mixture had become dry, without the slightest change being apparent either in the colour of the mixture or on the surface of the steel. Hence it was obvious that the action, that had been observed when Naples yellow was mixed with various media by means of a steel spatula, was not of a chemical nature. I then found that Naples yellow could be mixed with any of the fluids mentioned, and rubbed with a steel palette knife upon a porcelain slab, and that it might be made to appear discoloured, or otherwise, at pleasure. I repeated similar experiments with oil mixed with pure alumina (prepared by precipitation from a solution of alum in distilled water, by means of ammonia), and with finely pulverized crystals of quartz, and with ground glass of borax, and with pure silica (prepared by passing fluosilicic acid gas through water), and with Lieut. Hardy's "vitrified silica medium;" in every instance I could at pleasure discolour the Naples yellow, or leave it, well mixed, without discolouration.

The discolouration invariably proceeds from abrasion of the palette knife; and it so happens that the abraded particles of steel (which are in no respect different from those which may be seen when a penknife or a razor is set upon a clean hone, only much less in quantity) become much more apparent when blended with Naples yellow than when mixed with any of the other pigments. Pure precipitated alumina, when calcined, is a still more delicate test of the effects of abrasion from iron or steel. As a general rule, the more silicious the pigment, or the more abrasive the texture of the slab, the greater will be the contaminating effect from the steel palette knife with equal friction. It is evident, therefore, that all colours must of necessity be partially commixed with iron when they are rubbed between steel and an abrasive surface. Many of them, however, may not indicate any visible difference from such attrition,—some may even be improved by it,—while others, such as Naples yellow, may be very perceptibly deteriorated.

And now with regard to *stiles*,—it has no chemical action whatsoever, either upon oil or upon any pigment in use, when it is employed as it has been recommended. It may therefore be introduced or omitted in any medium, agreeably to the fancy of the artist. If it should be esteemed by any, it may be procured in the finest state of subdivision, from Messrs. Johnson and Co., 79, Hatton-garden, at about 3s. per ounce.

It affects the transparency of oil to an extent quite equal to a similarly proportioned mixture of pure alumina (uncalcined), as may be observed by allowing a mixture of each substance with linseed oil to dry upon a clean slip of glass.

If borax should be preferred, it may be obtained, retail, at about 1s. 4d. per lb. One ounce will cost 1d., and will produce from 20 to 24 oz. of a useful medium, which may probably supersede spirit of turpentine, if an efficient drier be

employed. The rationale of the drying of oil requires further research, and numerous patient experimental investigations.

If what I have here detailed, and which has occupied considerable time, should prove interesting to your readers, it will encourage me to labour again in the same field.—Yours, &c.

CHARLES THORNTON COATHUP.

Wraxhall, near Bristol.

## OILS OR FRESCOES?

SIR,—From the conflicting opinions of artists upon the respective merits of oil and fresco painting, one producing examples of oil pictures having failed, and another instances of a similar fate to fresco, many may be led to think that both are equally good; and, if so, that both might be employed together in the decoration of a large building. This is a point worthy of consideration, as in that case (if employing the genius of the country be an object) our water-colour painters, who would be good artists in fresco, might be included in the engagement, and would doubtless add fresh laurels to their already high reputation. Artists, however, are agreed upon one point,—that to paint an oil picture where one would do a fresco, would be the height of imprudence, except upon a ceiling. The duration of an oil picture is doubtful; the only approach to security would be upon a false wall, or stoothing; but this being made of light work or panels, is liable to catch fire, whereas fresco, which may be done literally upon the stones, offers no such objection, a matter of some consideration in these days, when expensive buildings are raised which may be destroyed in a few hours: many objections would be removed from oils if they were so painted; but then comes painting in oil upon a wall, on which I promised you some remarks.

Vasari tells us, that he painted the palace of the Duke Cosmo de Medici in this manner, and says, that the experience of many years has proved to him its eligibility, and therefore he has always followed it; but his number of years do not appear to be enough, for I cannot hear that they exist, though it is very possible they were not sufficiently valued to entitle them to proper care. His directions certainly appear good, and are as follows. First upon a common plastered wall: "Go over it," he says, "three or four times with boiled oil, allowing it each time to dry, and until it has had as much as it will absorb." This, of course, is simply a precaution against damp. "When quite hard, the ordinary priming of a canvas is to be laid over it, when the picture may be proceeded with." Another way—which is the way he began his pictures in the duke's palace—is this: "Make a stucco of marble and pounded brick; this being laid upon the wall and afterwards scraped smooth, a mixture is then compounded of linseed oil, resin, and mastic; this is laid on the wall with a brush, it is afterwards gone over with a hot trowel or flat iron, when the cracks and pores of the plaster will be completely filled with a strong defence against moisture; on this prepared wall the usual priming must be laid for the picture." The objection to these modes are, that from the quantity of oil used in the ground the pictures will gradually become dark and heavy looking, like the works of Charles de la Fosse and Jacques Rousseau in the British Museum; the former having done the walls and ceiling of the saloon, and the latter the staircase; and very gloomy they always appear, and certainly give no reason for employing foreign artists in preference to our own.

Besides these two ways of painting in oil on a wall, there are two other mediums—distemper and encaustic painting: the former, oddly called distemper from the Italian word *tempera*, has advantages and beauties peculiar to itself. Everybody has seen and admired the beautiful pictures and scenery in the metropolitan theatres, by Stanfield, Roberts, the Messrs. Greive, Farshaw, and Tomkins: these are called distemper, the colours being mixed with size; but the term is incorrect: the true distemper is the mode of *tempering an egg* till it forms a medium fit for painting with, and was the mode commonly used before the invention of oil. It is very little inferior to oil, and offers great advantages for painting on a wall, as being porous, damp passes easily through it; whereas oil, which is not so, is, by the constant assaults of moisture, forced off the wall in scales. I am surprised that distemper is not practised

more generally; though, I dare say, water-colour painters are aware of its value. The picture of 'Pan Teaching Apollo to Play on the Pipes,' in the National Gallery, is in distemper, afterwards oiled over. The mode of tempering the egg, according to Vasari, is as follows:—Take an egg, beat it up with the tender branch of a fig-tree, and use the milk it forms with your colours, blue only excepted, for the yellow of the egg would turn it green: this colour must be mixed with size instead. I believe a little vinegar will produce the same effect as the branch of the fig-tree, the acid being the tempering property.

Encaustic painting, the other way of painting on a wall, has, I fear, little to recommend it, the wax used being liable to changes of temperature. It is the invention of Count Caylus, and is supposed to be (from a passage in the works of Pliny) the way of painting used by the ancient Greeks. The cloth or panel is well rubbed, first of all, with wax, either virgin wax or bees'—the cloth may be rubbed at the back: a ground is then laid over the wax, of Spanish white, and on this the picture is painted in water-colours. When dry, it is held near the fire very carefully, when the wax will melt and absorb the colours, fixing them indelibly; a wall is fixed by holding an instrument near it, like a warming-pan, filled with lighted charcoal.

Müntz, who wrote a book about it, is very enthusiastic in its praise; the book may be perused, I dare say, on application to the librarian of the Royal Society of Literature, where I saw it. The plan is very practicable; any artist can satisfy himself by a few experiments.

Fresco, however, offers the greatest advantages for painting on a wall; its effect would be airy and delicate. Oil pictures are certainly richer and more beautiful, but if painted on the walls of a building, their richness and splendour would soon perish. I cannot help thinking the new Houses of Parliament would look strange filled with framed pictures; it would have the appearance of a private house or picture gallery.

Mr. J. P. Davis, in his very excellent letter, writes of fresco as "The crude and husky medium"—this, for a painter, is handling fresco a little roughly; he forgets that, such as it is, it has produced some of the finest pictures and designs in the world: and one of his arguments against it, that of climate, I disagree from altogether. What does Sir Joshua Reynolds say? "Raffaello, who stands in general foremost of the first painters, owes his reputation, as I have observed, to his excellence in the higher parts of the art. His works in fresco, therefore, ought to be the first object of our study and attention. His easel works stand in a lower degree of estimation; for though he continually, to the day of his death, embellished his performances more and more with the addition of those lower ornaments, which entirely make the merit of some painters, yet he never arrived at such perfection as to make him an object of imitation. \* \* \*

When he painted in oil his hand seemed to be so cramped and confined, that he not only lost that facility and spirit, but I think even that correctness of form which is so perfect and admirable in his fresco works." He says also of Michael Angelo—"From those who have ambition to tread in this great in this great walk of Art, Michael Angelo claims the next attention. He did not possess so many excellences as Raffaello, but those which he had were of the highest kind. He considered the art as consisting of little more than what may be attained by sculpture—correctness of form and energy of character. He never attempted those lesser elegances and graces in the art. Vasari says he never painted but one picture in oil, and resolved never to paint another, saying, it was an employment fit only for women and children."

Mr. J. P. Davis also attacks their durability; he says Vasari, in declaring them durable, "only repeats an error of his age." This is a strange expression. Vasari, when he wrote the life of Cimabue, speaks of his frescoes painted more than three hundred years before. He could surely judge for himself; and must have seen many frescoes by the old masters. The invention of oil painting, if it is dated at 1410, only gives us, in this argument, one hundred years in favour of oil up to the present day. It is furthermore a well-known fact, that many oil pictures have perished before they were fifty years old.

Here is another example. There are frescoes in admirable condition by Andrea del Sarto, who died in 1530. There are oil pictures even by Rubens, whom Mr. J. P. Davis, brings forward in favour of oil, painted one hundred years after these frescoes, that have long ago perished; for instance, his most celebrated work, 'The Descent from the Cross,' which Sir Joshua Reynolds says was falling from the canvas. Vide his "Journey in Flanders and Holland," which he made sixty years ago. Rubens died in 1641, which, at the outside, leaves one hundred years for the duration of his greatest work. This picture, it must be remembered, is in a church, perhaps on the wall, which is the reason of its decay. Andrea del Sarto's frescoes are, therefore, more than three hundred years old; and we may, I dare say, give them another hundred years, the limits, perhaps, for the existence of most pictures. If the Houses of Parliament are to be embellished, the noble names composing the committee ought to be a sufficient guarantee for the works being done in the most advantageous way; and artists will surely be satisfied with their decision, as the parties are some of their greatest patrons.—Yours, &c.

WELD TAYLOR.

Since writing the above I have carefully examined the paintings on the walls of Montagu House; they are excellent examples for experience. The walls of the staircase and ceiling of the entrance hall have almost perished from the peeling away of the colours, but the ceiling of the saloon is in tolerable preservation; had they been done in fresco, I can confidently say they would have been in good repair. Artists should examine them before the building is pulled down.

#### WILL OF SIR FRANCIS CHANTREY.

[As this document has given rise to various surmises, and also, by the way, to a very unnecessary and useless newspaper controversy, we think it desirable to print it entire; notwithstanding that, by so doing, we must omit several matters that we can ill spare. The will of the late estimable gentleman and accomplished artist, cannot fail to have a prodigious influence upon the future state and character of the Arts in this country. His bequest will form a nucleus for future gatherings; and probably be the means of giving to the Royal Academy immense power to advance the interests of the profession over which they preside. Upon this topic we shall have much to say hereafter.]

I, Sir Francis Chantrey, of Lower Belgrave Place, Knight, Sculptor, Member of the Royal Academy of Arts in London, and D.C.L. in the University of Oxford, hereby revoke all wills, codicils, and other testamentary dispositions heretofore made by me, and declare this to be my last will and testament: first, I direct that my body be interred in my vault in the churchyard of Norton, in the county of Derby. I give and bequeath unto each of my executors, hereinafter named, who shall act in the execution of this my will (except my wife, who is an executrix), the sum of £2000 sterling, free from legacy duty. And I give and bequeath all my household furniture, books, pictures, drawings, plate, linen, glass, wines, and other liquors, and my carriages and horses, models, and casts, not by this my will, or by any codicil or codicils thereto given or bequeathed to any other person or persons, or directed to be otherwise disposed of, unto my dear wife, Dame Mary Ann Chantrey, her executors, administrators, and assigns. And I hereby empower Charles Stokes, &c., Esq., George Jones, &c., Esq., and Charles Hampden Turner, Esq., three of my executors hereinafter appointed, or the survivors or survivor of them, or the executors or administrators of such survivor, to destroy such of my drawings, models, and casts, as they or he may in their or his uncontrolled judgment consider not worthy of being preserved. And my will is, and I direct that such of the works of Art upon which I may be engaged at the time of my decease, as shall be judged by my executors to be in a sufficient state of progress, shall be carried on and completed under their direction, provided that the parties to whom such works belong agree to such arrangement; and that my executors shall set apart and appropriate such sum and sums of money as shall be requisite for discharging all the expenses attending the carrying on and completing of the same works; and in case my friend and assistant, Allan Cunningham, shall be acting as my assistant at the time of my decease, it is my wish that my executors should engage his services to assist in the completion of the said works, and generally in the adjustment of my professional affairs, at such stipend or other usual remuneration as he may be in receipt of from me at the time of my decease; and upon the completion of the said works and the winding up of my professional affairs, in case the said A. Cunningham shall superintend the same to the satisfaction in all respects of my executors, and shall be living at the

above period of completion, I give and bequeath unto the said A. Cunningham the sum of £2000 sterling, free from legacy duty, but without any interest in the meantime; and I hereby authorize and empower my executors to employ any other competent person or persons in the stead of the said A. Cunningham for the purposes aforesaid, in case he shall not, for any reason, continue to act and assist in my professional affairs as aforesaid, and also to employ all necessary workmen at weekly or other salaries; and for the better carrying on and completing the said works, I direct that such works shall be carried on and completed in the studios, workshops, foundry, buildings, and premises which may be used by me for the purposes of my profession at the time of my decease. And it is my wish that Mr. Henry Weekes should also be employed by my executors, under the superintendence of the said A. Cunningham, in completing any models or other works at his usual stipend or remuneration. And I direct that he shall continue to occupy his present residence, being my house, No. 26, Lower Belgrave Place, for the term of one year after my decease, or longer at the discretion of my executors (in case it shall then happen to be his residence), without payment of rent or other consideration. And upon his services being no longer required by my executors, I give and bequeath unto the said H. Weekes the sum of £1000 sterling, free from legacy duty, but without any interest in the meantime; but in case of his death, before my executors have discontinued his services, instead of the said legacy of £1000, I give to the executors or administrators of the said H. Weekes the sum of £500 free from legacy duty, but without any interest in the mean time. And I give, devise, and bequeath, all my freehold and copyhold hereditaments, situate, lying, and being at Norton aforesaid, and all other my freehold and copyhold hereditaments whatsoever and wheresoever unto and to the use of my said wife, M. A. Chantrey, her heirs and assigns for ever. And as to all those, my leasehold messuages or tenements and hereditaments, situate in Lower Belgrave-place and Eccleston-street and Eccleston-place respectively, in the county of Middlesex (but subject to the provision aforesaid), and all other my leasehold hereditaments, and premises whatsoever and wheresoever, and all railway, canal, and road bonds, and all canal, navigation, and railway shares, and all shares that may, in any way, partake of the character of real estate, or be charged in any way or to any extent on real estate in any public companies, and also as to all monies which at my decease may be due and owing to me on mortgages or other real securities, and all the rest and residue of my present and future real and mixed estate of what nature or kind soever, I do hereby primarily subject and charge the same to and with the payment and satisfaction thereof of all my just debts, funeral and testamentary expenses, and the several pecuniary legacies bequeathed in and by this my will, or by any codicil or codicils thereto, and of the legacy duty payable in respect of such legacies, and of all such sum and sums of money as shall be requisite for discharging the expenses of carrying on and completing any of my unfinished works of art as hereinbefore provided, it being my will and intention that all my other personal estate shall be wholly exonerated from the aforesaid payments or any of them; and subject and charged as aforesaid, I give and bequeath all and singular the same leasehold hereditaments and premises, and real securities, and the interest and dividends due thereon, and the residue of my real estate and other the premises lastly hereinbefore devised and bequeathed, unto and to the use of my said wife, M. A. Chantrey, her heirs, executors, administrators, and assigns, absolutely to and for her and their own use and benefit. And I give and bequeath all my stocks, shares, and interest in the public funds and government securities, whether British or foreign, and all sums of money which may be due or owing to me upon bonds or other personal securities, or upon simple contract, and all and singular other my pure personal estate and effects whatsoever, and of what nature or kind soever (not specifically given or bequeathed in and by this my will, or by any codicil or codicils thereto), unto the said C. Stokes, G. Jones, and C. H. Turner, their executors, administrators, and assigns, upon the trusts and for the intents and purposes hereinafter declared and expressed of and concerning the same, that is to say, upon trust that they, the said trustees [here follow the customary powers of sale, transfer, &c., and for reinvestment of proceeds in government securities]. And my will is, and I do hereby direct, that the trustees or trustee for the time being of this my will, shall stand possessed of and interested in such last-mentioned stocks, funds, and securities, &c., upon trust, during the widowhood of my said wife, to pay and apply the interest, dividends, and annual produce thereof, by equal half-yearly payments (the first of such payments to be made at the expiration of six calendar months from the day of my decease), unto her, my said wife, for her own use and benefit; but in case she shall marry again, then from and after such second marriage, and during the then residue of her life, by and out of the same annual interest, dividends, and produce, to pay one clear annuity or annual sum of £1000 unto such person or persons, and for such intents and purposes as my said wife, notwithstanding such future coverture, shall direct or appoint. [Here follow the customary clauses for protection in case the wife should marry again.] And from and after the decease, or second marriage of my

said wife, which shall first happen, then upon trust to pay out of the said interest, dividends, and annual produce, one annuity or clear yearly sum of £300 to the said C. Stokes, and one annuity or clear yearly sum of £200 to the said G. Jones, during their respective natural lives, for their own respective absolute use and benefit, the same annuities to be free from legacy duty, &c. And upon further trust, that after the decease or second marriage of my said wife (whichever shall first happen, the trustees or trustee for the time being of this my will, do and shall so long as my tomb in the churchyard of the said parish of Norton, constructed by me and completed according to such instructions as I may leave for that purpose shall LAST, and expressly with the view of having my said tomb preserved from destruction, on the first day of December in each and every year, pay out of the said interest, dividends, and annual produce of my said residuary pure personal estate to the vicar or clergyman of the parish church of Norton aforesaid, who shall reside in the said parish of Norton, one annuity or clear yearly sum of £200 free from legacy duty, upon trust, nevertheless, that such vicar or clergyman do and shall so long as my said TOMB SHALL LAST, on the 21st day of December in each and every year, pay the sum of £50, part of the said last-mentioned annuity or clear yearly sum of £200, to the schoolmaster of Norton school, residing in the said parish of Norton, who, being a member of the Established Church of England, do and shall, so long as my said tomb shall last, himself personally instruct ten poor boys of the said parish of Norton, chosen and selected by such vicar or clergyman, in reading, writing, arithmetic, and other branches of general education, free from any expense to the parents of such poor boys; and upon this further trust that such vicar or clergyman do and shall, so long as my said TOMB SHALL LAST, on the said 21st day of December, in each and every year, pay out of the said annuity or clear yearly sum of £200 last mentioned, the sum of £10 each, to five poor men, and five other poor persons, being either widows or single women, all such persons being parishioners of the said parish of Norton, who, in the judgment of such vicar or clergyman shall be most deserving. And it is my will, that such vicar or clergyman, as some compensation for his care, trouble, and attention in and to the matters aforesaid, shall retain the residue of the said annuity or clear yearly sum of £200 last mentioned for his own use. And I declare that the receipt or receipts in writing, signed by such vicar or clergyman, shall at all times be a sufficient discharge and sufficient discharges to the said trustees or trustee for the time being of this my will, for such payments of the said last-mentioned annuity or clear yearly sum of £200 as shall in any such receipt or receipts be expressed to have been received, to be applied for the purposes and in manner aforesaid. And it is my desire and intention, that after the death or second marriage of my said wife, whichever shall first happen, subject to the said annuities, or such of them as shall for the time being be payable, the clear income of my aforesaid residuary pure personal estate shall be devoted to the encouragement of "BRITISH FINE ART IN PAINTING AND SCULPTURE ONLY," under and subject to such rules and regulations as I shall in and by this my will, or by any codicil or codicils thereto, make and appoint for that purpose; and in default of such rules and regulations, and subject thereto, in case the same shall be incomplete and insufficient, my will is, and I do hereby direct that from and after the decease or second marriage of my said wife, whichever shall first happen, the said trustees or trustee for the time being of this my will do and shall apply and dispose of the clear interest, dividends, and annual produce of my said residuary pure personal estate, after answering and satisfying thereout the said annuities, or such of them as shall from time to time be payable, in the manner hereinafter mentioned (that is to say), upon trust, that the trustees or trustee for the time being of this my will, do and shall pay over the same yearly and every year by one or more payment or payments, as they or he shall think proper, to the President and Treasurer for the time being of the Association of Eminent Artists, now known as and constituting the ROYAL ACADEMY OF ARTS IN LONDON, or to the President and Treasurer of any other society or association which, in the event of the title "ROYAL" being withdrawn by the Crown, or of the Royal Academy being dissolved, or its denomination altered, may be formed by the persons who may be the last members of the Royal Academy of Arts in London, whatever may be the denomination assumed by such last members. And I declare, that the receipt and receipts in writing of the President and Treasurer, for the time being, of the Royal Academy, or of such other society or association as aforesaid, shall be a sufficient discharge and discharges to the trustees or trustee for the time being of this my will, for the monies so from time to time paid over as aforesaid, and shall entirely exonerate such trustees or trustee from all responsibility as to the future application and disposition of the same monies. And my will is, and I do hereby direct, that from and out of the monies so paid over, one annuity or clear yearly sum of £300 shall be retained by such President for the time being, to and for his own absolute use and benefit; and that an annuity or yearly sum of £50 shall be paid thereout to the Secretary, for the time being, of the said Academy, Society, or Association, for his own absolute use and benefit, *on condition that such Secretary shall*

\* Passage in italics interlined in original

*attend the meetings of my trustees, and keep in a book, to be preserved by them, a regular account of all the proceedings:* such two last mentioned annual sums to be payable on the first day of January in every year, and the first payment to be made on the first day of January in the year succeeding that in which my said wife shall die or marry, as the case may be; and neither of such annual sums to be apportionable for a broken part of a year; and the clear residue of the same monies shall be laid out by the said President and other members composing such Council, for the time being, of the Royal Academy, or of such other society or association as aforesaid, when and as they shall think it expedient in the purchase of WORKS OF FINE ART OF THE HIGHEST MERIT IN PAINTING AND SCULPTURE that can be obtained, either already executed, or which may hereafter be executed by artists of any nation, provided such artists shall have actually resided in Great Britain during the executing and completing of such works, it being my express direction that no work of Art, whether executed by a deceased or living artist, shall be purchased unless the same shall have been entirely executed within the SHORES OF GREAT BRITAIN. And my will further is, that in making such purchases, preference shall, on all occasions, be given to works of the highest merit that can be obtained, and that the prices to be paid for the same shall be liberal, and shall be wholly in the discretion of the President and Council of the Royal Academy, or of such other society or association as aforesaid. And my will further is, that such President and Council, in making their decision, shall have regard solely to the intrinsic merit of the works in question, and not permit any feeling of sympathy for an artist or his family, by reason of his or their circumstances or otherwise, to influence them. And I do hereby further direct, that such President and Council shall not be in any manner obliged to lay out and expend in every or any one year, either the whole or any part of the monies so paid over to them for the purpose aforesaid, or any accumulations that may arise therefrom, but that the same respectively may from time to time be reserved and accumulated for a period not exceeding five successive years, if such President and Council shall see occasion. And I do expressly declare my will and mind to be, that no commissions or orders for the execution of works to be afterwards purchased as aforesaid, shall at any time be given by such President and Council to any artist or artists whomsoever. And I further declare my will to be, that the President and Council of the Royal Academy, or of such other society or association as aforesaid, do and shall, within the succeeding year next after any work shall have been purchased by them as aforesaid, cause the same to be publicly exhibited for the period of one calendar month at the least in the annual exhibition of the Royal Academy, or in some important public exhibition of Fine Arts, the same to be selected by such President and Council, subject to such regulations as they shall think fit and proper. And I direct that the said works shall be selected by the decision of a majority of the members of the Council for the time being of the Royal Academy, or of such other society or association as aforesaid, the President thereof having in such selection one vote as a member of the Council and a casting vote as President thereof. And I do hereby expressly direct, that after every purchase shall have been made by such Council, the names of those members of the Council who shall have sanctioned or opposed such purchase shall be entered in some book to be kept for that purpose, which book shall at all times remain open for the inspection and reference of all the members of the Royal Academy, or of such other society or association as aforesaid, and of the trustees or trustee for the time being of this my will. And it is my wish and intention, that the works of Art so purchased as aforesaid, shall be collected for the purpose of forming and establishing a PUBLIC NATIONAL COLLECTION OF BRITISH FINE ART IN PAINTING AND SCULPTURE executed within the shores of Great Britain, in the confident expectation that, whenever the collection shall become or be considered of sufficient importance, the government or the country will provide a suitable and proper building or accommodation for their preservation and exhibition as the property of the nation, free of all charges whatever on my estate. And it is my wish that my trustees or trustee, for the time being, and the President and Council of the Royal Academy, or of such other society or association as aforesaid, shall use their best endeavours to carry my object into proper effect. But I expressly direct, that no part of my residuary pure personal estate, or of the annual income thereof, shall be appropriated in acquiring any depositary or receptacle whatever, for the aforesaid works of Art, otherwise than in providing a place of temporary deposit and security whenever needful, and in defraying those expenses which shall be absolutely required for the necessary preservation of the said works of Art so long as they shall remain in such place of temporary deposit. And in case the Royal Academy and such other society or association as aforesaid, if any, shall be dissolved or cease to act for the purposes aforesaid, I do hereby direct, that the trustees or trustee for the time being of this my will, shall endeavour to obtain the authority and sanction of Parliament to some proper scheme for the future application of the annual income of my residuary pure personal estate, such scheme being in strict accordance with my intention hereinbefore expressed, viz., that such income shall be for ever devoted towards the en-

couragement of Fine Art in Painting and Sculpture executed within the shores of Great Britain. And it is my earnest request, that my said wife do, with all convenient speed after my decease, apply for and endeavour to obtain an Act of Parliament settling, or authorizing her to settle, the said freehold and copyhold hereditaments, and other real and mixed estate to which she may become entitled under this my will, or so much thereof as shall remain after defraying the expenses of applying for and obtaining such Act of Parliament and making such settlement, upon the same trusts as are hereinbefore declared concerning my residuary pure personal estate, but not so as to double or otherwise increase all or any of the annual or other sums hereinbefore made payable thereout, but so nevertheless that my said wife may have a life interest therein, or in such part thereof as she may desire. Nevertheless, I declare, that no forfeiture shall be occasioned by want of such Act of Parliament, but that in case the same should not be obtained, the same freehold and copyhold hereditaments, and other real and mixed estate, shall go and be held and enjoyed under this my will, in the same way as if no such request had been contained in relation thereto. And I do hereby nominate and appoint my said wife, M. A. Chantrey, and the said C. Stokes, G. Jones, and C. H. Turner, executrix and executors of this my will. But I hereby declare, that if either of my said executors shall be indebted to me at the time of my decease, such debt or debts shall not be extinguished by reason of his being so appointed an executor. [Here follow clauses to authorize the trustees to act in cases where he himself held property in trust, and in case of death, &c., to appoint new trustees, &c.] And it is my earnest wish, that such appointment be made within three calendar months next after the happening of any such vacancy as aforesaid, and that the number of three trustees may be kept up during the lifetime and widowhood of my said wife, and that after her decease the trustees be increased to five, by adding to the number of three the President and Treasurer for the time being of the Royal Academy, or of such other society or association as aforesaid, so that the number of five trustees, always including such President and Treasurer, shall thenceforth be kept up, &c. [Clauses for investing new trustees with full power.] And I direct that every trustee who shall be appointed under the power hereinbefore contained (excepting the President and Secretary of the Royal Academy, or of such other society or association as aforesaid) shall upon his appointment receive one clear sum of £100 sterling, to be retained out of the income of my residuary pure personal estate for the current year in which any such appointment shall take place, the same sum to be some remuneration for the trouble imposed upon such new appointed trustee. [Here follow the customary clauses for the legal discharge, reimbursement, and security of the trustees.] In witness whereof I, the said Sir Francis Chantrey, the testator, have to this my last will and testament, &c., set my hand, this thirty-first day of December in the year of our Lord one thousand eight hundred and forty.—F. Chantrey.—Signed, published, &c.—Witnesses, John Walter, 4, Symond's Inn, Attorney-at-law, Rose Mary Walter, 47, Ebury Street Piccadilly, Spinster.

This is a codicil to the last will and testament of me, Sir Francis Chantrey, of &c.—Whereas, in and by my said will, I have directed that in case my friend and assistant, Allan Cunningham, shall be acting as my assistant at the time of my decease, it is my wish that my executors should engage his services to assist in the completion of the works therein referred to, and generally in the adjustment of my professional affairs, at such stipend or other usual remuneration as he may be in receipt of from me at the time of my decease; and upon the completion of the said works, and the winding up of my professional affairs, in case the said A. Cunningham shall superintend the same to the satisfaction, in all respects, of my executors, and shall be living at the above period of completion, I have given and bequeathed unto the said A. Cunningham the sum of £2000 sterling, free from legacy duty, but without any interest in the meantime. Now I do hereby, in addition to the said sum of £2000 so given to him, give and bequeath to him, the said A. Cunningham, one annuity or clear yearly sum of £100, for and during the term of his natural life, payable quarterly out of the rents or interest and dividends of the leasehold and other property hereinafter mentioned, given and bequeathed by my said will to my wife, M. A. Chantrey. And after the decease of the said A. Cunningham, I give and bequeath a like annuity or clear yearly sum of £100 to Jean Cunningham, the now wife of the said A. Cunningham, for and during the term of her natural life, payable quarterly out of the rents or interest and dividends of the leasehold and other property hereinafter mentioned, given and bequeathed by my said will to my said wife. And whereas, as to all those leasehold messuages or tenements and hereditaments situate in Lower Belgrave-place and Eccleston-street, &c. &c., and all the rest and residue of my present and future real and mixed estate, of what nature and kind soever, I have primarily subjected and charged the same to and with the payment and satisfaction thereof of all my just debts, &c., in addition to the aforesaid charges thereon, I further charge all and singular the same leasehold hereditaments and premises and real securities, and the principal and interest due thereon, and the residue of my real estate, and other the premises lastly hereinbefore

mentioned, with the payment of the said several annuities hereby given and bequeathed to the said A. Cunningham and Jean Cunningham his wife, it being my will and intention that all my other personal estate shall be wholly exonerated from the aforesaid payments, or any of them; and, subject and charged as aforesaid, I give and bequeath all and singular the same leasehold hereditaments and premises and real securities, and the principal and interest due thereon, and the residue of my real estate, and other the premises lastly hereinbefore mentioned, unto and to the use of my said wife, M. A. Chantrey, her heirs, executors, administrators, and assigns absolutely, to and for her and their own use and benefit. And in all other respects I ratify and confirm my said will. In witness whereof, I, the said Sir Francis Chantrey, have to this codicil to my said will set my hand this third day of November, in the year of our Lord one thousand eight hundred and forty-one.—F. Chantrey.—Signed, published, &c.—Witnesses, John Walter, Attorney-at-Law, 4, Symond's Inn; Rose Mary Walter, 47, Ebury-street, Pimlico.

Proved at London, with a codicil, 15th of December, 1841, before the worshipful Robert Joseph Phillimore, Doctor of Laws and Surrogate, by the oaths of Dame M. A. Chantrey, widow, the relict, C. Stokes, Esq., G. Jones, Esq., and C. H. Turner, Esq., the executors, to whom administration was granted, having been first sworn duly to administer.

#### THE ARTS IN CONTINENTAL STATES.

**ITALY.—BOLOGNA.—Necrology.**—We announced in the last number the appointment of Mr. Cockerill in the room of M. Antolini as a member of the Institute of France. We now give the following notice of the well known and accomplished architect the Cavalier Gio Antonio Antolini, which we had not earlier an opportunity of mentioning. He was born in 1754, of a respectable family at Castel Bolognese: he studied at Bologna, and there took a degree as an architect and engineer. He was called to Rome for the works on the Pontine Marshes, and at Rome he studied deeply the remains of antiquity, and published "Illustrations of the Temple of Hercules at Cori." He then went to Milan, where he designed the plan of the Forum Bonaparte. He was afterwards named to two chairs, those of Architecture in the Academy, and of Geognosy in the University of Bologna; and he was subsequently elected a member of many learned bodies, including the Institute of France. He held many honourable public appointments, and executed many works for the Italian government as well as for individuals; he was also employed in foreign labours, latterly for the Viceroy of Egypt. He has left, it is said, in his son Philip Antolini, the heir of his talents as well as of his name.

He has published the following works, besides the above mentioned:—"The Ruins of Velleja in the Piacentino;" "The Temple of Minerva in Assisi," confronted with the plates of Andrea Palladio; "Elementary Ideas of Civil Architecture;" "Notes to the Treatise of Architecture by Milizia."

**The Exhibition at Bologna.**—On the 26th of December the distribution of premiums to the students of the Fine Arts, took place with the usual forms. The opening discourse was read by the Professor of Architecture, Signor Serra, who gave a brief eulogium on the merits of those academicians who have died during the past year, viz., Proff. Santini, architect; Giungi, sculptor; Tambroni, landscape painter; Rosaspina, engraver. The learned Dr. Ventarini read an eloquent oration on the true mission of the Fine Arts for the civilization of society.

The Exhibition, which was opened the same day, contains many and remarkable works; we can only note a few of the principal in each style.

**Historical Painting.**—*Schiavoni (Proff. Natale).*—This celebrated artist, in all his works, gives proof that he was born in the country of Titian and Paul Veronese. His 'Sleeping Flora,' size of life, is a superb picture for the transparency and variety and truth of its colouring, the elegance of its forms, and purity of its style.

*Schiavoni (Felice)* shows that he follows his father's steps in his beautiful 'Love, as a Gardener.'

*Bertini (G. b. au.)*—'The Constable of Chester,' from Sir W. Scott, is well imagined and well designed, but wants harmony.

**Portraits.**—*Rasori (B.A.)*—A portrait of the celebrated historian Repetti—a work worthy of Vandyke.

*Hayter (G.) B.A.* Painter of H. M. Queen

*Victoria.*—Portrait, size of life, half-length, of his old friend, the lamented Proff. Rosaspina. This picture is managed with the boldness of a master, and with a fine contra-position of light and reflection; the whole effect is great and true.

*Giragius (Simeon de Rezan).*—This Russian painter, who has been for some time a resident in Bologna for the purpose of making copies of the famous works of Guido, Cavedoni, Tiarini, in short of all the most excellent of the old Bolognese masters, exhibits the portrait of an old 'Greek Priest,' remarkable for its relief, characteristic expression, and harmony.

**Landscapes.**—*Campedelli (C.) B.A.*, exhibits four landscapes, where we find the happy mixture of Claude Lorraine and Paul Potter. The 'Sasso Hill' and 'Fountain of Love' are looked on as incomparable.

*Barbieri (G.)*—Among the multitude of clever landscape painters who exhibit so many pictures, we distinguish, by this artist, 'A Scene on a Swiss Lake,' which reminds us of the style of Poussin.

*Morghen (A.)*, the son of the great engraver, exhibits many fine pictures. His 'Land Storm' is too true, it is fearful in its terrible beauty. This is a real artist, approaching the style of Salvator Rosa.

**Sculpture.**—*Baruzzi (Prof. C.)*—Five busts in Carara marble really magnificent, but his statue of Madame Tagliani, as 'The Sylphide,' is more like a spirit of air than a marble; she seems to fly.

*Putti (N.)*—'Prayer,' a charming statue.

**Engravings.**—*F. Anderloni and G. Garavaglia* have a glorious work in this Exhibition; it is the famous 'Assumption' of Guido, at Genoa. The true drawing, the decided and yet soft cut of the burin, which conveys the transparent colouring of Guido, is indeed admirable. This work is also interesting as recalling an historical anecdote:—Guido had left the school of Calvart to study under the Caracci, consequently his old master was offended. The fame of this picture, however, moved old Calvart to wish to see it, that he might criticise the new style of his roving pupil: but when he found himself in front of the picture, Calvart forgot anger and all such feelings. The old man ran to Guido, kissing his hands, and exclaimed with enthusiasm, "Blessings on you, my Guido, and blessings on the care I gave to educate your youth to Art."

**FLORENCE.**—*Bartolini.*—The Institute of France has named as a corresponding member the sculptor Professor Bartolini.

**Galleria degli Uffizi.**—*A. Dumas* has just returned to complete the illustrations of the great work, "La Galleria degli Uffizi."

**SPAIN.**—**MADRID.**—*Perez.*—There has been exhibited here a truly beautiful statue by Perez, an artist now residing at Rome, representing, natural size, 'Isabella of Castile, Queen of Spain.'

**FRANCE.**—**PARIS.**—*Leonardo da Vinci.*—*Steam Cannon.*—M. Delecluze has discovered among the MS. of Leonardo da Vinci, placed after his death in the "Bibliothèque Royale," a document which carries back the invention of the steam-engine to the close of the fifteenth century; at least he has published in "l'Artiste" a notice of Leonardo, to which is appended a *fac-simile* of the hand-writing of one page of the precious manuscripts, with five pen-sketches of a steam-cannon in all its details, and the following note explanatory of these designs and of the use of the machine. Leonardo entitles it an invention of Archimedes, and names it "Architruono." "Invention of Archimedes." The "Architruono" is a machine of fine copper, whose purpose is to throw iron balls with much force and much noise. It is used in the following manner:—The third of the instrument consists in a great quantity of charcoal fire and a vessel containing water; when the water is heated, the screw of the vessel containing the water must be turned to close it above: all the water will escape below, descending into the heated part of the machine, and will there be immediately converted into a vapour of such force and in such abundance, that it will appear wonderful to see its violence, and to hear the great noise produced by this smoke. This machine drove out a ball of the weight of a talent.

**Ecole des Beaux Arts.**—M. Ingres has been chosen President, and M. Jarry de Mancy Vice-President of the "Ecole des Beaux Arts" for the ensuing year.

**Pantheon.**—The colossal statue of 'Immor-

talité,' which is the work of M. Cortot, and formed a part of the spectacle at the funeral of Napoleon, is about to be cast, and placed on the dome of the Pantheon.

**Count de Perregaud's Pictures.**—The sale by auction of Count de Perregaud's pictures, so well known as the selection of an excellent judge and a man of taste, excited much interest among all buyers of pictures. There was much competition, and the whole pictures, in number 69, brought 441,628fr. about £17,600. Several we believe were bought for England. A. Karel du Jardin, 'Crossing a Ford,' brought 26,300fr., £1052; 'Departure for the Chase,' A. Vandervelde, brought 26,850fr. £1074; 'The Spy,' by P. Wouwermans, brought 35,100fr., £1404. These were the highest prices obtained. The modern pictures proportionally sold less well than the ancient ones.

**Monument of Napoleon.**—The members of the commission charged with the examination of the models for the tomb of the Emperor, have made a report to the Minister of the Interior after examining the 84 models submitted to them at the "Palais des Beaux Arts." The following is the substance of it. The first inspection reduced the number of models for selection to 25, but this number still appearing too great, it was agreed that each member of the commission should choose 10 names, and that those should be submitted to the ballot. The result was, Messrs. Baillard and Visconti had the suffrages of all. M. Duc had 11 votes; M. Duban 10; M. Labrousse 9; M. Lassus 8; Messrs. Isabelle, Deligny, Gayraud, Triquetti, and Danjou, each 7. The other models most approved were those of Messrs. Canissié, Dexay, Bouchet, Feucheres, Petitot, Van Clémpotte, Seurre, Gauthier, Merey, and Auroy. After examining the models, the commission declared that none of the models are entirely satisfactory, though many are of high merit; and they recommended as the best means of realizing the wishes of the French nation the following plan:—A sarcophagus of granite or porphyry, of a severe and noble form, placed on a pedestal of an indestructible material, appears to the commission the most suitable monument which can be raised to contain the ashes of Napoleon. It should convey the idea of eternity, and that the remains of the great man are safe from the vicissitudes and accidents of time. It ought to be constructed in such a manner as to survive the destruction of the church which contains it, and the fall of the dome, and it should be impervious to fire. As to the objection to the plan of a crypt, that it is exposed to damp and to inundations, it is not true; the foundation of the Invalides is many metres above the highest waters, and its vaults are remarkably dry.

The excavation of the crypt besides renders any other appropriation of the dome impossible; it must remain for ever sacred to the ashes of Napoleon. The commission further expresses the opinion that within the enclosure of the Invalides, but without the church, and quite apart from the tomb, an equestrian statue of the Emperor should be erected. It further expresses the wish that this statue should be represented in the Imperial costume, to mark that Napoleon is honoured not less as a statesman and legislator, than as a warrior. The tomb within the church—nothing, in the presence of God; without—the statue—glory, in the sight of men. The commission does not recommend that a new program should be issued for a competition of models for the tomb of Napoleon. It limits itself to recommending this program—an open crypt within the Church of the Invalides, an equestrian statue of the Emperor without, leaving to Government the choice of the artists who are to execute them.

(Signed) Comte d'HOUEDETOT, Ch. REMUSAT, VITET, DE VATRY, J. INGRES, DAVID, CAVE, E. P. BERTIN, VARZOLIER, L. FRESSE, THEOPHILE GAUTIER, FONTAINE.

**Engraving.**—'Napoleon,' painted by Delaroché; engraved by Aristides Louis. All amateurs are acquainted with the splendid portrait of Napoleon, painted by P. Delaroché for the Countess of Sandwich. Napoleon is standing in his closet before a table covered with papers. The face is turned three-quarters towards the spectator, and expresses a mind full of high thoughts. The design is fine, the countenance dignified, the attitude well chosen, the likeness correct, the

accessories true, the picture is perfect. The eulogium of the picture is also that of the engraving. Aristides Louis has perfectly preserved and translated the picture with his burin. The varied and masterly manner in which the half-tints are harmonized, the light and the shadow, varying the touch according to the object to be represented, is an example of the true management of the burin, and is indeed surprising; it seems colour itself; and justly have artists and amateurs proclaimed this to be a masterpiece.

GERMANY. — STUTTGARD. — *Necrology.* — The great sculptor, Dannecker, is dead. It is true that for several years he has been lost to the world and to Art, his mind being greatly impaired—reduced, we believe, to second childhood, but his long life has only now closed at Stuttgart at the age of eighty-four. What traveller in Germany, at all interested in the Arts, has not visited Dannecker's studio at Stuttgart, and his beautiful and spirited 'Ariadne' in the villa of M. Bethman, near Frankfurt. It is many years since we ourselves paid our homage to these works, but even then Dannecker was an old man, and his spectacles and tools lay beside an unfinished statue of a very lovely little girl with a dead bird in her hand. We especially admired a charming water nymph as she laves in her stream, and a noble and thoughtful statue of 'St. John.' The genius of J. Heinrich Dannecker manifested its peculiar bent at a very early age; and it is said that it was by personal application to Duke Charles of Württemberg, while yet a child, that he obtained permission to study in his academy for the Fine Arts, then recently established near Stuttgart. This school was intended only for the nobly born, and the parents of J. Heinrich Dannecker were of a humble class. He afterwards studied at Rome, and had the advantage of the advice of Canova; and there his statues were so much admired that he was elected a member of the academies of Milan and Bologna. His life, we believe, after his return to Germany, was chiefly passed at Stuttgart. His busts are excellent, and he has preserved to us the likenesses of many eminent men. His statue of 'Christ,' which, it is said, owed its origin to a dream, is considered his greatest work, and occupied eight years of his life. His 'Ariadne' and his 'Sappho' are among the works to which he especially owes his fame.

#### ART IN THE PROVINCES.

LIVERPOOL.—The results of the recent exhibition have not been so successful as heretofore. The sales amounted to between £1500 and £1600. The following is a list of the pictures sold:—'Sunset on the Stour,' T. S. Cooper. 'Landscape and Cattle,' John Wilson, jun. 'Ruins—Twilight,' W. Havell. 'Summer Time,' T. Creswick. 'Fording a Brook,' T. S. Cooper. 'Herd- ing Cattle,' T. S. Cooper. 'View near Ambeaside,' C. T. Burland. 'Roslyn Castle,' T. Creswick. 'Shipping off Mount Edgemoor,' Plymouth, S. Walters. 'Derwent Water,' Mrs. Aspland. 'The Thames at Milton, Kent,' A. Vickers. 'Protection,' J. H. Illidge. 'Halt of the Gypsies,' M. Stanley. 'Cottage Girl, and Fruit,' Geo. Lance. 'The Gate Keeper,' H. J. Boddington. 'Entrance to a Village,' H. J. Boddington. 'Leicester and Amy,' W. P. Frith. 'Scene in Cumberland,' T. W. Watts. 'Cottage at Applethwaite,' T. L. Aspland. 'View of Ben Lawers, &c.,' Copley Fielding. 'An English Interior,' T. F. Marshall. 'Gleaners Returning,' T. F. Marshall. 'Girl at a Well,' Thos. Crane. 'Pursuit of Knowledge under Difficulties,' R. Farrier. 'Temple of Venus,' W. Havell. 'Eton College,' A. Vickers. 'Sketch of an Old Bridge,' F. R. Lee, R.A. 'The Halt,' Geo. Lance. 'As You Like It,' John Bishop. 'Love,' Alex. Johnston. 'Lane Scene,' H. Jutsum. 'Weary Travellers homeward bound,' E. A. Gifford. 'Loch Elvie,' L. Aspland. 'Haddon Old Chase,' Thos. Creswick. 'From the Fortunes of Nigel,' A. T. Derby. 'Windermere,' W. Havell. 'Near Florence,' W. Havell. 'Anxiety,' H. P. Parker. 'Study of a Monk Reading,' W. P. Frith. 'Dolly Varden, &c.,' W. P. Frith. 'Girl at a Spring,' P. F. Poole. 'Milking Time,' James T. Eglinton. 'A Little Fun,' P. F. Poole. 'Beaux Stratagem,' W. P. Frith. 'Loch Tyne Head,' W. Collingwood. 'View on the River Brathay,' R. S. Henshaw. 'Mill, near Stoke,' J. B. Crome. 'Woman's Reflections,' W. S. Henderson. 'The Thames, at Milton,' A. Vickers. 'An Indianman,' Samuel Walters. 'Dumbarton, on the Clyde,' Miss Jane Nasmyth. 'A Sketch from Nature,' F. R. Lee, R.A. 'On Loch Lomond,' Miss Margaret Nasmyth. 'Madeline,' A. T. Derby. 'Shrimp Catcher,' J. Zeitter. 'View on the Tay,' Miss Jane Nasmyth. 'A Covenantner,' A. John- ston. 'Smugglers' Return,' J. A. Pullen. 'At Har- fleur,' W. Fowler. 'Dow Craggs,' A. Hunt. 'On the River Derwent,' Mrs. Aspland. 'Bonnington Fall,'

Miss Margaret Nasmyth. 'The Blacksmith's Shop,' A. Vickers. 'Cattle Reposing,' T. S. Cooper. 'Waiting for the Ferry,' W. Marshall. 'The Old Sailor,' John Bishop. 'Shrimpers off Bootle,' Samuel Walters. 'Sunset,' A. Clint. 'Relieving the Destitute,' T. F. Marshall.

Portrait of James Montgomery.—A portrait of this distinguished poet and most estimable man has been recently painted by Mr. T. H. Illidge, of Liver- pool; an artist with whose works we are familiar, and who, we have no doubt, has done justice to the im- portance of his subject—that of transmitting to posterity a copy of the form and features of a man who has given so much enjoyment and instruction to his generation— "Blessings be with them and eternal praise— The Poets."

Our correspondent writes in very high terms of Mr. Illidge's work; the portrait he describes as a very striking likeness; the character of intellect being hap- pily retained; and a degree of refinement being given to the features without impairing the vraisemblance. As a production of art, too, it merits the most marked commendation. We should like to see it engraved; for although we have already two or three prints of James Montgomery—big and little—there is not one of them worth a straw. Mr. Illidge has also, we under- stand, lately painted a full-length portrait of Lord Stanley for the Liverpool Collegiate Institution.

EDINBURGH SOCIETY OF ARTISTS.—The fifth Ex- hibition of this Society is now open; and while we rejoice to find that in it the number of portraits bear an insignificant proportion to the usual supply of works of this kind, we cannot help remarking the paucity of historical subjects. This Institution is, however, as yet in its infancy; and we have sufficient reason, in the present Exhibition, to augur an increasing interest in the higher department of Art. The works amount in number this year to 232, the majority being land- scapes, many of which are distinguished by some of the highest requisites for this style of painting. No. 10. 'Carisbrook Castle,' by F. Watts, is prettily painted, but the general effect is injured by a want of union of parts. A 'View on the Clyde,' by John Fairman, is painted with an admirable purity of tone and much depth of feeling. No. 47. 'Brand Barn,' by W. Mason. This is the best of the four pictures exhibited by this artist. No. 60. 'An Old Mill on the Ouse,' by Boddington, is a charming picture, possessing all the truth which generally characterizes the works of this artist. No. 63. 'Prudhoe Castle,' T. M. Richardson. Often as we have seen this ruin on canvass, we have seen few better pictures of it than this. No. 70. 'Nine Views of Old Houses in Edinburgh,' W. Livell. These views are strikingly characteristic of the "old town," and evince much improvement on the part of this artist. No. 82. 'Near Ashfield, South Devonshire,' W. H. Crome. The composition of this work is admirably made out. No. 112. 'In the Vale of Clwyd, Denbigh- shire,' is also by Mr. Crome, and is a landscape pos- sessing the highest claims to admiration. The grey and time-worn bridge tells most effectively, in contrast with the gloom of the hills on the left of the picture. The sky is in perfect harmony with the general feeling of the work, which, on the whole, is worthy of a place by the side of the best performances of its class. No. 129 is by the same hand: it is entitled 'Bacon Cliff, Denbigh- shire,' and notwithstanding its bad position, enough can be seen of it to determine that it is one of the best works in the Exhibition. It is a moonlight effect, beauti- fully finished, and distinguished by singular depth and transparency. The following works may be also men- tioned as of a high degree of merit:—144. 'Glen San- nox, Arran,' James Ferguson. 167. 'View of the Fisher Gate, St. Andrews,' J. W. MacLean. 197 and 198. 'Evening,' and a 'River Scene,' James Ferguson. 145. 'Patie and Peggy,' Thomas McCulloch. With respect to the hanging of the pictures, an abuse seems to have crept into this Institution, which we lament to say prevails in others—that of hanging the best pic- tures in the worst places, and appropriating some of the best positions to indifferent productions.

MONUMENT TO BURNS'S HIGHLAND MARY.—Some considerable time since a number of admirers of the SCOTCH PEASANT BARD set on foot a subscription for the purpose of erecting a monument over the grave of her who first inspired the love of Burns. Designs for the monument were requested from various gentlemen; among others who responded to the call, a union of talent was formed between Mr. G. M. Kemp, the architect for the monument in course of being built in Edinburgh to the memory of Sir Walter Scott, and Mr. Alex. H. Ritchie, sculptor, a gentleman favourably known in many parts of Scotland by the meritorious works he has executed for public bodies and indi- viduals. At an early period of his life he was sent to Rome, where he became a pupil of Thorwaldsen, whose medal he had the high honour of obtaining; a distinc- tion which will be duly appreciated by all who take any interest in Art. The design for the monument above alluded to is chaste and appropriate; consisting of an obelisk placed on a pedestal, having three of its sides enriched with basso-relievo representations; the principal being the parting of Burns with Mary on the banks of the Ayr; the other two being an emble- matical illustration of the address "To Mary in Heaven," and the bereaved lover lamenting over the grave in which are buried his hopes and his affections. The choice of these subjects is strikingly indicative of a mind in harmony with the poet's feelings; while to complete the design, the celebrated Delta of Black-

wood's Magazine has furnished an inscription at once worthy of the theme and of its gifted author. Such a combination of talent is not frequently to be found, and we trust the men of Greenock will show by their adoption of it, an example which their neighbours of Glasgow would do well to imitate in their Wellington Testimonial as well as in their other public works.

#### RECENT ARCHITECTURE.\*

The greatest architectural novelty described in the present volume of the "Companion" is the building for St. George's Hall, and the new As- size Courts at Liverpool, originally intended to have been two distinct structures, but now com- bined into a single piece of architecture—one that, should it be fully executed according to the view here given of it, will be the finest edifice of the kingdom. Liberally as they have shown them- selves disposed in embellishing their town, the people of Liverpool have not hitherto been very fortunate in their selection of architects. Mr. Foster has engrossed their patronage too ex- clusively. Notwithstanding the immense sum expended upon it, the new Custom-house is almost below mediocrity as a work of Art, most common-place in design and in character. In- deed very little can be said at all in favour of the present so-called Grecian architecture of Liver- pool, it being most cold, insipid, and spiritless. Mr. H. L. Elme's building will be an exceedingly rich specimen of the Grecian style, carried out consistently, and treated with artist-like spirit and feeling, both in the general conception and in the separate parts. It consists of a single Corinthian order, whose columns are to be 46 feet high, or five more than those of the Royal Exchange, and which is further raised upon a terrace and stylo- bate. The principal façade, 420 feet, is divided into three portions, the centre one of which is formed by a *monoprosyle* colonnade of 15 inter columns (i. e. 16 columns), and the other two by *square* pillars, between which an ornamental screen wall is carried up about one-third of their height. Thus, while the whole will produce a re- markably rich and very unusual degree of effect as to continuity of columniation throughout, there will also be a very unusual degree of variety, without any interruption of style, as is generally more or less the case where part of a front is made to look as much as possible like the frontis- piece to a Greek temple, while the rest is per- forated with windows. In Mr. E.'s design, unity is very happily combined with contrast and vari- ety; not only does the introduction of both square and round columns contribute to the latter, but the two forms mutually set off and give value to each other. We have heard it objected, first, that there is no authority for square columns so applied; secondly, that the introduction of screen walls between them is an idea borrowed from Egyptian architecture. As to the borrowing part of the matter, we only wish that others would take the hint and learn to borrow with equal judgment and taste, instead of eternally copying the same models over and over again, as they now do; while as to authority, no other authority is needed than that of the design itself, which is no less tasteful and appropriate than eminently pic- turesque. Let whoever will make it matter of reproach, we make it for congratulation both to the architect and to the Art, that he has here taken a decided step forward in it; whereas, till now, Grecian architecture has remained almost stationary among us. We began by copying it servilely, yet piecemeal, and have ever since gone on after the same fashion, till at length the style has almost gone out of fashion—itsself certainly has fallen very much into discredit of late; and no wonder, for now that the mere novelty of it has passed away, people begin to be weary of seeing the same or nearly the same portico re- peated on every occasion; and some have found out that it requires far less talent to *design* a thing of that kind, than to compose a single piece of fresh detail, or to bring forward aught amount- ing to a new idea. Although we have by no means exhausted our remarks even on this build- ing, here we must break off for the present, whether we have the opportunity of returning to the subject again or not. Should the latter prove the case, our readers will, at all events, now know where they can find notices of many other structures, either recently begun or completed.

\* Continued from page 12.

## WORKS IN PROGRESS.

CANTERBURY PILGRIMS ASSEMBLED AT THE TABARD, SOUTHWARK. Painted by EDWARD CORBOULD. Engraving by C. E. WAGSTAFF. Publishing by T. Boys.

This is really an important work of Art; and in its progress thus far bids fair to be finished in a manner to give the very best imitation of the feeling of the original picture. The plate is very large, being of the size of Landseer's 'Return from Hawking'; and is to be finished by Mr. Wagstaff, in his most effective style of mezzotinto engraving. The subject is, of course, from Chaucer, and involves in its realization upwards of thirty figures; for thus has the artist, in following the description of the poet, assembled

"a goodly company,

In Southwark at this gentle hostelry,  
That hight the Tabard faste by the Bell."

The site of the celebrated inn—the ancient Tabard is still occupied by a house of entertainment—"hight" the Talbot, a corruption of the earlier word. The movement of a numerous party, about to set out upon a journey, is well described; the activity is universal; every one is in the act of preparation, except the monk, and one of the "priests three," who are seated in easy enjoyment, that nothing around them has the power to disturb. One of the most prominent foreground figures is the knight, who is already in the saddle, and looking down upon his yeoman busied in tightening the girths. There is, as may be expected, an abundant display of costume in this work, varying from that of the jaunty squire, down to the plain vestment of the tenant of the cloister. The head dress of this period is the *cargan* or drapery, similar to what was worn in the reign of King John. This, in the time of the "father of English poetry," was a favourite covering for the head among those of gentle degree; a circumstance of which the artist has availed himself with infinite advantage to his picture, by placing it on the heads of the knight, the squire, and of the poet himself. The squire is also a striking figure in the composition; he has dropped on one knee to receive his morning draught at the hands of the "fair young tapstress."

There is, in what we already see of this admirable work, an extraordinary display of character, strikingly apposite to the vocations of the assembled pilgrims; and we doubt not that it will associate the name of the artist with those of eminent painters of our school.

VIEWS IN OXFORD. Drawn and Lithographed by W. A. DELAMOTTE.

These views are 'The High Street,' 'The Broad Walk, Christ Church,' 'St. John's College,' 'The Garden Front of the same College.' Oxford has often been the subject of the pencil, upon which occasions the High Street has never been forgotten; we, however, find it as faithfully represented in the view before us, as in any we have ever before seen. In both views of St. John's College the architecture is so exactly drawn that it is impossible to mistake the building, having once seen it. 'The Broad Walk' is well represented; the effect of distance being easily and naturally obtained without interfering with the breadth of the masses of foliage of the foreground trees.

TRIAL OF EARL STRAFFORD. Painted by WILLIAM FISK. Engraving by JAMES SCOTT. Publishing by THOMAS BOYS, Golden-square.

Few things in Art are more difficult than to give pictorial interest and effect to a composition which is of necessity hedged in by formalities; the artist, however, as far as may be judged from the etching, has dealt successfully with the disadvantages incident to even rows of heads and the "degree of place." This famous trial began in Westminster Hall, on the 22nd of March, 1611, and continued eighteen days. In this plate there are upwards of fifty figures and heads. Lord Strafford stands upon a small raised platform pointing to his daughters by his side, and may be supposed to be giving utterance to the memorable words which occur in his defence. The Earl is habited in black, and being considerably elevated above those around him, stands forward, the principal figure of the assembly—the position of the figure is eloquent, and it is at once seen, that he is pleading for his children. The plate is large, and is in course of engraving in mezzotinto.

## THE ADDRESS OF THE PRESIDENT OF THE ROYAL ACADEMY.

THE annual address, on the occasion of the distribution of the gold medals, was delivered by the President of the Royal Academy, before the General Assembly on the 10th December last. In opening his discourse, the President takes occasion to comment upon the bootless theories of empiricism in Art, and their influence upon the practical artist. Since the revival of Art in Italy, until a comparatively recent period, but few artists by the publication of opinion and precept, have aided in maintaining that taste which their works have generated. Of these few Leonardo da Vinci, Vasari, De Piles, and Du Fresnoy are the most conspicuous. Generally speaking, therefore, the history of Art and its principles, has been left in the hands of men unqualified by education for the task they undertook. In modern times, however, and among ourselves, Reynolds, Barry, Opie, Fuseli, Flaxman, and Soane, have in their respective departments laboured in the establishment of canons of taste. The opinions of the accomplished President of the Academy of the progress and position of the British School of Art, must be deeply interesting to every native artist; we therefore, on this subject, quote his own words:

"If we take a candid review of the progress and present state of Art amongst us, I think it must be admitted that the discipline has not discredited the doctrine of the British School. The general practice is founded on just principles; and although unfavourable circumstances have never allowed free scope for their effective development, those principles have been preserved in the contracted sphere to which they have been confined, without corruption or perversion. In our admiration of Art, as displayed in the purest examples of abstract and ideal perfection, we have never lost sight of the homage due to Nature: nor have we so far degraded our devotion, as to disregard those duties of discrimination and selection which every rational view of her worship essentially demands."

On the subject of the originality of the British School, Sir Martin Archer Shee spoke analytically of Hogarth and his works, and to Wilkie the remainder of the address was devoted, wherein his most celebrated pictures were passed in review, and most appositely remarked upon. The following passage occurs in the sketch of the rise and progress of the latter:—

"His eye was as accurate and scrutinizing as his intellect was prone to inquire and investigate. He was no loose observer, satisfied with cursory glances on the surface of things. What he looked at he saw; and what he saw he remembered. When his ambition to enter on a wider sphere of exertion led him to the metropolis, I have understood that he first sought employment as a painter of small portraits, for which his powers of imitation and great delicacy of execution appeared to be peculiarly qualified. Fortunately, however, for his subsequent celebrity, he did not meet with the success he deserved in this line. I have heard him say, with the unadmitted simplicity which distinguished him, that he never could give satisfaction to his sitters. Yet there are specimens of his hand, executed at that time, which claim high commendation; and most of us remember the admirable small portrait of his Royal Highness the late Duke of York reading his despatches, which, at a subsequent period, he exhibited at Somerset House, and in which he proved his superior pretensions to public favour in this department."

Still speaking of Wilkie, this eloquent discourse terminates in these words:—

"But the efforts which could not repress his spirit, exhausted his strength. His physical powers were inadequate to sustain his mental excitement. Of this it would appear that he was himself aware, by the desire he expressed to hasten his journey home. Satisfied with the acquisitions he had made—his mind stored with novel images of social life—his collection of studies enriched with all the varieties of character, costume, and clime, which the habits and manners of eastern communities display in such picturesque abundance to a painter's eye, this great artist now set forward on his return to the land in which were centred all his hopes—the land to which he looked for the reward of all his toils—where he trusted, by the novel treatment of sacred subjects, that he might be the means of giving a new impulse, and attracting new interest, to pursuits that have long languished in the 'cold obstruction' of public apathy and national neglect. But he was not destined to realize these visions. A sudden and apparently unexpected exhaustion of the powers of life terminated in the calamitous event which deprived society of one of its most distinguished members, and frustrated the excited hopes of his Art and his country."

## VARIETIES.

THE BRITISH INSTITUTION will open on the 7th (we believe): four prizes are to be again given; and we may take for granted that the artists have been stimulated by the "hope of reward" that "sweetens labour." Unhappily, however, the intention of the Directors to repeat the benefit conferred last year, was not clearly understood until very lately.

ARTISTS' AND AMATEURS' CONVERSAZIONE. — On the evening of the 5th ult. there was at this conversazione, held as usual at the Freemasons' Tavern, a more numerous assemblage of members and visitors than had ever met upon any previous occasion. From the number and high respectability of the *réunion*, it is evident that the Society is progressing in a manner as soon to render its benefits apparent. The works exhibited were various, considerable in number, and high in merit. With respect particularly to oil painting, we might suggest that they should in future be accompanied by their titles, as it would doubtless be more gratifying to the authors of them to hear them spoken of by the names they have given them. Among the works of this class we recognised a picture by Herbert, A.R.A., 'The Boar Hunters' (if we remember rightly); also a work by Hart, A.R.A., the subject from Shakespeare, and treated with a moonlight effect. We observed also 'A Spanish Ruin,' by David Roberts, R.A., painted with his accustomed transparent shadows and brilliant lights. By O'Neil we remarked an admirably executed female figure, apparently in the act of prayer, and so entirely unaffected in style and intense in expression, as to embody that *something* we so often miss in works of higher pretensions. By Bradley, of Manchester, there were two portraits of Children successfully imitating, in freedom of handling, the manner of Sir Joshua; by Ward, R.A., 'The Devon Ox'; and by T. Boys, 'Fort Rouge,' painted with much power of effect. The Exhibition was rich in drawings: a pencil portrait of Lady Hamilton, by Sir Thomas Lawrence, and contributed by Messrs. Graves, is one of the most masterly productions we have ever seen. There were some charmingly coloured views by Prout, pencilled and treated with the usual force and effect of his manner. 'The Landing of Queen Henrietta,' Cattermole, a drawing of remarkable beauty; Müller's original drawings made for his work, the 'Remains of the Age of Francis the First'; and a portfolio of drawings by Pyne, principally Welsh scenery, made out with all the freshness and truth of nature; also a portfolio of sketches, by various artists, contributed by Messrs. Fuller.

INSTITUTE OF BRITISH ARCHITECTS. — The interest felt by Earl de Grey in the prosperity of this Society, of which he still remains the President, did not cease with his lordship's vice-regal appointment in Ireland. On the very day that he kissed hands at Windsor previous to his departure, he induced his Royal Highness Prince Albert to become a Patron of the Institute. The question of the junction of the Institute and the Architectural Society, has again been mooted, and, after a lengthened discussion during three evenings, may, we hope, be considered settled. United, they may do much more for the advantage of their profession than they could singly. The expense of one establishment will be saved, and much perplexity avoided. The second part of the Institute's Transactions is now at press, and will shortly be published.

THE AMATEUR ARTISTS' SOCIETY held their first meeting for their present session on the 12th of January, when many pictures were exhibited, displaying considerable promise. A paper was read by the President, Mr. Antrobus, with especial reference to the question of "frescoes or no frescoes," which now excites much interest in the artistic world. The opinion of the writer was decidedly adverse to their use in England. The claims of Cornelius, as a first-rate artist, were loudly denied.

THE KING OF THE FRENCH has presented Mr. Hullmandel with a gold medal, in testimony of the merits of his new invention of lithotint, the value of which to Art is highly estimated by the French as well as the English artists.

PRINCE ALBERT.—We have much pleasure in recording a gratifying instance of the kindness of

Prince Albert towards an English artist of eminent talent, whom he had known before his elevation to his present exalted station. It is alike honourable to the taste and feeling of his Royal Highness. Mr. Wyatt, the sculptor, who has lately returned to Rome, was staying at Windsor, and went to see the Castle. The Prince, hearing of the circumstance, sent for Mr. Wyatt, and received him in the most friendly manner, giving him a commission for a basso-relievo to adorn a space over one of the doors in the Castle.

**ANATOMICAL LECTURES FOR ARTISTS.**—We see announced a course of anatomical lectures, to be delivered by Mr. Dermott, in Charlotte-street, Bloomsbury, intended as a ready means to promote, among artists, that knowledge of the human structure which imparts ease and confidence in drawing the figure. It is not necessary to attempt to demonstrate the utility of such a course of study, as we have continually heard painters, and especially sculptors, lament the want of facilities for acquiring that which is at once the alphabet and the finished eloquence of their art. There is much, it is true, to divide the attention of the modern artist; but he is invited to perfection by advantages incalculable, when compared with those enjoyed by his antecedents of two or three centuries, or even half a century, ago. The men, whose works are held up as models for imitation, acquired their knowledge under much greater difficulties, and at a more considerable expense, than now attend the labours of the student. It is surprising that similar courses of lectures have not before been delivered, since such information as they convey is so necessary to all classes of artists who draw the figure; not that, because anatomy is studied, figures must necessarily be anatomically painted, but that the innumerable errors into which our artists are led from ignorance of it may be avoided. Pictures distinguished by an obtrusive display of anatomy may be valuable, but they are rarely pleasing; since so much of beauty is constituted of flowing lines and roundness undisturbed by muscular development.

**SYMBOLS ON ANCIENT BUILDINGS.**—Mr. George Godwin has laid before the Society of Antiquaries some observations on the fact, that the stones both inside and outside numerous ancient buildings in England, bear, in many cases, a mark or symbol, evidently the work of the original builders. His attention, it seems, was first drawn to the fact about three years ago; and he saw in it the probable means of connecting the various bands of freemasons, to whom we are indebted for so many magnificent buildings. In Germany and France similar marks have more recently been discovered; and Mr. Godwin, during a recent visit to Poitiers, in the department of Vienne, found a number of them identical with many which he had copied in England. Diagrams of these were exhibited, as also were examples from Gloucester Cathedral, Malmesbury Abbey Church, Bristol Cathedral, Church of St. Mary Redcliff, Furness Abbey, and other buildings. The signs are from two to six inches high, formed by a slightly indented line, and consist as well of known masonic symbols and Christian emblems as of apparently arbitrary forms. The *vesica piscis* occurs frequently, the cross in all varieties, the triangle, double triangle, trowel, square, emblems of eternity, &c., &c. Some of the buildings are literally covered with them. We hope Mr. Godwin's remarks will lead to a large collection being made in England, France, and Germany, so that they may be carefully compared.

**"THE DUKE" AND NAPOLEON.**—It is a singular fact, and worthy of record, as illustrating national character, that although portraits of Napoleon have been extensively purchased in Great Britain, there is no instance of a portrait of Wellington having been sold in France. This statement appears almost incredible; but circumstances having directed our inquiries to the subject, we ascertained that the leading publishers of London had never received a single order from France for a print of the Duke, nor, to their knowledge, had they ever disposed of one to a Frenchman. We presume, however, that when Glasgow has been disgraced by the erection of a Frenchman's statue to "represent" the conqueror of the Emperor, it will be engraved for the express supply of the French people, who will, no doubt, gladly place a pictured libel of the great

British Captain, taken when the vigour of his days is gone, and age has been exaggerated into decrepitude, by the side of their Emperor in the prime of life.

**THE NEW EXCHANGE.**—The first stone of this structure was laid on Monday, 17th January, by His Royal Highness the Prince Albert. Details of the ceremony were amply given in the daily newspapers. It is only necessary for us to record the fact; but we shall take an early opportunity of publishing some remarks on the building now in progress.

**RATCLIFF'S PATENT INKSTAND.**—We have been much pleased with this invention; and as we, at this moment, experience its advantages, it is our duty to communicate them to our readers. It is so contrived, that by turning a screw, sufficient ink is conveyed to the surface, while the pen cannot take from the sediment at the bottom; air is so effectually excluded, that the ink cannot become mouldy; and the nib of the pen can sustain no injury by the danger of pressure against the stand. It is moreover a very neat and convenient article; and decidedly superior to any other inkstand with which we are acquainted.

**POOLCOO CEMENT.**—We have repeatedly tried this valuable auxiliary to a household, and found it to answer admirably. There are few families in which it is not occasionally required; for, according to the adage, "accidents will happen," and it would be difficult to conceive any "breakage"—except a bone—to which this cement might not be advantageously applied. To artists it may be especially recommended as joining strongly, and without leaving the slightest mark, chipped portions of frames.

**SPILSBURY'S PICTURE.**—The want of some safe and secure means of "fixing" water-colour drawings, and drawings in crayon, as well as other productions of the artist, has been long felt. The ordinary modes are dangerous and not effectual; and none that we are acquainted with will permit the paper to be washed. Mr. Spilsbury has supplied a very desirable improvement; we cannot tell in what it consists, but it answers the purpose admirably. It is a colourless fluid to be laid over the drawing, carefully, with a camel's-hair pencil; and when dried it may be washed with water, if needful, without sustaining the least injury.

#### SALES OF THE MONTH.

**SALES TO COME.**—We direct the especial attention of our readers to the sale—advertised in the ART-UNION—of the works of Sir David Wilkie, to be disposed of by public auction, by Messrs. CHRISTIE and MANSON on some day (not yet fixed) of the month of April. We shall take an early opportunity of noticing this event at some length.

MR. PHILLIPS announces, on the 15th of February, his intention to submit to public auction the gallery of William Bullock, Esq.; and also another collection on February 8th.

**SALES OF THE PAST MONTH.**—On the 22nd ult. a collection of pictures, by masters principally of the Italian schools, were sold by Messrs. Christie and Manson, among which were disposed of at the following prices:—'A Dutch Village, with Boors playing at Bowls,' by Teniers, £137 11s.; 'A Grand Rocky Landscape,' Teniers, £45 3s.; 'Virgin and Child, &c.,' Ghirlandaio, £25 4s.; 'Virgin and Child,' Pulego, £22 11s. 6d.; 'St. John,' £19 19s.; 'Heads of the Twelve Caesars,' O. Vennius, £25 4s.; 'Landscape,' Moreland, £34 3s. 6d.

On the 20th ult. a portion of the collection of the late A. Gilmour, Esq., of Portland-place, was sold by Mr. Phillips, the under-mentioned pictures realizing the accompanying prices:—'Landscape,' Van Stry, 50 guineas; 'Fowls,' Hondkoecker, £21; 'A Holy Family,' Paduanino, £26 5s.; 'Interior,' Jan Steen, £24 3s.; 'Landscape,' Cuyp, £21; 'Landscape,' Jordaens, £26 5s.; 'Hawking Party,' Wouvermans, £31 10s.; 'Queen Sheba before Solomon,' Eckhont, £43 1s.

#### REVIEWS.

**CHILDE HAROLD'S PILGRIMAGE.** By LORD BYRON. JOHN MURRAY, Albemarle-street.

This is one of the most extraordinary reproductions we have ever seen; and it must become one of the most popular—being Childe Harold with *de facto* illustrations from the very scenes which the poet has sung in his immortal verse. The poem appears in one volume, large and thick—the embellishments are vignette landscape gems, from drawings by Creswick, Warren, Howse, and Aylmer; engraved by Finden; and amounting in number to sixty-one. This unusually long series is concluded by a valuable addition in the shape of a map, whereon is traced the pilgrimage of the Childe; and even here Art is not spared; the chart of his wanderings is set amid a profusion of beauties, minute views markedly typical of the lands wherein he set up, for a time, his unabiding tent.

Even to those (if any such there be) who may not have read "Childe Harold" since its progressive publication, a sight of these views alone will give delight; yet there is in them nothing more than beautiful and solid truths. The artists present them to us as they and as the poet saw them; for they seem to have walked in his footsteps, and, like him, courted the emotions of all periods of the sun's daily round from noonday to midnight, and from midnight to noonday again.

The frontispiece is a portrait of the noble poet, after a picture by Phillips, R.A. He is represented in a Greek dress, and fronts the spectator; but the head is seen nearly in profile being turned towards the right shoulder. This portrait is a half-length, and on a slight inspection seems materially different from other portraits of acknowledged resemblance; but a close examination proves that the same features have been the model of this painting. In the ordinary portraits of Lord Byron, there is an attempt to embody the fine sentiment of his poetry; but in this he is the soldier full of the spirit of the line—

"Greece! change thy lords, thy state is still the same."

We have been accustomed to look upon the head uncovered; it may have been the pleasure of the poet to wear the turban in which he has been painted; but so much of the character lay in the forehead, that we cannot deem the turban a compensation for its loss.

Nothing in this style of Art can excel the general tone and execution of the illustrations before us. As every thing is, at present, brought forward with engravings, we have long expected an illustrated edition of "Childe Harold." And now that it has appeared, we are happy in the opportunity of contributing our measure to the abundant praise which these embellishments must elicit. They are selected with the very best taste; which circumstance, together with their admirable feeling in effect, and masterly adaptation of manner in execution, leave nothing to be desired.

Among the first engravings in the volume, are Delphi and Cintra, both in themselves superb views, but rendered here doubly exquisite by their manner of treatment; then follow Mafra, Talavera, and Saragoza, also a view in Seville of a character powerfully Spanish.

"But Cadiz, rising on the distant coast,  
Calls forth a sweeter, though ignoble praise."

The minute view of Cadiz from the sea reminds us of similar Italian subjects by Turner, when his pencil by the sweetness of the scene is charmed into just enough of detail. Then follow views in Greece, among which we find, Ithaca, Yanina, Zitza, &c. &c. The views in the third canto bring us nearer home—it opens with the mustering of the British troops at Brussels. We have seen and heard enough of late of the Rhine, but the views before us of the Drachenfels and Ehrenbreitstein are fresh and lovely. The fourth canto affords the Italian views, among which are several in Venice, Florence, Rome, &c. &c.

In the series are several portraits, but they are introduced by no means in the ordinary stiff style of portraiture. There is an inimitable grace in the *abandon* with which they are thrown in, being engraved in frames which are represented resting on the floor surrounded by circumstances relating to the stories of the individuals depicted

—they are of Ada, Rousseau, and Tasso. The brows of the last are bound with the mockery of laurel.

"They gave him laurels who denied him bread."

The adoption of any other method of illustrating "Childe Harold" must have been a failure, since nothing else but the actual scenes described could have been a fitting accompaniment to the poem. The artists who have been employed in this work, place us in the position of the puzzled critic in the French farce—with him we say, "Ces gens-là font qu'il faille les louer toujours."

LONDON AS IT IS. Drawn and Lithographed by THOMAS SHOTTER BOYS. Published by THOS. BOYS, Golden-square.

Under this title has appeared a series of views representing some of the principal streets, thoroughfares, public buildings, &c. &c., in London. The plates are 26 in number, and correspond in size with the views in Paris, Ghent, &c. &c., by the same artist—that is to say, they are folio, and have admitted of the working out, to a certain extent, of that recognisable detail which aids the identity of locality. During a quarter of a century, the street scenery chiefly painted by our artists, recommended itself on account of some "picturesque" feature; and when this was wanting, it was supplied by means of a little ragged mannerism. At home we have but little to meet this taste, which has been fostered principally by matter from the Continent—the North supplying what we may term the Dutch-school subjects of this class of Art, and the South material of a more refined character. Works like that under notice were not thought of; continuous straight lines and plain façades were uninteresting, and extremely difficult of treatment: hence that with which the artist has here had to contend is, first, the substantial difficulties of his subjects, and afterwards the caprice of conventional taste. Of the former he disposes in a masterly style; and, assuredly, his work will deal successfully with the latter. The views are lithographed with a sepia tint, and the highest lights brought out with white.

The two worlds of which London is composed are here most ably illustrated in their leading features. Of course some of the river views are among the most striking on the side of the City; and of the street scenes in the same district, 'St. Paul's from Ludgate-hill,' is one of the most remarkable. As to its effect and general management, this view is admirably drawn; the hard angles of the architecture are softened down without affecting the truth of the architecture, and the foreground shadows are massed and toned in a manner effectually to throw off the lighter distances. In Guildhall there is nothing imposing, but the artist presents it to us invested with a powerful interest; and we like it the better that it is not thronged with a parade of figures. The drawing in this plate is free, and the shadow-tones flat and transparent. The 'View of London Bridge from Southwark Bridge' is one of the most beautiful of the series, and such as Canaletti would have delighted to paint: due breadth and importance is given to the river, above which the spectator is placed, looking down on the decks of the passing craft. In the distance, "below bridge," is seen the Tower and a haze of masts. We have also a view from the same point, looking up the river—"Blackfriars from Southwark Bridge," with St. Paul's rising above the houses on the City side; Blackfriars-bridge bounding the distance. Another charming river view is 'Westminster from Waterloo Bridge,' of which the Abbey is one of the principal objects. In 'The Tower and Mint' the view is from Tower-hill, and the armoury destroyed by the late conflagration is a striking feature of the picture. The plate, 'St. Dunstan's, &c. Fleet-street,' is somewhat "spotty," from the number of scattered lights by which the eye is distracted. Something is at times necessary to unite the lights of a composition, but we think it might have been more judiciously done than by upturned paving-stones, paviers' tools, and unsightly waggons. 'The Strand' affords a view of the churches of St. Clement, St. Mary, and St. Dunstan in the distance; but we think that the nearest church, St. Clement's, suffers in effect from the importance given to the foreground buildings. 'Temple Bar from the Strand,' gives a perfect idea of the confusion of that thoroughfare—the interest settles in the foreground, which is

thronged with pedestrians and vehicles of many descriptions. The 'Entry to the Strand from Charing Cross' comprehends Northumberland House, St. Martin's church, &c., &c. Among the views of West-end of town, 'Buckingham Palace from St. James's Park,' is one of the most striking. It is a landscape, with the distance closed by the Palace, which maintains its position well in the picture, from the skilful manner in which it has been put in. 'Regent-street looking towards the Quadrant,' is a beautiful specimen as a street view. Others are entitled—'St. James's Palace from Cleveland Row,' 'Regent-street looking towards the Duke of York's Column,' 'The Club Houses, &c., Pall Mall,' 'The Bank,' 'Piccadilly looking towards the City,' 'The Custom House,' &c., &c.

The impressions before us, as we have said, are tinted with sepia, but there are also others coloured by hand. This is the most important and meritorious work that has ever yet appeared as a series of views in the metropolis of Great Britain, and it is in execution certainly worthy of the subject. The style of work is bold and original, and sketches which in ordinary hands must have been tame and insipid, have become in those of Mr. Boys, pictures of much excellence. Nothing have we seen better adapted to this style of Art than the lithography in which these drawings have been executed.

ANATOMY FOR THE USE OF ARTISTS. By R. L. BEAN, late house-surgeon, at King's-college and Charing-cross Hospitals. London, H. Renshaw, 1841.

The importance of a knowledge of anatomy in the education of an artist is universally admitted. All feel its necessity, and see fully the want of power in design, and other disadvantages which result from neglect in this respect; and yet, whether it be from the difficulties which encompass the study, the limited opportunity which exists amongst us of drawing from the human figure, or whatever cause it may be, certain it is that in this respect more than any other, the English school is greatly deficient.

The little work before us, which aims at rendering more easy the acquirement of sufficient anatomical knowledge, promises to be exceedingly useful, and is entitled to the thankful patronage of those for whom it is designed. It contains ten plates clearly drawn, showing all the various muscles and bones in the human frame, the names of which are referred to in accompanying tables. The uses and effects of the muscles are also described briefly. The greater number of anatomical works published suppose the pre-attainment of a larger amount of knowledge of the names and terms employed than artists usually have, and moreover are so expensive as to be out of the reach of many students. The book before us, on the contrary, is perfectly elementary and simple, and so cheap as to be attainable by all who require it. We gladly hail its appearance.

#### TO OUR SUBSCRIBERS.

We have a communication of some importance to make to our subscribers. For a long time, we have felt much embarrassment in consequence of the limited space to which we have been restricted; and we have at length, and after due deliberation, resolved upon a considerable enlargement of "the ART-UNION," so that we may be enabled, without diminishing the necessary quantity of *Intelligence* concerning the Arts, to introduce articles on subjects that demand to be treated without restraint as to the number of columns to be occupied.

Under our new arrangements, therefore, we propose to combine the advantages of a MAGAZINE with those of a NEWSPAPER.

The suggestion has been frequently made to us from persons interested in our welfare in various parts of the kingdom; some proposing the enlargement we are about to adopt, others that our work shall be published twice instead of once in the month; to the latter we see many objections, to the former none; for we feel assured that no artist, or lover of the Arts, will hesitate to pay the small additional tax that will be levied upon him to meet our increased expenditure.

The ART-UNION will, therefore, in future contain twenty-four instead of sixteen pages; and be charged one shilling instead of eight-pence.

Various circumstances have, lately, combined to give a new stimulus to British Art, and to render information concerning it a PUBLIC WANT. We hope we may claim some merit for having assisted in the attainment of so desirable and so important a result—one which, a very few years ago, it would have seemed visionary to have anticipated. The supply must be made equivalent to the demand.

Hitherto, we have been entirely precluded from the treatment of any subject requiring so much space as essentially to abridge the monthly supply of "news;" hereafter, we shall experience no such difficulty—we shall be enabled to communicate information concerning any matter on a scale commensurate with its importance; to review, adequately, all works connected with the Arts, published either abroad or at home—not by a mere reference to their contents, but by a just and instructive condensation; and by the frequent introduction of such engravings as may be serviceable in illustrating the text. In short, our purpose is to render the ART-UNION a sufficiently full record of all that transpires, interesting or valuable to the artist and the amateur.

Our subscribers may be assured that the *entire of the extra sum we shall thus receive from them shall be expended for their benefit*; this pledge they will very soon be enabled to test by experience. We shall be well satisfied to be judged by the results.

With the next number—i. e. the number to be published on the first of March—we shall present to our subscribers an extra half sheet (besides the eight pages to be added to its contents), containing between forty and fifty specimens of wood-engraving, selected from the most popular illustrated works now in course of publication. We have selected them from Mr. Jackson's "History of Wood-engraving;" Lockhart's "Spanish Ballads;" Mr. and Mrs. S. C. Hall's "Ireland;" Knight's "Shakspeare;" Tyas's "Shakspeare," "England in the Nineteenth Century," "Master Humphrey's Clock;" Tilt's editions of "Cowper" and "Thompson," &c.

They are printed on a separate sheet—on fine paper—by Mr. Wright, of Fleet-street; and in order that no difficulty may arise to prevent its transmission with the number by post, each sheet is stamped.

As we shall print but a limited edition, we suggest to our subscribers the necessity of obtaining their copies early; and on no account to allow a day to pass, after the usual day of delivery, without ascertaining that the agents have supplied them.

With every copy of the ART-UNION this illustrated sheet will be supplied—of course *gratis*, and it must rest with the purchasers to look to the proper delivery. The sheet will be of greater value than the cost of the publication, and there will be consequently some danger of its being stopped on its way to the subscriber.

Those who may require more than one copy will do well to convey an early order to the publishers. Subscribers in the country will thus have timely notice of our design.

We hope to commence the publication of Mr. Pugin's series of papers on "Modern British Architecture" in our next number.

A letter on the subject of the "Art-Union of London" must remain over, as also a letter on "Clay for Modelling;" and a letter on "Encouragement of Art."

"The Poniatowski Gems."—We are prevented from noticing the collection this month as fully as it demands.

Among the works of Art—Prints and illustrated Books—that have been sent to us, we are compelled to postpone the insertion of Reviews, the whole of which are in type—of Portrait of his Grace the "Duke of Wellington," engraved by Wagstaff, from Mr. Pickersgill's picture; another Portrait of the Duke, from a painting by Mr. Briggs; "The Tower," by Mr. Hewitt (in noticing which we shall introduce two wood-cuts—one of weapons, another of ancient helmets); "The Hawking Party," by Edwin Landseer; the third series of Nash's "Mansions of England;" etchings of Landseer's "Court of Law," Grant's "Equestrian Portrait of her Majesty," Ricauti's "Rustic Architecture;" "Italy, Historical and Picturesque," by W. Brochedon; "Figures from Pictures in England, by Claude Watteau and Canaletto;" by S. Bendixen; "Revue Générale de l'Architecture et travaux Publiques;" "Dictionary of Greek and Roman Architecture;" "British, French, and German Painting," by David Scott, M.R.S.A.; "Sketches of Fallow Deer;" "The Imperial Family Bible;" "Etchings of Runic Monuments in the Isle of Man;" Delaroche's "Napoleon," and "King Charles in the Guard Room;" "Sketches in Norway," &c. &c. A pretty extensive arrear, which we trust to bring up next month.

## MILLER'S SILICA COLOURS.

In introducing these Colours to the notice of Artists and of the Public, it will not, perhaps, be deemed obtrusive, if the Manufacturer presumes to offer a few remarks upon the subject, seeing that, by the application of many years' experience, aided by numberless experiments, he has, at length, most successfully accomplished his object, in bringing back to light a long buried secret of ancient Art.

The countless and laborious efforts that, from time to time, have been made by modern Artists, to produce Colours that might bear comparison in point of brilliancy and durability, with those of the Old Masters, are sufficiently known to need no further comment. It is likewise, unfortunately, but too well acknowledged how fruitless these efforts have been. For although, at first, their works might appear to vie successfully with the antique originals, yet when placed, a twelvemonth afterwards, by the side of their prototypes, how great a falling off was there! What an universal degeneracy of tint and tone! While the ancient productions seemed as fresh and vivid as if they were the creations of yesterday, and appeared by their undecaying brilliancy and clearness to deride alike, the attacks of time and the feeble competition of modern Art.

The injurious effects of light and atmosphere on the colours of the present day, are very clearly evidenced by the contrast of Ultramarine, which being manufactured on the same principle as the Colours of the Old Masters and the Silica Colours, has been erroneously supposed to have derived an accession of brilliancy from age. Such, however, is not the fact. The phenomenon of its apparently increased vividness, is the result of its simply retaining its original lustre, whilst that of the other colours of the picture has invariably declined and faded. Were any one sceptical of the superiority of ancient colour, every doubt might be easily removed by a glance at the two pictures of Francia, recently added to the collection in the National Gallery, and painted between three and four hundred years ago. The transparency and freshness of their tints have that time-defying character and gem-like lustre, that modern paintings seldom perhaps possess and never retain.

In the early periods of Art, the painter, having no colourman to prepare his colours for him, was compelled to seek and compose them himself, from whatsoever substances were at hand, from earths and stones; and chiefly from their use of such imperishable materials, unimpaired by chemical agency, may be inferred the great durability of his productions.

The present Silica Colours, now confidently submitted to the ordeal of public opinion, have already been severely tested by Artists of the first eminence, and by persons of scientific attainment, whose judgment has been unequivocally expressed in their favour; and who do not hesitate to affirm that they reveal the mystery of ancient colouring; and that they possess all the invaluable qualities of transparency, brilliancy, and durability, which are so eminently conspicuous in the works of the ancient painters.

The Silica Colours are prepared in collapsible tubes, and can be forwarded per post to any part of the country, on receipt of an order, for any of the under-mentioned tints, viz.:

Pale and Deep Red.  
Pale and Deep Blue.  
Pale and Deep Yellow.  
Pale and Deep Orange.  
Pale and Deep Purple.  
Pale and Deep Green.  
Pale and Deep Brown.  
White and Half Tint.  
Gray and Black.

## VAN EYCK'S GLASS MEDIUM for OIL PAINTING.

This Medium having been tried by Artists of the first eminence, is found to be the grand desideratum for removing the existing evils of the Modern School; namely, the destructive effects of Varnishes, Oils, and M'guelps, as all pictures painted with them, after a time, lose their transparency and brilliancy, and become horny, spotted, and dark-coloured; whereas those painted with the Glass Medium have a most brilliant effect, and will be found to remain perfectly unchanged, as its durability can only be compared to painting in enamel.

## Glass Medium in Bottles.

No. 1. For first and second painting, and for mixing with colours already prepared in Medium.

No. 2. For general painting, and for rubbing up powder colours with.

No. 3. For third painting, finishing, and glazing, or mixing with lakes and other colours, requiring strong driers, giving at the same time additional transparency.

Any of the above Media may be thinned, according to the taste of the Artist, with Miller's pure Florentine Oil.

## Glass Medium in Powder.

Nos. 1, 2, and 3.

If these powders be mixed stiff upon the palette with a small portion of Miller's pure Poppy Oil, it will enable the Artist to lay colour, pile upon pile, and to dip his pencil in water or oil at pleasure. It will also dry so hard that it may be scraped with a knife on the following day.

Artists are recommended to replenish their Colour Boxes with Colours prepared in Medium, as they will be found better in every respect than those prepared in the ordinary oils.

It is also requisite to remark, that while Artists continue to use colours as commonly prepared in oils, they only reap half the advantage resulting from the great improvement in the art—which the Media are acknowledged to be by upwards of one thousand Artists who have already tried and approved them.

T. MILLER, being the original preparer of this INVALUABLE MEDIUM, has the honour of supplying

And many other Artists of Eminence.

T. MILLER gladly embraces this opportunity of publicly expressing his grateful acknowledgements to his numerous Patrons and Friends, both in this country and on the continent: and particularly those gentlemen, who, unsolicited, have so kindly forwarded to him letters testimonial of their entire approbation of the Glass Medium. Nor must he omit to mention (which he does from a sense of gratitude, rather than from a feeling of vanity), the presentation of a Silver Cup, by an artist of eminence, for his invention of the Silica Colours;—and Artists and the Public may be assured, that, with such a flattering stimulus to exertion, as the suffrages of gentlemen of first rate talent, he is not likely to relax in those efforts, whereby he first obtained their notice and approbation.

## To Water-Colour and Miniature Painters.

## MILLER'S GLASS MEDIUM.

It is well known that some preparation for giving brilliancy and depth to Water-Colour Painting, and for enabling the Artist to repeat his touches without disturbing the colours already laid on, has been long sought after; this new vehicle possesses all these advantages. When mixed with the colours it has a most brilliant effect, and will preserve delicate tints unimpaired; in durability it will approach nearer to Oil Painting than anything hitherto in use.

## Glass Medium in Bottles.

No. 1. For first colouring or laying on masses of colour. This dries so hard that the second colouring or finishing will not disturb it.

No. 2. For second colouring, glazing, and finishing. Also the NEW SILICA COLOURS, prepared in Cakes, which possess many and great advantages over the Cake and Moist Water Colours, at present in use.

Japaned Tin Water Sketch Boxes, with Bottle, Cups, &c., complete.

T. M. has great pleasure to inform Artists that he has on sale all the Colours made by G. Field, Esq., author of "Chromatography," &c. &c.

He has also all the remaining stock of Ultramarines, manufactured by the celebrated Italian maker, the late G. Arzone.

## MILLER'S PREPARED LEAD PENCILS

FOR DRAWING, &c.

Of different degrees of hardness, without grit.

## DRAWING AND CRAYON PAPERS.

## CLARE'S PREPARED BLACK LEAD IN CAKES.

This beautiful preparation of Black Lead is a substitute for the Lead Pencil, over which it possesses many advantages; among these, are the depth and clearness it imparts to the shadows of the drawing, and the softness and delicacy with which the lighter parts may be handled. As it is used (like a water colour) with the Camels' Hair Pencil, it admits of great rapidity of execution and boldness of effect, as a large surface may be speedily covered, and intense and delicate tints produced with equal facility; and without any of the porousness which is so apparent in the Lead Pencil, or the least risk from rubbing or exposure.

## BRUSHES AND PENCILS OF ALL KINDS.

## MILLER'S NEW PALETTE

Is held in the same manner as the one in general use, but the thumb-hole is dispensed with, thereby obviating the annoyance resulting from oil and colour running through upon the hand, and will doubtless entirely supersede the present one.

SILICA GROUND CANVASS. This Canvass, not being prepared in the usual method with common oils, causes all colours used on it to dry from the bottom, and not from the surface, as is now the case, thereby, in the painter's phrase, giving a light within. May be had of all sizes, on frames and in rolls.

SILICA VARNISH. This varnish, not being made of soft gums, like the ordinary varnish, when once dry cannot be removed from the painting; neither is it acted on by the atmosphere, which frequently occasions the effect of a thick bloom, similar to that of a plum, thereby entirely destroying the effect of the picture. All these evils are completely obviated by the use of the Silica Varnish.

Mahogany Oil and Powder Colour Boxes.

Japaned Tin Oil Colour Sketch Boxes.

Colours prepared in small boxes, for painting on Glass.

MILLER'S PREPARATION FOR CLEANING AND RESTORING OIL PAINTINGS.

In small boxes complete, with directions for use.

MILLER'S ARTISTS' COLOUR MANUFACTORY,  
56, LONG ACRE, LONDON.

## COLLIER'S SHAKESPEARE.

ON THE FIRST OF FEBRUARY

WILL BE ISSUED A VOLUME, TO BE CONTINUED EVERY OTHER MONTH, OF

## A NEW EDITION OF SHAKESPEARE'S PLAYS AND POEMS,

Collated with the Original Editions, and comprising Notes, Biography, and a History of the Origin and Progress of Dramatic Performances in England.

By J. PAYNE COLLIER, Esq., F.S.A.,

Author of "The History of English Dramatic Poetry and the Stage," &amp;c., &amp;c.

IN EIGHT HANDSOME DEMY OCTAVO VOLUMES.

Price 12s. per Volume, being £1 16s. for the Complete Work, including the Biography, History, &amp;c.

*The issue will commence with the Second Volume, as the first will contain the Biography, History of the Drama, &c.*

The want of a Library Edition of Shakespeare's Works, comprising the latest discoveries and elucidations made by celebrated Antiquaries and Commentators, has induced the Publishers to avail themselves of Mr. Collier's knowledge, ability, and zeal on this subject, in order to present the Public with as perfect an edition, more especially as regards the text of the Plays and Poems, as can be given, and in such a form and size as shall render it at once available to the scholar and the general reader.

The Publishers would feel particularly obliged by Purchasers notifying, at their earliest convenience, to their respective booksellers, their intention to take the work.

To PROVE the necessity of such an undertaking, Messrs. Whittaker and Co. have requested Mr. Collier to draw up a Pamphlet on the subject, in which will be found much curious and new information relating to the Plays and Poems. A Second Edition of this work is just issued, under the following title:—

## REASONS FOR A NEW EDITION OF SHAKESPEARE'S WORKS,

Containing notices of the defects of former impressions, and pointing out the lately acquired means of illustrating the Plays, Poems, and Biography of the Poet.

By J. PAYNE COLLIER, Esq., F.S.A.,

Author of "The History of English Dramatic Poetry and the Stage," &amp;c., &amp;c.

Second Edition, with Additions. Demy Octavo. In a Wrapper. Price 1s.

"Mr. Collier makes out his case well, and from the cogency of his "Reasons," must fully convince the Public, that in spite of the labours of Malone, &c., there is still room for doing much with the works of the immortal Poet, which the negligence of former editors, and their inadequate means, have left undone."—*Times*.

"No person who is acquainted with Mr. Collier's past contributions to the history of our dramatic literature can doubt his competency. To him it is a labour of love to illustrate the masters of the Elizabethan period; although the modesty with which he executes such services is as remarkable as the ability and the judgment which his performances display."—*Monthly Review*.

\* \* See Prospectuses at the end of the Magazines and Reviews.

WHITTAKER AND CO., AVE-MARIA LANE.

**TO ARTISTS, &c.**—An Elegant PAINTING-ROOM, with a well lighted EXHIBITION-ROOM, TO BE LET, in PARK-VILLAGE WEST, REGENT'S PARK. Inquire at No. 12 in the Village, next door to the above-mentioned building.

## SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES McLEAN**, 78, Fleet-street (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

## PAINTING IN OIL.

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC TUBES**, for COLOURS, OILS, VARNISH, MAGYLP, ASPHALTUM, &c.—**THOMAS BROWN** begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

## A SELECT COLLECTION OF PICTURES.

**MR. PHILLIPS** will SELL by AUCTION, at his GREAT ROOMS, NEW BOND-STREET, on TUESDAY, FEBRUARY 8, at One precisely, without reserve, by order of the Executors, a SELECT COLLECTION OF ANCIENT PICTURES, formed from the several Schools of Art, and uniting many excellent examples; amongst those may be noticed, a 'Sea Piece,' by W. V. Velde; a 'View in Venice,' Canaletti; two 'Games Pieces,' by Fyt and Snyder; an 'Exterior,' by Jan Steen; a 'Portrait of a Child,' Metz; two 'Views on the Amstel,' Storck; 'Landscapes,' by Lingelback, Asselyn, Moucheron, and Wilson; Historical and Classical Subjects, by N. Poussin, Rubens, and P. Veronese; Portraits, by Murillo, Sir J. Reynolds, Vandyck; and others of equal merit, by

Murillo	Signani	Mieris	Canaletti
Vandyck	Guido	Maas	Verkolie
P. de Cortona	Amiconi	Rubens	Vernet
Caracci	Panini	Storck	Bredael.

May be viewed Saturday and Monday previous to the Sale, and Catalogues had.

## THE COLLECTION OF ANCIENT PICTURES OF WILLIAM BULLOCK, ESQ.

**MR. PHILLIPS** begs to announce that he will SELL by AUCTION, at his GREAT ROOMS, NEW BOND-STREET, on TUESDAY, FEBRUARY 15, at One precisely, an interesting COLLECTION OF GALLERY and CABINET PICTURES, combining many clever examples of the early German School, as well as those of the best period of Spanish and Italian Art; in particular may be mentioned two pictures, by John Van Hughtenburgh, of the famous 'Battle of Naseby,' in 1645, and the 'Siege of Dunkirk,' in 1658, painted with great force and vigour; also two subjects by Titian and Vermeyen, the 'Siege of Tunis,' in 1535, by Charles V., and the 'Battle of Muhlberg,' in 1547, both of great interest; 'Jupiter and Antiope,' by Corregio; a replica of the famous work in the Louvre, the 'Descent of Christianity,' by Schidone; 'Christ surrounded with Angels and Saints in Adoration,' by Corregio; 'St. John,' by Caracci, from the Orleans collection; and many others of high merit, by

M. Angelo	Caracci	A. del Sarto	Teniers
Titian	P. Veronese	Schidone	Van Valens
Domenichino	Guido	Luini	Guardi
Murillo	C. Dolce	C. Maratti	Watteau, &c.

The principal part of this Collection was purchased by Mr. Bullock, at St. Lewis, on the Upper Mississippi, and are considered to have been formerly a part of the collection of Charles V. of Spain.

May be viewed two days previous to the Sale, and Catalogues had at Mr. Phillips's.

THE LATE MR. O'CONNOR'S REMAINING WORKS By Messrs. CHRISTIE and MANSON, at their great Room, King-street, St. James's-square, SATURDAY 12th FEBRUARY,

THE REMAINING FINISHED PICTURES and SKETCHES, all of cabinet size, of that highly talented Painter of British scenery, Mr. O'CONNOR, deceased.

## THE WORKS OF THE LATE SIR DAVID WILKIE, R.A.

**MESSRS. CHRISTIE and MANSON** have the honour to acquaint the Nobility and Connoisseurs, that in APRIL they will SELL by AUCTION (by order of the Executors), the beautiful WORKS of that inimitable Painter, and most distinguished ornament of the Royal Academy, SIR DAVID WILKIE, DECEASED. This Collection comprises Oil Paintings and Sketches, and a large assemblage of the most exquisite Drawings in Water Colours, and Sketches in Pen and Black Lead, including the almost invaluable Series made during his last tour in the East.

Further particulars will be duly announced.

## PALMER'S PATENT ELECTROTINT.—

The attention of Artists, Amateurs, and Publishers is respectfully directed to the importance of this new Invention, by the use of which Artists may obtain from the Patentee, at a small expense, Plates which, by the usual mode of Copper-plate Printing, will transfer to Paper perfect Fac-similes of their own Drawings or Paintings. A book, descriptive of the process, and containing full directions for Artists, is being prepared for the press, and will shortly be published.

The following specimens are just published, price 7s. 6d. each, India Proof Impressions, 4to.:—Plate No. 1. 'Dog's Head,' by T. Sampson; 2. 'Study of a Head,' by Wilkie, T. Sampson; 3. 'Dog's Head,' by T. Sampson; 4. 'Fisherman,' sketched from life in Electrotint, by T. Sampson; 5. 'Fruit Piece,' by G. Lance; 6. 'Fishing Party,' by Arnold; 7. 'Music Party,' by Arnold.

N.B.—A liberal allowance to the Trade.

For Licences, apply to the Patentee, E. PALMER, 103, NEWGATE-STREET, LONDON.

Extract from the *Times*, Jan. 15th, 1842:—"The four prints we have seen are exceedingly beautiful; they are clear and brilliant, and free from that appearance of soot in the shadows by which lithographic prints, &c., are occasionally disfigured. The new invention is yet in its very infancy; but, from what it has already developed of its powers, it may be safely foretold that it is likely to obtain a speedy and lasting maturity in the history of the Fine Arts."

## WORKS IN PROGRESS, NEARLY READY FOR PUBLICATION.

Mr. Boys has the pleasure to announce the following Works for Publication during the present season:—

AN ORIGINAL WHOLE-LENGTH PORTRAIT OF  
THE RIGHT HON. SIR ROBERT PEEL, BART.,

Esq. &c. &c.

Just Painted, taken from Life, by JOHN W. WALTON, Esq. Forming a Companion Portrait to LUCAS's celebrated Trinity House Portrait of THE DUKE OF WELLINGTON.

This most excellent original Portrait of the great Conservative Leader, whose accession to power in the councils of our beloved Sovereign, has been hailed with such truly national joy, will be engraved from the original Picture, in his best and most highly finished style,

By C. E. WAGSTAFFE, Esq.

SIZE, FORTY-ONE INCHES BY THIRTY-TWO INCHES HIGH.

"The likeness is a good one; the attitude is characteristic of the original; and the whole is spirited and full of life."—*Times*.

"This portrait is highly characteristic of Sir Robert, and conveys to the spectator a just impression of the dignity and manliness of the gifted original. The countenance is most admirably portrayed, and is really a

'speaking likeness,' full of frankness of expression and high intellect."—*Standard*.

"Mr. Walton has certainly produced a strong likeness; the attitude is easy and characteristic; and the minor points and accessories throughout well painted. A popular engraving may be executed from this performance."—*Literary Gazette*.

Price to Subscribers: First Proofs before the Letters, on India Paper, £5 5s. .... Proofs with the Letters, £3 3s. .... Prints, £1 11s. 6d.

To be advanced, on the Day of Publication, to—First Proofs before the Letters, on India Paper, £6 6s. .... Proofs with the Letters, £4 4s. .... Prints, £2 2s.

## LONDON AS IT IS:

Being a Selection of Twenty-six Views in this great Metropolis, representing its principal Streets, and characteristic accessories, Public Buildings, in connexion with the leading Thoroughfares, &c. &c.

Drawn from Nature, expressly for this work, and lithographed by THOMAS SHOTTER BOYS.

It is singular that, until the present, no work has ever undertaken to represent, on an important scale, the characteristic features of *London*; Persons from the Country, and Foreigners from all the nations of the earth, visiting this great Metropolis, have inquired and sought for in vain, such Views of London as should at once bring them back to the scenes they have left, which have so excited their astonishment and wonder; nothing but small views, insignificant in size and incorrect in delineation, could be procured; it is not doubted, then, that the present work, which embraces truth in representation, combined with judgment in selection and the highest qualities of Art, upon a scale worthy of the subject, will be prized as a desideratum.

Price: Printed with Sepia Tints, £4 4s., bound. .... A few Copies, coloured by hand, and mounted in a Portfolio, £10 10s. .... Separate Impressions, Tinted, 4s. Coloured, 7s. 6d. .... Coloured and Mounted, 10s.

## CANTERBURY PILGRIMS,

ASSEMBLED AT THE TABARD, SOUTHWARK,

PREVIOUS TO THEIR SETTING OUT ON THEIR PILGRIMAGE TO BECKETT'S TOMB.

"Uprose our host, and was our aller cock,  
And gathered us together in a flock."—Chaucer's 'Canterbury Tales.'

The point of time chosen from the graphic description, by the father of English poetry, of this most interesting record of English history, is that contained in the lines above—the dawn of the morning. The scene is the celebrated Tabard, one of those ancient picturesque inns of the fourteenth century, some remains of which are yet existing, and which is still an inn at this day, under the corrupted name of the Talbot (in the Borough).

In the bustling scene of their preparation for setting out, the various characters and costumes of the Pilgrims, "and eke in what array that they were in," the widest scope for pictorial effect is afforded; and the artist, Mr. EDWARD CORNOULD, has availed himself of it to the utmost. The Engraving will be executed by Mr. C. E. WAGSTAFF, in his most finished style of Mezzotinto. The size of the engraving will correspond with that of LANDSEER's 'Return from Hawking.'

Price to Subscribers: Proofs before Letters, on India Paper, £8 8s. .... Proofs, £5 5s. .... Prints, £3 3s.

\* \* \* An etching of this splendid subject may be seen at the Publisher's.

TWENTY-SIX VIEWS OF THE  
COLLEGES, CHAPELS, AND GARDENS OF OXFORD.

From Drawings made expressly for this Work, by W. A. DELAMOTTE.

"O ye spires of Oxford! domes and towers!  
Gardens and groves! your presence overpowers!"

The above Work will correspond with Boys's, Nash's, and other Works, and will be executed in Lithography by Mr. W. GAUCI.

Price: Bound, Printed with Tints, £4 4s. .... Coloured, and mounted in Portfolio, £10 10s.

## THE TRIAL OF THOMAS, EARL OF STRAFFORD,

IN WESTMINSTER HALL, APRIL 1641.

From the Original Picture, painted on a large scale, by WILLIAM FISK, and engraving in the most highly-finished manner, as companion to HAYTER's 'Trial of Lord William Russell.' This deeply interesting national subject contains between two and three hundred Figures, of which a considerable number are Portraits of the celebrated men who lived in that eventful period.

Price to Subscribers: Prints, £2 2s. .... Lettered Proofs, £3 3s. .... Plain Proofs, before Letters, £6 6s. .... First Proofs, before Letters, on India Paper (strictly limited to Fifty Impressions, many of which are already subscribed for), £8 8s.

NOW PUBLISHED,

LUCAS'S FIRST AND MOST CELEBRATED PORTRAIT OF  
HIS GRACE THE DUKE OF WELLINGTON, K.G.

AS MASTER OF THE TRINITY HOUSE.

Engraved by HENRY COUSINS, Esq.

First Proofs, before the Letters, on India Paper, all sold. .... Proofs, with Letters, a few left, £4 4s. .... Prints, £2 2s.

A MONTHLY JOURNAL OF THE FINE ARTS.

No. 38.

LONDON: MARCH 1, 1842.

PRICE 1s.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE TO ALL PARTS OF THE UNITED KINGDOM.

**BRITISH INSTITUTION, PALL-MALL.**—The GALLERY for the Exhibition and Sale of the Works of British Artists IS OPEN daily, from Ten in the morning till Five in the evening. Admission 1s.; Catalogues 1s. WILLIAM BARNARD, Keeper.

**ARTISTS' AND AMATEURS' CONVERSAZIONE.**—The Members are reminded that the SECOND MEETING of the Season will take place at the FREEMASON'S TAVERN, on WEDNESDAY, the 2nd of MARCH.

**ART-UNION, ISLINGTON and NORTH LONDON.**—Subscription to the Annual Distribution, Half a Guinea. The Lists will close on the 15th of March. Particulars may be obtained, and Subscriptions paid, on application to the Secretaries at the office of the Society, Halton Cottage, Halton-street, Islington; to Mr. Winbolt, City of London Institution, 165, Aldersgate-street; to Mr. Tucker, South-west Literary Society; or to the Bankers, Messrs. Rogers, Olding, and Co., Clement's-lane.

T. W. BENTLEY, } Hon. Secs.  
W. H. BUTTERFIELD, }

**THE APOLLO ASSOCIATION, (or ART-UNION) OF NEW YORK, to BRITISH ARTISTS.** This Institution, the first and only one of the kind in the United States, and similar in plan to the Art-Union of London, is now in successful operation, having about 4000 Members.

A Semi-Annual Exhibition is given of the works of American and Foreign Artists; and the surplus funds are devoted to the purchase of pictures, for distribution by lot among the Members.

British Artists, who may wish to send specimens of their works for exhibition and sale, may do so through the undersigned, who will give all necessary particulars. GEORGE E. PUTNAM, Hon. Sec. Wiley and Putnam, Stationer's Hall Court.

**ETCHING CLUB.**—A few of the large paper Proof Copies of THE DESERTED VILLAGE, illustrated by THE ETCHING CLUB, remain, and may be had on application to Mr. S. Redgrave, the Secretary, Hyde Park Gate, Kensington Gore; or to Mr. Griffiths, 14, Waterloo-place, Pall-mall.

THE ETCHING CLUB are now engaged in the illustration of Milton's Poems, "l'Allegro," and "Penseroso," on a similar plan.

**ASSOCIATION FOR THE PURCHASE OF BRITISH ENGRAVINGS.**

**THE COMMITTEE** beg to intimate, that the SUBSCRIPTION LISTS for 1842 are now OPEN, and request intending Subscribers to insert their names as soon as possible.

The object of this Association is to cultivate a taste for the Fine Arts, and to encourage native talent, by the distribution among its Members of Engravings of standard reputation, the productions of British Artists.

A Subscription of Five Shillings constitutes membership; but a Member may subscribe for any number of shares. The whole of the funds are expended each year in purchasing engravings, selected by a Committee of the Members, and distributed by ballot at a General Meeting of the Association, called by public advertisement.

Subscription Lists lie with the Honorary Secretaries. JAMES NEWLANDS, Architect, 9, Argyll-square, Edinburgh, Secretary.

Honorary Secretaries for London:—ANDREW MOFFAT, Bookseller, 6, Skinner-street, Snow-hill; ALEXANDER WILSON, Engraver, 28, Thanet-street, Burton-crescent.

Now ready,  
**THE PORTRAIT OF THE RIGHT HON. LORD STANLEY, M.P.** Beautifully engraved by F. C. Lewis, Esq., after the original, drawn from the life, the same size as the exquisite heads of the "Duke of Wellington" and "Sir Robert Peel," by Sir Thomas Lawrence, just published by Messrs. H. Graves and Co. Price—Prints £1 1s.; Proofs with Autographs, £2 2s. London: H. Graves and Co., printers and publishers, by special appointment, to her Majesty and H.R.H. Prince Albert, 6, Pall-mall.

NEARLY READY FOR PUBLICATION, IN ONE VOLUME, QUARTO,  
**DISCOURSES** delivered to the STUDENTS of the ROYAL ACADEMY, BY SIR JOSHUA REYNOLDS. Illustrated by Explanatory Notes and Plates, By JOHN BURNET, F.R.S. London: James Carpenter, Old Bond-street.

Immediately, in 1 vol., royal 4to., price 16s.,  
**SKETCHES FOR RUSTIC WORK;** Including BRIDGES, GARDEN BUILDINGS, SEATS, FURNITURE, ETC., 18 plates. The Scenic Views in the Tinted style of Zincography; with descriptions, and estimates of the Garden Buildings. By T. J. RICAUTI, Architect.

"This work, in addition to the Gate-ledge, Winter-house for Plants, Pigeon-house, Fishing-cottage, &c., contains a Design for a Gardener's Cottage, with Fruit-rooms, &c., constructed exactly upon the principles advocated by Dr. Lindley in the "Gardener's Chronicle" for September 18th, and October 2nd, 1841. James Carpenter, Old Bond-street.

Just published, in royal 4to., price £1 5s. bound,  
**RUSTIC ARCHITECTURE—**PICTURESQUE DECORATIONS OF RURAL BUILDINGS in the Use of ROUGH WOOD, THATCH, ETC. Illustrated by Forty-two Drawings; consisting of Plans, Elevations, Sections, and Perspective Views; the Doors, Windows, Chimney Shafts, &c., drawn geometrically to a large scale; with descriptions and estimated costs. By T. J. RICAUTI, Architect.

"We have repeatedly and strongly recommended this elegant and useful Work, and can safely say, that we think no gentleman who purchases it will be disappointed."—*Loudon's Gardener's Magazine.*

James Carpenter, Old Bond-street.

Published in 4to., Price £4 10s. in French Boards; and on Royal Paper, 4to., with proof impressions of the Plates, and a Portrait of the Author, Price £7 7s.,

**A TREATISE ON PAINTING.** In Four Parts. Illustrated by One Hundred and Thirty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNET, F.R.S.

1. On the EDUCATION OF THE EYE. Second Edition. Price £1 5s.

2. On COMPOSITION. Fifth Edition. Price 15s. in boards.

3. On LIGHT AND SHADE. Fifth Edition. Price 18s. in boards.

4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This work is particularly recommended to the Students in Art in the New Edition of the Encyclopædia Britannica—See the article on Drawing.

James Carpenter, Bond-street.

**CHILDE HAROLD ILLUSTRATED.** Now ready, royal 8vo., £2 2s., or Indian Proofs, £3 3s.,  
**CHILDE HAROLD'S PILGRIMAGE.** By LORD BYRON. A new and beautifully illustrated Edition, embellished with Sixty engravings by Finden, from original Drawings made by eminent Artists, and a portrait of Lord Byron in his Albanian dress, by Phillips, never before engraved.

John Murray, Albermarle-street.

**FRESCO AND ENCAUSTIC PAINTING.**  
Now in press, and shortly will be published, price 5s.,  
**A TREATISE ON FRESCO AND ENCAUSTIC PAINTING;** by EUGENIO LATILLA; showing in detail the methods practised by the Greeks and Italians, with the various Stuccoes, Colours, and Mediums, as well as manner of applying them. Also, an Improved Method of Painting Cartoons; with Observations upon Mural Decoration generally.  
Published by the Author, 78, Newman-street; and to be had of the Artists' Colourmen.

This day is published,  
**ROSCOE'S SOUTH WALES,** new edition, with 50 steel Engravings, and a coloured Map.  
This greatly improved edition is published at £1 5s. cloth extra, and £1 15s. morocco extra, and is uniform with the new edition of Mr. Roscoe's "North Wales." The morocco copies are bound in the best manner, and form superior and elegant volumes for presents.  
Tilt and Bogue; Simpkins and Co.; and Orr and Co., London.

Now ready, post 8vo., 18s.,  
**HANDBOOK to the PUBLIC GALLERIES** of ART in and near LONDON. With CATALOGUES of the PICTURES, accompanied by CRITICAL, HISTORICAL, and BIOGRAPHICAL NOTICES. By Mrs. JAMESON.

"To each Gallery is prefixed a short historical and explanatory introduction, giving an account of its formation, its present state, the days and hours when open to the Public," &c.  
"Mrs. Jameson has indulged in less of dissertation than we should have thought possible, producing instead, a Guide-Book of singular unity, clearness, and value. It could hardly be more thoroughly executed to keep the promise of its title."—*Athenæum*.  
John Murray, Albemarle-street.

Now ready, post 8vo., 12s.,  
**HANDBOOK of ITALIAN PAINTING.** Translated from the German of KUGLER, and Edited with Notes by C. L. EASTLAKE, R.A.  
Extract from Editor's Preface.

"This work is intended to supply a want long felt by persons endeavouring to acquire a knowledge of the Early History and Progress of the Art of Painting, which no other English work supplies, viz., a short and easily intelligible guide, pointing out to the unlearned the leading style of Art—the perusal of which will serve as a fit preparation for a visit to the collections of Painting on the Continent, and in our own Country; while the remarks it contains with reference to the characteristics of Schools and individual Artists, recommend it as a means of forming the taste."  
John Murray, Albemarle-street.

**T. H. FIELDING'S WORKS.**  
**THE THEORY OF PAINTING.** 3rd Edition, much enlarged, royal 8vo. £1 6s. and illustrated with numerous Plates: to which is added an introduction to Painting in Water Colours, with an index of Mixed Tints, as also an Appendix, containing a Manual of Lithography.

**THE ART OF PAINTING in OIL and WATER COLOURS,** for Landscapes and Portraits, including the preparation of Colours, Vehicles, Oils, &c., &c.: with numerous Plates. Imperial 8vo. £1 7s.

**A SYNOPSIS of PRACTICAL PERSPECTIVE,** Linear and Aerial, 19 Plates, royal 8vo. £1 4s.  
**THE ART OF ENGRAVING,** being an historical and distinct account of the different kinds of Engraving now in use. Illustrated by numerous specimens of the best engravers in each style. Royal 8vo. 12s.  
Ackermann and Co. 56, Strand.

Now publishing, beautifully printed and neatly bound in cloth, price 7s., or in six parts at 1s., illustrated with Water-coloured Engravings.

**THE COMPLETE GUIDE to the FINE ARTS:** containing full Instructions in Drawing, Oil and Water-colour Painting, Portrait Painting, Landscape Painting, Miniature Painting, Perspective, Crayon Painting, Grecian and Persian Painting, Flower Painting, Lithography, Engraving on Wood, Copper, &c., and valuable Receipts.  
Part 1. contains—The Whole Art of Oil Painting—2. Drawing and Sketching from Nature—3. Drawing in Perspective—4. Miniature Painting—5. Engravings on Wood, Copper, and Lithographic Drawing—6. Landscape Painting in Water-colours, &c. Each part complete in itself.  
T. Sloper, 19, High-street, Marylebone; and W. Brittain, Paternoster-row.

**RATCLIFF'S PATENT INKSTAND,** the most complete yet offered to the public, in which the usual faults of inkholders—mouldiness, corrosion, evaporation, and thickening of ink—are completely avoided. An immense improvement on the fountain and other inkstands now in use, and will prove invaluable in India and other hot climates.  
Sold by L. Booth, Duke-street, Portland-place; and by all Stationers, in elegantly Bronzed, Or-molu, or China Mountings, suitable for the Office and Drawing-room.  
Merchants and Foreign Orders supplied on liberal terms.

**J. M. W. TURNER, R.A.,** proposes to PUBLISH, by Subscription, FIVE LARGE PLATES, viz.:

Dido and Æneas (morning of the chase) ..... 24 in. by 16, Smith  
Caligula's Bridge ..... 24 — 16 Goodall  
Juliet, after the Masquerade ..... 22½ — 16½ Hollis  
Mercury and Herse (upright) ..... 18½ — 15 Cousins  
Crossing the Brook (ditto) ..... 18½ — 15 Brandard  
The plates are Mr. Turner's own property, and may be subscribed for separately; the issue to be strictly limited to 500, when the plates will be destroyed. The impressions to be signed and numbered by Mr. Turner himself, and delivered in the order of subscription.—Subscribers' names received only by Thomas Griffin, Esq., 14, Waterloo-place, Pall-mall, where an impression of each plate, and the prospectus of publication, may be seen between the hours of eleven and four, any day in the week except Monday.

ADAPTED FOR PRESENTS AND REWARD BOOKS. Recently published by Whittaker and Co., Ave Maria Lane.

**THE ORIGIN, PROGRESS, and PRESENT CONDITION of the FINE ARTS in GREAT BRITAIN and IRELAND.** By W. B. SANSFIELD TAYLOR, Curator of the Living Model Academy, &c. 2 vols. post 8vo., with wood-cuts, price 21s. cloth.

**MÉRIMEE'S ART OF PAINTING in OIL and FRESCO.** Translated, with considerable additions, by W. B. SANSFIELD TAYLOR, Senior Curator of the Living Model Academy, &c., with two chromatic tables, coloured. Post 8vo., 12s. cloth.

**CHAUCEER'S POEMS MODERNIZED.** By WORDSWORTH and others, with Introduction, by R. H. HORNE, &c. Small 8vo., 7s. 6d. cloth.

**THE HISTORY and DESCRIPTION of FOSSIL FUEL, the COLLIERIES, and COAL TRADE of GREAT BRITAIN.** By the Author of "Treatise on Manufactures in Metal," in "Lardner's Cyclopædia." Second edition, 8vo., 14s. cloth.

**D. R. GREGORY'S HINTS, for the USE of TEACHERS of ELEMENTARY MATHEMATICS, and of SELF-TAUGHT STUDENTS;** with Selection of Miscellaneous Tables, and an Appendix on the Geometrical Division of Plane Surfaces. 12mo., price 6s. cloth.

**KEIGHTLEY'S HISTORY of ENGLAND.** Intended for Students, and those desirous of acquiring the important facts of the history in an impartial and compendious form. 3 vols., 8vo., price £1 11s. 6d. cloth.

**CUVIER'S ANIMAL KINGDOM.** In Sixteen Volumes, with 814 Engravings. Translated by E. GRIFFITH, F.A.S., and Others. The small remaining Stock reduced to the following prices:—  
Demy 8vo., formerly £26 8s. cloth, now 12 guineas.  
Royal 8vo., col., " 51 18s. " 25 ..  
Demy 4to., India proof, 52 16s. " 24 pounds.

**THE WORKS of the LATE SIR DAVID WILKIE, R.A.**

**MESSRS. CHRISTIE and MANSON** have the honour to acquaint the Nobility and Connoisseurs, that in APRIL they will SELL by AUCTION (by order of the Executors), the beautiful WORKS of that inimitable Painter, and most distinguished ornament of the Royal Academy, SIR DAVID WILKIE, DECEASED.  
This Collection comprises Oil Paintings and Sketches, and a large assemblage of the most exquisite Drawings in Water Colours, and Sketches in Pen and Black Lead, including the almost invaluable Series made during his last tour in the East.  
Further particulars will be duly announced.

The Cabinet of Pictures of John Knowles, Esq., F.R.S., deceased.—By Messrs. CHRISTIE and MANSON, at their GREAT ROOM, KING-STREET, St. James's-square, on FRIDAY, APRIL 22, at One precisely.

**THE CHOICE COLLECTION of Italian, French, Flemish, Dutch, and English PICTURES,** collected during the last 40 years by that excellent connoisseur, John Knowles, Esq., F.R.S., deceased; comprising a 'Musical Party,' a capital work of George; the 'Virgin appearing to St. Francis,' by Mascelletta; and 'Venus at the Bath,' by Palma, from the Orleans Gallery; and others by

Salviati	Ostade	Both
L. Carracci	V. Der Neer	Wouvermans
Carravaggio	Rembrandt	V. De Velde
J. De Mabuse	Lievens	Sir J. Reynolds
Rubens	Kierinx	Wilson
V. Dyck	Bergheim	Gainsborough
Swaneveldt	Poelenburg	Morland
Temers	Cuyp	Stothard

Also two fine works of Fuseli; a Bust of Garrick, in terra-cotta, by Nollekins; and a terra-cotta of Moses, after M. Angelo.

May be viewed two days preceding, and catalogues had.

A Choice Collection of Pictures, and Splendid Carvings in Oak, from Worcestershire.

**MR. PHILLIPS** begs to announce, that he is instructed to SELL by AUCTION, at his GREAT ROOMS, NEW BOND-STREET, on TUESDAY, MARCH 8, at One precisely, A CHOICE COLLECTION of ANCIENT CABINET AND GALLERY PICTURES,

by distinguished artists of the Italian, Flemish, and French Schools, selected with taste as to subject, and at considerable cost, by Charles Collins, Esq., whose attention has been given to the purchase of Works of Art for many years past, and particularly to the Italian School; amongst which may be mentioned a 'Repose in Egypt,' by Barocci; a 'Magdalen,' by Guido; 'The Wise Men's Offering,' by Albano; 'Leda,' by Cignani; and other subjects of equal merit by

The Caracci	Guercino	Mola
The Pontius	Bassano	Orizonti
Domenichino	Cortona	Pannini

Also many excellent examples of the Dutch and Flemish Schools, including those of J. Steen, Weenix, P. Neefs, Teniers, P. Bril, Berchem, &c., and a series of 17 exquisite Carvings in Scripture Pieces, after designs by Michael Angelo, formerly in the church of Notre Dame, in the finest state.

May be viewed two days preceding the day of Sale, and Catalogues had at Mr. Phillips's.

A Collection of Ancient Drawings in the Portfolio, Books of Print, Musée Français, fine proofs, from the Country.

**MR. PHILLIPS** begs to announce that he will SELL by AUCTION, at his GREAT ROOMS, NEW BOND-STREET, on THURSDAY, MARCH 10, and following Day, at One precisely, A VALUABLE COLLECTION of ORIGINAL DRAWINGS in the portfolio, by the distinguished masters of the German, Italian, Dutch, Flemish, and French Schools, the property of a Gentleman, and brought from his residence in the country, including fine examples by Raphael, Parmigiano, Titian, J. Romano, A. Sacchi, Berchem, V. Velde, and other eminent artists; also a few portfolios of engravings, and books of prints, including the Dresden Gallery, a fine old copy, the Musée Français, fine proofs, folio, and other Works on Art.

May be viewed two days preceding the sale; and catalogues had ten days prior at Mr. Phillips's.

**THE LATE MONSIEUR DE ST. DENIS'S COLLECTION of PICTURES.**

**MR. PHILLIPS** begs to announce, that he is instructed to SUBMIT to SALE by AUCTION, at his GREAT ROOMS, NEW BOND-STREET, on WEDNESDAY, MARCH 23rd, and following Day, at One precisely, A HIGHLY PLEASING COLLECTION OF CABINET PICTURES,

principally formed from the French, Dutch, and Flemish Schools, by the distinguished Amateur, Mons. de St. Denis, late of Paris, deceased; including several charming examples by Watteau, Greuze, Pater, Boucher, Vernet, Guardi, Canaletto, &c., in particular the celebrated 'Belle Paysanne,' by Greuze; a 'Bacchante,' by the same; the original study for the 'Girl with a Dog,' and his own Portrait, presented to the late owner, accompanied with the artist's original autograph letter, 'The Discovery,' by Watteau, and the 'Picture Letter,' with several Panels, by this artist and Boucher; a splendid picture by Fyt; a 'Coast Scene,' by Vander Capella; a 'Moonlight Scene,' by Van der Neer, his *chef-d'œuvre*; three 'Battle Pieces,' by Hughtenborg; two Compositions by Van Stry, and two by Vanderneulen; Scenes by Canaletto and Guardi; Portraits of Henry VIII., Mary Queen of Scots, Montaigne, and particularly the Daughter of the Duke d'Antin, by Watteau; also clever examples by Gonzales, Cuyp, Slengelandt, Vernet, Swaneveldt, Dekoning, Ferg, Guardi, &c.

To be publicly viewed two days previous to the Day of Sale, at Mr. Phillips's, as above.

**BOND'S PERMANENT MARKING INK:** the original and far superior article, requiring no preparation, for Writing upon Linen, &c., so as to prevent the liability of loss or mistake.—Sold by the Preparer, JOHN BOND, Chemist, 28, Long-lane, West Smithfield, London; Sutherland, Calton-street, Edinburgh; Ferrier and Co., Dublin; and most Stationers, &c. Price One Shilling a Bottle.

**POOLCOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFIELD and Co., Cutlers and Razor-makers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFIELD'S London made Table Knives, at BLOFIELD and Co.'s, 6, Middle-row, Holborn.

## FRESCO PAINTING;

## ANCIENT AND MODERN.

In the first period of its existence Art may be considered as a language, it next becomes the form of the beautiful, the symbol of feeling, and of the abstract and general conceptions of the mind. For the religious impressions, the mythic traditions of a people soon become embodied; the virtues which adorn, the vices which degrade society assume a figurative type; man desires to imitate and to record, and every age is anxious to transmit its impressions to the future, to heighten them by refinement of expression, and to give them the character of duration. This is particularly true wherever, as a national characteristic, the imagination is more predominant than reason; where ideas, which possess no substantive existence, require a kind of objective certainty to represent them; where language is informed, inadequate, or the means are unknown for the expression of thought, by printed characters.

It was thus in Egypt and in Greece, where Art was directed to inculcate religion, deify heroic action, hallow the social virtues, and refine the public feeling.

In works of Art, the characteristic of the Greek, is the perception of the beautiful; that of the Egyptian, sublimity and duration. The Greek was imaginative, highly rationalistic, and sceptical; the Egyptian was gloomy, fettered by the institution of castes, reflective, but debased by superstition. Painting and Sculpture were alike patronised by the religious institutions of both nations: but the mind of the Egyptian artist was palsied by the restrictions of the priesthood, which forbade all change in the form of the human figure, enjoined the same formal outline, and conventional mode of execution. Even under the influence of Greek and Roman con-

quest, or the reign of the Ptolemies, they remained in this respect unchanged. Apart from the stimulating atmosphere, the free soil, and unfettered habits of the Greek, the philosopher promoted the Fine Arts, as a mode of refinement; the priest, because it excited religious feeling; and the legislator because the emotions of patriotism were heightened by the commemoration of great events. Mural painting, the first step towards monumental works of Art, was early employed by the Egyptians, the Greeks, and other nations, for the purpose of internal and external decoration.

This appears, from the often cited passage in Ezekiel viii., 10, and chapter xxiii., 14, 15; as well as from the general testimony of Greek and Latin authors.

Of late years this practice of mural painting has been disputed by many critics of Italy, Germany, and France. In France opinion is chiefly divided by the theory of Raoul-Rochette, and Letronne. M. Rochette is of opinion, that the paintings mentioned by Pausanias, in the Pœcile, painted by Polygnotus, Micon, and Pantenus, were on wood inserted in the wall, and that those in the Temple of Theseus, and of the Dioscuri, were similarly executed. He maintains this opinion, not only by the most extensive erudition, but by the following quotation, from the letters of Synesius: "The Pœcile has ceased to be the Pœcile since a proconsul had removed the panels of wood illustrious by the art of Polygnotus." But if we consider the description of Pausanias, not only in relation to the Pœcile, but with respect to other buildings, it is difficult to escape the conviction that they were painted on the wall. Of the Pœcile he says, "In the middle wall are Theseus and the Athenians fighting against the Amazons;" next to which are the "Greeks who have taken Ilium;" and this latter picture is evidently of considerable extent. In the Temple of Theseus he describes the picture of the third wall as not clear, because injured by time; and because Micon had not expressed the whole affair. Similar descriptions apply to the Dioscuri. It is not improbable, however, that Pausanias has referred both to pictures and painting on the walls. We know that pictures were placed in the temples at a very early period. They were at first votive, not necessarily mythic, but consecrated as being placed in the temples, and comprised under the general class of *αναθηματα*. Portraits were so consecrated, not only from a political motive, but a religious feeling; for instance, the portrait of Themistocles, in the Parthenon, placed there as a public expiation of the injustice with which the Athenians had treated the Conqueror of Salamis.

When this custom first commenced, it is impossible to state (Boech. Corpus. Ins. Gr. tome i., p. 18, 19), but it was extensively practised, the pictures were arranged, and it was to the Heræon of Samos that Strabo first applied the term Pinakothek. Considering, however, the opinion of Pliny, the statement of Pausanias as regards mural painting, that it was an Art not unknown in other countries, the certainty that colour was employed in the decoration of Greek architecture, and in part applied to statues—admitting to the full extent the existence of tabular pictures on wood, placed in public buildings, and the fact of their removal by the Romans—it does not appear that mural painting was unknown, to the extent M. Rochette would suggest; although possibly its general employment has been hitherto too readily admitted. Whether the

\* M. Rochette uses this word, I think, in the sense here adopted, that is as "consecrated;" it might be also employed in the meaning of "accursed," "devoted to the infernal deities." It would be an interesting inquiry to ascertain whether in times of party spirit or strife, or on occasion of cowardice, betrayal of public trust, &c., the Greeks might not place the portrait of a political antagonist or state criminal in a temple from this latter motive. At Venice, in the Hall of the Great Council, the place for the portrait of Marino Faliero is painted over with a black veil, and the following words are inscribed: "Hic est locus Marini Faliero, decapitati pro criminibus." Would not this tend to confirm the probability of such a practice in Greece? Victor Hugo notices a similar fact in Egypt.

Greeks painted in fresco is a doubtful fact: painting on stucco, in distemper, and encaustic, is well attested.\* Painting in distemper consisted in dissolving colour in water, mixing it with glue, and then intensely varnishing the surface; Encaustic was a kind of painting in which the colours were mixed with wax, and which, by various modes of applying heat, became fixed in their original splendour. It has been lately revived at Munich, according to a process made known by Montabert, in his "Traité de la Peinture."

In whatever manner the Fine Arts may have been practised in Rome, their real development, and the refinement produced by the influence of literature, was the result of the conquest of Græcia Magna and Sicily.

GRÆCIA capta ferum victorem cepit, et artes,  
Intulit agresti Latio.

It was Greece who placed her fetters upon her barbaric conqueror, and held him in a slavery, more glorious than his own freedom; humanizing his character, and redeeming, in some degree, the misery entailed upon the world, by his desire of universal mastery and shameless lust of conquest. Thus the Roman knew, Quid Sophocles, et Thespis, et Eschylus utile ferrent; and the robbery of Greek Temples, gave him the finest works of plastic Art, by which to guide his judgment and refine his taste. One great proof, indeed, of the practice of mural painting in Greece, is the knowledge we possess of the similar custom at Rome. For here, the Fine Arts were exclusively cultivated by Greek artists, or by others educated in Greek schools; and the same materials for colour were employed. Before this period mural painting had been practised by the Etruscans, Volsci, and Latins; and it was customary to cover sandstone and brick with a coating of calcareous composition, upon which colour was employed. This at first might be monochromatic. Mere ornamental fresco was the work of inferior artists; as, for instance, the decorations in the country towns of Herculaneum, and Pompeii, but the houses at Rome, the Palace of the Cæsars, the public edifices, the Baths of Titus, give examples of a much higher order. Much of this was meant to be seen but by torch light; and its style may be considered Romanesque, rather than Arabesque. According to Vitruvius, the ground for fresco pointing was thus prepared. The colours were applied moist to the surface of a stucco, formed of powdered marble mixed with lime. The wall or ceiling had three distinct coatings of this material, of which the first contained a coarse powder, the second a finer, and the other the finest marble dust; and this was carefully polished. The frescoes in the Baths of Livia and of Titus, and the ground of the celebrated Aldobrandini picture are of this kind. Those found at Rome, in 1780, which became the property of the Prelate Casali, considered as forming one wall of an extensive gallery, and which, from the subject represented, were called Dapiferi, are similarly executed. By experiments made by Sir H. Davy, no appearance of any wax varnish, or of animal or vegetable gluten to fix the colour, was perceptible. In black colours (possibly at all times difficult to treat), Pliny states, that glue was used to fix them. Duration of colour must depend upon the employment of proper vehicles, and the careful preparation of the wall. The history of ancient mural painting may here properly close. To trace it during the decline and fall of the Roman Empire; its state during the struggle of Christianity for the mastery of the human mind, and its final grandeur in Michael Angelo and Raffaele, would be more properly the subject of a distinct essay. This period is, therefore, omitted, that attention may be directed to the HISTORY and PROCESS and present state of FRESCO PAINTING in Germany, Italy and France.

The process of fresco-painting consists in this—A well-dried wall is covered over with one or

\* See a valuable note (in Kugler's Hand-Book of Painting), by Mr. Eastlake, page 95.

two lines (about 1-16th of an inch thick) of a very carefully-prepared mortar, made of fine river sand and old lime; which serves as the ground of the painting, and possesses the property, *so long as it is in a damp state*, of fixing the colours applied to it without the aid of size or of any other medium; so that neither when dry, nor by means of water, can they be effaced, but in the course of time become more completely united with the surface of the wall. This union of the pigment with the mortar, prepared as above, is not merely a *mechanical* adhesion, but a *real chemical cohesion*. For the lime, thus slacked in the wet mortar, has the peculiar property, during its drying or setting, of working to the surface, and, owing to the absorption of carbonic acid from the atmospheric air, to become there *crystallized* to a fine transparent enamel, which the colouring matter, when applied, thoroughly penetrates, invests, and becomes itself so fixed. This crystallized surface, a kind of *stalactite formation*, is with difficulty soluble in water, and is not destroyed by other atmospheric influences; but by the continued chemical action of the carbonic acid and moisture, it becomes as it were still further concreted, or harder and harder still. In this chemical union of the pigment with the lime, (which is applied to the mortar or to the colours themselves as a hydrate of lime, but which in the end at least partly passes into a carbonated neutral salt), the condition now exists, that those pigments only can be employed which are not altered by caustic lime. On this account, therefore, not only is the use of vegetable and animal pigments in general excluded, but those even of the mineral kingdom which possess elementary properties in too great affinity with or liable to be decomposed by the lime; for else they not only lose their own former natural condition, but enter into a new secondary one with the lime, by which the colour becomes changed. Now as this fixing of the colour depends on the humidity contained in the thin coating of lime, it follows that the laying on of this and the completion of the painting upon it can proceed but by degrees; and that only so much of the wall, therefore, must be covered at a time as the painter is certain of finishing in one day. Colours applied afterwards could never durably unite with the ground on which the crystallized surface is already formed, as the communication between the colours and the solution of lime still contained in the mortar would cease. As the colours appear considerably darker (not, however, all equally so) before they are completely dry, it may be requisite for the most skilful artist to retouch parts of the painting in distemper, to soften any harshness in outline or inequality that may exist.\* For the same reason, it is apparent that a well-balanced and finely-felt harmony of light and shade is not so attainable, as in an art where the painter has always before his eyes not only the true effect of that part of his work which is completed, but can retouch it, changing and labouring the colours as the effect requires, till by a gradual process of re-painting and glazing the wished-for harmony is attained. Another peculiarity of fresco-painting, and one much more important in its consequences, is its entire want of all transparent and juicy colours; so that shades of only moderate depth appear dry, dim, and deprived of that spirit of illusory truth so favoured by the use of colours mixed with rich vehicles. On the other hand, fresco surpasses all other modes of painting in representing gradations of light. The deficiency of a pure crimson and bright red, caused by the exclusion of all vegetable dyes, is to be considered but as a secondary evil: it is one which in the

\* But this is a custom, if possible, invariably to be avoided; it diminishes that vigorous feeling with which works of this kind should be conducted, nourishes an inclination towards littleness in detail; faults are corrected, rather than foreseen; it is censured by many of the most eminent Italian painters, and thus condemned by Vasari: "Però quelli che cercano lavorar in muro, lavorino virilmente a fresco, e non ritocchino a secco; perché, oltre l'esser cosa vilissima rende più corta vita alle pitture," &c.

later middle ages was remedied by superficial coatings of transparent colours in distemper.

Thus it is clear that fresco is not adapted for any such branch of Art as principally requires a magical effect of light, shade, and colour, or which, in short, aims at producing illusion: this should be as much as possible avoided, for all attempts of this description only tend to create hopes we cannot realize, and subvert what is possible by efforts at impossible effect. On the other hand fresco essentially possesses the power of representing form and figure—all that can express thought, idea, character; and is perfectly adapted to any undertaking which acknowledges these as its legitimate object. If to this we add its extraordinary durability, and consider that not only is it connected but indissolubly united with the wall as the polish to the marble, we must then admit that it is the most suitable, if it be not the *only* style appropriate for monumental works, in which form and character predominate above the charms of light and colour, and which produce effect rather by the expression of thought than by an effusion of feeling allied to the style of lyric poetry.

But it is objected, that the want of transparent dark colours, and the impossibility of producing deep and dark shades of great illusory effect, are fatal to its general employment. Yet this supposed imperfection (for it is no more) renders it the more appropriate for designs upon a *large scale*; which are in general so connected with architecture that they seem to form one organic and harmonious whole. Architecture gives the principal forms; to enliven without destroying them is the task of fresco painting. Its subjects must make, therefore, no appeals to the illusions of the senses, nor aim at being mistaken for reality: the highest object should be poetic and artistic truth, in so far as this is attainable without lowering its greatness of style. When, however, fresco united with architecture has fulfilled the required end (that is, of artistically enlivening the architectural forms, either spherical, cylindrical, or plain surfaces, without destroying their outline), then the very impossibility of breaking the apparent surface of the wall by *deep deceptive shades*, making the represented scene appear like reality, becomes a matter of appropriate consideration. We must seek for aid from an antagonist power. This we find in the extraordinary light of the lime and of the colours united with it, which afford sufficient means to produce the requisite effect. For, let it be assumed that the whole picture is several shades lighter than if executed in oil, or than even reality would be in a diffused light, yet the perfect sufficiency of the means in question to obtain a satisfactory result with consistency and truth is not to be doubted, without the picture having the appearance of reality, or without changing and interrupting the effect of the entire architectural surface. And here, too, another advantage must not be overlooked, namely, that the space painted seems enlarged by light colours, and appears loftier, more free, and cheerful. This theory is fully confirmed by the works of the middle ages, when painting had attained its highest degree of perfection, from the time of Giotto to Raffaele. The celebrated artists of that period endeavoured to produce mural works of Art, which were to be congenially blended with the architectural design, and not to appear as additions at once superfluous and unmeaning. They made no attempts to foreshorten their figures (*either when the horizon was low, or even on roofs*); they avoided all such tricks, which could but have produced an unideal relation between nature and the imitations of Art, and painted the surface as they would have done pictures in general. The absurd custom of totally transforming and destroying the architectural surface by means of perspective and optical trick, so as apparently to raise the roof of a hall or church having a flat roof, to a cupola, &c., commenced during the decline of the art under Correggio, and is most remarkable at

the period of Andrea Pozzo and his contemporaries. But in adopting these views, modern artists fail not unfrequently, by giving *too deep a tone to their colours*. It arises from this circumstance. Accustomed to paint in oil, they seek to transfer to fresco the effect of oil. This appears at first an insignificant mistake, but in reality it destroys every principle of fresco. For the inevitable results of these attempts at impossible illusion are dry, dull, heavy shades, the destruction of the architectural surface, and finally, want of light and of equality of colour.

Having now considered the process, the particular limits and powers of fresco, it is requisite to give some general account of its present position as a branch of Art. It has been frequently asserted, "that the secret of fresco painting was for a long time lost;" or, "that it remained entirely unpractised, until lately brought into use by the German artists at Rome." This opinion is unfounded.

It is well known that the Italians and the Tyrolese use it extensively even to the present time in their churches, monasteries, and palaces; so that the German painters can maintain no claim to its re-discovery. They may be said to have restored the Art, inasmuch as they have based it upon rational principles. They have sought, after the example of the masters of the fifteenth century, by pursuing what others have despised—the study of nature—to give it a place no less becoming than important in the interests of religion and life. To this merit the German painters are fully entitled.

There is a period in the history of Art when the very genius which led to its progression, becomes the cause of its decline. It is when painting ceases to exhibit nature, but merely reflects the artist. When the conception of great thoughts, the scenes of nature, the dramatic incidents of life, when all that prompts to individual action, or links man to his fellow man in the wide relationship of humanity, giving to Art the sublimity of revelation, the character of history and the force of truth, have ceased to influence the *mind*,—the *picture* will become the tame and spiritless effort of an imagination conventional and unreal, of conceptions faintly reflecting the creative power of the past, of thought and feeling, bearing a species of causeless affinity with the affections, emotions, or actions of man; and of ideas, the highest excellence of which may consist in assimilating Art to the character of a book of fashion;—the mark of the predominating influence, the type of the opinions of the day. And when to this we add, the evil that must arise from fixing the essential qualities of a work of Art, not in its internal excellence, but in the practised superiority of external treatment: when that which forms the inward life and soul of Art is sacrificed to that which is its mere mechanic power, we cannot wonder, that mediocrity in the artist, dogmatism in criticism, or indifference in the people, should become the inevitable result. This, or something like to this, was the state of Art at periods of the sixteenth and seventeenth centuries. But about the middle of the eighteenth a desire for severer study again appeared, and the critical spirit of the German, which has been so deeply exercised at all periods in literature, was now also turned to Art. In 1700, Christian Ludwig von Hagedorn, published his Essays upon painting, and thus prepared the way for A. R. Mengs and J. Winckelmann, who first felt and communicated the spirit of the antique in all its depth. But the principles of Mengs would have established a new form of eclecticism, which is but another name for mediocrity; and it was soon discerned that even his external merits were valueless, and were at once to be repudiated to prepare the way for the restoration of Art in the vigorous excellence of uncorrupted youth. It was Carstens and Schick who in the first instance strove earnestly to effect this: but the times in which they lived were unpropitious. On the one hand, the most com-

plete indifference of the public, on the part of artists and the patrons of Art the most irrational love of novelty, neutralized their exertions. Their friends and followers, Wächter and Koch, have scarcely received more encouragement and support from their contemporaries.

With far greater success than the artists above-mentioned, Cornelius, Overbeck, Veith, and Schadow, associated to effect the complete restoration of fresco-painting. At the villa of the King of Prussia's Consul, the Chevalier Bartholdy, they found the desired opportunity. The subjects selected were from the "History of Joseph." The 'Explanation of the Dream,' and the 'Recognition in Egypt,' are by Cornelius; the 'Sale of Benjamin,' and the 'Year of Famine,' by Overbeck; 'The Garments Stained with Blood,' and 'Joseph in Prison,' by Schadow; and 'The Year of Plenty,' by Veith. Apart from their intrinsic merits, these pictures derive a particular importance from the consideration, that they were the first productions that had been seen for centuries, of art, pure, powerful, and refined. With reference to either, they will exist as invaluable monuments, worthy of the present and of succeeding ages. To these artists Prince Massimi gave at a subsequent period a far more extensive commission. At the Villa Massimi, in the neighbourhood of the Lateran, the hall and two chambers were directed to be painted in fresco, with compositions from the three greatest epic poets of Italy. Julius Schnorr undertook the "Orlando Furioso" of Ariosto; Overbeck, with Joseph Führich, the "Jerusalem Delivered" of Tasso, for one of the side-rooms; and Veith, with Koch, the "Divina Commedia" of Dante, for the other. Veith's task, the "Paradise," was originally to have been painted by Cornelius; but just as the design was prepared, he was called away to fulfil the duties of Director of the Academy at Düsseldorf, and thus its completion was delayed. However sanguine the expectations in which, after the works executed at the Casa Bartholdy, we might indulge, yet the surprising elevation which fresco had attained was throughout remarkable in the decoration of this villa. Independent of the excellent pictures of Overbeck and Veith, full of original genius, Julius Schnorr's graceful compositions in rich landscape exhibit this branch of Art in an entirely new point of view. Koch, the landscape-painter, in his compositions from the Hell and Purgatory, displays an imagination at once animated and powerful; and surprises us by his vigorous conception of the poet's somewhat mystical ideas. Führich, also, who now for the first time enters the list as a fresco-painter, impresses us with a favourable opinion of his talents.

About the same time, Overbeck painted in the church of Santa Maria degli Angeli, near Assisi, upon the end-wall of the chapel of St. Francis an admirable fresco, the subject of which relates to the history of that saint.

Cornelius, who considered fresco-painting as the most suited to the highest aims of Art, was the first to introduce it into Germany. When Director of the Academy of Düsseldorf, he immediately commenced the decoration of the Hall of the Glyptothek at Munich with designs from the Greek mythology. These paintings are now so deservedly celebrated, that it would be superfluous to enter into details either as to their subjects or arrangement. With regard to their general conception and treatment, and individual delineations of character, it has been objected that they are neither Grecian nor antique. Now on this point these questions arise: Whether it be possible, and now particularly, for us really to conceive and to create in the pure spirit of the Greeks? and even if it were possible, whether we ought so to do? The first question may at once be negatived; and the other, assuming the first to be even answered in the affirmative, can present no difficulty, if we direct our attention to the general scope and end of Art. Now Art is conversant with representations of organic

forms, originally acquired by means of the senses, but combined in harmony and beauty in the inner world of the artist's fancy, and reproduced from thence in order to excite in others corresponding impressions. Accordingly, such images only should be introduced in Art as exist really in the mind and soul of the artist: they should be truly moulded, as they are truly felt, in the artist's pure conception, and not affectedly or artificially. The sympathy or unison of feeling which such works find in the public mind, will depend upon the degree in which they correspond with the spirit of the age and its predominant tendency. But it is not always necessary that the artist's subjects should be taken from the actual world, in order that the public should be interested in them; they may embrace all that is dignified and generally characteristic of human nature, however remote may be its conditions of time and place. Whatever the human mind can compass, is its legitimate province. It is a despotism at once ignorant and absurd to confine the artist within arbitrary limits; for example, to withhold or exclude the highly poetic mythology of the Greeks. Such treasures, as a Greek, he cannot indeed possess, nor yet for Greeks has he to re-create them; but merely as they appear in the light and shade of his time and of national habits. This variable and accidental form consists, however, in points unessential and subordinate. The immutable principle, and that which belongs to the Art of all times, can be alone the property of mankind. The re-admission of the Greek mythology within the sphere of our Art, seen in this point of view, should appear to us, therefore, as little objectionable as the circumstance that Cornelius has imbued his ancient forms so deeply with the spirit of our own times, that they do not, like the figures in the Etruscan vases, require a particular study, much text, and more learned commentary to understand them. For to enjoy we must comprehend—that is, if the mind be the source of the pleasure. But it is precisely in the execution of these mythic pictures that the power of Cornelius is evinced. Character and dignity are here united with a high degree of grace: the drawing is severe, the colours simple, as the object required.

During the progress of these works in the Hall of the Glyptothek, the open arcades in the Hofgarten were similarly painted in fresco by many pupils of Cornelius. The subjects chosen were from the history of the Princes of the House of Bavaria. Other works of various merit (as Langer's pictures in the Leuchtenberg Palace, the ceiling of the Odeon, that in the Protestant Church, by Hermann, the picture in the Church of Sendling, by Lindenschmidt, &c.) are not to be compared with those commenced immediately after the completion of the Glyptothek, in the new wing of the Residence, and in the Castle Chapel.

Henry Hess was next commissioned by the King to paint the Chapel of All Saints in fresco, in the Mediæval style, upon a gold ground. He was assisted by I. Schrandolph, Carl Koch, and J. B. Müller; and of these, excellent lithographs by J. G. Schreiner have appeared. The subjects are chiefly biblical, and comprise the leading incidents in the Old Testament and the Life of our Saviour. It may be justly asserted, that no church has been for centuries so harmoniously and consistently decorated. Its impression is most effective, and conducive to devotion. Whatever of well-grounded objection may exist or may be urged against the revival of a style of Art belonging to a period deprived of social interest from its remoteness while it wants the charm of antiquity, yet a principle which has so powerful an influence on the feelings of every one must be admitted to be legitimate in its nature, and has claims that we cannot disallow.

In the Royal Palace, the Nibelungen Halls are important in the history of fresco painting. Julius Schnorr has in these rich compositions given further proof of the talent displayed at the Villa Massimi. The apartments of the King are

decorated with paintings illustrating the Greek; those of the Queen, with subjects from ancient and modern German poets; partly in encaustic and partly in fresco; all in intimate connexion with the architecture, and for which the sculptor, L. Schwanthaler, designed the compositions.

In the Church of St. Lewis, the dramatic character of the three pictures painted by Cornelius is in powerful contrast with the calm symbolic composition of Hess in the All Saints' Church. They occupy the entire end-wall of the choir; so that in the centre, opposite the chief entrance, the 'Last Judgment' is in the larger space, and in the two side-walls the 'Nativity' and the 'Crucifixion' are represented. It is more especially the 'Last Judgment,' which for greatness of style, powerful conception, and skill of execution, surpasses all that modern times has witnessed of the kind. True as it may be that the comparison of different works of Art has for the most part a tendency to injustice, yet we may venture, for the purpose of more convenient consideration, so to examine the pictures painted by Hess in the All Saints' Church, and those executed by Cornelius in the church just mentioned, and without the risk of careless imputation, ask, with reference to the claims and wants of our times, which of these two great masters has struck out a style of church-decoration most in accordance with the present state of Art and of national refinement? This merit, and without the least depreciation of the excellence of Hess, rests with Cornelius; for an unprejudiced judgment must discern that a merely historical and for us long obsolete spirit prevails in the compositions of Hess, which, since it cannot be founded upon the opinions and habits of the present, must be artificially derived from a remote period, or the relation of facts and sympathies peculiar to that period; by which reflex action of the artist's mind a style necessarily esoteric in its character is formed; and which can only endure, by the regression of general thought and feeling to the era of its first principles and source. For after the vulgar love of disputation had been gratified by the discussion of the question, of the personal beauty of our Saviour;—the fear of imparting to pictures a dramatic character which might lower to the unrefined imagination, the indefinite to the finite, the Deity to man;—the dread, moreover, by ideal treatment of the form of Scriptural personages to awaken the dormant idolatry which the expressive beauty of Greek Art had at first systemized, if not created; induced the early fathers of the church to encourage, and painters to adopt a style at first allegorical, then symbolical, which, while it gave to Art a Christian character, yet freed it from the influence of former principles, and placed it beyond the prevalent ebullitions of ignorance and superstition. Apart from technical treatment, therefore, the merits of Hess and Cornelius, must be considered with respect to the correctness of opinion on the relative excellence of the Christian form of Art. In this then may consist the inequality of Hess, for imbued as an artist may be with the conceptions of the past, adroitly capable of their adaptation to the present, the result must ever be an adjustment,—an accommodation possessing, indeed, all the attributes of genius, but deprived of that free, sound, vigorous, natural growth, so remarkable in the compositions of Cornelius. Yet in a period which has the misfortune of being a kind of *herbarium vivum* for all kinds of plants and of all times, the adoption of a refined dignified, though antiquated style of Art, such as Hess with so much feeling has restored, however opposed to our present modifications of opinion, must be appreciated by the educated; and can only, by the uninstructed, be despised. It is a splendid anachronism of Art.

For the cupolas and lunettes of the twenty-five arcades along the south side of the Pinakothek, Cornelius prepared a series of particularly fine designs, representing the most interesting periods in the lives of eminent Italian and Dutch

painters, from Cimabue to Rubens; the execution of which was entrusted to Professor Zimmermann. He further contributed the designs for the frescoes of the Isarthor, which was restored by Professor Gartner. Upon a frieze seventy-five feet long, upon the eastern side, is represented the 'Entry of King Lewis of Bavaria,' after the battle of Amfing; and upon the other side, looking towards the city, the 'Adoration of the Kings.' Bernhard Neher, by the masterly execution of these paintings, obtained a great reputation; owing to which he was invited to Weimar, where he is now occupied in decorating many rooms of the Ducal Palace.

In landscape also, considered as an independent art, fresco has attained an unexpected excellence, through the genius of Karl Rottmann. To him we owe a series of the most interesting views in Italy, Sicily, and Greece; which are placed, after the compositions from the "History of the House of Bavaria," in the arcades of the Hofgarten. These incomparable works prove in a striking manner, what, even within such narrow means as fresco commands, genius is capable of effecting. Together with great breadth of composition, they breathe such a freshness, a magic of light and colour, that even from the best period of the Art we can select nothing of the kind to be placed with them in legitimate comparison. Notwithstanding the many technical difficulties which fresco presents, in particular to the landscape painter, the treatment of these pictures in so light, so masterly, that the mere spectator is ignorant of the practised skill that is displayed. But it is not by this technical treatment alone that Rottmann stands so high as a fresco-painter. Still more must we admire the highly-poetic education of his mind, and his artistical power of arrangement. It is only by such means that landscapes which present particular scenes, or portrait landscapes, can become true works of Art; while, on the other hand, mere mechanically-copied views possess no other interest than could attach to landscapes reflected in a glass. The original thought, the graceful feeling, of a mind imbued with the perception of the beautiful, and the expression of its conceptions in compositions appropriate, as well as becomingly treated with regard to design and colour, are what we desire in works of Art. These form their essence, their inward life; if deficient,

"We start, for soul is wanting there,"

and we have at most but to admire the mechanical dexterity they display. Easy as it is to fail in landscapes of this kind, yet Rottmann has solved the problem of *possible success*, by the resources of so powerful a mind, that every picture, by its calmly satisfying truth, possesses all the charms of an harmonious poem. With respect to the distribution of light and shade, this great artist has adopted a style perfectly original as regards fresco landscapes, by avoiding as much as possible all large masses of shade in the foreground, and placing them more in the distant portions of the picture; in consequence of which, the various tones required are quite attainable in fresco, and have sufficient depth and transparency for their situation.

The great hall of the University of Bonn is decorated with fresco-paintings, representing the four faculties. Of these, Hermann designed Theology, and completed it with the help of Götzberger and Ernst Forster; Götzberger undertook and painted Jurisprudence, Philosophy, and subsequently Medicine. But excellent, and in strict accordance as these are with the principles of fresco-painting, they are inferior to the Theology of Hermann. Stürmer and H. Mücke have painted, in the house of the Count Von Spee at Helsdorf, pictures representing incidents in the life of Frederick Barbarossa, of which the 'Submission of the Milanese' is particularly deserving of praise. If Mücke may be justly censured for the employment of too deep a tone of colour, by which fresco is entirely deprived of

its peculiar attribute, *light*, yet we must admit that these compositions evince how nerally it can approach to oil-painting in power of effect.

At the request of the Baron de Furstenberg-Stammheim, C. Deger has commenced the architectural decoration of the Church of St. Appollinaris at Remagen; and in addition to the five pictures on subjects illustrative of Goethe's poems, by Professor Peschel, of Dresden, in the hall of the Belvedere, at Dittersbach on the Elbe, and the paintings in the mansion once belonging to the Hartel family, now to that of Leplay, at Leipzig, by the same artist and Preller, there are many by Vogel in the Castle Chapel at Pillnitz. A most extensive work at the Royal Castle of Dresden now occupies the attention of Bendenmann; and, to judge from the cartoons, something of great power, and which may confer honour on the school of Düsseldorf in its peculiar style, and on this its most distinguished pupil, may be expected.

At the royal villa of Rosenstein, near Stuttgart, Anthony Gegenbauer has decorated a great hall, and its dome, with frescoes, from the story of Psyche. Gegenbauer has also made very successful attempts at Rome in *covering canvases tightly stretched, with a mortar composed of lime and gypsum, and then painting on it in fresco*; so that by these means he has succeeded in producing removable pictures, among others, Cupid and Psyche, Hercules and Omphale, remarkable for the extreme delicacy of their handling and colour. He speaks in high terms of the advantages afforded by this method; as the artist is enabled, by damping the back of the canvass, and consequently the mortar which forms the ground of the picture, to paint, not only two but probably three days on the same portion of the work. In the hall of the Städel Institute, at Frankfurt-am-Main, Veith has executed a large fresco representing, in two allegorical pictures (Italy and Germany), the introduction of Christianity into the latter country, the consequent moral improvement and progress of civilization. The composition of the principal figure is powerfully conceived; the various groups are well arranged; they are significant, and give the most full and harmonious completion to the design.

The best examples of Italian painting may be limited to the paintings of Camuccini, Benvenuti, Bezzuoli, and Sabatelli. Camuccini is of artists, the most opposed to innovation; yet he exhibits very strikingly the difference between an original and an imitative talent. From youth Michael Angelo and Raffaele have been his study, but in technical treatment he has profited by the instructions of his uncle. He has copied much from the old masters, and always with clearness and intelligence; and has caught in an admirable manner the elevated style of Michael Angelo. But his works bear the stamp of the French school; there is a tendency in them to theatrical effect; his personages appear less individuals really suffering, or expressing natural emotion, than as characters dressed, arranged in appropriate situations, and then displayed upon the scene. He has painted in fresco, 'The Almighty borne by Angels,' &c. Great skill in arrangement and delicate perception of colour are remarkable in Benvenuti. This may be seen in his frescoes, in the Sala d'Ercole at the Palace Pitti, the subjects of which are taken from the fable of Hercules. He was here assisted by Professor Caciagli. But it is by his altar-pieces, in particular by his frescoes at San Lorenzo, that he must be judged. His figures are natural and life-like, they are truly conceived, and endowed with much force of expression. He has represented at San Lorenzo, 'The Creation and the Fall of Man,' the 'Death of Abel,' and the 'Sacrifice of Noah.' From the New Testament, 'the Birth of Christ,' the 'Passion,' the 'Resurrection,' and the 'Last Judgment.' After Benvenuti, Bezzuoli must be noticed, who has exhibited great ability in drawing and the technical portion of Art. It is to him the Grand Duke entrusted the fres-

coes in the Stanza di Tito, of the Palace Pitti. Cesar Massimi has decorated a private house; and Morrelli, the Villa Demidoff with frescoes; Adelmello has been also employed. It is said that his facility in composition and execution is so great, that he can design and finish his works, almost as the mason applies the plaster to the wall—a story which the wall would very probably refute. Rudolphi has restored, amongst others, the frescoes of Amico Aspertini, the pupil of Francia, in the chapel of St. Augustin, of the church of St. Frediano at Lucca, the state of which had been long a subject of regret, and has executed this task with so much skill that the most practised eye may fail in discovering the places he has touched. Applani, who died in 1817, has executed many important works at the Imperial Palace of Milan they represent incidents in the life of Napoleon; there are also others by him representing the four Evangelists, &c. Professor Sabatelli has also decorated the Palace Pitti with subjects taken from the Illad; these were in part finished by Marinelli and Pampaloni. Bellosi has been commissioned to paint some important works for the King of Sardinia. The ceiling in the great hall of the Casino Nobile has been painted by him. Santi, who for many years was chiefly occupied in the restoration of pictures, has lately devoted his attention to fresco-painting. His ceiling in the church of St. Luke is a composition rich in figures, but reflective in a great degree of Camuccini and Benvenuti. In France, where, strictly speaking, the grander style of Art which has here occupied our attention has never flourished, no remarkable compositions can be cited among productions of recent times. For the works referable to the style we have mentioned have been partly executed in oil, and partly in wax-colours; and how incompatible such processes are with the true principle of monumental mural painting, as before defined, is proved by the results in the Louvre, the Pantheon, and now in the church of La Madeleine.

Such is the outline of the history and process of fresco-painting. It has been already stated upon what principles it rests. It is now desirable to consider to what purpose it is applicable, what it designs, what it can effect. But it is not desirable to enter into the warfare of opinion as to the relative employment of fresco or oil, and for this reason;—that it is not desirable to compare them, as neither could, in all cases, be assimilated with or substituted for the other.

—Facies non omnibus una

Nec diversa tamen; qualem decet esse Sororem.

Fresco-painting is particularly adapted for designs upon a large scale; it is eminently *historical*. It seeks to record the moral dignity, the acts of mercy, the mysterious dispensations, the hopes, the triumphs, and the future awards of Religion, and to perpetuate the individual elevation, the national greatness, the intellectual condition and honourable rewards of Man. It was the opinion of Michael Angelo, that painting in oil was unworthy of a great mind: if he said this, it was probably because he felt fresco-painting to be the expressive form of a great thought. It was certainly better adapted to the elevated character of his compositions, which required a simple and solid arrangement of colour; rather subdued than enlivened, and producing a grand and impressive effect, by their architectural combination. The excellence of fresco-painting must essentially depend upon the creative power of the mind. To think in little, if the phrase may be used, would be as useful here as to war in little. It is therefore adapted for the Palace, the Senate-house, the tribunal of Justice, and the Temple. But it is not intended, by stating the particular aim of fresco, to lower in any manner the importance of oil-painting. It is besides impossible. Has the 'Last Judgment' of M. Angelo obscured the beauty, or diminished the greatness of the 'Transfiguration'?

Fresco is adapted to represent, with force and

beauty, a great idea; it is not so well adapted to reproduce the scenes of nature, or to depict the affections, the feelings, and the ties of social life. The chefs-d'œuvre of painting are in oil—the grandest compositions are in fresco. The domain of the latter is truth and ideal greatness; that of the former, imagination, imitation, feeling. An oil-painting pleases at once, and independently; fresco, when combined, or in connexion with architecture. It is an idle task to trace distinction for the purpose of depreciation. Painting, sculpture, and architecture, are but various modes of expressing the beautiful in thought and form. "Omnes artes quæ ad humanitatem pertinent, habent quodam commune vinculum, et quasi cognatione inter se continentur:" this was the opinion of Cicero.

But all questions are merged in the importance of the employments of fresco-painting, as indicative of the encouragement of British Art. Religion and the state are the proper guardians of the Fine Arts. The connexion that exists between the beautiful, the true and good, between the internal conception of their existence as abstract qualities, and their expressed external form; by the constant contemplation of which, the mind becomes elevated, thought educated, and taste refined; give to the Fine Arts a particular influence with reference to public instruction and manners. A people amongst whom, the internal perception of order, symmetry, beauty, and accurate design is nourished and perfected, is doubtless (*general education in proportion*), more inclined to correctness in judgment, less disposed to the variable in thought and feeling, more advanced, and more disposed to progress in refinement than a nation deprived of this resource. The idea of order, regularity, and perfection, cannot long rest on any subject without extending its influence to others; there has been, there could not exist, a cultured taste and a brutalized understanding; for now, idea is extended by idea, as water, by apparent pressure, is expanded in successive circles. And to philosophical investigation there appears a greater connexion than is generally admitted between the power of the mind, which is enabled to trace and to appreciate the beauty of a statue and the wisdom of a law; between the science displayed in a machine, and the knowledge exhibited in a book; and between the merits of a legislator, an orator, a painter, or a poet.

It has been remarked, that the Fine Arts have attained their utmost point of excellence in countries the most corrupt. It is true: they existed despite of that corruption; and without their influence would the Pantheism, the sceptical philosophy of the ancients, or the ever varying dogmas of a later period, alone have saved or reclaimed mankind from degradation? If the Fine Arts fix the attention of man, by their elevated conceptions they refine him; if they record great actions, they possess a moral influence, and, by its dignified expression, they instruct him; and if they portray the character and the truths of religion, they remind him, that whatever the extent or power of the wisdom of earth, its direction, development, and intellectual perfection is of heaven.

By what do men seek to awaken, nourish, and diffuse the love of glory? Is it not by sculpture, painting, and architecture? Do they not make them the rewards of virtue, by employing them, to raise monuments destined to eternize the glory of that man who has deserved well of his country? It is only by connecting the Fine Arts with great actions and great events, that the state can promote or protect them; they will otherwise become the handmaids of luxury, vanity, and pleasure; for by individuals the artist will be considered, and will in time subdue his genius to the consideration, that he is but destined to divert the great, flatter the opinion of the public, and relieve the ennui of the wealthy. He who rests on individual patronage, may live to confirm Dr. Johnson's opinion of a patron. He may probably be enabled to refute it. He who trusts to public

taste, must recollect on what that taste may turn. Taste is no less arbitrary than rare. Individual patronage, as patronage, is that of gold. This was not the reward the Greek tendered to the painter, the warrior, or the poet. The legislators at least of that people felt that merit is not to be bribed, but honoured; that the reward of the serf and slave should not be the same as that of the citizen who had distinguished, the hero who had defended his country; they knew that he who seeks fame will not thirst for wealth, and that the true reward of genius is not increase of fortune but of public esteem.

British artists struggle against difficulties unknown in other lands. Religion does not consecrate the offerings of their genius by placing them within the precincts of her temples; the legislator is palsied by the fear of their direct encouragement; nor have they, as they merit, the advantage of public sympathy and support. Remove this barrier, and give them a field for exertion by liberal national patronage. Greatness is not of a thing, it depends upon the culture and the institutions of a people. The British empire may be considered as the legacy of that of Rome. In a few years the English language will become the medium of communication throughout the greatest portion of the globe. Our arms and commerce have established a dominion in climes the most remote, the least frequented. Yet the Fine Arts, which every powerful nation has loved to protect, and slave or freemen to possess, have been by none so much neglected. They are not with us a social manifestation, the evidence of collective refinement. We have not yet raised "the Atheist cry, there is no Art;" but we have not sought to give it a place in religion and national feeling. In ruins, and deprived of every kind of political power—yet we cannot diminish the greatness of Athens or of Rome. Art has made them the historians of the past; Art sheds around them a halo even in decay; they are still impregnate with divinity: we read of them as the seats of war and civil strife; and we view them still as the depositories of the intellectual refinement of mankind. It is with them as with the memory of the illustrious dead; thought passes away from the fitful history of their lives, and dwells with a feeling not unallied to veneration, on the record of their acts of virtue.

Rome which won the world by arms, Rome masters its spirit by her intellectual power:

"—there, as though  
Grandeur attracted grandeur, are beheld  
All things that strike, enoble—from the depths  
Of Egypt, from the classic fields of Greece,  
Her groves, her temples,—all things that inspire  
Wonder, delight.

\* \* \* \* \*  
And not a breath, but from the ground sends up  
Something of human grandeur."

(And cannot England be as Rome? Great and extensive as are our possessions, the ability to defend, fully equal to the valour by which they have been won, the empire of Britain can exist but by that; before which successive monarchies, the mightiest warriors and nations guided by the greatest statesmen, have been swept, as the storm-raised sand dust of the desert—Opinion. This, it should be our duty to create, concentrate, direct: supremacy should not be an attribute of war, but the reward of civilization, if we retain or yield the dominion of the world, yet alike in glory or decay, every nation should bless our influence, still turn to us, even as we have turned, as pilgrims of the genius of Athens and of Rome, and in the graceful imagery of Buchanan, hail us as the evidence of the intellectual condition of the past, and no less the harbinger of the cultured advancement of the future.

Salve fugacis gloria seculi,  
Salve secunda digna dies nota  
Salve vetustæ vitæ imago  
Et specimen venientis ævi.

Feb. 17.

Yours, &amp;c.,

S. R. H.

## ART APPLIED TO MANUFACTURES. No. II.

### EDUCATION OF THE ARTISAN—STUDY OF FORM AND PROPORTION—METHODS OF TEACHING DRAWING—DRAWING CLASSES AT EXETER HALL.

THE arts of design are based on the science of form and proportion: the effect of colours on the eye is so vivid, that any discordance is immediately obvious, and suggests a correction of the inharmonious combination; but the deviations from the graceful in form and proportion that produce unpleasing shapes, are so slight as to be perceptible only to the cultivated eye, and remediable only by the practised hand. The importance of a scientific understanding of abstract beauty in form and proportion, not merely a general acquaintance with examples or types of beautiful shapes, is therefore apparent; and this can only be acquired thoroughly with the aid of the pencil. All combinations of form resolve themselves into lines, and the power of delineating is concurrent with the ability to follow them; at least the manual dexterity constitutes so small a share compared with scientific perception, that the intellectual process may be said to include practical skill, just as the study of language includes the power of forming letters. Writing assists the definition and memory of ideas conveyed by words; drawing does the same for ideas expressed in form. It depends upon the method of teaching, however, whether drawing be confined to the power of copying lines correctly, or be made the means of exercising the mind, and confirming the understanding in the appreciation of the characteristics of form. Hitherto drawing has been too exclusively considered as an executive art, to be taught separately from, if not independently of intellectual investigation, and its practice has become in consequence empirical; students have been taught to copy what was before them mechanically, without well knowing what they were imitating; just as the Chinese make a thing, the use of which they are ignorant of, with all the flaws in the pattern. This is evidently a bad practice; for, in proportion to the intelligence of the artist, will be the spirit of his copy. Place a drawing made by a person thoroughly acquainted with the object delineated, by the side of another made by one who knew it by sight only, and the superiority of that produced by the intelligent draughtsman will be evident at a glance to every one conversant with the original. It is the artist's deficiency in knowledge of the subject he has delineated, that renders scientific judges so often dissatisfied with pictures and drawings that are pleasing to the eye, regarded merely for their execution and pictorial effect. The peculiar character of ornaments and other artificial productions are as distinctly visible to all who understand them, as the generic characteristics of objects in nature are to the naturalist; and as the artisan is called upon not only to copy but invent, his knowledge of the characteristics of what he imitates ought to be complete. It may be said, teach him to draw first, and he will be better able to understand after having become familiar with the forms. This reasoning is specious, but unsound: it is not only assuming that to acquire the power of drawing is more difficult than it really is, but actually tends to make it so. When the object to be represented is thoroughly understood, and the way to set about delineating it is known, the mere act of drawing the lines is simple and almost mechanical. The writer may be allowed to state the arguments in support of this position in his own words, taken from the introduction to a little pamphlet on the subject.\*

"The eye is the camera obscura of the brain: the external lens is the object-glass receiving the rays of light, and transmitting the luminous image on to the retina; when thus depicted on the tablet in the visual chamber, it becomes the property of the mind: if the brain chooses to retain it, well; if not, another picture painted with the pencil of light momentarily succeeds, and effaces the transient impression; and so the delicate and beautiful mechanism of sight continues to perform its delightful office of presenting to the brain an endless and rapid succession of ever-varying scenes and objects, with unerring fidelity and unceasing activity; unless the organ be impaired by disease. The common phrases, 'a quick eye,' 'an accurate eye,'

\* Elements of Perspective Drawing; or the Science of Delineating Real Objects.—Taylor and Walton.

are apt to mislead: every eye in a healthy state is quick and accurate. It is the understanding that is slow and imperfect; imperfect, because it does not take the time and pains requisite completely to comprehend the characteristic features of the image formed on the retina: upon the degree of attention bestowed on these evanescent pictures depend the perfectness and durability of the ideas of external things with which the memory is stored, the understanding enriched, and the fancy enlivened. The intellectual operation may be likened to the chemical process by which the photographic pictures are rendered permanent: it is this which resolves the fleeting visions of the outward sense into distinct and lasting ideas of the mind. In default of this mental process, too many of our fellow-creatures go through life almost insensible to the sources of enjoyment continually presented to them: having eyes, they see not; or, 'seeing, they see, and do not perceive': 'their eyes are open, but their sense is shut.' The image painted on the retina of the merest dolt that ever gazed on a beautiful prospect, is as vivid as that presented to the painter or the poet; the intellectual comprehension and appropriation make the difference. Hence it is evident that vividness and correctness of perception depend upon the understanding; and the training, or education of the eye, means the discipline of the mind in relation to ocular perceptions.

"A knowledge of the laws of perspective, by means of which the appearances of solid forms are delineated on paper, so as to convey a correct idea of the realities, is clearly an operation of the mind. Thus the first and all-important principle of drawing—namely, that the science of form is dependent upon the proper exercise of the understanding—is demonstrated.

"We now come to the consideration of the ART OF DELINEATION, in which the powers of the hand come into operation. And truly the hand is as docile and apt a member as the eye, when it is properly directed by the mind: though, unlike the eye, it only acts when told, and therefore requires practice in order to perform its duty dexterously. But who that has seen the juggler catching the rapidly descending balls with one hand, and flinging them up in the air with the other, his eye fixed all the while on one point in the glittering circle described by the revolving balls, can doubt the aptitude of the hand in obeying the mind as directed by the eye? If another proof be required, it is supplied by the familiar instance of the cutting out of profiles in paper: the proflist fixes his eye upon the face, while his hand directs the scissors almost mechanically, only requiring a glance to verify the correctness; or rather, perhaps, to ascertain that the relative position of the different features is correct. The influence of the mind in the act of delineation is strikingly shown by the phenomena (if the term may be allowed) of silhouettes. It is a singular fact that, readily as a black profile is cut in paper from the life, it is extremely difficult to copy it with a pen. The reason is this:—the resemblance, consisting in a general similitude of form and proportion, is conveyed by such slight means that a moderate degree of approximation to likeness conveys an impression of identity; yet the most minute deviation from the outline of the silhouette in copying it with the pencil is fatal to the similitude, because in so slender an indication not a trace can be dispensed with. What makes it so difficult for the eye and hand to follow the contour of the silhouette, is that the shadowy image presents so little for the understanding to master; and the hand, therefore, with great difficulty follows the course of the eye, not being sufficiently influenced by the understanding.

"Any one who has looked over an accomplished artist sketching from nature, will have observed that his eye is directed much more attentively to the scene or object before him than to his paper; he looks to his drawing chiefly to ascertain that each successive line he traces is properly placed relatively to those previously drawn, and to put in finishing strokes. He has taught his hand to obey him instinctively. So entirely is the perception of form dependant on the understanding, that if the difficulty of placing the several lines in their proper relative positions could be got over, a blind man might be taught to draw a solid object, whose shape he could ascertain by the touch.

"Having arrived at the fact that the sense of vision may be dispensed with in the perception of form by the mind, it remains to try if the understanding can be set aside, leaving the eye alone to direct the hand. A cube, or square box, may be so placed before the eye that only one side is presented to view; and supposing the mind to have no cognisance of its real shape, nor any means of ascertaining it, the delineation of its apparent form would not convey an idea of the reality: the same may be said of a cylinder so fore-shortened that only one end is visible. As the eye can only receive an impression from one side of any object at a time, a second view of it, or the evidence of the touch, is requisite to inform the mind of its actual shape and size.

"Suppose that an accomplished artist were to see in a foreign country some strange object, with the nature and use of which he was ignorant; that it was not within reach of his hand, and did not afford him another view from a different point: if he were to delineate the apparent form ever so correctly, he would fail to convey a distinct idea of the reality either to one acquainted with its true shape, or to another who was

not. The truth is, that the artist depicts not the object or scene itself, but the idea of it in his own mind; and whether that idea is complete and accurate, or not, depends upon the clearness and perfectness of his understanding."

The next question to be considered is the proper method of teaching drawing; and in determining this, the reasoning before adduced will have great influence. According to the foregoing arguments, that course will be the best which exercises the mind most, thus bringing the aid of the understanding to test the clearness of the perception, and to direct the hand; therefore, that which requires a complete knowledge of what is to be copied, and leaves least room for merely mechanical labour, will be the proper method. These conditions are complied with by using solid forms as models for the learner; for to copy these requires a perfect acquaintance with the object previous to beginning to draw it, an attentive consideration of its entire shape and the proportions of its various parts in relation to each other during the progress of delineation, and a knowledge of the rules for representing on a flat surface the appearance of a solid substance. In copying the drawing of another the eye and the hand of the learner are exercised, but his mind scarcely at all: the work of the understanding has been done by the artist who made the first drawing, and the pupil has only to imitate the lines mechanically; he is not required to know how the drawing before him was made, or whether it is correct or not; he has but to copy line for line and touch for touch, Chinese fashion: set him to draw the real object itself and he will be at fault, because it is a solid form, and he knows not how to represent accurately the appearances of solidity; in short this course will produce neat and dexterous line drawers and tint makers, but it will not make quick and accurate draughtsmen. Yet this is the way that drawing has hitherto been taught in this country, and such is the plan pursued at the School of Design. But it may be urged that the beginner, especially if he be young, is required to do too much at once in setting him to copy solid forms, which demand so much knowledge and attention; and that he ought first to learn to use the pencil freely, or at least to command his hand so that it will follow the direction of his eye; indeed that it needs practice to be able to draw a right line. Suppose a pupil, who has never handled a pencil is set down with a sheet of paper or a black board before him, and required to draw a straight line in a particular direction; it would not be more difficult for him to take as his model one edge of a solid or plane surface than to copy a line drawn upon the board or paper: and if instead of drawing three other lines in the same direction as the first, he were required to draw them from the other three edges of a square figure, plane or solid, the exercise of the intellect in measuring the distance of one line from another, and the relative direction of each in relation to the other, would make the task more interesting if more difficult; and how much more the pupil would have done, how much further would he have advanced in making a square, than in drawing four parallel lines, having no meaning and representing no form. This practice of drawing simple rectilinear figures, of various shapes, and then curvilinear, gradually increasing in difficulty, should be continued till the pupil can draw a clear and firm line, with tolerable steadiness and precision; and for this purpose geometrical plane forms, cut out of card-board or tin painted white are preferable to parts of solid figures; because the imitation of the plane is perfect when the outline is drawn, and the relief of the plane surface and the mass of white cause the outlines to appear particularly distinct. At the first commencement it is desirable, that the pupil should have a base and perpendicular line drawn for him on the board to enable him to keep his figure square. In a class of children, which the writer experimented upon, he adopted this plan; the first figure he set up was a right angled triangle, and the pupils were then required to mark off on the base line the width of the base of the triangle, and on the perpendicular its height; they then drew a line from point to point on each side, and the figure was complete. The surprise and delight of the young learners at having achieved a complete figure at their first lesson was a most gratifying indication of their

future progress, and the lively interest they took in pursuing the study.

Up to this point the superiority of the plan of copying from a palpable form instead of lines drawn on paper will, it is hoped, have been demonstrated satisfactorily: we now come to the next step in the pupil's progress, drawing from the solid form, previous to which a knowledge of the elements of the perspective is required. Perspective, we regret to see, finds no place in the course of instruction at the Government School of Design, because there the pupils copy from drawings until they have attained dexterity enough to draw from casts empirically, that is, without knowing the principles on which the apparent forms of objects differ from their real forms. The importance of understanding perspective, at least the first principles of the science, is obvious when we reflect that every thing that we see is viewed perspective: the idea of teaching drawing without explaining to the pupil the laws which govern the appearance of objects to the eye, is so preposterous, that had not people been so long familiar with it in practice it would be scouted for its absurdity; just as a tutor would be ridiculed who was to teach composition by setting his pupils to write out passages from Johnson, Addison, or Gibbon, without explaining the rules of grammatical construction. Perspective is made a bugbear to learners: the difficulty of learning perspective is not great; though to make it appear easy to understand, requires an experienced teacher who is thoroughly versed in the elements of the science: its leading principles are few and simple, and once mastered are always retained: it is their application which is complex, and this is more apparent than real. But if ever so difficult it is essential to be learned: it must be practised, whether the rules be known or not; and it is surely not worth while, for the sake of avoiding a little trouble, to learn imperfectly the science on which the art of delineation is based, especially when an imperfect acquaintance with it causes frequent inaccuracies that the eye detects and is annoyed by, but the hand vainly endeavours to remedy; while a thorough knowledge ensures exactitude without trouble. Mr. Dyce contends, that there is no need for artisans to study perspective, because they are mostly required to draw patterns which have very little relief: but the simplest flower cannot be drawn without some knowledge of its rules. What objection is there to a complete acquaintance with it? Superficial instruction in elementary knowledge is like an unsettled foundation; the higher the superstructure the greater its instability.

The practice of teaching drawing from solid forms is becoming very general, both among private teachers and in public schools; and a set of models designed for the use of families and schools, by Mr. Augustus Deacon, and published by Taylor and Walton, have been much approved of by teachers for this purpose. They consist of a number of solid pieces of simple geometrical

forms contained in a box, and are so contrived as to be available for copying separately, and to represent in combination a variety of objects, such as houses, castles, bridges, steps, crosses, &c. The foregoing figures are copied from some of the forms; the size of the cube being six inches square, and the others in proportion. The sides are purposely left plain, the models being intended for elementary teaching; but the groups suggest real objects sufficiently to supply the interest which association creates in the mind: see the following sketch taken from one group, with merely the addition of a few touches to indicate doors, windows, ground, water, and foliage. In this figure may be traced the cube, the parallelopiped, the octagonal pillar, the column and its conical cap, and the arches. This set of models being designed for home use and limited classes in schools, was made as small as possible for the sake of portability; but the same forms might be made on a larger scale by a joiner, to adapt them to large classes in public schools; in which case it is desirable that they should be painted white.

Upon this subject we have entered at some length; but it is necessary that we postpone, until next month, the publication of our remarks.

W. S. W.

### THE ARTS IN CONTINENTAL STATES.

**ITALY.—ROME.**—*Paintings of Artists at Rome.*—Von Süsser has painted a beautiful landscape, in which we see the palace of the Caesars, the Baths of Caracalla, the Campagna, and distant chain of mountains illuminated by the setting sun. It is destined for Berlin. In the great exhibition room in the "Porto del Popolo" is a large picture painted by P. Galiardo, intended for a North American church. The subject is 'Vincenzo di Paola receiving deserted Orphans.' It is a picture with many faults, but also many excellences. The Polish artist Kanieffe, who is here pensioned by the Czar of Russia, has just completed, according to a commission from the heir apparent of that empire, a picture, whose subject is 'The Recalling to Life the Widow of Naia's Son.' It is easy to see that Raffaele has been the model on which this young artist has formed himself, by the simplicity and repose of the composition: a true style in colouring also distinguishes this work. Podesti has finished his great picture of 'The Judgment of Solomon,' painted by order of the King of Sardinia, to be placed in a court of justice. For this the picture is well adapted, and placed in a large hall will do no dishonour to the fame of Podesti. But there is much of theatrical effect in the composition, and caprice in the costumes; the execution both as to drawing and colouring is good. Ammerling has two very pretty pictures, 'A Mother and Child,' and a 'Roman Girl playing on the Lute.' A visit to his studio is also at present peculiarly interesting, because he possesses a collection of portraits of the most distinguished living artists. The French artist, M. Chevendier, exhibits a picture of 'Peasants returning home in a Cart drawn by Oxen.' The scene is in the Campagna. The picture is skilfully managed, but it has too much of that dark grey colouring which is seen in all the schools of which M. Ingres is the chief.

**FRANCE.—PARIS.**—*Tomb of Napoleon.*—*Le National, Le Siecle, L'Univers,* and other French newspapers, announce that the Government and the King have finally ordered that the monument to Napoleon shall be executed according to the plan proposed by the committee of judges, as given in the last number of this journal. A crypt within the church of the Invalides, in which the tomb will be placed—an equestrian statue of Napoleon in the court near the entrance of the church. The artists to be employed are Messieurs Visconti and Marochetti; the first for the architectural, the second for the sculptural part.

*L'Armeria Real, ou Collection des principales pièces du Musée d'Artillerie de Madrid.*—"Royal Armory," or, a Collection of the principal pieces in the Museum of Artillery at Madrid.—Artists, archaeologists, and amateurs of curiosities will find this publication most interesting. The armour of the Cid, of Charles V., the Sword of Francis I., of Isabella, of Cordova, the famous Shield of Paris, and a thousand other celebrated names and

objects of Art which awaken recollections, and are of much historical importance. The objects are perfectly well drawn by G. Sensi; L. Sansonetti does the ornamental part; Facsardo and other good artists are the engravers; M. Jubinal writes a learned explanatory text in French.

**LYONS.**—*A Chinese Painter.*—A Chinese, who was present at the martyrdom of a Christian Missionary, was so struck with the firmness with which he died for his faith that he became himself a Christian. He made his way to Europe, went to Rome, and studied painting; he has been successful as an artist; and there is now here in the church of St. Guillaume a fine picture by his hand, well designed and strongly coloured. The subject is 'The Death of the Christian Missionary,' to which he was a witness, and which changed his faith and his life.

**GERMANY.—HAMBURG.**—Our New Exchange, which has been building during the last five years under the direction of the architect Wimmel, is now finished, and will be opened next month. The noble simplicity of this edifice renders it one of the greatest ornaments of our city.

**BERLIN.**—The admiration of amateurs is at present directed to the "*Gemalde Galerie des Koniglichen Museums Berlin*," edited by Mr. Simion, and dedicated to the King. This publication is a sort of sister to that of the Gallery of Dresden, its object being to make generally known the chef-d'œuvres of every school which exist in the Prussian Museum. The execution is in lithography, but with a degree of excellence we have seldom seen equalled, certainly never exceeded. The principal artists are employed; among these Haufstaengl, who so largely contributed to the success of the Dresden Gallery. The first number contains a magnificent lithography of the famous portrait, by Titian, of his daughter 'Lavinia.' The force, the freshness, the gradual passage of the lights to the shadows is superb, and gives completely the character of the great Venetian master. Another picture lithographed is 'Jesus, and St. John, a boy,' by Rubens, truly charming; and there is a third, 'Die Vaterlike Ermahnung,' by G. Terburg. We believe the work will be a very successful one.

**MUNICH.**—Swankhalar has received an order from the King of Bavaria for a great work—it is to be called the 'Pantheon of Bavaria,' and is to be placed on the hill of St. Theresa, near Munich. On the summit is to be placed a statue of Bavaria, fifty-nine feet in height, the lion on which she rests twenty-five. These are to be cast in bronze, and it is calculated they cannot be completed in less than seven years. Around, under open colonnades, are to stand the statues of the illustrious men of Bavaria.

**RUSSIA.—ST. PETERSBURGH.**—*Galvano-plastic.*—To the prosecution of this discovery many of our artists have devoted themselves with great zeal, especially the celebrated medallist Tolstoy, and the architect Hasenberger. The latter has just finished a copy of Rausch's bust of the late King of Prussia, which leaves nothing to be desired.

**SMOLENSK.**—There has been erected here, by Imperial command, a monument in memory of the battles of 1812. It is of cast iron in the Byzantine Gothic style, and is placed on the Parade Platz, opposite the King's bastion, which was the point where the battle raged most furiously on the 5th of August, 1812. The inauguration took place on the 5th of November.

**WARSAW.**—On the 29th of November was consecrated the monument of cast iron which was erected by command of the Emperor of Russia to the memory of the seven Poles who fell in defence of the Russian power on the 29th of November, 1830. The plan is that of the architect Corazzi, chosen from among ten competitors. The octagonal base is of native marble; eight bronze lions support an iron pedestal, above which are four eagles of gilt bronze, their wings outspread; a shield is on the breast of each, on which is inscribed a map of Poland; from the pedestal springs an obelisk of cast iron. The proportions given in German ells seem immense indeed: the octagonal marble base is 30 ells in diameter; the pedestal 8½ ells in height by 10 in diameter; the obelisk 25 ells in height, 6 in diameter at the base, and 4 at the top. The iron and bronze were both cast in Warsaw. It is placed on the Saxon Platz.

### THE SCOTTISH ART-UNION.

[The determination of the Committee of the Scottish Art-Union to continue to purchase only, as prizes, the works of artists, natives of Scotland, has given rise to considerable dissatisfaction in this country; we have received several communications on the subject, from which we select the following.]

SIR,—Observing in a recent number of your journal an advertisement from the Association for the promotion of the Fine Arts at Edinburgh, and being a member of the Art-Union of London, I am induced to offer a few observations thereon, that the comparative merits of both Associations, and their claims to support, may fairly be laid before the public.

The advertisement states that the "Committee of Management are entrusted with power to purchase what may appear to them the most deserving works of Scottish Art." The pictures thus selected by the committee are then disposed of by lot; and a prize-holder may thus obtain a picture in that class of Art for which he may have no particular inclination, and of a size not convenient for his purpose.

In the Art-Union of London the prize-holder gets a money prize, with which he may go to any of the five exhibitions of London, *i. e.*, the Royal Academy, the British Institution, the Society of British Artists, and the two Water Colour Exhibitions, and select for himself any works of Art to the amount of his prize. Or if it be inconvenient to avail himself of this, the committee offer their services in selecting for him a work of Art of any class he may name. In this Association there is nothing exclusive—there is no condition made that the prize-holders shall be bound to select a work the production of an English artist.

If the committee of the Edinburgh Art-Union are determined to make theirs a National Association, and to vaunt themselves upon the superior encouragement given to the Arts in the North, why not confine their subscriptions to Scotland? As it is, their boasted sum of £6767 may be half contributed by English subscribers, and is no criterion of the growing taste for the Fine Arts in Scotland.

I have no objection to the nationality of the Scotch: it is most gratifying to see the efforts of their countrymen appreciated and encouraged by them. But Art is of no place; Scottish Art can never be separated from English Art; they should go hand in hand together.

Considering that much illiberality exists in the Scottish Association, both as to its plan and its efforts to obtain subscribers from the Art-Union of London, I am induced to request the insertion of this letter in your valuable journal.

Yours, &c.,

A MEMBER OF THE LONDON ART-UNION.

[We are by no means disposed to pass any remark that may seem prejudicial to the interests of an Institution having for its object the advancement of the Arts; but we feel imperatively called upon to offer some observations in reference to the injudicious, illiberal, and dangerous policy which the Scottish Society have adopted, and continue to pursue. It was, perhaps, not only justifiable, but wise, at the commencement of the Institution, to lay down a rule for the purchase only of works actually produced by artists, natives of Scotland; when the sum collected amounted to but a few hundred pounds, and it was gathered chiefly in Scotland, it was properly spent at home; divided among deserving men, and stimulating others to exertion. But now that the hundreds have become thousands, and that a vast proportion of the subscribers are procured in England and Ireland, the exclusive purchase of productions by Scottish artists is not only manifestly unjust, but highly detrimental to the true interests of Scotland. The Art-Unions of London and Dublin have not been ungenerous enough to retaliate, and exclude the works of Scottish artists from their prize lists; if they had done so we should have been the first to have raised our voices against a course so utterly unworthy; for, to say nothing of its folly and illiberality, it would have kept away a picture by Wilkie from the possession of a London or Dublin prize-holder, as the system pursued in Edinburgh keeps away from a Scottish lover of Art a production by either Eastlake or Maclise; and so have tended, if not to the ruin of the Institution, most materially to have abridged its means, and so to have defeated its great purpose.]

We may hereafter enter into the statistics of these three Institutions—those of London, Edinburgh, and Dublin, with a view to show what portions of the monies collected have been received from persons not natives of the places in which the establishments have been formed; and the number of pictures purchased by artists, natives of the three countries; at present we content ourselves with protesting against the continuance of the unwise, illiberal, and evil course pursued by the Scottish Societies.

Patronage, like charity, should unquestionably begin at home; but, as certainly, it should not end there.

Above all things, Art should be considered as catholic in the truest sense of the term. We have never, ourselves, had the opportunity of examining an exhibition in Edinburgh; but certain we are, that no one annual exhibition has ever contained good pictures by Scottish artists to the value of £6000 or £7000; and we can have no doubt that the strong complaints from time to time forwarded to us, of the purchase, by the Art-Union Committee, of bad pictures, have arisen mainly from the fact, that the committee must spend yearly the whole of the sum subscribed, no matter how indifferent may be the article offered for sale. We know that this was the case at the exhibition in Dublin; but, in that instance, the evil arose, not from any limitation of choice to artists of particular places of birth, but because there were not pictures of merit supplied for selection equal in value to the sum to be expended.\*

But even if the Scottish artists did supply pictures of merit fully equal in value to the amount subscribed, we should still contend that a portion of the sum ought, in common justice—we had almost written in common honesty—to be divided among English and Irish artists; not only because a large proportion of the subscriptions will have been raised in England and Ireland, but because the inevitable consequence of the existing system is to deteriorate Scottish Art, by making Scottish artists content with the achievement of mediocrity, knowing that they will be subjected to no competition which can prevent the sale of their productions.

If the present plan be continued for half a century longer, as surely as that we now write the sentence, Art in Scotland will become contemptible, and Scottish artists, who work in Scotland, a reproach to their country.

But long before this affliction can arrive, the evil will have cured itself; for the thousands now subscribed will assuredly dwindle down, and become hundreds, tens, units, in proportion as the character of the works deteriorate; the more especially as in other Societies, similarly constructed, there will be no such foolish and ungenerous restriction; where the prize-gainer may not only select the production of an artist, without being first compelled to ascertain if he were born north or south of the Tweed, but may take the picture that exactly meets his taste, touches his feelings, awakes his sympathies, or satisfies his judgment.

We earnestly hope, therefore, that the committee of the Scottish Art-Union will give this matter their very serious consideration; and that we may ere long have the pleasure to announce that their most unwise and unjust law has been abrogated.

We tell them, fairly and plainly, that if they resolve to retain it, the consequence can be no other than ruinous to their institution; that subscribers in England and Ireland will fall off very rapidly; that no works of ability by English or Irish artists will be transmitted to Scotland; and that they will do incalculable mischief to Scottish Art and Scottish artists.†]

## WORKS IN PROGRESS.

### THE PUBLICATIONS OF MESSRS. HENRY GRAVES AND CO.

IN no country has the art of engraving progressed so steadily and so rapidly as in our own. We occasionally meet with a superb continental production; but for every such example we can point to a hundred of equal merit here. Thousands of impressions from plates of the most astonishing style of finish are yearly circulated—the copper is even worn out by service; yet, after a time, they become rare, and we hear of them no more, save at intervals, in the portfolios of some deceased collector, whose acquisitions in this department of Art are to be sold by auction. The spirit with which the business of the publication of works of Art is now conducted, is unexampled. The very finest pictures are selected; large prices are given for copyrights; and the engraver receives for his labour a higher premium than has ever before been given. We this month devote a portion of our attention to the forthcoming publications of Messrs. Henry Graves and Co.—the joint productions of talent of the highest order in painting and engraving. We feel ourselves bound to notice in this special manner the productions of a firm to which

\* An evil that, we trust, will not again occur. The committee of the Royal Irish Art-Union will this year, in all probability, have between £3000 and £4000 to expend. They must lay it all out; and if good pictures be contributed by English and Scottish artists, they will certainly be purchased, although a preference will no doubt be given to the works of Irish artists, where they are of equal merit with those of artists of other parts of Great Britain.

† As we shall perhaps find it necessary to revert to this topic, it is only fair to state that we shall willingly insert any defence of the present system that may be forwarded to us.

the public are indebted for some of the most exquisite prints that have recently appeared. This is a department of the art in which the public themselves have no voice; they are altogether in the hands of the publisher, and must, for good engravings, rely upon his taste and judgment, qualities in which the firm in question sustain the high reputation of their long-established house. As extended fame is the highest hope of the artist, he is indebted to the publisher for a great share of that which he may acquire; therefore, but for the wide circulation given to his works by means of publication, his reputation would be comparatively limited. Among the works of this house which now call for notice, or rather enumeration, for we cannot yet do justice to their excellence in promise, is one illustrative of the most imposing ceremony of our constitution, and not less than six from the works of Landseer.

**HIGHLAND WHISKY STILL.** Painted by Edwin Landseer, R.A. Engraving by Robert Graves, A.R.A. —The original picture was one of the most admired of the Royal Academy Exhibition some years ago. There are five figures in the composition, the principal whereof is a Highlander resting after the fatigues of the chase, and delivering his opinion of the "liquor" just drawn from the still. This engraving is in an advanced stage of finishing, and is elaborated in the most skilful style of line-engraving. The transparency of the shadows is wonderfully preserved, and the fleshy roundings of the limbs have been dealt with exactly after the spirit and feeling of Landseer's works. The diversity of the composition involving objects and surfaces of qualities and appearances so various might have been supposed to present difficulties of no ordinary kind to the engraver; but Mr. Graves has succeeded in treating the principals and accessories of his plate in such a manner as to present them at once to the eye in the perfection of natural truth.

**CHILDREN AND RABBITS.** Painted by E. Landseer, R.A. Engraving by Thomas Landseer. The figures here are portraits of the children of the Hon. Seymour Bathurst; and the plate will form a pendant to that containing the portraits of the children of the Duke of Sutherland. It is in mezzotinto, and in an advanced state: there is in the heads a delicacy of management, and, in other parts, a breadth of manner, both powerfully descriptive of the decided touch of the distinguished painter.

**THE WIDOWED DUCK.** Painted by E. Landseer; engraving by John Burnet. The subject is the grief of a duck for the loss of her mate, that has been shot, and the expression has all the descriptive force of the painter. The engraving is in mezzotinto, and is in a forward state.

**THE MORNING OF THE CHASE.**—Haddon Hall in the days of yore.—Painted by Frederick Taylor; engraving by H. T. Ryall. The original is a very beautiful water-colour drawing, descriptive of the return of a hunting party, and comprehending all the attributes which give effect to pictures representing scenes of a past time. The style of engraving is mezzotinto.

**MR. AND MRS. HAWK.** Painted by E. Landseer; and engraved by C. G. Lewis. Two companion engravings have received this title; they are portraits of two hawks, wonderfully painted; the heads of the birds are life itself.

**THE CORONATION.** painted by Hayter, and engraving by H. T. Ryall, is within a few months of being finished. The importance of this engraving as a work of Art, and the interest of its subject in a historical and national point of view, render it one of the grand historical works of the present reign. It contains upwards of fifty portraits of the great and noble of the land, who surrounded the throne on the memorable occasion it commemorates. A work of this consequence will not bear to be considered in a few lines,—even as reference to it in its unfinished state; and we shall take an early opportunity of noticing it at length.

**PORTRAIT OF HIS ROYAL HIGHNESS PRINCE ALBERT,** painted by George Patten, A.R.A., and in course of engraving by H. T. Ryall, is intended as a pendant to Chalon's portrait of her Majesty. His Royal Highness is in the full robes of the order of the Garter.

**THE DUKE OF BEAUFORT'S DOGS;** painted by Landseer; engraving by T. Landseer. The beautiful picture which supplies this engraving was exhibited about three years ago. Being in the very forte of Mr. Landseer's style, it possesses all the advantages by which that style is distinguished.

**LASSIE HERDING SHEEP.** Painted by Edwin Landseer, R.A.; engraving by John Burnet, F.R.S.; published by Henry Graves and Co.—This is a line engraving to be finished in Mr. Burnet's excellent manner. The "lassie" is shoeless and bonnetless, precisely such a figure as is hourly met with, not only in the land of the Gael, but also in that of the northern Saxon. She is leaning against a rock, spinning wool with the simplest of all machines—a reel. Many parts of the plate are still only in outline.

### PUBLICATIONS OF MR. M'LEAN.

**LAYING DOWN THE LAW.** Painted by Edwin Landseer, R.A.; engraving by Thomas Landseer. The subject is one after the painter's own heart—an assembly of dogs presided over by a "grave and reverend" poodle, in whose countenance we read clearly—patience, long suffering in the cause of justice, and not

less distinctly a benevolence that will not deny the prisoner at the bar every legal advantage he may be entitled to. We would, for the sake of this admirable work, that the story had been somewhat less ambiguous; and we hope, as the engraving advances, that the circumstances of the composition will be as explicit as those of Mr. Landseer's works usually are. The judge is a white poodle, with his head lost in a mass of hair, which, together with his depending ears, forms the most perfect resemblance of the judicial head-costume that can be imagined. The picture comprehends twelve or thirteen heads of us many different species of the canine race; and the expression given to each accords faithfully with the known characters of the animals. Some eye the prisoner with no very kindly aspect. Some are listening attentively to the judge's charge, and others energetically discussing the merits of the case. The plate is in mezzotinto, and when finished will be one of the most extraordinary productions ever offered to the public, suffering comparison with the works of none—not even of Landseer himself.

**EQUESTRIAN PORTRAIT OF HER MAJESTY.**—Painted by F. Grant. Engraving by J. Thomson. This will be an exceedingly large print; the style of work is mezzotinto, and the etching is in a state preparatory to finishing. Her Majesty is mounted on a grey horse, and accompanied by the Marquis Conyngham, Lords Melbourne and Uxbridge, the Hon. George S. Byng, Sir George Quentin, &c. The party are passing through an arch in Windsor Park; and the foreground being an elevation, the Castle is seen at a distance over the tops of the trees which cover the lower grounds. Mr. Grant excels in the arrangement and grouping of his figures, an excellence which is particularly conspicuous here, for never have we seen any similar work more happily managed. The Queen and Lord Melbourne head the party, and her Majesty, in the act of speaking to the Marquis Conyngham, turns her head, throwing aside at the same time her veil; thus the portrait is a full face admirably shown by an arrangement which obviates the necessity of any foreshortening of the principal horses. This, when finished, promises to be a standard portrait of the Queen, the likeness in contour and expression being perfect.

## CORRESPONDENCE.

### THE ART UNION OF LONDON.

TO THE EDITOR OF THE ART-UNION.

SIR,—The appointment of a sub-committee, to consider the future prospects, and most efficient mode of applying the increasing income of the Art-Union of London, speaks well for the intentions and determination of the principal movers of that Association and it is very evident that the sub-committee have pursued the best of all courses in soliciting the suggestions of the eminent artists to whom they have applied. Their judgment has likewise been evinced in deferring for the present the final settlement of matters of such great importance. The Association must ere long be so mixed up with the destiny of Art in this country, that to determine hastily as to its future government, would perhaps be creating some evil for which it might prove very difficult to find a remedy. In the mean time, I deem it to be the duty of every one who has any feeling for the prosperity of the Fine Arts in this country, to be on the alert, endeavouring, by all fair means to strengthen such a national cause, amongst which might be conspicuous a manifestation of his own ideas on the subject, or a canvassing of the merits of those offered by others, the object of all being the same: no one could quarrel with another for finding out the readiest mode of obtaining it: and surely if all the artistic world convey their stores to the same market, it will afford the best means (by comparison) of selecting that which is of most value.

One cannot but feel satisfied with the greater portion of the extracts in your former number, from the report of the sub-committee; yet I must beg to offer my doubts as to the policy of changing, as hinted at, one of the principal features of the Art-Union, viz., the right of the public to select their own prizes. Such an alteration affords, in my opinion, a fair subject for discussion; in fact, it may be presumed, from the manner in which it is alluded to, that the advice of the many interested is sought for. The suggestion runs thus, "Whether it might be desirable that one of these principal prizes should be selected, under the best advice, by the committee." This involves so many considerations, that it demands an entire attention, unmixed with baser matter. I therefore pass it by for the present, with a declaration of my feeling, assured of two things: the first, that the committee had much better decline such an unthankful, onerous office, unless they can prove publicly (to avoid all suspicions), that some real benefit will accrue to Art,

artists, and the public from their exercising it; the second, that every prize-holder will prefer choosing for himself, even though he became a sufferer thereby.

The paucity of pictures from which the *larger prize* holders have been enabled to make their selection, has hitherto proved a great drawback to their good fortune: it is proposed to obviate this in future, and at the same time to advance high Art, by announcing at the annual meeting, some of the principal prizes, say £400 or £500 each, for the following year, which might induce a greater number of artists to paint pictures of that class than otherwise would. But this will not prove sufficient for securing to the subscribers all the advantages it is desirable they should have. It must be borne in mind, that the Royal Academy is the only one of the London Exhibitions which opens after the balloting for the prizes; the other galleries may have been stripped of their best pictures ere the prize holder (particularly a country one), can turn his good luck to any good account: this is a sourced eserving of much consideration. No other means occur to me for its permanent removal, than fixing the day of drawing earlier in the year; were this done, it is evident that the *value* of the prizes would be greater, from which one may fairly conclude that the number of subscribers would be augmented; on the other hand, while it is suffered to remain, many will, as they do now, hesitate to join the Association, or at least, take objections to being left by the managers with the refuse of the galleries.

Nothing in my opinion can be better than the idea of presenting, occasionally, first class pictures to some public Institution. Those *legion-visited* buildings, the National Gallery or the British Museum, would alone find good places for them for many years to come; but might not the effort for elevating the minds and taste of the people be directed at the same time to the improvement of Art itself? Why not encourage artists to tempt the *higher walks*, by offering a large premium annually for the best work, upon some *subject given out* the year before—the pictures to be exhibited with the Art-Union prizes: it would not then be very difficult to find out "who was the best man?" The trial of strength amongst the pupils at the Royal Academy is, as you are aware, conducted on this principle; there even the size of the canvasses scarcely ever varies; this, indeed, is the true way of drawing out the talent and genius of the country; at least, could the experiment do any harm? I think not. What preferable feeling shall we kindle, and keep alive to an honourable emulation; the hope of victory will sometimes do more than patronage itself.

Yours, &c., VIOLENS.

#### SCULPTURE IN GREAT BRITAIN.

SIR,—The thousands who visit our annual Exhibition at the Royal Academy, and other galleries where sculpture forms, if not a principal, a large portion of the collections, are in total ignorance of the means by which such objects are produced. The general belief is, that the statue, or group, hewn without previous labour from the rough block, is completed at once by the sculptor, and that the greater the finish or smoothness that may decorate the work, the more talent is manifested and credit due; but with the artist and the educated in Art, it is simply considered a mechanical termination, unworthy, in every respect, of consideration, unless applicable to a well-selected subject, well told, and with judgment drawn; and even then, as a pleasing auxiliary only. Mind and sentiment are the chief; and though certain materials may be more pleasing to the eye, and, in many cases, enhance the general effect, still the work, without these requisites, would be, *in place of Art*, that of *mechanical labour*. With the multitude, nay, with many educated people, an impression exists, that the whole art of statuary lies in the execution of the marble, a truth evinced by the manifest indifference which may be observed at our exhibitions for the *plaster* productions of genius, while trifles wrought in the more expensive material rivet attention, and draw forth expressions of the greatest admiration. Sculpture has not only been long a misunderstood, but a neglected, art. Let us visit the numerous galleries and exhibition-rooms of our own country, and we shall then obtain sufficient proof of the fact. Our Royal Academy, our *British Institution*, and the Suffolk-street Gallery, are all instances. The National Gallery, though hung throughout with pictures, boasts but ONE only specimen of the sister Art! At Manchester, Liverpool, and Birmingham—indeed, at all our provincial exhibitions—the accommodation for sculpture is totally neglected;

and though repeated premiums are offered for the encouragement of painting, in no case has a corresponding feeling been evinced for the patronage of statuary. Let us visit Paris, and the same neglect becomes apparent. Windows, far beneath the many glorious works of antiquity which adorn the Louvre, destroy the mastery with which they are wrought; though, on proceeding to other halls, we find every accommodation afforded for the exhibition of pictures. Milan, Bologna, and Florence are equally regardless of their statuary in respect to light; and even (in many instances) the Eternal City, the mart of sculpture, is open to the same remark. The last slight which this noble art sustains remains untold. See our daily and our weekly papers, nay, our journals of *Art* and science—see the column after column noticing the productions of the pencil, and then the *infantile* paragraph, stating simply that sculpture too is there.

The first idea of the sculptor is traced either in clay or on paper; a small and rough sketch of the subject he wishes to produce, in which he considers well his tale, and the best mode to convey it, the most agreeable position for his figures, and the general effect of the whole, totally neglecting every appearance of detail or smoothness. When this draught is completed agreeably to his wishes, he commences (with the assistance of his workmen) to pile up a mass of clay the size of the object to be portrayed, rendering it firm and steady by the addition of irons and framework, secured to the stand on which it rests; and on the careful completion of this—the model—depends the correctness and beauty of the marble. It is at this stage that the draught or original idea is reconsidered, copied, and, with the assistance of the human figure, more minutely studied and carried on to completion. The moist nature of the clay renders some mode necessary for the preservation of the model during the progress of carving, or being *copied* in marble, and this is effected by moulding and casting, as follows:—The clay—for instance, a statue—is at first covered on the front half only, from the summit to the base, with a mixture of plaster and water, which is allowed to become hard, or set, previously to the remaining portion of the figure being covered, when the object is entirely coated, and the mould completed. A sufficient time having elapsed to render the mould firm, it is carefully removed in two parts from the clay, when an exact representation of the statue is shown in reverse. These, being thoroughly cleansed, are placed securely together, and filled with plaster of a finer nature, and in turn an impression is taken of the mould; this being carefully cut away, leaves a cast, similar in every respect to the original model. The plaster cast is now placed in the hands of a mason, who by means of a machine proceeds with the pointing or roughing out. By this process the waste stone gradually diminishes, and the form daily becomes more and more apparent, until within an inch or less of its intended surface, when it is submitted to the chisel of the sculptor's more able assistant, who carries it still nearer to the *perfection of the model*, and prepares it for the final touches of the master.

Yours, &c., A SCULPTOR.

#### LINES ON R. INNES'S PICTURE.

*In the Rooms of the Edinburgh Society of Artists.*

He comes not through the lagging day,  
With faithful step and cheerful mien,  
To chide the heavy hours away,  
And happier make that humble scene;  
No step is there, nor voice to stir  
The sleeping of the wearied cur.  
Unwelcome is the light of morn  
To eyes that fain would shun that light,  
And shrink from garish day, forlorn,  
As day were hateful to the sight.  
The spinning-wheel beside her stands  
Untouched by those unconscious hands.  
Ah! yes—a father's frown hath chased  
A lover's presence from the door;  
And by that sorrow gently traced,  
And eyes cast on the cottage floor,  
The painter's tale is told; for there  
Sits love in sorrow—not despair.

W. H. CROME.

#### THE PONIATOWSKI GEMS.

THE Poniatowski collection of gems has long been celebrated throughout Europe. It was the property originally of the Kings of Poland, in whose possession it was augmented by the acquisition of the rarest and most beautiful specimens. By inheritance the series descended to the late Prince Poniatowski, by whom every opportunity was embraced of adding to its interest; inasmuch that (ultimately) it was justly considered the finest collection of modern times. While in the possession of its late proprietor, the cabinet was enriched with many choice specimens, obtained at a great expense from various parts of Europe; and almost the entire collection has become the property of John Tyrrel, Esq., who, with the view of benefiting Art, submits to the world proof impressions of these valuable antiques, which are now in course of publication by Messrs. Graves and Co. The entire series amounts in number to upwards of 1200, whereof only 243 have as yet appeared, constituting the "first class."

Engraved gems are the only relics of ancient Art, that now exist in all the freshness and precision of execution with which they quitted the hands of the artist; and to be assured that these are yet as perfect as when their various engravers pronounced them finished, it is only necessary to examine the clear impressions which they yield. For this perfect and uninjured condition it is not difficult to account, since they are easily secured, and, from their size, may be guarded with care for any length of time; while, on the other hand, perishable pictures, and statues of frail Greek and Italian marble, are exposed to every casualty: hence, in their minutest details, they may be consulted for truth by the poet, historian, and artist; for among them we find copies of many remarkable works of antiquity, of which we know, but for such copies, no more than the names. In them the ancients also celebrated their religion, illustrated their history, and paid tributes of honour to the great and good.

Gem engraving is an art of the highest antiquity; it was known and practised among the Egyptians and Jews. By the former engraved gems were not only prized for the value of the stone and the elaborate execution of the engraving, but they were worn as medals and marks of distinction for signal services in peace or war.

The Etruscans were the first Europeans who adopted the Arts of the Egyptians; and much as the civilization of the Greeks is quoted, yet the Etruscans were in a state of advancement, while the Greeks were but gradually emerging from barbarism. From the Egyptians also did the last mentioned people acquire their taste for sculpture and engraving, which, together with a knowledge of mechanical execution, was all they borrowed to set on foot among them, that other mythology, the religion of sculpture. When the art of gem-engraving had attained in Greece to a considerable degree of excellence, their use as signet-rings and ornaments became very common. Greek art received its first grand impetus from the expulsion of the Persians: from this period, sculpture and gem engraving advanced rapidly to its ultimate perfection in the age of Alexander.

Pyrgoteles was the most celebrated Greek engraver; he lived in the time of Alexander, and had alone the privilege of engraving resemblances of him, as Apelles, of all painters, had that of painting him, and Lysippus of executing statues of him. According to Pliny, Apollonides and Cromius the elder, held the second rank. In the age of Pericles, Polygnotus, Mycon, Pamphilus, and Plotarchus, were the most eminent; and in the time of Alexander the most famous were Pyrgoteles Aëtion, Apollonides, Solon, Sosstratus, and Cromius.

After the Romans had conquered Etruria, a taste arose among them for engraved gems, but they first employed them as distinctive of rank and merit: for instance, a plebeian was constituted of the equestrian order by the gift of a ring; and if a Roman of patrician rank disgraced himself and his order, he was degraded by being deprived of his ring. The use of gems and gem-rings however became finally general, and were ultimately worn by citizens of Rome as an appointment carrying with it an appearance of respectability. The abuse of honorary statues in Rome was not greater than the luxury of rings, for frequently were the hands entirely covered with them. The art of engraving was not confined to gems, but was applied to the ornamenting of vases, of gold, silver, onyx, crystal, &c., &c., and to every description of personal ornament.

The love of this department of Art grew to a passion

among the ancients, some of the most celebrated of whom encouraged it extensively. Heliogabalus is said to have worn gems on his "shoes and stockings"—Pompey esteemed gems among the richest of his captures—Julius Cæsar was a great collector of them; he left his cabinet to the Temple of Venus Genetrix.

Gems remain to us in better preservation than any other relics of equal antiquity; a fact easily accounted for, when we consider their uses—sacred and moral; their material durability; the value set upon them; and their portability and facility of concealment. We have seen gems submitted to examination by microscopes of the most powerful construction; a test by which their execution seemed the more marvellous, as the finest statues did not excel them in proportion and accuracy of design. In the Poniatowski cabinet, formed with such care, and collected at such expense, it may be supposed that all are of high value; there are, however, very many of rare beauty; we may instance No. 14. 'The Goddess Vesta,' by Pergoteles; No. 33. 'Head of Ganymede;' No. 108, by Gnaïos, 'Venus seated in a Shell, drawn by Dolphins;' No. 155, by Gnaïos, 'Apollo pursuing Daphne;' No. 164, by Chromios, 'Midas bathing in the River Pactolus;' No. 168, by Pharnax, 'Tityus in Torture,' &c. &c. The whole of the impressions indicate the finest preservation, display the richest poetry in design, and the utmost nicety of execution.

In thus multiplying the collection, so as to render accurate copies of it accessible to lovers of art generally, Mr. Tyrrel has conferred a public benefit; of the originality of a vast proportion of them there can be no doubt: they are valuable lessons to artists. We shall recur to the subject on some future occasion, describing the series more minutely.

#### METROPOLITAN IMPROVEMENTS.

To obtain the most direct and commodious thorough fares, sewers, and means of ventilation, to establish public parks and walks, and to embellish architecturally and otherwise the Metropolis, are all objects of the greatest importance to the health, comfort, and morals of the people, at once recognised by all, and every where admitted. It is, nevertheless, a fact, that these things are managed badly amongst us; that thousands have been spent in bit-by-bit alterations that might have been improvements, but are not so; that opportunities of adorning the streets, of establishing silent lectures on the beautiful, are every day neglected; and that even now densely populated quarters are so ill-arranged, and so badly ventilated, that fever reigns, not merely in every house, but in every room of every house, and spreads thence with fearful power through all the town. It is, therefore, a matter for congratulation, that these subjects are now exciting public attention to a very considerable extent, and that the necessity of arranging and carrying out gradually some comprehensive and general plan is beginning to be felt. A Society is now in course of organisation with this end in view, and has been taken up warmly by a number of influential men of all parties and professions. It does not propose to originate plans itself, but to examine into and further the adoption of the principles on which all such plans should be founded; to point out the evils which have arisen from considering the subject only in detail; and to urge upon the Legislature the importance of looking forward for ten or fifteen years, and of employing the first talent in the country to prepare, for the consideration of both Houses of Parliament, a plan of all the improvements in the metropolis which might be carried into effect within the period named. Were any magnificent plan of this description brought before the country, a plan which all would be proud to see realized, and which would, in the end, be sure to benefit all, as such a plan unquestionably would, we are convinced it would at once become popular, and that money might be raised without difficulty to carry it out efficiently.

Up to this time plans have been brought forward solely with regard to the interest of the few, and have never been considered relatively to a whole, or with a view to the general welfare. There can be no doubt that this Society may effect much good; in fact, it *must* do so, if it be but by simply exciting attention to its object; and we look anxiously for its immediate proceedings. Even at this time, the Act of Parliament which has been obtained for improving the metropolis, and which includes the formation of a new street from Coventry-street, Piccadilly, to Long-acre, might be revised with the greatest advantage. The penny-wise-and-pound-foolish system has been pursued, and, unless some alteration be made, will materially lessen the

amount of good which might have been expected from it. Even in a pecuniary point of view, a partial improvement is never found to make so good a return proportionately as a perfect one: as, for example, £10,000 may be spent in taking down one side of a street, without obtaining any return for the money so laid out; whereas removing the whole at a cost of perhaps no more than double the amount, may, by entirely altering the neighbourhood, raise the rents, and so produce a fair interest on the amount expended:—"There is that scattereth, and yet increaseth; and there is that withholdeth more than is meet, but it tendeth to poverty."

The committee, which is at present little more than provisional, comprises Mr. Ormsby Gore, M.P., Mr. Mackinnon, M.P., Colonel Sykes, Mr. Barry, R.A., Mr. Martin, K.L., Mr. H. T. Hope, Mr. Ivatt Briccoe, Mr. W. E. Hickson, Mr. Britton, Dr. Southwood Smith, Mr. Donaldson, Chairman of the Commissioners of Sewers, Mr. Godwin, Colonel Prosser, Mr. Wentworth Dilke, Mr. B. Smith, M.P., Mr. Chadwick, Dr. Elliotson, Mr. C. Fowler, Mr. Lindley, and many others.

#### OBITUARY.

##### DANNECKER.

THE celebrated German sculptor died at Stuttgart on the 8th of December, in the eighty-fifth year of his age. To all artists who have visited Germany, his works are well known, and his fame has reached all English lovers of Art through his widely-celebrated 'Ariadne,' an exquisite composition, in the possession of Bethman, the banker at Frankfurt. The early history of Dannecker is like that of many, very many first-class artists, and might be written in less than a dozen words, from that vocabulary which supplies the plain means of describing the commencement of every similar career; these are, poor parents—innate devotion to Art—intense application—difficulties—success. His parents endeavoured to thwart his inclination for the plastic arts, but the fascination was too strong upon him, and it carried him through all their opposition. His father was employed in the stud of Duke Charles of Württemberg, to whom the youth ul Dannecker explained, personally, his views; and in 1771, at the age of thirteen years, obtained permission to study in the academy at the "Solitude," a ducal residence near Stuttgart, where pupils received, gratis, instruction in painting, sculpture, and music. One of the principal rules of this academy was infringed in the admission of Dannecker; for the students admitted were not below the middle rank in life; he, however, soon distinguished himself, and bore away, in his sixteenth year, the prize from older competitors—the prize awarded to him for his model of 'Milo of Cortona.' Friedrich Von Schiller was a fellow-townsmen of Dannecker, and also a fellow-student at the Solitude, where a friendship commenced, of which a lasting memorial remains in the famous statue of the illustrious poet. In 1780, and in his twenty-second year, he quitted the academy, as did his friend Schiller at the same time. While studying he was encouraged by employment from the duke, who afterwards appointed him sculptor to the Court, with a salary of 300 florins a year—about £25. Ardently desiring improvement beyond what his native place could afford him, his wishes pointed to Paris, which place he received permission to visit; but at first without any addition to his pittance, which was increased by 100 florins only after a residence of some time in that capital.

At Paris he became the pupil of Pajou, and made the friendship of the sculptor Scheffauer. At that time, as now in the French capital, the facilities for the study of nature were greater than in any other European city. To this study therefore he devoted himself during the term of his sojourn there, which was about five years. In 1785 he quitted Paris in the society of Scheffauer, with whom he proceeded to Rome, where he attracted the attention of Canova, by whose instruction and advice he was much benefited. In Rome also commenced his friendship with Göthe and Herder, who, like himself, were seeking inspiration from the relics that enriched the Eternal City. In Italy his reputation took its rise; for there he produced works which caused the academies of Milan and Bologna to elect him a member of their respective bodies. On returning to Stuttgart, he was employed for some time in mo-

delling various subjects for Duke Carl; and he was thus occupied until 1796, when he again commenced working in marble, and executed his famous 'Sappho,' which is at Monrepos. Many busts of very celebrated persons are among the works of Dannecker; and none better known than that of his early friend Schiller. His bust of Gluck, the composer, is also an admired production; this was the result of a commission from the present King of Bavaria, when Crown Prince, for whom he also executed other works. His group after the Mythus of Apuleius—'Eros and Psyche'—is celebrated for its conception and poetic treatment; and some of his other mythological subjects are of the highest class of merit, as his 'Minerva,' 'Melpomene,' and 'Thalia.' His works in marble and bronze are numerous, amounting in number to about 500; of his busts, that of Lavater is considered the finest; and of his ideal productions his *capo d'opera* is a statue of the Saviour. This last named work was finished in the year 1824, having been a subject of elaborate study during eight years. For the original conception he was indebted to a dream; and, perhaps, no other work of its class acquired, during its tardy progress, a greater degree of renown for its author. Thorwaldsen saw the figure before completion in the atelier of Dannecker, and expressed an opinion that, by the addition of drapery, the success with which the subject had then already been treated, would be annulled; but the latter adhered to his original design, and the result has shown that he was fully equal to the task he had imposed upon himself.

As may be understood from the nature of his subjects, his style was formed from the antique. For some time before his death, he was but the wreck of what he had been, and had ceased from mere superannuation to exercise his art.

##### M. BOUCHOT.

After having long struggled against disease in the chest, has at last sunk under it, and died in Paris of decline. M. Bouchot was born in 1800, went to study at Rome and afterwards at Naples. Returning to Paris, his talents were soon acknowledged as a painter, both of history and portraits. The French Government ordered him to paint, for the church of La Madeleine, a Lunette of gigantic proportions, the figures being twice and a half the size of life. The subject is 'The three Marys at Calvary.' It is one of the finest pictures in the church, and is the masterpiece of the artist in religious works. In the historical style his best production is 'The Death of General Marceau,' in the Museum at Versailles. While Bouchot was receiving from Government and individuals an immense number of commissions for pictures—accompanied by honours and fortune—while he was happy in domestic life, having married the daughter of Lablache, to whom he was devotedly attached, death came and closed his career, leaving in grief and desolation his friends and family.

##### MR. HUBERT FRY.

This amiable young man had given great promise of excellence as a marine artist; a few of his early drawings have been engraved. He was on a voyage to Italy for the purpose of improvement in his professional studies, and had arrived within twelve miles of his post of destination, when a heavy gale drove the vessel ashore, and Mr. Fry perished with four of the crew, on the night of the 31st of January. He was 22 years of age.

HEREFORD.—Arrangements are in progress for restoring the fine old Cathedral of Hereford: the estimated cost is £20,000. The Dean and Chapter are ready to subscribe £2000 from their own resources; the Bishop of the diocese, £300; and the Chancellor of the choir £100. The circular states that "since the year 1831, the Dean and Chapter have expended on the fabric, besides the proceeds of the fabric's estates, and a voluntary sacrifice of 5 per cent, upon all their fines, the sum of £149 7s. 6d. from their own private means." Unfortunately, there is a debt of nearly £2000 upon the fabric fund. The restoration of these time honoured and deeply interesting structure is a glorious work, to which the clergy and the laity should be equally ready with assistance. The sum required, is not a large one, and might be easily raised without inconvenience, by contributions from the purses of a few wealthy individuals. It is an object, however, in which the public generally should co-operate. At a more recent meeting than that to which we have referred, it was determined to entrust the work to Mr. Cottingham.

## WOOD-ENGRAVINGS.

We have no design to enter at any length into this subject; a History of the Art we have already given; our purpose is merely to print a few specimens of wood-engraving:—first, because they will form an agreeable acquisition to our subscribers; and next, because they will afford some idea of the progress of the art during the last year; our examples being selected from the best of the illustrated books.

We commence with a selection from the published volume of Mr. J. Jackson—"A Treatise on Wood-engraving"—a beautiful, interesting, and valuable work, to which we refer the reader who desires to obtain information on the subject:—either as to its origin, progress, and present state, or to the "practice of the art," of which Mr. Jackson has given a detailed account, at once minute and comprehensive.

As we have other opportunities of selecting from the works of modern engravers, we take, from Mr. Jackson's book, copies, by him, from some of the old masters in the art. The first two are from Albert Durer: the one, from the vignette title page to his "History of the Virgin" (published at Nuremberg, A.D. 1511), the other from the vignette title page to "Christ's Passion," which appeared about the same time.

The third is from Holbein's "Dance of Death." The fourth is copied from a cut engraved by Christopher Jegher (about 1610), from a drawing made upon the block by Rubens (the original cut is twenty-three inches and a half wide by eighteen inches high). The fifth is copied from Burgmair, born at Augsburg about 1473; he made an immense number of designs upon wood, although it is not certain that he engraved any of them. The example we introduce is from his "Triumphs of Maximilian,"—a work "executed by command of the Emperor, to convey to posterity pictorial representations of the splendour of his court, his victories, and the extent of his possessions." The sixth cut is from the same work, and is one of the most gorgeous of the series; although, according to the "Treatise on Wood-engraving," there are reasons for believing it was not from a drawing by Burgmair, but by one of his contemporaries. The cut is unfinished—the parts left black on the banners having been intended for inscriptions. Mr. Jackson deserves the highest credit for the manner in which he has produced this work—a work that will add greatly to his reputation.

In this column we give three specimens from a new Edition of the "POEMS OF COWPER;" the engravings being all by Mr. Orrin Smith, from the drawings, on the wood, of Mr. John Gilbert—an artist who has, very recently, made good his claim to a leading station in this branch of the profession. Few, indeed, have more happily, or accurately, illustrated the works of the most tenderly didactic of our British poets. Mr. Gilbert has completely entered into the feeling of the original, in the passages he has selected; his drawings have been executed with great delicacy and care, yet with a sufficiency of vigour, to redeem them, amply, from the charge of over-refinement.

We take three specimens from a work entitled "ENGLAND IN THE NINETEENTH CENTURY." It is publishing in Monthly Parts—of which four only have as yet appeared—by Messrs. How and PARSONS. It is a very elegant publication, and will prove an exceedingly useful one; for the object held in view is to depict each county, not alone with reference to its pictorial beauties, its architectural splendours, and its peculiar characteristics; it forms a prominent part of the design to furnish information upon all important topics—such as the Population Returns, particulars relative to Poor-law Unions, Roads, Boundaries, Magistracy, &c. &c., "arranged in so simple and concise a form as to afford an accurate idea of the existing state of our county relations in all these respects." The first is Hulme Hall, Lancashire; the second, Tol Penwith; and the third, Roche Rocks, both in Cornwall. The drawings are by Mr. G. F. Sargent.

We select four cuts from an edition of "THOMSON'S SEASONS." It contains forty-eight illustrations, drawn and engraved by Samuel Williams, an artist who deservedly holds a foremost rank in his profession. The volume is published by Messrs. Tilt and Bogue, and is a beautiful specimen of typography, from the press of Wright and Co., the successors of Whitehead and Co.

The two cuts which follow are selected from "MASTER HUMPHREY'S CLOCK;" both are from drawings by Cattermole, engraved by Landells. The work is so universally known as to render notice of it unnecessary. Its popularity has been unsurpassed by that of any publication of the age; there are few persons in Great Britain, who can read, who are not familiar with the productions of the estimable and accomplished author. Happily, they advocate, strenuously and eloquently, the cause of Virtue; their extensive circulation is, therefore, certain to advance the general good. The beauty and value of the illustrations to the volumes, most recently issued, cannot have been appreciated by the public; for the necessity of printing rapidly and largely has rendered it indispensable to "work" the cuts by machinery; and no machine has been, as yet, brought to such perfection as to render justice to the wood-engraver. It will be perceived, however, by comparing our impressions with those published in "Master Humphrey's Clock," that the ordinary process has been wonderfully successful.

We select, in this page, some very favourable examples of the ability of our British engravers. They are from a volume—just issued—by Mrs. S. C. HALL, entitled "SKETCHES OF IRISH CHARACTER." The volume consists of a series of deeply interesting and beautifully written stories; in introducing which the fair authoress states that she has "aimed at a higher object than mere amusement, desiring so to picture the Irish character as to make it more justly appreciated, more rightly estimated, and more respected in England." The volume contains five engravings from paintings by Maclise; and about fifty wood-cuts of the highest merit, drawn on the wood by Herbert, Evans, Townsend, Harvey, Franklin, G. Cruikshank, Weigall, Mc Ian, West, &c. &c. The Fairy Piper is drawn by S. West, engraved by Armstrong; the Girl Digging Turf is by Evans and Walmesley; the Neglected Children, by Franklin and Green; Coolhull Castle, by Brooke and Delamotte; "the Lecture," by Gilbert and Landells.

IN this page we give four specimens from Mr. Murray's illustrated edition of "LOCKHART'S SPANISH BALLADS,"—perhaps the most exquisitely beautiful work, illustrated by engravings on wood, that has yet appeared in England. Our selections are from the drawings of Mr. H. Warren, the President of the "New Society of Painters in Water Colours;" and in the skill with which they have been executed, no British artist has hitherto surpassed him. We regret that, in the list of contents of the volume, the names of the engravers are not mentioned—they have done Mr. Murray ample justice. The book has received the aid of W. Allan, R.A., David Roberts, R.A., W. Simson, W. Harvey, and C. E. Aubrey; and every page contains a tinted border, designed by Owen Jones, architect. We rejoice to learn that this graceful and elegant volume is "out of print,"—a circumstance that will, we trust, stimulate Mr. Murray to the production of other books of equal beauty and merit. We hope that, ere long, the best of our British artists will not consider it an unworthy or unbecoming task to execute drawings for the wood-engraver; in France and Germany genius of the highest order has been thus employed so often, that the superiority of Foreign, over British, artists, is too generally looked upon as indisputable. We admit nothing of the kind; although here we cannot attempt to combat the error.

THIS page contains specimens from the edition of "SHAKESPEARE," published by Mr. Tyas, engraved by Orrin Smith, from the drawings of Kenny Meadows. The Work is issued in Monthly Parts, and at so cheap a rate as to place the dramas of the great Poet, worthily illustrated by the artist, in the hands of the people. The designs are—the great majority of them, at least—of unrivalled excellence; no painter has ever more completely caught the spirit, or more accurately conveyed the meaning, of the original; and the engravings are of corresponding merit.

HERE are two examples from Mr. Knight's pictorial edition of the works of SHAKSPERE; an edition valuable not only for the beauty of the illustrations, but also for the excellence of the notes and elucidations.

WE select four Cuts from "THE BRITISH ANGLER'S MANUAL"—the letter-press being from the pen, and the illustrations from the pencil, of the accomplished painter, T. C. HOFLAND, Esq. We give them less as fine specimens of wood engraving, than as good examples of the artist's ability to render the one art subservient to the other. Mr. Hofland is—as all painters ought to be—an angler; and his book upon the subject is an interesting and a very valuable auxiliary to all who pursue "the gentle craft."

In this page we give a few selections from a Work, publishing in monthly parts, entitled "IRELAND, ITS SCENERY AND CHARACTER: by Mr. and Mrs. S. C. Hall." The illustrations are supplied by various artists, and are descriptive of the people, the antiquities, and the natural beauties of that country. As works of art the majority of its embellishments are of the very highest merit; and the engravers, who have executed the various subjects, are of established repute. Each monthly part contains about twenty wood-cuts, two engravings on steel, from the pencil of Mr. Creswick, and a map of a county. The first is Carlow, drawn by Harvey, engraved by Green; the second, "Pancake tossing," from a drawing by MacIac, R.A., engraved by Landells; the third, a "Pishogue woman," drawn by Timbrell; the fourth, a girl crossing a mountain stream, by Harvey, engraved by Miss Cook.

We have thus presented to our subscribers the best specimens we could obtain of the wood-engravings in course of publication. We shall, at least once a-year, furnish a similar sheet of examples, to exhibit the progress of the art.

We may take this opportunity of stating that Mr. S. C. HALL is preparing for the press a volume that will, in some degree, associate with the "Book of Gems of British Poets," published by him, some three or four years ago. The work on which he is now engaged, is a collection of BRITISH BALLADS, including the choicest of those that have been gathered, with so much industry and labour, by PERCY, EVANS, RITSON, ELLIS, SCOTT, JAMESON, PILKINGTON, MOTTERWELL, &c. &c.; the majority of which rank among the most popular compositions in the language, but which have never yet been brought together. The engravings are to be on wood, from drawings by the most eminent of our British artists: it is intended to introduce an illustration upon every page, so that the volume may contain above FOUR HUNDRED embellishments. Ample scope will thus be afforded for the display of that genius in design, in which the artists of Great Britain have been hitherto, we think unjustly, contrasted, to their disadvantage, with the artists of Germany and France, whose works, drawn on the wood, are generally considered of unapproachable excellence. The volume will be "got up" so as to vie, in all departments, with the best productions that have been issued in any country.

## THE BRITISH INSTITUTION.

THE Exhibition—1842—was opened to the public on Monday the 5th of February; as usual, the catalogue contained the brief preface of two lines—"The directors have been under the necessity of returning upwards of *three hundred pictures for want of room!*"—an annual declaration that reflects no credit upon the Institution. Every petty dealer in marine stores takes especial care that his warehouse shall increase in proportion to his business; and he would be stigmatized as an idiot who assigned as a reason for rejecting customers, that he had no space in which to exhibit the articles they required, and in which he professed to deal. We call earnestly, but most respectfully, upon the wealthy and influential noblemen and gentlemen who direct this great and important establishment for "promoting the Fine Arts in the United Kingdom"—mainly by disposing of the works of British artists—not to suffer this degrading and afflicting announcement again to deface their books: not to reject nearly as many works of Art as they exhibit;\* not to deprive, it may be, three hundred artists of even the chances of honour and recompense; not to lower the British Nation in the eyes of foreigners, by showing that the British people, though profusely liberal in the building of royal stables, can afford only to maintain a structure in which the "Fine Arts" are to be "promoted" by exhibiting exactly two-thirds of the number of works sent for exhibition. "Want of room!"—how deplorable an excuse for the suffering, mental and corporeal, that must have ensued to many—perhaps to three hundred—men of genius, industry, and perseverance, whose aspirations have been subdued, whose hopes have been crushed, whose prospects have been blighted, and whose means of existence may have been taken from them—for a cause so pitiful! Is this picture too highly coloured? We know that it is not. But that we should inevitably wound sensitive feelings, we could tell the Directors stories of misery, incident upon these "rejections," at which the most stoic among them would shudder, and which many of them would, at once, rush to relieve. It is not the beggar who exhibits his rags, and intrudes his ailments upon the eye or ear, who is the truest object of generous consideration; it is the high-minded gentleman, who suffers in secret, and lets want eat into his vitals till he dies, rather than let the world bruit about his wretchedness. Are there no living instances to pair off with those of Proctor in the one profession, and Chatterton in the other? We dare not name them until they are dead!

The aggregate incomes of the Directors of the British Institution are at least three millions per annum. But we have no notion of demanding that they, out of their private means, rid themselves of the reproach of rejecting "three hundred pictures for want of room." Sure we are that the funds of the Institution, properly managed, would be amply sufficient, either to enlarge this gallery, or to build another sufficiently extensive, even if all idea of obtaining a grant in aid from the Nation were to be abandoned; and we do contend—strongly, but respectfully—that it is the duty of the Directors to see it done.†

The Exhibition of the present year contains, as we have stated, four hundred and fifty-two works. Of these, several have been made familiar to us elsewhere. There is no single picture of absorbing interest; but the collection supplies evidence of progressive improvement, and is, as a whole,

\* The Exhibition consists of *four hundred and fifty-two* works of Art, of which seven (!) are in sculpture.

† It would require no very large sum—in addition to the value of the present Institution—to purchase the St. James's Theatre, which appears to have been a disastrous speculation for the proprietor, and which certainly might be obtained upon very advantageous terms. Nor is there, we think, any doubt that Government would assist in promoting an object of vital importance to the Arts of this country. Any plan that emanated from so many distinguished persons as compose the directorship would, indeed, be certain of success; their high and honourable names would be a sufficient guarantee for the propriety of a step in advance, commensurate with the altered condition of the Arts since the commencement of their design, in 1805—thirty-seven years ago, when artists were few, and a very limited wall sufficed to hang all the pictures painted in England during the year.

satisfactory. A large proportion are of considerable merit; and the number below mediocrity is very few—fewer than usual. Still, we cannot describe it as greatly surpassing its predecessors; nor, indeed, does it come "up to the mark" we had a right to anticipate, as a consequence of the distribution of prizes last year, and a notice that the same plan would be pursued this. The majority of our more distinguished painters are absentees; and some of those who were formerly regular and extensive contributors have on this occasion sent nothing.

We cannot commence our annual task without recurring to the old subject of complaint—the blunders in hanging. We shall be much mistaken if it be imagined that "grumbling" is a pleasure to us; or that we approach this topic with any feeling but that of extreme reluctance. It is, however, utterly impossible that we can shut our eyes and close our ears. Artists use the pencil, and not the pen; they must appear by counsel when they design to make their wrongs known and their complaints heard. As long as we stand in that relation to them, their case shall be stated fully and freely, however high may be the rank of their judges. We say, without hesitation, the exhibition at the British Institution is fertile in proofs, either of ignorance or partiality; that several inferior pictures have been elevated into undue eminence by the positions in which they are placed; and that many works of undoubted merit are so situated as to appear utterly insignificant or worthless. We do not intend to notice *all* the "perpetrations" of which we complain, but some of them we cannot pass over in silence. Let the visitor look to the right-hand corner of the "grand room;" stoop very low (if he will kneel, so much the better) and he will see two exquisitely painted works, of a high class of character; finely conceived and elaborately wrought, by J. R. Herbert; neither of them large, placed "on the line"—*of the floor*; so as to be totally useless to the accomplished and popular painter, in the way of adding either to his reputation or his property. Mr. Herbert has two other pictures in the gallery; both are placed in the condemned room.\* In the same melancholy chamber is an admirable painting by Mr. Frith, a young artist who has already gathered "golden opinions," and who bids fair for the highest professional honours at a period not very distant. We venture to assert, that if this picture were placed upon the line, it would obtain one of the four prizes. Another young painter—Mr. Poole, to whom the same observations would apply with equal force—has two pictures in the list: one of them is placed at the top of a room, and one on a level with the floor. The one above may be, for aught we can tell, the veriest daub that was ever painted; and, in the absence of proof to the contrary, we will give the "hangers" credit for justice in putting it where it could not disgrace its company; but the one on the floor we can see—and have seen: it is a work that would do honour even to the collection of Mr. Wells.†

No. 1. 'View on the river Vecht, near Loenen, Holland,' E. W. COOKE. A small picture, which occupies the centre over the fire-place of the north room. It is gracefully painted, but is surpassed in merit by other works in the exhibition, productions of the same excellent artist. He does not, however, this year manifest the progress that may be justly expected from one who has been "patronised" (the term is a bad one, but we have, unfortunately, no better), to a very great extent. Yet how dangerous it is to form conclusions without sufficient evidence; we happen to know that the painter has been for many months labouring under an affection of the eyes—

\* Mr. Herbert was a few months ago elected an associate of the Royal Academy; we believe unanimously, or, at least, nearly so—a fact of which the directors, we must assume, were as little cognizant as they are of the existence of his genius; for in the catalogue, the letters A.R.A., which betoken the distinction, are omitted. We can hardly conceive the condemnation of Mr. Herbert by the Institution to be accidental, for it is but a sequel to the proceedings adopted against him—here, but here only—during the last four or five years.

† Mr. Poole exhibited a work last year at the Society of British Artists; it was bought immediately, and might have found a score of purchasers. We write from our own knowledge. There are few artists in the collection whose works would be more ardently coveted—if they could be seen.

and that, consequently, decided improvement was not to be looked for. As it is, however, his productions are pre-eminently good; and suffer only by comparison with those of his own, which the public as well as the critics have stamped with approbation.

No. 2. 'The Wanderer,' T. WEBSTER, A.R.A. A delicious cabinet picture, occupying, also, the post of honour—and deservedly so. As a painter of youthful expression, this artist has rarely been excelled. The present work consists of his ordinary elements of composition: a young Italian itinerant is exhibiting his menagerie of guinea pigs and white mice, at the door of a cottage, to some children within. The descriptive force lies in the contrast which exists between the heads of the children—that of the Italian boy on the one side and those of the cottage children on the other. The brow of the former is clouded with early care, and his eyes are fixed upon some object within the cottage; but his hope is checked, by the angry repulse instead of the hearty greeting; such would seem to be the artist's design; the effect is therefore highly dramatic; we can almost hear the voice of the dame dismissing the supplicant although her form is unseen. The expression of the boy's countenance—of the eyes especially—is a production of absolute genius. The subject is extremely simple, but its treatment is unaffected and full of truth.

No. 3. 'The Pedler,' J. C. HORSLEY. A very highly-wrought work, but not, therefore, the more effective. The artist has the merit of expending labour upon every part of his picture; but he has done so at the sacrifice of character, and given to it "a mechanical turn;" he, evidently, lacks that consciousness of power, without which great things are never produced. It was exhibited last year at the Royal Academy, and was, consequently, scarcely entitled to the conspicuous place it at present holds.

No. 4. 'The Saint Manufactory, or the interior of one of those shops at Naples in which are carved, painted, and sold Crucifixes, Madonnas, Saints, Angels, and Souls in Purgatory,' T. UWINS, R.A. For a *tableau-de-genre* this is a rich subject; and Mr. Uwins has availed himself of its abundant appliances with infinite skill and judgment. The *padrone* is seated and listening attentively to the instructions of a monk, who, by the way judging from appearances, seems to enjoy the easier life of the two. Upon the former, as the master spirit of the place, the principal light falls; and the manner in which the other figures and objects in the composition are made to retire, is really the perfection of Art. This is a style of subject different from the daylight scenes we have been accustomed to from the same hand; but the success is not less signal in this than in productions of this gentleman's other manner, of which we have so often had occasion to speak in terms of eulogium. He is a most accomplished artist—a high and classic mind is apparent in all he does; he never trusts to his ability in copying from and giving colour; but *thinks* deeply and maturely. In his hands the produce of the easel is a production of the intellect—naturally and strongly exercised.

No. 5. 'A Contadina of Sorrento,' E. V. RIPPINGILLE. A striking and very touching portrait; cold and raw in tone perhaps—a mistake into which nearly all our artists fall, who study long in Italy. At least, it seems a vice in our English eyes, and is certainly opposed to our English tastes. No. 6 is by the same artist; 'Maneteanoli, or Brigand Servers,' painted from Pietro Ciconi and his wife, two persons notorious in this kind of traffic. Mr. Rippingille has been studying the most famous—or rather infamous—of the Italian Bandits; the collection contains several examples of his bias this way; we are thankful that they permitted him to "take himself off" as well as his dangerous sitters.

No. 8. 'Fruit,' G. LANCE. It is impossible to conceive a picture of its kind more beautiful than this—if it has a fault, it is that the arrangement is too methodical. Grapes, plums, &c., are the fruit: a pheasant is added lying on its back, and presenting the varied hues of its breast plumage, every feather of which is individually coloured; with a care however divested of all hardness. The Dutch school is here outdone, not only in purity of tone, but also in finish.

No. 17. 'The Fair at Fougères, Brittany,' F.

**GOODALL.** A subject like this, admitting of expression of every shade and action of every degree of emphasis, is a severe test for the maturity of an artist, and proportionably more so for unconfirmed powers. Many of the best artists of our school have painted fairs and village festivals, but few of these associate themselves in memory with the names of their authors as their best works. With respect to the present picture—being a French fair, it were nothing if it were not essentially French; this it is to the minutest items of its composition, and we trust that Mr. Goodall will paint English domestic scenes with the same fidelity that he depicts foreign. There is a distinct coincidence of feature peculiar to the Norman and Breton women, which is so faithfully described in all the works of the artist, as to become somewhat monotonous. The grouping of this picture is most effectively designed; some parts even remind us of Wilkie: we can pay the artist no higher compliment. He is, we understand, very young—not yet twenty years of age; if he continue to improve as he has progressed hitherto, he will be an artist of whom his country will be proud; we do most earnestly hope that success will not beget carelessness, but that the praise with which he will be greeted on all sides may stimulate to still higher exertions. Some years ago we saw in his very early works promise of great excellence, and gave expression to the hope we entertained of his future career; hitherto we have not been disappointed, nor have we much apprehension that we shall be so hereafter; but now that he is “winning golden opinions” everywhere, we may serve him better by warning rather than by cheering.

No. 22. ‘Study from Nature,’ F. GRANT. A most delicate and graceful portrait, of a small size; possessing very high qualities, and not offending by the slight and “unlaboured” manner for which it is conspicuous.

No. 25. ‘First Love,’ Mrs. W. CARPENTER. Perfectly delicious; a picture that cannot be too highly praised. The production of a most accomplished mind, and bearing ample evidence of thorough knowledge of the capabilities of Art. It is the portrait of a young child nursing her doll; a simple composition, happily and beautifully true. How very few of our British painters are there who can surpass this work in any one of its qualities; indeed, in the whole range of modern Art we could scarcely name one who, in this style, so essentially English, could go beyond it. We have said, and say again, that the Royal Academy would do themselves honour by electing this lady a member of their body; the case is by no means without precedent; yet when candidates for future professional distinctions are mentioned, how is that we never hear of her?

No. 26. ‘Scene in the New Forest, near Minster, Hants,’ COPLEY FIELDING. As, generally, with the oil pictures of artists who profess especially water-colour painting, this picture of Mr. Fielding’s is strongly characterized by the manner of his water-colour productions. The horizon is black with threatening clouds, and everything betokens an approaching storm. The foreground is swept by fitful gusts of wind, the violence of which is amply shown by the yielding trees on the left of the picture. A small sketch in the south room is, however, much less free from the habit of painters in water-colours: it is remarkably bold and masculine in tone.

No. 32. ‘Consequence’—a sketch, W. E. FROST. A capital bit, full of point and character. The artist is an accurate observer, and can picture humour without vulgarity. We look for better things at his hands hereafter.

No. 33. ‘A Forest Bourn,’ J. STARK. A true copy of Nature, as Nature appears in England—nothing exaggerated—nothing put in for effect. It is not the only good and true work by Mr. Stark to which we shall have to refer; and although of considerable excellence, it is not the best he exhibits.

No. 34. ‘Bathers surprised,’ W. ETTY, R.A. This will be remembered as a leading attraction at the Royal Academy. It is full of the qualities for which the artist is pre-eminent—qualities the most difficult of attainment.

No. 38. ‘Cardinal Wolsey leaving London after his disgrace,’ S. WEST. The Cardinal is well supported as the principal figure in the picture, and the general management of the effect is ac-

ording to some of the best principles of Art. Wolsey is dejected and care-worn: the disgrace is powerfully painted, when we remember the character of the “magnificent English Cardinal;” but, for an English subject, the work is perhaps “Italianized” in manner and in costume; yet the artist is obviously a man of considerable talent, and he has directed his efforts into the higher walks of Art. The drawing is good, and the colouring is excellent. We have no doubt of his occupying a prominent station hereafter.

No. 39. ‘Afternoon,’ T. CRESWICK. Nothing in its style ever surpassed the beauty of this picture. It consists of the usual materials employed by its author—trees, and water, in addition to which there is a cottage. We observe less of colour in this and his other works in this exhibition than he has heretofore been in the habit of using. The afternoon is dull, the sky being charged with grey clouds. The whole of the lower part of the composition is made out in tones of corresponding sobriety. The immediate foreground is water, broken by rocks, and reflecting the surrounding objects on its limpid surface. On the right of the picture rises a group of tall trees, painted in one unvarying hue of sombre green; yet without the aid of a single accidental light or forced shadow, the masses of foliage are divided and beautifully rounded. The severity of the style of this picture reminds us of some of Ruysdael’s best efforts. Indeed it would scarcely subject us to an accusation against judgment and taste, if we were to say, we prefer it to most of the works of the great oracle of the connoisseurs. It is really almost a relief to be able to find *some* fault with a production, on the whole, so admirable—so very near perfection. The break of water in the foreground is “niggling;” as if the artist had put it in without reference to the “original;” and, so, had worked with a timid hand, conscious that he was without the assurance of reality. The picture is, nevertheless, by many degrees the best that Mr. Creswick has yet produced—perhaps it is not going too far to characterize it as the best of the modern English school. It will, inevitably, secure the accession of Mr. Creswick to the most distinguished position the profession can bestow upon him.

No. 43. ‘Amalfi, from the Garden of the Capuchin Convent, Naples,’ J. UWINS.—On the left of the picture is the terrace walk of the convent, shaded by vines; and here is the absorbing interest of the scene, for it is drawn and painted in such exquisite perspective, that the monk who is in the foreground must actually move (for he is moving) some distance before he arrives at the termination of his walk. In all respects, the work is a good one; the young artist has gone very far towards establishing a reputation; he has been gradually, but safely, improving, evidently without an overstrained effort; in his genius there has been nothing premature; his progress has been well sustained; and he may now take his place among the worthier of his compeers without fear that he will lose the character he has gained.

No. 44. ‘Amsterdam, from Buiksloot Creek,’ E. W. COOKE. Another of Mr. Cooke’s contributions; but not one that we can like; its tone is “dreary.” Of a far better order is No. 56, ‘View in the Lake of Haarlem,’ which ranges with it.

No. 45. ‘The Mountain Rivulet,’ P. F. POOLE. A most graceful and pleasant picture; a child is drinking at a way-side rivulet; an elder sister, and her guardian, standing by. The face of the older girl is heavily coloured, and ineffective; but there are qualities in the picture which amply compensate for a defect.

No. 53. ‘Stirling, from the West-gate of the Castle,’ W. COLLINGWOOD. Very little is seen of Stirling—the beauty of the view is the landscape distance—one of the sweetest *morceaux* that can be well imagined.

No. 55. ‘The Reproof,’ W. K. KEELING. Picturing an old knight, with a letter in his hand, “reproving” the fair girl who leans upon his arm. It contains some good work; but is deficient in character and expression.

No. 63. ‘Windsor Castle, from Bishops-gate,’ C. R. STANLEY. An excellent copy of the old familiar “scene.”

No. 70. ‘A Wood,’ T. CRESWICK. Another delicious production by an artist whose works always afford enjoyment—either to those who can appreciate Art or who love Nature.

No. 71. ‘The Sisters,’ painted at Sonnino, E. V. RIPPENGILL. A very striking picture; two young women are sitting under the shadow of huge rocks. The character of their countenances is that of vigour and daring; yet it is clouded by a melancholy expression; the key to which is supplied by information that they are the daughters of “the notorious Bandit Gennaro Gasperoni.”

No. 72. ‘Mary Magdalen,’ a study from Nature, G. HAYTER, M.A.S.L. This is a head and bust after the style of some of the old masters. There is a German mannerism of colour throughout the work which is not pleasing; it is, however, carefully painted, and fervent in expression. It does not, however, by any means convey the character we attach to the subject, nor do we like the model.

No. 76. ‘View of the North-side of Edward the Confessor’s Chapel in Westminster Abbey,’ PERCY CARPENTER. A capital copy of the noble and beautiful interior; rendered with a fine and true feeling and with marvellous accuracy.

No. 77. ‘The Bashful Lover and the Maiden Coy,’ F. STONE. The figures in Mr. Stone’s pictures communicate with the spectator as readily as those of any modern artist. We see them at once through and through without the aid of anything like broad expression; in short, he paints the motions of the heart with a feeling of the most refined sentiment. A damsel tastefully attired in the fashion of the latter part of the last century, has just crossed a stile at which appears the lover. A younger sister of the maiden calls her attention to the hesitating suitor, but she refuses to look back, and her confusion is markedly portrayed. The picture is a sweet passage of poetry; it may be read as well as seen, for a story has been rarely told in more expressive and comprehensive language. The landscape is decidedly bad; the hue of the trees is not to be found in nature.

No. 79. ‘The Jailor’s Daughter,’ J. R. HERBERT. Another picture of strong passion, from the exhaustless store of this author of moving *histoiettes*. It is small, and consists merely of a female figure about to open the door of a prison-cell; but her agony of expression, and the minor accessories of the composition, tell a long story of profound interest. The cell contains a prisoner or prisoners cast for death—for on the door is written, in red chalk, “Morte.” The time is night; she has traversed the passages of the dungeon without her shoes, and the spectator cannot help joining her in the prayer, that the inmate of the cell were fairly beyond the prison walls. It is, indeed, a most touching and affecting picture; painful to a degree, but evidencing genius of the very highest order by the emotions it rouses in the breast of the spectator. We lament that Mr. Herbert too frequently desires to give pain rather than to produce pleasure. He manifests continually a powerful mastery over human passions, but rarely awakes sensations in which it is enjoyment to indulge. He must rid himself of this morbid ailment of his mind, and give a wider and nobler scope to his great capabilities; let him commemorate some remarkable event in history; or immortalize an era in the life of some British worthy. We have few living artists so completely able to cope with the grand in Art, or to produce pictures that shall be in the best sense “national.”

No. 80. ‘The Outcast,’ is by the same master-hand—an effort of the same master-mind. This, too, is painful, though of high merit as a work of Art, and strictly true to the actual, although a vigorous imagination has been brought to bear upon it. It tells a sad story in language most forcible and emphatic; and a tragic interest is given to it by the hand that from the doorway betokens the utter abandonment of the unhappy outcast who has left the home of a seducer. The work is full of pathos, and reads a fine moral.

No. 85. ‘Leonidas,’ HERBERT SMITH. Glover’s “Leonidas” supplies the passage here illustrated—the lines, applying directly to Leonidas, are—

“The Spartan chief  
Himself o’erlaboured, of his lance disarmed,  
The rage of death can exercise no more.”

We would gladly see extended a feeling for Art of this class, but we fear that if Hilton’s works were unappreciated, there is but little chance for those who would follow in the same path. The author of this work displays much power in heroic description. The composition and drawing of his

picture are masterly, but it is placed somewhat too high for close inspection.

No. 88. 'Cromwell's Daughter interceding for the Life of Charles,' T. EARL. There are in history certain prominent *personæ* so familiarized to us in idea, that we can at any time call them up in thought before us. Cromwell is one of these, and in portraying such personages, artists would do well to adhere to accepted descriptions. The Protector is, obviously, too tall, and is painted in a red doublet and gambado boots. The picture would have been in better taste had he been clothed in sad-coloured raiment. These remarks fall from us with a sincere desire to guard artists against errors which depreciate the value of their labours, and we doubt not that our observations will be received as they are intended.

No. 93. 'La Somnambula,' C. LANDSEER, A.R.A. This work is unworthy of the artist whose name is attached to it; it is poor in design, in composition, and in colour; and the subject is exceedingly disagreeable. For the sake of the artist's high and deserved reputation it would be well to remove it from the wall.

No. 103. 'The Curiosity-shop,' R. J. LONSDALE. A highly wrought bit, very affective.

No. 104. 'Visit of Poor Relations,' F. P. STEPHANOFF. A chapter of every day life pleasantly read. An old gentleman and his wife in the enjoyment of every comfort are surprised by a visit from a poor female relation. The former will be so deaf that it is impossible to make him understand the circumstances and pleadings of his less fortunate visitor. The old lady sits drawn up in mistaken dignity, and deigns not to look at her. A pendant to this is No. 105, the 'Visit of Rich Relations,' paid to the same couple. In the former picture the old gentleman is yet in his morning gown; but he is now carefully dressed and not a hair of his wig astray. He is himself ushering in his rich relations whom the good lady is receiving with every demonstration of the most hearty welcome. Mr. Stephanoff's manner of painting is peculiar to himself; it seems to have originated in water-colour drawing. We wish that his faces had more roundness.

No. 110. 'Dancing Dogs,' A. MONTAGUE. A rich English landscape, possessing considerable merit, both of design and execution. A capital group of youngsters are introduced into the foreground, full of animation and enjoyment, as they witness, to them, a most unusual sight.

No. 111. 'A Wood Nymph,' A. GEDDES, A.R.A. This, although not an agreeable picture, completely carries out the artist's design; it is rich, luxurious, and abandonné.

No. 112. 'Gillingham, on the Medway,' W. J. MÜLLER. A work of the very highest class, and manifesting a thorough acquaintance with the peculiar attributes of Nature. It is singular that the artist should be able to paint landscapes with so much freedom, truth, and accuracy, and yet rank foremost among copyists of the human form and character. We have here a work that may class with the best of Constable's, possessing much of the fine quality for which that accomplished artist was distinguished; yet, in Mr. Müller's work, there is none of the mannerism which, for a time, deprived Mr. Constable of general popularity.

No. 115. 'The Old English Ballad-singer,' W. B. SCOTT. Although many objections may be urged against this work, it is by no means a common-place production. On the contrary, it is striking and remarkable, notwithstanding its defects of lowness of tone and scattering of interest. The subject was a bold one; and speaks well for the rightly-directed ambition of the painter. An old English Ballad-vender is reciting his tales to a group of the olden time, in the market-place of some village; the characters of the listeners are well imagined and portrayed; it is full of point and humour, yet without bordering upon caricature. We look upon it as a work of good promise, as the offspring of a mind of no ordinary capability.

No. 116. 'Elizabeth Castle, Jersey, from the Causeway—low water,' E. W. COOKE. This subject is treated similarly to Mr. Cooke's 'Mount St. Michael' of the last year; the fortress is in the back ground, whence extends forward an expanse of water and wet sand; the latter traversed by parties proceeding in the direction of the Castle. The picture is richly coloured, and the effect admirably sustained.

No. 120. 'Be it ever so humble, there's no place like Home,' E. LANDSEER, R.A. This is a contritely repentant absentee in the shape of a little rough terrier, that has evidently been some time astray. His home is humble enough: a barrel with a hole in it, his dish is empty and broken, and an intrusive snail has written "solitude" at his very threshold. It is difficult to describe in words the profoundly imploring expression with which the eyes of the dog are endowed; the head is raised, and he looks upwards, as in the act of howling. Much of the picture seems to have been painted at once; it has all the clear colouring of the best style of its distinguished author; and if scarcely sufficient to sustain his great and universal reputation, it would make a character for any other living painter.

No. 121. 'The Bride,' T. VON HOLST. The last year's exhibition, of this Institution, contained a picture by Mr. Holst, to which the Bride would be an excellent pendant, being like the other, a head and bust painted in shade. The back ground is yellow, to resemble the gilding of the old masters. The subject is derived from Shelley—

"Genevra from the nuptial altar went,  
The vows to which her lips had sworn assent  
Rung in her brain still with a jarring din,  
Deepening the lost intelligence within."

There is an independence of manner and a refinement of sentiment in the female heads of this artist, which all must acknowledge who can appreciate deep feeling in Art; the features of this head are inwrought with the verse of the poet. It is the production of a lofty genius, of a very powerful imagination, and of a deep study of Art. Yet we must again complain that the able artist will continue to select subjects that inflict pain; no one can look upon this wretched bride without a sense of suffering.

No. 125. 'The Emperor Charles V. picking up the pencil of Titian,' W. FISK. Such a favourite theme is this, that it has occupied the pencils of artists of almost every modern school. In painting subjects so hacknied, artists are unjust to themselves.

No. 126. 'Mouth of the River Zaan, with Zuyder-Zee, Fishing Craft, &c.—Amsterdam in the distance,' E. W. COOKE. This is to our mind the best of the works which Mr. Cooke exhibits this year; it is worthy of him; the tone is marvellously clear and bright; the composition graceful and natural; the sea as true a copy of reality as Art could produce.

No. 131. 'A Fairy Tale,' Mrs. W. CARPENTER.—A young mother reading to her young child—a miniature copy of herself. The work is beautiful; perhaps the most exquisite production, taken altogether, in the gallery.

No. 135. 'The Romantic Marriage,' N. J. CROWLEY, R.H.A.—A work that exhibits considerable talent; yet of much too dramatic a character, as if the artist had studied from dresses and decorations borrowed from the theatre, rather than from nature and fact. The scene, therefore, sadly wants reality. Yet it was a bold and praiseworthy undertaking; a proper attempt to grapple with a very difficult subject—a subject which history records, and the poet has immortalized. It is taken from one of the "Irish Melodies," and records an incident in the life of a Prince of Desmond: he marries a peasant girl, and the chiefs of his clan repudiate and disown him. The moment taken is that in which the young lover presents his beautiful mistress to the assembly of elders, and exclaims—

"You who call it dishonour,  
To bow to this flame,  
If you've eyes look but on her,  
And blush while you blame."

There are parts of the picture absolutely beautiful; the figure of the hapless bride is exceedingly graceful, and a female group in the foreground is introduced with happy effect. A little less redundancy of colour and a more subdued action would have placed the picture high on the list of excellent works.

No. 136. 'The Death of Edward V. and his brother Richard, Duke of York, in the Tower, 1483,' W. SIMSON. To this picture may be applied our remark under No. 125, as to the choice of subject. It must remind (the disposition is, of course, accidental) all who look at it of another picture of the same subject. It is beautifully

painted; but we lament that the power exhibited in it had not been exercised on some other equally striking passage of history, to which greater originality might have been given. It is strange, by the way, that many artists who have pictured this sad incident have chosen to place the boy-princes in bed *fully dressed*.

No. 141. 'June,' T. CRESWICK. Another of Mr. Creswick's treats, carrying us absolutely into the full summer, among the cool and silent places that meditation loves, although the gurgling waterbrook is rushing onward by the side of the solitary.

No. 142. 'The Seasons,' J. PARTRIDGE. A pretty piece of poetry, neatly and gracefully painted, but deficient in freedom and effect.

No. 143. 'Interior of Sefton Church, near Liverpool,' W. COLLINGWOOD. This is a new name; we shall meet it again, and often, hereafter. The artist is on the right path to fame.

No. 147. 'A Shed; Cattle reposing,' T. S. COOPER. A cabinet picture beautifully finished, in a style which Mr. Cooper still seems to keep to himself; for year after year passes and no competitors approach him.

No. 148. 'La Lettre d'Angleterre,' A. T. DERRY. A sweet portrait of a lady receiving a letter from home, in a far land; but why it should receive a French title we are at a loss to guess.

#### MIDDLE ROOM.

No. 149. 'The Will of Mrs. Margaret Bertram,' T. CLATER. An incident from Guy Mannering, pictured by an accurate observer and a good artist. The group assembled to hear and discuss the Will, is well and naturally arranged; the countenances express the varied characters which the great author has so ably described. The subject has been carefully studied, and is painted with considerable judgment and skill.

No. 150. 'Burning the Water, a scene on the Tweed, near Abbotsford,' W. SIMSON. An excellent work, full of force; boldly and vigorously coloured. It represents the sport of salmon spearing by fire light, at night; and has given occasion to the artist to manifest his power and originality by the effect he has produced in the reflection of the fire upon the water. He has wrought with a firm hand; and his picture is one that few have equalled.

No. 151. 'L'heureux Gourmet,' MADAME SOYER. A clever picture; but by no means a pleasing one.

No. 161. 'A Study,' MISS M. A. COLE. A very free sketch; carefully and gracefully drawn; and bearing evidence of much ability though little more than a sketch.

No. 167. 'The Puritan,' G. LANCE. The book which the old soldier-saint holds in his hand is so well painted that we should like to take it from him.

No. 168. 'Fruit,' we should covet entire.

No. 169. 'Old May Day,' T. CLATER. Describing a pretty old English scene; and nicely composed; with the character which poets and painters both like to give to village "swains and lasses." The work is much too grey in tone.

No. 170. 'Near Windsor,' J. STARK. A fine bit of pure English landscape, copied from nature, by the skilful, practised, and matured hand of a master.

No. 186. 'The Brothers,' F. GRANT. A composition consisting of portraits of two children, painted with much force and freedom. Mr. Grant is always happy in the arrangement and positions of his figures. The disposal of hands and arms is a matter of some difficulty in portraiture, but in this part of his pictures we generally find much grace.

No. 187. 'The Braw Wooer,' A. JOHNSTON. A pretty and pleasant reading of the story, which Burns so sweetly tells, of the lassie who affects indifference to tease her lover; the colouring is thin and raw, but the composition is natural and true.

No. 188. 'View in Croft Park, Herefordshire,' E. GILL. This seems to be a right good landscape, but it is too remote from the eye to be judged of without a reservation. The foreground appears to be painted with much vigour, and the distance with great clearness and effect. We are mistaken if the artist be not a painter of promise.

No. 189. 'May Morning from Milton's Sonnet,' J. P. DAVIS. A work of large size, which, although it undoubtedly reminds one too forcibly of the "sitters," and covets too little a notion of

the Divinities, bears evidence of a fine mind and of a rich fancy. It is conceived with a true poetic feeling, and is of a class which few of our artists are bold enough to attempt.

No. 193. 'On the Banks of a River,' T. S. COOPER. Another cabinet picture, in the artist's peculiar, we may add exclusive, style; a sweet and graceful copy of nature.

[We are reluctantly compelled to divide our notice of the British Institution; for we have written at considerable length, and cannot introduce the whole of it without materially trenching upon the variety of our "contents."]

We have desired to notice every work that possessed merit, or appeared to promise merit hereafter—yet how many are we compelled to leave unspoken of. If we have remarked upon some that may seem to fall under the ban of mediocrity, we have been guided by a conviction that it is our duty to cheer along an arduous, difficult, and wearying path all who are honestly and faithfully toiling through the journey. The painters are, like the poets—

"A simple race who spend their toil  
For the vain tribute of a smile."

A word of encouragement is rarely a word out "of due season;" but a sarcasm, while inevitably producing pain, may depress even to ruin a mind proverbially sensitive.

We read, with regret, many notices in newspapers, the writers of which seem content to point out for praise and patronage only the works of artists who are indifferent to the one and do not need the other; while in some publications we observe with exceeding sorrow, a tone of flippancy that may annoy, but can do no possible service.

There is no public writer of prominence and ability who has not himself run the gauntlet, and borne the buffetings, of life; it would be well if he had, at all times, uppermost in his mind the memory of his own sufferings when harshly or unjustly rebuked;—as he must have been, sometimes, when pushing his way towards distinction.

What a beautiful lesson is that which Uncle Toby conveys to us, in picturing the negro girl, "flapping away flies, not killing them!"—

"SHE HAD SUFFERED TRIBULATION, TRIM,  
AND HAD LEARNED MERCY."

Pictures sold at the British Institution:—116. 'Elizabeth Castle, Jersey,' E. W. Cooke, Marquis of Westminster. 126. 'Mouth of the River Zaan,' E. W. Cooke, Sir C. Coote, Bart. 44. 'Amsterdam,' E. W. Cooke, T. Baring, Esq. 1. 'View on the River Vecht, in Holland,' E. W. Cooke, W. Wells, Esq. 121. 'The Bride,' T. Von Holst, 60 guineas, Duchess of Sutherland. 220. 'A Welsh Stile,' P. F. Poole, 40 guineas, Lord F. Egerton. 360. 'Helmsley Castle, Yorkshire,' J. Radford, Lord Faversham. 372. 'Rivaux Abbey, Yorkshire,' J. Radford, Lord Faversham. 264. 'Industry,' T. M. Joy, £60, Lord Newborough. 210. 'Slave Merchants,' Coke Smyth, 10 guineas, C. B. Wall, Esq. 327. 'Sketch for a Picture of the Good Samaritan,' W. J. Müller, £12, C. B. Wall, Esq. 25. 'First Love,' Mrs. W. Carpenter, 30 guineas, G. Hibbert, Esq. 392. 'Coast Scene,' H. Bright, G. Hibbert, Esq. 395. 'Landscape and Cattle,' H. Bright, G. Hibbert, Esq. 195. 'A Water Scene in Holland,' The late A. Hughes, £28, G. Hibbert, Esq. 193. 'On the Banks of a River,' T. Sidney Cooper, 35 guineas, G. Hibbert, Esq. 369. 'Caistor Castle, Norfolk,' P. Elen, 5 guineas, T. Baring, Esq. 368. 'At Yarmouth,' P. Elen, 5 guineas, T. Baring, Esq. 34. 'Bathers Surprised,' W. E. E. R. A., R. Vernon, Esq. 146. 'The Little Brunette,' W. E. E. R. A., R. Coils, Esq. 78. 'Rustic Cottages,' H. J. Boddington, 20 guineas, J. Ludlow, Esq. 49. 'Scene from Orlando Furioso, J. Severn. 341. 'Riposo Italiano,' J. Severn. 141. 'June,' T. Creswick, 45 guineas, Joseph Strutt, Esq. 70. 'A Wood,' T. Creswick, 35 guineas, — Rought, Esq. 39. 'Afternoon,' T. Creswick, 110 guineas, B. Smith, Esq. 194. 'A Quiet Spot,' T. Creswick, 35 guineas. 439. 'The Vow,' F. Newenham, £60, — Farrer, Esq. 3. 'The Pedler,' J. Calcott Horsley. 187. 'The Braw Wooer,' A. Johnston. 438. 'William the Third's Chamber, Hampton Court Palace,' £20 W. Wellesley, Esq. 417. 'The Invitation,' J. R. Herbert. 80. 'The Outcast,' J. R. Herbert. 79. 'The Gaiety's Daughter,' J. R. Herbert. 204. 'A Visit to the Tower,' C. F. Wicksteed, 7 guineas, — Addams, Esq. 278. 'Alpine Sportsmen,' J. Inskipp, 60 guineas, — Harris, Esq. 77. 'The Bashful Lover and the Maiden Coy,' F. Stone, J. T. Dorrington, Esq. 8. 'Fruit,' G. Lance, 65 guineas, Dr. Young. 257. 'Frank Hals painting the Portrait of Vandyke,' J. D. Wingfield, £10, E. Nash, Esq. 65. 'Cavalier Reading Don Quixote,' Coke Smyth.

## ARIETIES.

THE ROYAL ACADEMY.—Charles Barry, Esq., architect, has been elected a member of the Royal Academy in the room of Sir David Wilkie, deceased. This election is calculated to give unmixed satisfaction to artists generally and to the public at large; for of Mr. Barry's high qualifications there can be no question. We presume, however, it will now be considered that this branch of the Arts is sufficiently represented in the Academy; and that, for some years to come, architects will have to wait until the arrival of their time for promotion. The same cannot be said of sculptors; we sincerely hope that their share of honours will be distributed among those who have adopted a profession, the difficulties in which are more numerous than those which surround any other.

MR. HOWARD'S LECTURES.—Mr. Howard has commenced his course of lectures upon painting; a valuable addition to those of Reynolds, Fuseli, &c. To these, as to all others here delivered, we would earnestly address the attention of the student. A lecture is not simply a "discourse pronounced on any subject;" it is the sedulous deduction of patient study—the fact acquired and elicited by the enlarged experience both of youth and manhood. An artist in general possesses a mind of imaginative susceptibility; abstract qualities he clothes in beauty; and beauty of form he reproduces by variation. Truth, though possessing all the intellectual greatness of truth, becomes to him more peculiarly impressive, from its mode of narration. If he detail the moving incident of life, he treats it as a subject for the painter. Thus, the student, not unfrequently, while he enjoys the beauty of rhetorical Art, increases the knowledge of his own. Knowledge assumes a thousand forms,

Mille habet ornatus, mille decenter habet.

Knowledge of books and man, of the great men of his own profession, of the powers of the human understanding, their unremitting cultivation, combined with an earnest and devotional feeling of the truths of religion, may be well considered (as they have been), the true patrons of an artist's talent. Invention and imitation must enter largely, if not entirely, into every composition; a mind of an inapt, low, and uneducated capacity, will do neither well, and must rest contented with the honours such resources can command. Greatness in Art is dependant on its pre-existence in the mind.

THE ETCHING SOCIETY.—A society is in course of formation—indeed, we believe it is already formed—with a view to cultivate for mutual improvement, and public advantage, a too much neglected branch of Art. It consists, we understand of 20 members; and they have already fixed upon a place of periodical meeting, at which they will consult upon the best means of promoting their most desirable purpose, exhibit the works produced in the mean time, and arrange for their proper publication. The subject they have selected for illustration is the "Comus" of Milton—a better choice could not have been made; it is of the purest classic, the deepest interest, and as a poem ranks foremost among the compositions of the divine poet.\* We believe it is the intention of the Society to fix so moderate a price upon their labours, as to enable them to be placed in the hands of persons of moderate means; their great object being to improve public taste by submitting to it a class of Art, in which merit shall work its way alone, without the aid of comparatively meretricious ornament. We sincerely hope that this part of their plan will be persevered in; to charge a large sum for such a work is to do no service to the Arts; it is, indeed, to lay it only before those who do not require it, those who have the power of procuring the most excellent work that any country has produced. In short, we hope—and have

\* The choice is fortunate too, on other grounds. The "Masque of Comus" is about to be brought upon the stage at Drury Lane, where, under the able, efficient, and liberal management of Mr. Macready, the arts have been employed to advance public taste. Its introduction at the theatre will restore it to its old popularity; and there will be thousands eager to be made familiar with it, just at the period when, most probably, it will be illustrated by "the Etching Society,"

reason to believe—that "The Etching Society" will be guided more by a wish to promote the general taste, and lead "the mass" to an appreciation of what is good and true in Art, than by a regard to mere pecuniary advantage. We heartily wish them success; and will do all in our power to advance it. Next month we shall, probably, be in a condition to publish the names of the Society; at present, however, we may remark that the list is composed of artists of undoubted ability; each of whom holds a prominent and honourable rank in his profession, and some of whom are among its most distinguished members.

NEW SOCIETY OF PAINTERS IN WATER COLOURS.—The Society have elected five additional members: Messrs. Topham, Dodgson, Jenkins, and Archer, and Mrs. Margetts. A brief history of its course may not be unacceptable to our readers. In the year 1831, a Society was formed for the Exhibition of Paintings in Water Colours, at which all water-colour painters were invited to exhibit; indeed, a circular was sent to artists generally, although none but works in water colours were exhibitable. This Association struggled through three annual exhibitions, being supported by the contributions of nobility and others, as well as artist subscribers, a certain number elected as a committee being the responsible parties. The plan, however, was found not to answer. "The New Society of Painters in Water Colours," as it now exists, dates from 1834, and started with about 25 members, the majority of which had belonged to the earlier formation. Their first three exhibitions were at Exeter Hall, from which they removed to their present Gallery, 53, Pall-mall, adjoining the British Institution. It appears singular that a Society forming itself of about 25 members, should have been able to stand the test of an exhibition, when only the year before the number of exhibitors was 170. Yet it has continued to progress in public favour, and each of its annual exhibitions has presented marks of great improvement.

THE ART-UNION OF LONDON.—It should be borne in mind that the list of the "Art-Union" will be closed during the month of March; persons desirous of subscribing, but who have not yet subscribed, should therefore lose no time in doing so. We understand the amount will not fall far short of £10,000; and that the drawing will be fixed as soon as possible after the books have been made up. This year, the print—to a copy of which every subscriber will be entitled, will be really worth the guinea subscribed. We wish to draw the attention of our readers, and of artists in particular, to the very important notice just now issued by the Committee of this Society, and which will be found in our advertising columns. This step has evidently been taken not more for the protection of the Committee than of all honourable and fair dealing artists themselves, who otherwise would compete but ill with the jobbing traders in Art, should there be such. The Committee, it seems, require an emblematical device for their reports, &c.; and have offered ten guineas for a sketch in outline for the same. We are sure English artists will respond to their wishes, and provide them with an elegant and appropriate design. Mr. Mulready's picture 'The Convalescent,' and Mr. A. Calcott's 'Raffaello,' and the belle Fornarina, are spoken of as subjects for forthcoming engravings.

UTILITARIANS! O. FINE ARTS.—In a recent work, "Notes of a Traveller," &c., by Samuel Laing, the following observations occur, amid many others, on the Fine Arts. To transfer them entirely to our pages, would be impossible; but we shall endeavour to do strict justice to Mr. Laing by our quotations. "What, after all, is the real value, in the social condition of man, of the Fine Arts? Do they contribute to the well-being, civilization, and intellectuality of mankind, as much as the cultivation of the useful Arts? . . . Is Rome, the seat of the Fine Arts, upon a higher, or so high a grade, in all that distinguishes a civilized community, as Glasgow, Manchester, or Birmingham, the seats of the useful arts? Is a picture, a statue, or a building, so high an effort of the human powers, intellectual and bodily, as a ship, a foundry, or a cotton-mill? Raffaello, M. Angelo, Canova, what are ye in the sober estimate of reason? the Arkwrights, the Watts, the Davys must rank before you as wielders of great intellectual powers

for social good. . . . The Glasgow manufacturer, with his *printed cotton handkerchief*, has extended humanizing influences more widely than all the painters, sculptors, and musicians of our age put together." When we first read these observations we rubbed our eyes, sent for an almanac, and very seriously asked ourselves, in what century are we living? Has the Benthamism of the nineteenth century reawakened the savage ignorance of the Tertullians of the third? Is the theory of Monbodo true? Is man the mere refinement of the ape, a zoological machine, a simious being of bones and sinews, from whom the mind and the immortal soul have fled for ever? Cannot Mr. Laing distinguish betwixt a *sign* and a *cause*? Does he not know, can he refute the fact, that as nations have advanced in civilization, the state of the Fine Arts has been invariably its indication? Is he so blinded by his paralytic vision, which looks only on one side, that he does not see the questions he proposes may be retorted? As, what has the *factory mill done for humanity*? What is the state of Manchester, Birmingham, the seats of the *useful arts*? Is not each the very lazar-house of misery, the hot-bed of exotic vice? Why disjoin the useful and the fine arts; do they not civilize by conjunction? If a picture do not tend to form the moral character of a stoker, or a mill-owner, will a steam-engine or a spinning-wheel so do? Mr. Laing mistakes the civilizing effects of his Glasgow cotton pocket-handkerchief. A savage will not use this to hide his nakedness: the plantain or the neighbouring bush is to him much more familiar. But it is the *design*, the *colours blended into form*, the admiration of *what to him is the beautiful*, that first attract, then modify, the animal propensities of his mind. And are all MAN'S faculties to be limited to the useful? Has he no higher tendency, no greater aim? Is he not endowed with powers various in their nature, yet all conducive to his moral and intellectual progress? Civilization follows alike the steps of commerce and of war. The very passions of society are finally made subservient to social good. Were the opinions of Mr. Laing the opinions of a common mind, we should pass them by unnoticed; for a blockhead is safe in his insignificance, as an insect escapes death from the recollection that it is

"The poor Beetle that we tread upon,"

or from the unpleasantness caused by its destruction. But he is far too intelligent a writer, too accurate an observer of man, too profound and original in his views, to think that his remarks will not awake the opposition he has challenged. Nor can he be said to be as one imitating none, and inimitable of any. There is a swarm of *Utilitarians* who declaim against the loss of capital sunk in the *National Gallery*. We ourselves remember a biped of this description; nor can we conceal from our readers the dreadful nature of his fate. He became, as he stood before us, the last of "Ovid's Metamorphoses:—"

"Ille sibi ablatas fulvis amittitur ab alis;

Inque caput crescit; longos que reflectitur ungues;

Vixque movet natas per inertia brachia pennas;

Feda que fit volucris, venturi nuntia luctus,

IONAVUS BUBO, dirum mortalibus omen.

.....

Sibilat: hanc illi vocem Natura relinquit."

There is nothing so truly degrading as the doctrine of an Utilitarian: it is Materialism deprived of its ability. As everything *useful* is of value to Mr. Laing, we humbly trust that the liberality of Glasgow will present him, with at least—a wooden spoon. For ourselves we shall always in future look upon a cotton pocket-handkerchief with profound respect: it is "Laing's symbol of Glasgow and African civilization." "Let Glasgow flourish."

#### THE EXCHANGE COMMEMORATION MEDAL.

—Paragraphs have appeared in the newspapers respecting the Medal issued by the Joint Gresham Committee on the occasion of Prince Albert's laying the first stone of the New Royal Exchange, asserting that the die from which the medals were struck was *borrowed*, and moreover, that it was borrowed from the *Foreign-office*. We really did not think this statement could be correct, although well aware of the low state of feeling in this country for medal engraving; we also considered it unlikely that Lord Aberdeen, a reputed patron of the Arts, would have countenanced a

proceeding, at once, insulting to Prince Albert and degrading to the Arts. We find, however, that the charge is substantially true. The Medal struck by the Joint Gresham Committee (a specimen of which was buried in the foundation stone of the New Royal Exchange, and others were presented to the distinguished visitors to the Lord Mayor), was engraved by W. Wyon, Esq., R.A., for the Secretary of State, sometime since, for the purpose of being given as honorary rewards to foreigners who should save the lives of British subjects from shipwreck! Now, whatever might have been the reason for this absurd and improper proceeding, whether a notion of economy were the origin, supported by conviction that in the present state of the Arts the citizens of London would not have acquired penetration enough to discern the fraud, or whether the members of the committee are absolutely so void of taste and a sense of propriety and fitness, as to have considered that so important an event as that of the 17th of January might be recorded by medals from an old die as well as from a new one; or whatever might have been the real cause, the fact cannot be made too public, nor the practice too strongly deprecated before it becomes a general rule. If this decision of the committee, to borrow works of Art instead of employing artists, be permitted to stand as a precedent, we shall soon hear of hiring dies for medals or borrowing them for all occasions on which it may be thought necessary to engrave and strike medals.\*

**BIELEFELD'S PAPIER MACHE.**—Though the scope of this journal would be inadequate to the notice of every invention in this prolific age, and though such notices, when unconnected with Fine Art, may be considered somewhat out of place, we hold it most peculiarly our province, and to the direct advantage of the public and Art itself, to scan closely the merits or demerits of works devoted, both to the common and refined purposes of every day life, in which shall be involved Fine Art. Thus a chair of gold or ivory, or a vase of a precious stone, not possessed of classic or beautiful form, fails in becoming an object of admiration to those of a refined and cultivated taste; wealth misapplied can command the one, and misdirected perseverance and care produce the other; while the commonest materials, wrought by a master mind, at once into objects of general utility and refined taste, deserve a warmer and more earnest introduction to the public than they could find in the show-room of the manufacturer. It is with this feeling that we would direct public attention to the papier mâché works of Mr. Bielefeld, Wellington-street, Strand, under whose spirited direction the material has attained a state of perfection never anticipated. Its strength exceeding that of wood, and durability in any state of atmosphere, have ceased to be a matter of doubt, and it is applied with equal success in either internal or external decorations. In distant objects, such as cornices, capitals, ceiling centrings for rooms, and the highly wrought frieze, it has worked for itself a high and deserved reputation; but, independently of this, it possesses some rare artistic qualities, which are lost at the height of a room or the summit of a column; and with these qualities we are likely to become more intimately acquainted, as the proprietor is devoting his energies to the production of some picture-frames, which bid fair to rival the best carving in wood ever applied to the same purpose, while it leaves very far behind four-fifths of the carved frames which, at great cost, have of late years been removed from the lumber-rooms of the broker, and injudiciously made to deform the walls of the modern mansion. The frames of Mr. Bielefeld present the best characteristics of fine carving, the course of the chisel, though subdued, is everywhere apparent,

\*The obverse die, which the Committee borrowed, has the Queen's head with her titles in *Latin*, to this was appended a plain and poor inscription in *English* merely giving the date of laying the first stone. We have just received a very beautiful medal—one of the best medals of modern times—from Mr. Stothard; designed to commemorate, in a manner worthy of it, the important event of January 17. The Portrait of Prince Albert was, we believe, engraved from several sittings kindly and graciously given him by His Royal Highness. The fraud of the Committee appears still more culpable, if it be true, as we believe it is, that this medal was offered to them, upon very low terms, and declined on the ground of economy.

and the liberal resort to undercutting, and occasionally nearly alto relief, realize the peculiar finesse and spirit of the best manipulators amongst the old carvers in wood; substituting, for the dull, prim, and mechanical mediocrity of works in putty composition, an easy, liberal, and artistic dexterity in the execution, which must be appreciated by every lover of the excellent. They may be recommended also on other grounds; when conveyed from place to place (to Provincial exhibitions, for example), they are liable to no injury from chipping, as the common frames are; we have seen the effect of a picture entirely ruined in consequence of the frame being shattered during transit. An essential advantage also is, that these frames weigh no more than half the weight of the usual frames of the same sizes. We strongly urge upon artists to visit this establishment, and examine for themselves.

#### CAPT TAYLER'S FLOATING BREAKWATER.

This admirable invention advances undeniable claims to public notice, as well upon its various merits, as upon the grand score of expense. It is constructed of frame-work, or caissons of timber, so moored as to meet the breakers to which it yields; but at the same time so subdues their violence, that the entire space enclosed by a line of such breakwaters becomes perfectly smooth. A main objection to piers and stone breakwaters is the accumulation of sand and mud which they generate, to the detriment of every harbour which they are employed to protect. It will readily be understood that the floating breakwater is free from such objections. In its employment upon dangerous coasts, in the construction of harbours of refuge, its advantages are apparent, as these cradles or frame-works could be laid down and secured when no other means of forming harbours exist. To the expense we have already alluded; from its construction it is evident that it could be made and kept in repair at a twentieth of the expenditure of ordinary stone breakwaters.

#### SALES OF THE MONTH, PAST AND TO COME.

Messrs. Christie and Manson sold, on the 12th ult., a collection of the works of the late J. A. O'Connor, Esq. The pictures were small, and generally without frames, consisting of the simplest materials—a tree or two in the foreground, with, perhaps, a glimpse of a sweetly-painted distance, for in such components alone lay the simple magic of O'Connor's art. The sale was for the benefit of the widow, and we have great pleasure in saying that the pictures realized as much as was expected. On the same day were sold, 'A View on the River Dord,' Cuyp, £31 10s.; 'A Party playing at Blind-man's-buff,' Pater, £48 6s.; 'Interior,' Teniers, £45 13s. 6d.; 'Portrait of a Venetian Senator,' P. Bordone, £48 6s.; 'A Muse,' Domenichino, £42; 'Portrait of the Mother of Titian,' Titian, £29 8s.; and 'Portrait of Henrietta Maria,' Vandike, £525.—Messrs. Christie and Manson will sell by auction the remaining pictures, sketches, &c., of the late Sir David Wilkie, in the month of April; a sale which must excite more interest than any that has for years taken place.

Mr. Phillips, on the 22nd ult., sold the pictures of the Count d'Arguil, which had been imported from Brussels; as also another collection, among which an 'Interior of a Cathedral,' by Neefs, returned 23 guineas; 'A Frost Piece, with Figures Skating,' Vanderneer, 18½ guineas; 'A Hawking Party halting at a Château,' 25 guineas; 'The Apostles' (from the Mellini Gallery), Agostino Caracci, 31½ guineas.—Mr. Phillips will shortly dispose of a third consignment of the pictures of Allan Gilmore, Esq.; on the 8th inst., of those of Charles Collins, Esq.; and on the 23rd and 24th inst., the extensive collection of M. de St. Denis, late of Paris, deceased, consisting chiefly of works of the Dutch and Flemish masters, and among which are many valuable paintings.

Messrs. Foster and Son will, in the early part of the month, dispose of a few specimens of the works of Nielli, of which there exist but very few specimens in this country. There is in the British Museum a cup curiously wrought and engraved by this artist. The works in question, as curiosities of Art, we trust to be enabled to describe next month.

## REVIEWS.

**MANSIONS OF ENGLAND IN THE OLDEN TIME.** Third Series. By JOSEPH NASH. Published by T. M'LEAN.

Already so well known is this work from the eminent merits of its first and second series, that it is unnecessary to accompany our announcement of the appearance of the third with any attempted estimate of its value to art and science. In the key which accompanies the volume, Mr. Nash acknowledges the encouragement extended to him in the "lively interest evinced in the progress of his labours, and the many personal attentions shown him by the possessors of the mansions already visited by him." He adds, that "every successive journey has made him acquainted with more unlooked for relics of the architectural splendour of the old Baronial halls and manor-houses, and he has no doubt that there exist many yet to be brought to light of fully equal interest to those already before the world." We sincerely hope he will not relax in his labours until he has brought forward everything worthy of his pencil, and of assorting with his previously published sketches. Many of these antique abodes are notable in history; others have been the temporary abode of kings during their periodical progresses and provincial excursions; and others are remarkable as associated with the memory of many of the great and noble of our land. The artist gives increased value to his work by the addition of figures habited after the fashions of the times in which flourished the early possessors of the mansions they appropriately inhabit.

The views are in number twenty-six, of which the two first are at Burleigh, in Northamptonshire, the magnificent seat of the Cecils, now the property and residence of the Marquis of Exeter. This mansion was built principally by the Great Lord Treasurer Burleigh, between the years 1577 and 1583. The design has been attributed to the English architect, John Thorpe, as also to John of Padua. The first view is the Inner Court the most striking feature of which is the Clock Tower surmounted by a spire. From the entrance beneath, a train of visitors are entering the quadrangle headed by Queen Elizabeth, who is escorted by the Lord of the Mansion.

The Gallery at Lanhydroc, Cornwall (No. 6), affords a view of one of the most elaborately ornamented ceilings in existence. A range of pendants occupy the centre of the ceiling, the remainder of which is divided into compartments, each containing a scripture subject, and the smaller spaces are filled with birds, quadrupeds, and florid ornament; the whole forming an unequalled mass of curious detail. Lanhydroc is in Cornwall, near Bodmin, and is an ancient quadrangular building of no exterior interest. No. 7, is the Staircase at Aldermaston, Berks, the seat of W. Congreve, Esq. The house was built in the reign of Charles of First, of whose period it is an excellent specimen. This is a beautiful plate, extremely clean and effective in its execution. The balustrade is richly carved, and the massive piers in the landings support mythological and other figures boldly carved in wood. Athelhampton, in Dorsetshire, (plates No. 8 and 9), is highly interesting as a fine specimen of ancient English architecture. No. 8 is the Court Yard, and the following plate is the Hall; around the walls of which hang the trophies of the chase and the trappings of war—antlers, coats of mail, lances, swords, and high above all these the armorial banners of the house. The Drawing Room at Chastleton, Oxon (plate No. 12), is one of the finest subjects for this department of Art that we have ever seen. Chastleton was built in the reign of James the First, and is now the property of Whitmore Jones, Esq.; the entire panelling of the room is tastefully and profusely carved, and above the range of the windows are set apparently portraits in oval frames. This is followed by two views at Hatfield, the property of the Marquis of Salisbury. The latter of these is the Long Gallery wherein is pictured the "Ceremony of the Christening of the Child of the Earl of Salisbury," to which King James the First and his Queen stood sponsors in 1616. Plate No. 15 is Charlote, in Warwickshire, the seat of George

Lucy, Esq.; and the figures introduced are those of Sir Thomas Lucy, his keepers, and Shakespere, the last being in custody for deer-stealing, having been seized *flagrante delicto*. Nos. 16 and 17 are supplied from Hampton Court, being the Hall and the Presence Chamber. So well known are both of these that no description from us is necessary; but we are bound to speak of the high character of the artist's labours. Mr. Nash presents to us this magnificent interior as supposed on the occasion of the grand banquet given to the French Ambassadors by Cardinal Wolsey who sits at the extremity of the Hall, and is in the act of drinking to the healths of the Kings of England and France. This is an admirable plate, executed in the perfection of its style. Among the remaining subjects are, the Drawing Room, Dorfold, Cheshire; Porch, Montacute, Somerset; Hall, Penshurst, Kent; Compton Wynyate, Warwickshire; Bramhall Hall, Cheshire, &c. &c.

It is the picturesque character of such relics as these that has given rise to the much-loved style of Art, which the French term the *moyen-âge*—being compositions consisting of figures costumed and circumstanced according to the spirit of earlier times. We are only surprised that a work of this kind has not been undertaken before; we, however, congratulate all admirers of such antiquities that the blank is to be filled up by an artist so accomplished as Mr. Nash.

**THE HAND BOOK OF THE PUBLIC GALLERIES OF ART.** By MRS. JAMESON. Published by JOHN MURRAY.

Amid the growth of Institutions for the exposition of ancient and modern Art, something like this has been wanted for the purpose of communicating, in the readiest manner, a little common information regarding painters and pictures. The work appears in two volumes, the first of which contains an Introduction, catalogues of the Royal Galleries of Windsor, and partially of Hampton Court. In the second, Hampton Court is concluded, and followed by descriptive notices and catalogues of the Dulwich Collection, Barry's pictures in the Adelphi, and Sir John Soane's Museum. In the introduction, are devoted some pages to explanations of terms of Art, such as *manner*, *composition*, &c. &c. Such definitions to artists, and even to those but little learned in Art, are useless; but as a hand-book for the public, rather than for artists, it can be understood that it was necessary to make the work as perfect as possible. As the introduction advances, it becomes a compilation of the criticisms and opinions of some of the most eminent men who have given to the world the results of their experience and observation; Reynolds, Richardson, and Barry speak, and we have the sentiments of Price, Shelley, Hazlitt, &c. &c.: here, consequently, may the painter learn something if even he be gray in his Art; for though he may have read again and again these very passages in the treatises of which they form part, yet in the form in which they are here presented to us, they are agreeably easy of remembrance.

In speaking of the origin of the Royal Galleries, Mrs. Jameson briefly reviews the progress of Art in England, down to the present time, and with abundant reason laments the confusion arising from the manner of hanging the pictures at Hampton Court, works of all schools and all periods being indiscriminately mixed; we join the lady most cordially in her complaint.

As containing catalogues of the Public and Royal Galleries in and about London, the compilation will be found useful and interesting, as well to artists as to lovers of Art.

**HAWKING PARTY IN THE OLDEN TIME.** Painted by EDWIN LANDSEER, R.A. Engraved by C. F. LEWIS. Published by HENRY GRAVES and Co.

The subject of the picture from which this print is executed, is such as could be entertained by none other than a most able master of expression. To paint the death-struggle of a heron in the talons of a hawk is a daring experiment; this alone being the picture. It is, however, in challenging and triumphing over such difficulties that substantial power is declared. The hawk and his quarry are near the ground, the heron almost dead, and

the other still cleaving to and lacerating it with all the fierceness of its nature. The contrast between the two birds exhibits the hawk not a whit better than his evil reputation; in his eye there is a living intensity which proclaims aloud the character of a fell destroyer; and in this it is where chiefly centres the surpassing greatness of the artist. The head of the heron is falling, the neck is lax and the wings are nerveless and flaccid; but the pith of the description is again in the eye which is dim and closing in death. The plumage of the birds is engraved with the nicest distinction, that of the hawk being short and crisp, while the ruffled feathers of the dying heron are longer and lighter. The birds are about to fall upon a knoll behind which we see approaching "the hawking party," an old knight, his daughter, and others riding at full speed, and accompanied by the falconer with his tray of hawks. The background on the left of the picture bears a dark and stormy aspect; but on the right the distance opens, and we see the castle whence the party have set forth on their expedition. This engraving is in mezzotinto, and cannot fail to have attracted the attention of all who appreciate such refinement in Art as is demonstrated in this work.

**HIS GRACE THE DUKE OF WELLINGTON.** Painter, H. W. PICKERSGILL, R.A. Engraver, J. E. WAGSTAFF.

Of the scores of portraits of the Great Duke we have been called upon to examine, from time to time, we question if there be one, altogether, more satisfactory than this; it is excellent as a likeness, very admirable as a picture, and of rare merit as an engraving. The Duke has been copied when but a very little advanced beyond his best time; when scarcely passed the prime of his vigorous manhood; when moral energy and intellectual strength marked every line of his features. He is pictured, too, full length, as the soldier—the character in which posterity will most love to know him—standing upon one of his glorious battle fields. By his side is an attendant bearing the British standard; the hat is off, and in his hand he holds a telescope. The painter has, therefore, mixed a passage of poetry with his veritable transcript of a fact; and added to his own acknowledged genius, was the stimulus received from the honour of painting such a subject. He has succeeded, therefore, in producing a picture that ought to live, and will live, for ages. The engraved copy is, in all respects, admirable. In his own peculiar and most excellent style few, if any, of our English engravers surpass Mr. Wagstaff. We regard this portrait as a valuable contribution to the nation, and rejoice in the possession of so fine a work of Art and so true a resemblance to the great original.

**KING CHARLES I. IN THE GUARD-ROOM.** Painted by PAUL DELAROCHE. Engraved by GEORGE SANDERS. Published by JAMES BUDD and Co.

The painting, after which this engraving has been executed, is in the collection of Lord Francis Egerton. The immediate subject is derived from Sanderson's "Life of Charles I.," and represents the unfortunate King surrounded by the brutal soldiery to whose custody he was committed after condemnation. The substance of the picture lies in the following passage—"That one defiled his venerable face with spittle, I abhor to say it, was wittingly done, but we are assured he wiped it off with his handkerchief; they puffed tobacco fume (no smell to him more offensive), and cast their tobacco-pipes at his feet."

The composition consists of thirteen figures, every one of whom contributes his quota to the circumstances of the event. The main interest of the work is well settled on the king, who is habited in black, and faces the spectator. He has sought refuge in reading, which last solace even is denied him, for in their barbarous triumph the soldiers of the Parliament heap upon him every insult they can in their malicious ingenuity devise. One is puffing tobacco smoke in his face, while another is shouting in his ear some toast to the downfall of kings, or success of republicanism. The personal points of the king are well made out, and in the countenance we read a catalogue of woes. We cannot help remarking the *pose* of the figure—it is highly

expressive of the resignation of fallen majesty—the head is slightly turned in reproach to the man who is insulting him with the tobacco smoke, but it is turned in relation to the other position observed in reading the book. Delaroche has intended this to be the grand natural effect of the work, and it is so undoubtedly. The engraving is clear and spirited in the foreground parts and grouping.

**NAPOLEON.** Painted by PAUL DELAROCHE. Engraved by ARISTIDE LOUIS. Published by HENRY GRAVES and Co.

This portrait of Napoleon is an identity of the man in person and character. Delaroche has read his subject more accurately than any of the artists of all nations, even with Canova at their head, who have given to the world their various semblances of this extraordinary man. French artists generally have painted him in a style too epic—rather as a hero of romance than as an actor in grave history; and, in making him at all times play to the national vanity they satirize themselves, and give their great captain no credit for greater capabilities. He was adored as the mere soldier, and consequently painted as such; and to express sufficiently the profound devotion of his followers, he was constantly represented surrounded by men expiring in the act of embracing his knees, or saluting him with their last breath. Such circumstance is too dramatic for a portrait of Buonaparte, although no portrait otherwise treated would have been so popular during the tide of his success: it is also too superficial, as pertinent only to the relations between the soldier and his leader. As a despoiler of dull ceremonies, the Imperial robes of France become him less than the "redingote grise" which he wears in the Place Vendôme; and this, perhaps, he himself was aware of, since he took pleasure, when even surrounded with crowned heads, of reminding them that they were in the society of a *quondam* lieutenant of the regiment of La Fère.

The head of this portrait was painted by Delaroche during the hundred days, and finished by him afterwards, by desire of the Buonaparte family. He is represented in his closet, but standing, and in the position in which he has already so often been drawn. His left hand is cast behind him, and holds the snuff-box to which he frequently applied under excitement, or when occupied in deep thought; and the right hand rests within the waistcoat, which is unbuttoned to admit it. The costume is, as usual, the closely buttoned coat faced with white; but the entire interest centres, as it ought, in the head, and never was a head invested with more character. Writing materials are before him, and he is undoubtedly occupied with the plan of his last campaign; and the anxiety of his position is written in every feature. Nothing can exceed the intensity and power lying within the shadow of the eye; every muscle of the countenance is braced; the entire expression is fully up to the occasion; for "Europe in arms," and "Waterloo" are distinctly written there.

The engraving is superbly executed in line, and in a manner much softer than the knife-edge style of which the French vaunt themselves so much: it is, in short, one of the finest works of Art that we have ever seen.

**RACHEL.** Painted by E. D. SMITH. Drawn on stone by R. J. LANE, A.R.A. Published by the Artist, 7, Hertford-street, May Fair, and MACLEAN.

Rachel is here represented in one of her most celebrated characters, that of Camille, in Corneille's tragedy of "Horace," or "Les Horaces," as it is by an extraordinary licence termed in the French play-bills and advertisements. She is represented in the white robes of a Roman virgin, and the entire bearing of the figure is rather that of real life than of theatrical portraiture. In modern stage portraits artists frequently fall into the error of painting the actor as enouncing some passionate sentiment demanding a corresponding action, and thus frequently exaggerate the gesture and expression to a degree beyond the limits where natural truth terminates and caricature begins—even when such passages are most happily illustrated, the compliment is paid rather to the author than the actor. In the present case

the artist has eschewed a representation of acted emotion, having selected the time when Camille, after the interview with her father, determines, even amid the universal joy, to lament the loss of her lover.

"Eclatez mes deumeurs à quoi bon vous contraindre? Quand on a tout perdu que saurait-on plus craindre?"

Nothing can exceed the fidelity with which the character of the head is maintained—the features are so perfect in resemblance, that they recall the presence of the actress as she appeared during her late engagement at her Majesty's Theatre. Of the lithography it is enough to say that it is in the best style of Mr. Lane. We agree with Mr. Smith, that a theatrical portrait must not of necessity be an *extravaganza* in art. This work must add to his already extended reputation.

**THE TIRED HUNTSMAN.** Painted by CHARLES LANDSEER, A.R.A. Engraved by H. C. SHENTON.

This is the print presented by the Art-Union of London to its subscribers of 1840. The composition consists of two figures—dogs, and objects incidental to the abode of a man devoted by habit or vocation to the chase. A fire is glowing on the antique hearth, and before it is extended, in sleep, the hunter—subdued by the toils of the day. He is lying upon a bear-skin, which two dogs, his companions in the field, share with him. His wife sits anxiously watching him, and at the same time is rocking a cradle by her side. The artist has told his *historiette* gracefully, and perhaps made the most of it: the sentiment is an effective one, and the accessories are tolerably well distributed; but "The Tired Huntsman" is not of that standard of Art which should be the care of an Art-Union, being of a school of painting which has been too indulgently fostered in England. The class of Art to which it belongs has rivetted a taste which ought to have soared beyond this, and settled upon something higher. The engraving is in the line manner, and is executed by Mr. Shenton in a style most judiciously tempered by the character of the several objects to be represented; it is in short engraved with a skill and success seldom surpassed.

**ETCHINGS OF THE RUNIC MONUMENTS IN THE ISLE OF MAN.** By W. KINNEBROOK. Published by LONGMAN and Co.

The author of this work, with much industry, has etched twenty-six plates of the Runic Crosses of the Isle of Man; to which he has prefixed a brief essay, and some judicious notes. These relics are among the most curious antiquities of our islands; and we join Mr. Kinnebrook in lamenting that, having survived during, probably, 900 years, and through ages less civilized than this, any of these remains should be ignorantly broken up and disposed of as common stone. They are elaborately, but of course rudely carved, some being covered with hieroglyphics and others with florid ornaments. Some bear Runic inscriptions, which are read from the bottom upwards; from which it is assumed that the crosses have been erected in memory of deceased persons of distinction. The legends, as here rendered, seem to contain here and there a corruption of a Latin or a Saxon word; the rest is made up of rugged and hard-mouthed Scandinavian with strings of impracticable consonants. The Runic character is supposed to have been introduced into Europe before the birth of Christ, and these remains, it is presumed, are the work of the Norsemen who seized the Isle of Man about the end of the ninth century. The history of these crosses, and the characters inscribed upon them, would involve portions of that of Asia and Europe, before and during the conquests of the Romans. It was employed by the Goths and by the Saxons, before their conversion to Christianity; and some Asiatic nations engraved in it the exploits of their heroes on rocks. The crosses and their ornaments are carefully etched, so carefully and perfectly to their style and ornaments.

**LORD STANLEY.** Painted by H. P. BRIGGS, R.A. Engraved by HENRY COUSINS. Published by AGNEW, Manchester.

Lord Stanley is represented standing in an attitude of fixed attention, and although the background be no part of the House of Commons, yet

he may be supposed to be meditating a pungent reply to some member on the "opposite" side of the house. The portrait is a half-length, and perfectly simple in its arrangement and circumstance; the figure is erect, with one hand resting on a table and the other carelessly supported by a ribbon to which attached an eye-glass. The engraving is mezzotinto; and we must express our admiration of the skill with which the figure is brought out, without its subdued breadth being broken by any forced lights.

**ITALY—CLASSICAL, HISTORICAL, AND PICTURESQUE.** By WILLIAM BROCKEDON, Esq., F.R.S. Published by DUNCAN and MALCOLM, Paternoster-row.

We have of late years read and seen much of Italy; but we are yet content with any judicious quotation of it, from the days of the Medici and the "liberal Popes," back to those of the Cæsars; and from them again to the old time before them—that of the Etruscans. Of the work bearing the above title we have to speak of the first part, which contains three plates, with descriptive letter-press. Modern Italy is the subject of the views; but the descriptions being entitled "historical," &c., the thread of description is taken up from the earliest records. The first view is that of St. Peter's, from the Janiculum Hill, drawn by David Roberts, from a sketch by Eastlake. This is perhaps the only point of view whence this magnificent structure is seen in its true grandeur. The second view is that of the port of Ancona, drawn by W. Brockedon, and engraved by J. Cousins. The third is that of Leghorn, drawn by W. Brockedon, from a sketch by Admiral Sartorius, and engraved by W. Brandard. In Leghorn itself there is but little worthy of the pencil. This view is taken down the coast to the northward, the city of Leghorn being five miles distant: the view is closed by the high backs of the mountains of Carrara, looking over the *maremma* of Pisa. The plates are beautifully engraved; and the work is altogether worthy of its distinguished author.

**FIGURES FROM PICTURES IN ENGLAND BY CLAUDE, &c.** Drawn and Lithographed by S. BENDIXEN. Published by COLNAGHI and PUCKLE.

The number of subjects contained in this volume is 24, being eight from known works of each of the three esteemed painters—Claude, Watteau, and Canaletto. The figures are from pictures in public galleries: of the eight from Claude, six are extracted from his works in the National Gallery, and two from those in Dulwich Gallery. The figures of Claude, like those of Rembrandt and other celebrated masters who have painted effects, are generally merely secondary or accessory, and so treated with less care than if they had been the pictures. Thus the figures of these masters were remarkable for their want of grace, which, in an extract of the bare figures, would be yet more conspicuous. In the work before us, the artist has most judiciously accompanied the figures with a snatch of the composition in which they are found, and has wrought up the effects to a close imitation of the original pictures. The figures of Watteau are full of grace; they were painted after unmade-up nature. The draperies of his ladies, and the coats of his gentlemen, were perhaps too much elaborated into folds, but they are elegant, and those in the present work are well selected; they are principally from pictures in Dulwich Gallery. Those from Canaletto are in the National Gallery. Each plate is set in a florid border, inwrought with fragments of the various compositions whence the figures are taken.

**RUSTIC ARCHITECTURE.** By T. J. RICAUTI, Architect. Published by JAMES CARPENTER, Old Bond-street.

Picturesque rustic architecture is the subject of this book, and it is treated in a very intelligible and straightforward style. The materials employed by the author are rough wood, thatch, &c., and he recommends his work to the attention particularly of the inhabitants of America. The illustrations are 42 in number, consisting of plans, elevations, sections, perspective views, &c. &c. These plates in all form six designs for cottages and small residences, any of which may be adapted for an out-door member of a gentleman's establishment,

or for a small private family. The letter-press is abundant, clear, and explicit; so much so as to render this kind of architecture practicable to individuals located where the assistance of an architect is not attainable.

**SKETCHES IN NORWAY.** Drawn by BRUCE SKINNER, Esq. Etched by W. J. BLACKLOCK. Published by J. ROBINSON, High Holborn.

Norway is a part of the world of which we hear and know less than of countries much more remote; but judging from the sketches before us, it holds out many allurements to the lover of the rude sublimities of nature. The rough-cast face of this northern land is here represented with much force; and we are at once struck with the want of human habitations, which constitute in a great degree the substance of the scenery of southern countries. The landscape is composed of the varied features of lake and mountain—glaciers, which the foot of man never trod, and wild abysses into which the sun never shone.

These glimpses of the far north have been selected with a pure feeling for the picturesque, and some of them compose admirably and remind us in their character of Switzerland. The etching is generally clear and spirited, and in some of the plates particularly fine.

**THE COMPLETE GUIDE TO THE FINE ARTS.** Published by W. BRITAIN, Paternoster-row.

This little volume is stored with information upon almost every subject connected with Art. Portrait painting is here described, from the setting of the palette to the finishing touches of the work; as also is landscape painting, both being accompanied with recipes for mixing colours, &c., &c. Among the subjects treated of are crayon and water-colour painting, picture cleaning, engraving on wood, &c. &c.

**CONFERENCE BETWEEN COMMODORE SIR J. J. GORDON BREMER AND CHANG THE CHINESE ADMIRAL.** Drawn by Sir HARRY DARELL, Bart. Lithographed by J. N. LYNCH. Published by Messrs. COLNAGHI and PUCKLE.

This conference took place on board her Majesty's ship *Wellesley*, on the 4th of July, 1840, the day before the taking of Chusan. With Sir J. J. G. Bremer there are present, Sir Harry Darell, Major-General Burrell; Captain Maitland, of her Majesty's ship *Wellesley*; Lord Jocelyn, military secretary to the mission; and Mr. Gutzlaff, Government Chinese interpreter. On the part of the Chinese there are portraits of Chang, his flag captain, and of a number of mandarins. As the drawing was made on the spot, it may be considered a faithful representation of Chinese official costume.

**REDCLIFFE CHURCH.** Drawn by J. B. SURGEY. Lithographed by G. HAWKINS. Published by GEORGE DAVEY, Bristol.

In this view the church is not seen as from the street, but from behind the houses in Redcliffe-street. The structure is in the form of a tower, and its style is Gothic. There is nothing grand in the edifice as here presented, but it is beautiful and abundantly rich in ornamental fret-work. The drawing and lithography are clear and careful. It is dedicated, by permission, to the Bishop of Gloucester and Bristol.

**LORD STANLEY.** Drawn by F. C. LEWIS. Engraved by the Same. Published by HENRY GRAVES and Co.

This engraving is executed after a drawing, and in the light free manner of the heads of the Duke of Wellington and Sir Robert Peel. The countenance is in a high degree animated; the artist has conveyed into the eyes an earnest and impressive meaning, and endowed the lips with a firm vitality which indicate much strength of character.

**STEPHANO.** Designed and Lithographed by HENRY MELLING. Published by the Same, 3, Frederick-place, Hampstead-road.

This is a specimen of coloured lithography. The design seems to be an original one, but we think it would have answered the purpose of the artist better had he executed a fac-simile "in little" of some known picture. Our reason for such suggestion is, that we apprehend that it will not be

valuable as applied to original works, although it may be highly desirable in multiplying memoranda of arrangements of colour in esteemed pictures. This invention would, if the process be simple, be of great use in this way.

**BRITISH, FRENCH, and GERMAN PAINTING.** By DAVID SCOTT, M.R.S.A. Edinburgh, 1841. pp. 86.

Under this title has appeared a very able pamphlet on the proposed decoration of the New Houses of Parliament. Combining enlarged views, extensive acquaintance with schools of Art, and critical knowledge of their best artists, its arguments are striking, and its conclusions generally just. That an author, possessing so much true feeling for the higher departments of Art, should cloud his ideas in a rugged and often obscure style, is much to be regretted, and fully accounts for the inadequate notice which has been attracted to a series of able articles from his pen, in the late numbers of "Blackwood's Magazine," on the genius of the greatest Italian painters. At the present moment, when the Fine Arts seem likely to attain to a higher and more permanent interest, than they have as yet assumed in the public mind among us, it seems of consequence that those who are capable of directing it should conciliate their readers, so far, at least, as to acquire a popular style. In the pictures which Mr. Scott has exhibited in Edinburgh, he is independent enough to follow out his own ideas, opposed though they be to the general taste; and for this he well deserves the approval of the many who cannot admire their results. Let him do the same in his writings; but let him never forget, that in the one and the other originality of conception may lead to the happiest efforts, while peculiarity of style tends to mannerism and affectation.

Although this essay contains a rapid glance at the tendency of painting since its revival in Europe, especially in those countries named in the title, the main object is to prove the justice and expediency of employing British artists on the New Houses of Parliament. As it is our wish rather to direct to it the notice of our readers, than to anticipate the argument and copious information which will reward their perusal of Mr. Scott's treatise, we shall present them with a single extract.

"But if, as has been in some instances proposed, German painting is to supplant English; and its very different character of thought is to be admitted in the only great work (national then it will not be) which the country has afforded in that department of Art, the English school of painting may be destroyed. It will, at least, be broken in upon and virtually terminated. It were then needless to put the question—Is the character of British painting not worth preserving? Is it not altogether a more eminent and worthy manifestation of mind, than that of Germany, in its ultimate value, in connexion with the moving world? Does it not present more extensive and higher capabilities, although these have not been manifested in the same connected and obvious form in which those of Germany have? And the only national act of Great Britain, in regard to its painting, will, in that case, either end in an attempt, which will be foreign and unrecognised by the general mind of the country, until such time as its effects have supplied the painting of England; or, in the to her unsupportable contingency, merely remain an inoperative, and isolated monument, of an act of injustice done to the talent of the country. Did then, in one important respect, Barry, Fuseli, and Blake wear the sackcloth of neglect about them in vain? Did Reynolds justly counsel that the English painter should 'extend his views to all ages and to all schools; bring home knowledge from the east and from the west,' only that his precepts and example should be rendered useless, and the birth-right of British painting be surrendered to a resuscitated course of an obsolete time?

"If the desire to introduce the painting of another country after this forcible manner,—not leaving it, if it in truth possesses such merits as would enable it to do so, to work its own way; if this desire proceeds from a mistaken cosmopolitanism, let it be so in truth, and there will in reality be less harm done. Invite painters from France, whom we have seen pursue purposes much allied to those of British painting, and there is no lack of ability among them; ask Russians, several of whom are well known over the Continent; and also bring them from the now dotting *alma mater* of the Art—Italy, but which still possesses eminent names; and whether or not this may produce a more consistent and elevated work, there will, at least, be impartiality displayed, and it will betray no want of liberality, however much it may do so of native and independent resources."

D. D.

**AN ESSAY ON ARCHITECTURAL PRACTICE.**

By T. L. WALKER, architect. Publisher, SPRIGG, late Williams, Great Russell-street.

This essay purports to be the first portion of an attempt to supply a guide for students at their first entrance on the practice of architecture as a profession, and treats especially of the construction of general working drawings. The subject chosen for illustration is St. Philip's Church, Friar's Mount, Bethnal-green, an edifice erected by the author, and whereof seven-and-twenty woodcuts are given. It is a very plain and straightforward structure, and the whole of the essay is somewhat too elementary,—nevertheless, it brings together in one view a good deal of general information, and cannot fail of being useful for those for whom it is intended. We shall reserve further remarks until the work is completed, and, in the meantime, recommend the present part to all students in architecture. Mr. Walker is already favourably known to the public by his "examples of gothic architecture."

**SKETCHES OF FALLOW DEER.** Published by BROWN, Brothers, Leicester.

This series of sketches is the production of an amateur, and is executed in tinted lithography. We know of no work expressly intended to describe deer; and we are glad to see that an animal so often and so faultily painted in our park and forest scenery, is at length attracting the attention of the lovers of the picturesque. The author of these sketches seems to have profited by uncommon opportunities of studying the fallow deer, the character and habits of which he has so successfully represented in the work before us. The action and varied attitudes in which the animal is here drawn, are full of grace peculiar to its nature. As a provincial production, this work does its author and publishers much credit, and we trust it will not be the last of the kind we shall see.

**THE IMPERIAL FAMILY BIBLE.** Published by BLACKIE and SON, Glasgow, and Warwick-square, London.

This edition of the Scriptures is published in parts, and is illustrated by a series of engravings from the old masters, and from designs by John Martin, K.L. The size is folio, and the engravings correspondingly large; the selection seems to be most judicious, since we find among them elaborately executed engravings after the most esteemed masters of the famous continental schools.

**FOREIGN WORKS ON THE FINE ARTS.**

**TRACHTEN DES CHRISTLICHEN MITTELALTERS NACH GLEICHZEITIGEN KUNST DENKMÄLEN HERAUSGEGEBEN.** Von J. VON HEFNER, unter Mitwirkung von Ph. VEIT, J. D. PASSAVANT, J. VON RADOWITZ. Mannheim, 4to., 1842. — Illustrations of the Costume of the Christian Middle Ages, from contemporaneous Monuments of Art. Edited by J. von Hefner, with the assistance of J. D. Passavant. Ph. Veit, &c. Mannheim, 4to., 1842; and ROLANDI, Berners-street.

The rapid progress of our age in science has been accompanied also by an active spirit of inquiry into the history, habits, and customs of the past. This has been particularly remarkable in France and Germany, where the productions both of Literature and Art have much tended to concentrate and increase the feeling. A pursuit of this kind, though deficient in general interest, merits support; for, correctly to judge of the character of a people at any particular period, we must not only study History, which is the record of their acts, but Literature, the history of their opinions, and Art, which is another form of thought. Yet the importance of costume, "as that which most faithfully reflects the manners of a people, their domestic customs, and predominating inclinations," has been overrated. Costume does this, not independently, but combined: it is, indeed, a sign of the social state; yet it is only one among many more important. Works of this description are, however, most essential to artists, and those who seek to trace the philosophical history of national character. "The Saxons," says Strutt, "put Noah, Abraham, Christ, and King Edward all in the same habit—that is, the habit worn by them—

selves at that time; and in the same MS., illuminated in the reign of Henry the Sixth, are exhibited the figures of Meleager, Hercules, Jason, &c., in the full dress of the great lords of the prince's court." Even since the time of Strutt, sketches of interiors have been animated with figures whose costume was far more imaginative than historical. We are not, however, surprised at this; for of works of this description the expense is great, as the demand is limited, the sources on which they must rely are frequently meagre, and in general accessible but to few; they are to be copied by various hands, in many places from the ruined monument, or the rare book. This deficiency of information the work above cited professes to supply. The plates are illustrative of all classes—the knight, soldier, merchant, and persons of rank, messenger of justice and troubadour; and representations of modes of investiture, drawings of shields, armour, and tombs, are also added. The letter-press is sufficiently descriptive, and contains matter of considerable interest. The editor states it to be his intention to produce a work of a truly historic and artistic character, of which the figures shall be scrupulously reproduced; and thus form a faithful picture of the progress of Art, from its early Christian period to the sixteenth century, and this at a price to make it easy of general acquisition.

HANDBUCH DER KUNSTGESCHICHTE. Von Dr. FRANZ KUGLER. Stuttgart, LIEFERUNGEN 1—2, 1841.—The Hand-Book of the History of Art. By Dr. Franz Kugler. London, NUTT. Parts 1 and 2, 8vo.

This work (the first attempt, we believe, of this description) will supply much useful information to the student, and to those who desire to possess a general acquaintance with the history of the Fine Arts of antiquity. Its object is, step by step, to trace the progress of Art, from the first rude origin to its perfection—to exhibit its various forms and peculiar characteristics. Each chapter has an introductory, an historical, and critical division, by which the work becomes a manual both of fact and useful comment. The first part comprises Asiatic, the second Greek and Roman Art, under the heads of sculpture, painting, coins, &c. The information is well condensed; the best authors are cited; no idle controversy is indulged; and the style, though not free from occasional obscurity, is superior in this respect to many recent German critical works, the due comprehension of which is only to be ascribed to some effort of faith, as it never could be acquired by any exertion of the understanding.

#### TO SUBSCRIBERS.

*We receive, from time to time, complaints from country Subscribers, as to irregularities in the delivery of the ART-UNION; in one letter before us, an answer by a country agent is thus given, "Not arrived—and we believe not punctually published on the first of the month." Now we beg to state, that in no single instance have we been an hour behind our time; want of punctuality would be, on our parts, exceedingly prejudicial to our interests, and an offence for which we could offer no excuse. On the last day of the month, our journal is, and always has been ready; and there can be no good reason why it should not be in the hands of Subscribers, either in London or within 100 miles of London, on the morning of the first day of the month.*

*It may, invariably, leave our office on the afternoon of the last day of the month; and, indeed, regularly does so in every case over which we have any control.*

*With a view to prevent disappointment as to its regular transmission, we stamp every copy, in order that it may not be delayed for ordinary modes of transfer, but go direct through the post: as we have intimated, copies that go from our office are invariably posted on the last day of the month.*

*Subscribers who have been subjected to disappointments in the regular receipt of our journal, will, therefore, not only acquit us of blame, but may now ascertain with whom the blame actually rests.*

132, Fleet-street, Feb. 26th.

Persons who may require additional copies of the ART-UNION for the present month, will do well to order them without delay; as, after a few days, the edition will be exhausted, and it will be very difficult to procure a copy.

We are induced to make this suggestion, because when, on a former occasion, we issued a sheet of woodcuts, we had a large number of orders for it, which we found it impossible to supply; and we know that, in many instances, persons desirous of procuring a copy, paid for it five times the sum at which it was originally charged.

It may be necessary to observe that the extra half-sheet—of eight pages—containing a selection of woodcuts is issued with every number of the ART-UNION for March. Purchasers will, therefore, take especial care to obtain it perfect.

#### TO CORRESPONDENTS.

"Le Peintre Graveur" of Adam Bartsch, is the best work we have on the works of the early masters, comprising the Dutch, the German, and the Italian schools. Bartsch was keeper of the Imperial Collection at Vienna. The work is in 21 vols.; and a copy is in the print-room of the British Museum. There are only twelve or fourteen etchings in it, after extremely rare prints. Mr. Josi, the excellent keeper of the prints in the Museum, has made great progress towards an English edition of this work, with many important additions; a work that, if completed, would reflect great credit, not only on him, but the nation.

We thank a "Well Wisher and Subscriber;" and have acted upon his hint.

We are fully aware of the facts to which "a friend" refers; but we should find it rather difficult to review a work we have not seen; in common courtesy we are bound first to notice works upon which our opinions are asked; and in doing so find ample occupation for our time and space.

An extensive series of Drawings, the originals of Mr. Nash's "Mansions of England," will be exhibited at Messrs. Graves and Co.'s, 6, Pall-mall, during the present month. Judging from the beauty and interest of the published copies, we imagine that few exhibitions, even at this season, will be more attractive.

FOREIGN PUBLICATIONS.—We intend to devote considerable space to the notice of Foreign Works connected with the Fine Arts; reviewing them as soon as possible after they are issued, and giving, as nearly as we can, the marrow of the best, directing the reader to the sources where he may obtain copies.

The Society of British Artists, we believe, will open their gallery on the last Monday of March; at least, this has been the usual plan. Pictures intended for the ensuing Exhibition should be sent as soon as possible after the commencement of the month.

The new Water-Colour Gallery will open about the same period. The old Society will open about a month afterwards.

The pictures for the Royal Academy must be forwarded on the first Monday and Tuesday of April.

We are again, notwithstanding our additional columns, compelled to apologise for postponing the publications of several articles in type. These consist chiefly of "Correspondence," and "Notices of New Works." Next month, however, we hope to bring up all our arrears.

We really hope we may be held excused for declining to insert long treatises on the subject of Vehicles—at least for some time to come.

"An Artist and Well-wisher" will perceive that we have, in part, adopted his suggestion.

We are collecting the information necessary for a paper on scene-painting; its modern improvements, capabilities, &c.

TO ARTISTS.—The Committee of the ART-UNION OF LONDON are desirous of obtaining an appropriate EMBLEMATICAL DEVICE for the Prospectus, Reports, &c. of the Society. The sum of TEN GUINEAS is therefore offered for the best Outline Design, in Ink, for the same; size, three inches in diameter. The drawings, each of which must bear some distinguishing mark, and be accompanied by a sealed letter, similarly marked on the outside, and containing within the name and address of the artist, are to be forwarded to the Honorary Secretaries, at the Office of the Society, 73, Great Russell-street, Bloomsbury, on or before the 14th day of March next. No other letter will be opened than that accompanying the adopted design. As it is proposed to reduce the device for a seal, simplicity is desirable.

GEORGE GODWIN, jun., } Hon. Secs.  
LEWIS POCOCK, }

Feb. 17, 1842.

#### ART-UNION OF LONDON. NOTICE TO ARTISTS AND SUBSCRIBERS.

1st. The amount of a prize is in no case applicable to the purchase of more than ONE WORK OF ART; and shall not be allowed to include any payment to the Artist for more highly finishing or perfecting such work; or, in fact, anything more than the *bond fide* value of such Work of Art, as actually exhibited.

2nd. No Picture, or other Work of Art, shall be purchased by any Prizeholder, the price of which was not left with the person appointed to communicate the same to public inquirers, at the first opening of the several exhibitions (except the British Institution, now open); and any reservation which may make the price required by the Artist doubtful, shall be considered as placing such Work of Art as though no price had been affixed to it; and, consequently, render it ineligible to be purchased by any Prizeholder.

3rd. Should any collusion be discovered between an Artist and a Prizeholder, to evade the foregoing laws, or any part of them, the amount of the prize shall be forfeited, and merge into the general funds of the Society, and the Prizeholder shall have his Subscription returned to him.

G. GODWIN, jun., Esq., F.R.S., F.S.A. } Hon Secs.  
LEWIS POCOCK, Esq., F.S.A. }  
By order, T. E. JONES,  
Feb. 1842. Clerk to the Committee.

#### ART-UNION OF LONDON. PRESIDENT.

His Royal Highness the DUKE OF CAMBRIDGE.  
COMMITTEE OF MANAGEMENT.

Henry G. Atkinson, Esq., F.G.S.	Edward Hawkins, Esq., F.R.S., F.S.A.
Chas. Barry, Esq., A.R.A.	Henry Hayward, Esq.

	Edward Wyndham, Esq.

HONORARY SECRETARIES.  
George Godwin, Esq., F.R.S., F.S.A., 11, Pelham-crescent, Brompton.  
Lewis Pocock, Esq., F.S.A., 29, Montague-street, Russell-square.

The ART-UNION was established in 1836, to aid in extending the love of the Arts of Design through the United Kingdom, and to give encouragement to Artists beyond that afforded by the patronage of individuals.

1. It is composed of Annual Subscribers of One Guinea and upwards.

2. The funds, after paying necessary expenses, are devoted to the purchase of Pictures, Drawings, Enamels, Sculpture, or Medals.

3. Every Member, for each Guinea subscribed, is entitled to one chance of obtaining some work of Art at the annual distribution, the selection of which rests with himself.

4. In addition to the equal chance annually afforded to each Subscriber of becoming the possessor of a valuable work of Art, by the result of the allotment, a certain sum is set apart every year to enable the Committee to procure an Engraving; and of this Engraving each Member will receive one impression for every Guinea subscribed.

The number of Subscribers last year was 5012, the sum of £3650 being expended in the purchase of pictures, at various prices, from £10 to £300.

An Engraving of Mr. LANDSEER's picture, 'THE TIRED HUNSMAN,' by Mr. H. C. SHENTON, is now in course of distribution to the Subscribers of the year 1840, at Messrs. P. and D. Colnaghi's, 14, Pall-mall East.

Mr. J. P. KNIGHT's picture, 'THE SAINTS' DAY,' is in the hands of Mr. W. CHEVALIER, to be engraved for the Subscribers of 1841.

The Subscribers of the year, ending on the 31st inst. will receive impressions of an Engraving by Mr. W. H. WATT, of HILTON's fine picture, 'THE RETURN OF UZA.'

THE LISTS FOR THIS YEAR WILL CLOSE ON THE 31st INST.; and an immediate payment of Subscriptions is earnestly requested, in order to enable the Committee to make advantageous arrangements for the ensuing distribution.

Prospectuses may be obtained at the Society's Office, 73, Great Russell-street (corner of Bloomsbury-square), where the Clerk is in attendance daily, from Nine till Six o'clock, to afford any information that may be required, and to receive Subscriptions.

By order, T. E. JONES,  
1st March, 1842. Clerk to the Committee.

## MILLER'S SILICA COLOURS.

In introducing these Colours to the notice of Artists and of the Public, it will not, perhaps, be deemed obtrusive, if the Manufacturer presumes to offer a few remarks upon the subject, seeing that, by the application of many years' experience, aided by numberless experiments, he has, at length, most successfully accomplished his object, in bringing back to light a long buried secret of ancient Art.

The countless and laborious efforts that, from time to time, have been made by modern Artists, to produce Colours that might bear comparison in point of brilliancy and durability, with those of the Old Masters, are sufficiently known to need no further comment. It is likewise, unfortunately, but too well acknowledged how fruitless these efforts have been. For although, at first, their works might appear to vie successfully with the antique originals, yet when placed, a twelvemonth afterwards, by the side of their prototypes, how great a falling off was there! What an universal degeneracy of tint and tone! While the ancient productions seemed as fresh and vivid as if they were the creations of yesterday, and appeared by their undecaying brilliancy and clearness to deride alike, the attacks of time and the feeble competition of modern Art.

The injurious effects of light and atmosphere on the colours of the present day, are very clearly evidenced by the contrast of Ultramarine, which being manufactured on the same principle as the Colours of the Old Masters and the Silica Colours, has been erroneously supposed to have derived an accession of brilliancy from age. Such, however, is not the fact. The phenomenon of its apparently increased vividness, is the result of its simply retaining its original lustre, whilst that of the other colours of the picture has invariably declined and faded. Were any one sceptical of the superiority of ancient colour, every doubt might be easily removed by a glance at the two pictures of Francia, recently added to the collection in the National Gallery, and painted between three and four hundred years ago. The transparency and freshness of their tints have that time-defying character and gem-like lustre, that modern paintings seldom perhaps possess and never retain.

In the early periods of Art, the painter, having no colourman to prepare his colours for him, was compelled to seek and compose them himself, from whatsoever substances were at hand, from earths and stones; and chiefly from their use of such imperishable materials, unimpaired by chemical agency, may be inferred the great durability of his productions.

The present Silica Colours, now confidently submitted to the ordeal of public opinion, have already been severely tested by Artists of the first eminence, and by persons of scientific attainment, whose judgment has been unequivocally expressed in their favour; and who do not hesitate to affirm that they reveal the mystery of ancient colouring; and that they possess all the invaluable qualities of transparency, brilliancy, and durability, which are so eminently conspicuous in the works of the ancient painters.

The SILICIA OIL COLOURS are prepared in collapsible tubes, and can be forwarded per post to any part of the country, on receipt of an order, for any of the under-mentioned tints, viz.:

Pale and Deep Red.	Pale and Deep Yellow.
Pale and Deep Blue.	Pale and Deep Purple.
Pale and Deep Orange.	Pale and Deep Brown.
Pale and Deep Green.	Gray and Black.
White and Half Tint.	

VAN EYCK'S GLASS MEDIUM  
FOR OIL PAINTING.

This Medium having been tried by Artists of the first eminence, is found to be the grand desideratum for removing the existing evils of the Modern School; namely, the destructive effects of Varnishes, Oils, and M'guelps, as all pictures painted with them, after a time, lose their transparency and brilliancy, and become horny, spotted, and dark-coloured; whereas those painted with the Glass Medium have a most brilliant effect, and will be found to remain perfectly unchanged, as its durability can only be compared to painting in enamel.

## Glass Medium in Bottles.

No. 1. For first and second painting, and for mixing with colours already prepared in Medium.

No. 2. For general painting, and for rubbing up powder colours with.

No. 3. For third painting, finishing, and glazing, or mixing with lakes and other colours, requiring strong driers, giving at the same time additional transparency.

Any of the above Media may be thinned, according to the taste of the Artist, with Miller's pure Florentine Oil.

## Glass Medium in Powder.

Nos. 1, 2, and 3.

If these powders be mixed stiff upon the palette with a small portion of Miller's pure Poppy Oil, it will enable the Artist to lay colour, pile upon pile, and to dip his pencil in water or oil at pleasure. It will also dry so hard that it may be scraped with a knife on the following day.

Artists are recommended to replenish their Colour Boxes with Colours prepared in Medium, as they will be found better in every respect than those prepared in the ordinary oils.

It is also requisite to remark, that while Artists continue to use colours as commonly prepared in oils, they only reap half the advantage resulting from the great improvement in the art—which the Media are acknowledged to be by upwards of one thousand Artists who have already tried and approved them.

T. MILLER, being the original preparer of this INVALUABLE MEDIUM, has the honour of supplying  
SIR MARTIN ARCHER SHEE, President of the  
Royal Academy,

Sir A. W. Calcott, R.A.	W. Havell, Esq.
C. L. Eastlake, Esq., R.A.	T. C. Hoiland, Esq.

W. Derby, Esq.	F. S. Cary, Esq.
T. Ellerby, Esq.	C. F. Williams, Esq.
G. Field, Esq.	F. R. Say, Esq.
W. Fisher, Esq.	W. R. Collett, Esq., M.P.
W. Fisk, Esq.	W. Dyce, Esq.
W. H. Freeman, Esq.	M. E. Cotman, Esq.
J. Gilbert, Esq.	W. R. B. Shaw, Esq.
A. Vickers, Esq.	R. K. Penson, Esq.
A. Tidy, Esq.	C. L. Reet, Esq.
H. Room, Esq.	H. Gritten, Esq.
F. D. Broadhead, Esq.	M. Claxton, Esq.
H. Strong, Esq.	B. R. Faulkner, Esq.
L. Huskinson, Esq.	W. E. Winter, Esq.
J. Lerd, Esq.	G. S. Fitch, Esq.
J. W. Child, Esq.	H. Milling, Esq.
J. Hall, Esq.	J. H. Dixon, Esq.
C. Hancock, Esq.	Colonel Rawdon, M.P.
R. G. Hamnerton, Esq.	Sir Gordon Bremer.
Horace Vernet, Esq.	A. Delaroche, Esq.

And many other Artists of Eminence.

T. MILLER gladly embraces this opportunity of publicly expressing his grateful acknowledgements to his numerous Patrons and Friends, both in this country and on the continent: and particularly those gentlemen, who, unsolicited, have so kindly forwarded to him letters testimonial of their entire approbation of the Glass Medium. Nor must he omit to mention (which he does from a sense of gratitude, rather than from a feeling of vanity), the presentation of a Silver Cup, by an artist of eminence, for his invention of the Silica Colours;—and Artists and the Public may be assured, that, with such a flattering stimulus to exertion, as the sufferages of gentlemen of first rate talent, he is not likely to relax in those efforts, whereby he first obtained their notice and approbation.

The SILICA WATER COLOURS are prepared in small squares, which possess many and great advantages over the Cake and Moist Water Colours, at present in use; and can be forwarded per post to any part of the country, on receipt of an order for any of the under-mentioned tints, viz.:

Pale and Deep Red.	Pale and Deep Yellow.
Pale and Deep Blue.	Pale and Deep Purple.
Pale and Deep Orange.	Pale and Deep Brown.
Pale and Deep Green.	White and Black.
Pale and Deep Gray.	

To Water-Colour and Miniature Painters.

## MILLER'S GLASS MEDIUM.

It is well known that some preparation for giving brilliancy and depth to Water-Colour Painting, and for enabling the Artist to repeat his touches without disturbing the colours already laid on, has been long sought after; this new vehicle possesses all these advantages. When mixed with the colours it has a most brilliant effect, and will preserve delicate tints uninjured; in durability it will approach nearer to Oil Painting than anything hitherto in use.

## Glass Medium in Bottles.

No. 1. For first colouring or laying on masses of colour. This dries so hard that the second colouring or finishing will not disturb it.

No. 2. For second colouring, glazing, and finishing.

T. M. has great pleasure to inform Artists that he has on sale all the Colours made by G. Field, Esq., author of "Chromatography," &c. &c.

He has also all the remaining stock of Ultramarines, manufactured by the celebrated Italian maker, the late G. Arzone.

MILLER'S PREPARED LEAD PENCILS  
FOR DRAWING, &c.

Of different degrees of hardness, without grit.

## MILLER'S NEW PALETTE

Is held in the same manner as the one in general use, but the thumb-hole is dispensed with, thereby obviating the annoyance resulting from oil and colour running through upon the hand, and will doubtless entirely supersede the present one.

SILICA GROUND CANVASS. This Canvass, not being prepared in the usual method with common oils, causes all colours used on it to dry from the bottom, and not from the surface, as is now the case, thereby, in the painter's phrase, giving a light within.

SILICA VARNISH. This varnish, not being made of soft gums, like the ordinary varnish, when once dry cannot be removed from the painting; neither is it acted on by the atmosphere, which frequently occasions the effect of a thick bloom, similar to that of a plum, thereby entirely destroying the effect of the picture. All these evils are completely obviated by the use of the Silica Varnish.

## DISSOLVING VIEWS.

Colours prepared in small boxes, for painting the Dissolving Views as now exhibited at the Royal Polytechnic Institution, with directions for use. The same Colours are also applicable for painting the slide glasses of Magic Lanterns, and devices or ornaments on ground glass, in imitation of the old masters.

MILLER'S PREPARATION FOR CLEANING AND  
RESTORING OIL PAINTINGS,

In small boxes complete, with directions for use.

MILLER'S ARTISTS' COLOUR MANUFACTORY, 56, LONG ACRE, LONDON.

## MESSRS. COLNAGHI &amp; PUCKLE,

No. 23, COCKSPUR-STREET, CHARING-CROSS,

## PRINTSELLERS TO HER MAJESTY THE QUEEN,

TO THE QUEEN DOWAGER, HER ROYAL HIGHNESS THE DUCHESS OF KENT &amp;c., &amp;c.,

Have to announce the Publication of the following Engravings and Works—viz.,

## PORTRAITS OF HER MAJESTY AND H. R. H. PRINCE ALBERT,

Engraved by FREDERICK BACON, Esq., from the original Miniatures painted by W. C. ROSS, Esq., A.R.A., her Majesty's Miniature Painter.

## PORTRAIT OF H.R.H. THE DUCHESS OF KENT,

A Companion to the Portraits of her Majesty and the Prince, by the same Artists.

These beautiful Prints, executed in the line manner, are of the same size as the Miniature, and are as much suited for framing as for the portfolio of the Amateur. They are acknowledged to be by far the best Portraits of her Majesty, his Royal Highness the Prince, and her Royal Highness the Duchess of Kent.

Prints . . . 10s. 6d.      Proofs . . . £1 1s.      Autograph Proofs . . . £2 2s. each.

## A PORTRAIT OF HIS GRACE THE DUKE OF WELLINGTON.

A Half-length Print, Engraved by T. H. RYALL, Esq., Engraver to the Queen, from the Original Picture by H. P. BRIGGS, Esq., R. A., Painted for the Right Hon. Lord Wharncliffe. Of this admirable Picture, by far the best likeness of his Grace since the celebrated Portrait executed in 1823, by SIR THOMAS LAWRENCE, for the Right Hon. Charles Arbuthnot, one cannot speak too favourably. It represents the Duke in the fulness of years and wisdom.

Prints . . . £1 1s.      Proofs . . . £2 2s.      Autograph Proofs . . . £3 3s.

## PORTRAIT OF THE RIGHT HON. SIR NICHOLAS CONYNTHAM TINDAL,

Lord Chief Justice of the Court of Common Pleas.

An admirable Half-length Print, by Mr. H. COUSINS, from an exceedingly fine Picture by THOMAS PHILLIPS, Esq., R.A.

Prints . . . £1 1s.      Proofs . . . £2 2s.      Autograph Proofs . . . £3 3s.

## CONFERENCE ON BOARD H. M. SHIP WELLESLEY,

BETWEEN SIR GORDON BREMER, K.C.B., AND THE CHINESE AUTHORITIES IN THE HARBOUR OF CHUSAN, ON THE EVENING OF THE 4th JULY, 1840.

Lithographed by LYNCH, from the Original Drawing by SIR HARRY DARELL, Bart., A.D.C.

This interesting Print contains Portraits of Sir Gordon Bremer, Brigadier Burrell, Captain Thomas Maitland, R.N., Lord Jocelyn, Sir Harry Darell, Bart., A.D.C., the Rev. Mr. Gutzlaff, the Chinese Admiral, Chang (Governor of Chusan), his Flag Captain, and the Chief Magistrate of Chusan.

Price 10s. 6d.

# WINSOR AND NEWTON'S COMPRESSIBLE METALLIC TUBES TO SUPERSEDE BLADDER COLOURS FOR OIL PAINTING.

**W** and N.'s Compressible Metallic Tubes are made on an entirely novel plan, of a series of layers or rolls of extremely thin metal; they are extremely light, yet have great strength and toughness, so that they are not liable to split and leak, as is the case with all Tubes made on any other plan.

By a process peculiarly original, W. and N. line every Tube with a thin membranous substance, and thereby prevent the very injurious effect occasioned to colours which are long kept in direct contact with a metallic surface. The most delicate colour is thus effectually protected from any chemical action that might otherwise cause its deterioration.

The oil colour is ejected from these Tubes in a manner similar to that in which colour is expressed from the common bladder colour, by squeezing or compressing between the thumb and finger, so that the colour is always kept gathered up in a compact state; the empty part of the Tube remaining closed or compressed behind it.

The bottom of the Compressible Tube is cemented in a manner entirely new, which gives a security to the Tube not before obtained, and renders it impossible for the contents to be forced out through accident or imperfect closing.

W. and N. beg to apprise their Patrons that their new manufacture of Compressible Metallic Tubes is entirely original; and, excepting the tubular form (which has been generally adapted in various contrivances for preserving oil colours for the last fifty years), their Tubes are not similar in their manufacture to any of the numerous other tubes applied to the preservation of oil colours now in existence.

They are light and portable, and may be packed with safety among linen or paper. They preserve oil colour for any length of time, are peculiarly adapted for expensive colours, and offer the most perfect mode of sending oil colours to warm climates.

The advantages of these Tubes may be thus enumerated.

The preservation of the colour free from skins.

The cleanliness with which the art of painting may be pursued, either by artist or amateur.

The readiness with which the colour may be pressed from the tube without the necessity of laying down the palette and brushes.

Freedom from smell, and danger of breaking or bursting.

Economy in use, and moderate price.

TO BE HAD, WHOLESALE AND RETAIL, AT

WINSOR AND NEWTON'S  
ARTISTS' COLOUR MANUFACTORY,  
38, RATHBONE PLACE, LONDON.

Price 6d. each, to be filled with colour, (Cobalt, Madder, Lakes, &c., extra as usual).

**TO MINIATURE PAINTERS, &c.—W. WARRINER, 39, GREAT CASTLE-STREET, REGENT-STREET, Manufacturer of OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES, of all sizes, shapes, and patterns.**

W. Warriner, having been established more than a quarter of a century, begs to return his sincere thanks to those Artists and others who have undeviatingly patronised him, begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses always ready, or speedily made to order.

The Trade, Merchants, and Captains of Ships supplied on the most advantageous terms, and with the greatest punctuality.

## THE CHEAPEST MANUFACTORY FOR GILT AND FANCY WOOD PICTURE FRAMES.

**P. GARBANATI, WORKING CARVER** and **GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane**, respectfully informs Artists, &c., that as he manufactures entirely on his premises every description of ORNAMENTED GILT and FANCY WOOD PICTURE FRAMES, he is enabled to offer them at such low prices that he defies competition. A most extensive assortment of every size Picture Frames kept ready. Re-gilding in all its branches in a most superior manner, cheaper than by any other house in the trade. Estimates given free of charge.

A large assortment of handsome ornamented swept Gilt Miniature Frames at 6s. each (glass included), not to be equalled for price and quality by any other manufacturer in the kingdom.

A list of the prices of Plate Glass, Gilt and Fancy Wood Picture Frames, &c., sent, pre-paid, to any part of the kingdom.

## PAINTING IN OIL.

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC TUBES, for COLOURS, OILS, VARNISH, MAGYLP, ASPHALTUM, &c.**—THOMAS BROWN begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "BROWN'S PATENT" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

**PATENT OXYDATOR.—DEPOT, 14, Finch-lane, Cornhill.**—The OXYDATOR is the only effective instrument for the perfect combustion of common oil, with all the brilliancy and more than the power of the finest sperm, and without alteration of the sperm lamp. Price 5s. including a proper chimney-glass, preserved from breaking by the metal oxydator. The advertised substitutions are merely narrow-necked glasses, difficult to clean, and induce an endless expense for breakage.—SMITH and Co., Agents for the Patents. Country agents wanted. Purified oil, to burn in all lamps with the Oxydator, 4s. per gallon.

## ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.

**J. ECKFORD, 45, FLEET-STREET,** corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

## SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES McLEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**INSTANTANEOUS DAGUERRETYPE, or PHOTOGRAPHIC PORTRAITS,** by Mr. A. CLAUDET's new Patented Improved Process, ROYAL ADELAIDE GALLERY, LOWTHER-ARCADE, West Strand.—Mr. A. Claudet has completed his new arrangements, and has fitted up a comfortable and elegant room at the above Gallery for taking Portraits and Groups of Figures by an instantaneous process, producing faithful and pleasing likenesses. This improvement will be hailed as the greatest desideratum in this wonderful art; for hitherto, when the sitting required any length of time, the features were unavoidably constrained or unnatural. Specimens are exhibited at the Adelaide Gallery, where portraits are taken daily. As sunshine is not necessary, dull weather does not prevent the operation. Price of a single portrait fitted in a neat case one guinea; for groups containing two figures one guinea and a half, adding half a guinea for every extra figure; in family groups, two children half a guinea. Parties are not expected to pay unless satisfied with the likeness.

# THE ROYAL MARRIAGE PICTURE.

"Mr. Hayter had the honour of submitting to her Majesty his large oil sketch for the grand historical picture of the Marriage, with which her Majesty was graciously pleased to express the highest approval."—COURT CIRCULAR.

"On Saturday, her Majesty honoured Mr. Hayter by sitting to him in the Marriage robes; and his Royal Highness the Prince Albert also sat to him for his great picture of her Majesty's Marriage."—COURT CIRCULAR.

"Her Majesty, the Queen Dowager, and her Royal Highness the Duchess of Kent, honoured Mr. Hayter by sitting to him in the full Marriage robes, for his picture of that august ceremony."—COURT CIRCULAR.

"Her Royal Highness the Duchess of Gloucester did Mr. Hayter the honour to sit for the great Marriage picture."—COURT CIRCULAR.

"Their Serene Highnesses the Duke of Saxe-Coburg-Gotha and Prince Ernest; and their Royal Highnesses the Duchess of Cambridge and Princess Augusta of Cambridge, did Mr. Hayter the honour to sit to him, to be painted into the grand picture of her Majesty's Marriage."—COURT CIRCULAR.

"Their Royal Highnesses the Dukes of Sussex and Cambridge, and Prince George of Cambridge, honoured Mr. Hayter with a sitting for the historical picture of her Majesty's Marriage."—COURT CIRCULAR.

"On Wednesday last, his Majesty the King of Prussia honoured Messrs. H. Graves and Co. with his autograph in their subscription book, as a subscriber for the forthcoming engraving from the Royal Marriage Picture."—COURT CIRCULAR.

"MR. HAYTER had the honour yesterday to submit to her Majesty the Queen, his Royal Highness Prince Albert, and the King of Prussia, in Windsor Castle, his most beautifully finished picture of 'The Royal Marriage,' when her Majesty, Prince Albert, and the King of Prussia, were most graciously pleased to express their entire approbation of this magnificent painting."—COURT CIRCULAR.

HER MAJESTY'S PRINTSELLERS AND PUBLISHERS, MESSRS. HENRY GRAVES AND CO.,  
have authority to announce that, by

HER MAJESTY'S SPECIAL PERMISSION,

they will in April have the honour to exhibit, in their Gallery in Pall-Mall,

THE MAGNIFICENT PICTURE OF

## HER MAJESTY'S MARRIAGE.

Painted by GEORGE HAYTER, Esq., M.R.S.L., her Majesty's Historical and Portrait Painter.

Any attempt at Description of this Grand and Noble Picture must be very imperfect; but the Publishers beg to state, that  
THE SPLENDID ENGRAVING which they are to have the honour of publishing will enable all the admiring Patrons of Art to possess this,  
THE ONLY AUTHENTIC MEMORIAL

OF ONE OF THE MOST INTERESTING EVENTS OF HER MAJESTY'S REIGN.

Subscribers' names for this National Engraving received by Messrs. H. GRAVES and Co., her Majesty's Printsellers and Publishers, where the  
Subscription Book, containing the numerous Autographs of the Royal and Illustrious Subscribers, is now open, and the Impressions  
will be strictly delivered in the order of subscription.

Price to Subscribers: Prints, £4 4s. .... Proofs, £8 8s. .... Proofs Before Letters, £12 12s.

HENRY GRAVES and Co. will also have the honour, in the course of a few days, of Exhibiting in their Gallery, to the Patrons of Art,

THE SPLENDID SERIES OF UPWARDS OF FIFTY MOST EXQUISITE DRAWINGS OF THE  
INTERIORS AND EXTERIORS

OF

## THE ANCIENT MANSIONS OF ENGLAND,

BY THAT EMINENT ARTIST, JOSEPH NASH, ESQ.

These exquisite Original Drawings, made in the Mansions, are upwards of double the size of the engraved plates, and will form the most interesting  
Series of Drawings, ever produced, of the Architecture of England in the time of Queen Elizabeth.

BY COMMAND OF HER MAJESTY.

HENRY GRAVES and Co. beg to announce that have nearly ready for Publication,

THE MAGNIFICENT ENGRAVING FROM THE GRAND HISTORICAL PICTURE OF THE

## CORONATION OF HER MAJESTY, QUEEN VICTORIA.

Painted by GEORGE HAYTER, Esq., M.R.S.L., Her Majesty's Historical and Portrait Painter; and Engraved in the most splendid style of Art, by H. T. RYALL, Esq.,  
Her Majesty's Historical and Portrait Engraver.

Not only has her Majesty been graciously pleased to give Mr. HAYTER numerous sittings for this National Picture, but the whole of the Royal Family, the Foreign Princes, the Dignitaries of the Church, the Ladies and Officers of State, have all (by Special Desire) sat to Mr. Hayter for their individual Portraits; thus combining, in one grand Picture, nearly One Hundred Authentic Portraits of the most Illustrious Personages of the Age, assembled round the Throne of our beloved Sovereign,  
in the venerable Abbey of Westminster.

Price to Subscribers: Prints, £4 4s. .... Proofs, £8 8s. .... Proofs Before Letters, £12 12s.

Among the Numerous Subscribers whose Names already honour the Subscription List for this grand National Engraving, are the following Illustrious Personages:—

HER MAJESTY THE QUEEN  
HIS ROYAL HIGHNESS PRINCE ALBERT  
HER MAJESTY THE QUEEN DOWAGER  
HIS MAJESTY THE KING OF HANOVER  
HIS MAJESTY THE KING OF PRUSSIA  
HIS MAJESTY THE KING OF BELGIUM

The GALLERY for the Exhibition and Sale of the Works of British Artists is OPEN daily, from Ten in the morning till Five in the evening. Admission 1s.; Catalogues 1s. WILLIAM BARNARD, Keeper.

**ART-UNION OF LONDON.**  
The Artists who kindly submitted DESIGNS for the DEVICE required by the Society, are informed that the Committee have selected a Drawing by Mr. F. K. PICKERSGILL; and that the other Designs, together with the letters, unopened, may be obtained by their Authors, on application at the Office.  
Geo. GODWIN, Jun., } Hon. Secs.  
Lew. Pocock, }  
Office, 73, Great Russell-street,  
Bloomsbury, March 1842.

**BRISTOL SOCIETY OF ARTISTS.**  
**THE EXHIBITION** of the above SOCIETY, for 1842, WILL OPEN, on the 18th of April, at the Bristol Philosophical Institution, Park-street. Pictures will be received up to the 9th instant.  
London Artists will please to observe, that Mr. GORDON, of Charles-street, Berners-street, Collects and Packs Pictures for the Society.  
An ART-UNION, under distinguished Patronage, is established in connexion with the Exhibition.  
ROB. TUCKER, Secretary.

**ROYAL ACADEMY, Trafalgar-square.**—  
NOTICE TO ARTISTS.—All WORKS of PAINTING, SCULPTURE, or ARCHITECTURE, intended for the ENSUING EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 4th, or by Six o'clock in the evening of Tuesday, the 5th of APRIL inst., after which time no work can possibly be received, nor can any works be received which have already been publicly exhibited.  
The other regulations necessary to be observed may be obtained at the Royal Academy.  
HENRY HOWARD, R.A., Sec.

Every possible care will be taken of works sent for exhibition; but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package which may be forwarded by carriers.  
N.B. Pictures and Drawings will be received on the south side of the building, and Sculpture on the north.  
The prices of works to be disposed of may be communicated to the Secretary.

**ELECTROTINT;** or the Art of making Paintings or Drawings in such a manner that, by the Electrotype Process, Copper Plates or Blocks can be obtained from them, capable, when printed from, after the manner of engraved plates or wood blocks, of yielding fac-simile impressions of the Original Paintings or Drawings, by T. SAMPSON; with Illustrations of Textures, Brushes, &c. Published by E. PALMER, Philosophical Instrument Maker and Patentee, 103, Newgate-street, London, price 1s. 6d.  
N.B. A few copies, in royal octavo, bound in cloth, 4s. Electroint Portrait of Her Most Gracious Majesty the Queen, in the act of signing a pardon, by T. Sampson; Two Fruit Pieces, by G. Lane; 'Fisherman,' sketched from life by T. Sampson; and several others, just published by E. PALMER, Patentee, 103, Newgate-street, London, price 7s. 6d. India proof impressions, quarto.  
N.B. WANTED several sets of ORIGINAL DESIGNS, suitable for Illustrations of Popular Works. Apply to the Patentee before Ten o'clock any morning, with Specimens.

TO THE ADMIRERS OF VAN DE VELDE.

COMMITTEE.  
C. W. Bowden, Esq.  
W. D. Hushell, Esq.  
E. Clark, Esq.  
H. Clark, Esq.  
J. Cones, Esq.  
C. T. Coathupe, Esq.  
W. Cave, Esq.  
Rev. W. Millner, A.M.  
A. H. Palmer, Esq.  
G. Cumberland, Jun., Esq.  
TREASURER.—G. A. Ames, Esq.  
SECRETARY.—Mr. Robert Tucker.  
The constitution of this Association is similar to that of the Art-Union of London; and an Engraving, of the published price of one guinea, will be presented to every Subscriber. The Shares are One Guinea each.  
ROB. TUCKER, Secretary.

**ETCHING CLUB.**  
**THE MEMBERS** of the ETCHING CLUB are now engaged in the ILLUSTRATION of Milton's Poems "L'ALLEGRO" and "IL PENSE-ROSO," which will be illustrated by upwards of Seventy Etchings, on the same plan as "The Deserted Village," though considerably enlarged. The whole of the Club, consisting of the following Members, will take a part in the work:—  
John Bell, Sculptor.  
C. W. Cope.  
Thomas Creswick.  
J. R. Herbert, A.R.A.  
J. C. Horsley.  
J. P. Knight, A.R.A.  
R. Redgrave, A.R.A.

The publication will take place about Christmas next. The following number of copies will be taken off, and the plates then destroyed. The delivery will be strictly according to the order of subscription.  
10 Reserved India-paper Proofs, before letters, half-colombier, at 13 Guineas each.  
50 India-paper Proofs, half-colombier, with the Poems engraved on the plates, at 10 Guineas each.  
250 copies India paper, quarter-colombier, at 5 Guineas each.  
The number of copies to be printed has been well considered with regard to the capability of the Plates, and that every Subscriber may be assured he will receive an impression in which the finer qualities of the Etchings shall not be destroyed.  
Subscribers' names received by the Secretary, Mr. S. Redgrave, Hyde Park Gate, Kensington Gore; and Messrs. Longman, Paternoster-row.  
A few of the large paper Proof Impressions only of "The Deserted Village" remain, and may be obtained by application as above.

**ARCHITECTURAL CARD MODELLING.**  
Patronised by her Most Gracious Majesty and his Royal Highness PRINCE ALBERT.

**MR. ANDREWS, of GUILDFORD,** begs to introduce to the notice of the Nobility, Gentry, and the Public generally, a novel branch in the Fine Arts, viz., ARCHITECTURAL MODELLING in Card-board in imitation of ivory. Specimens of this beautiful Art have been submitted to the inspection of her Majesty and his Royal Highness Prince Albert, who were graciously pleased to express their satisfaction, and to purchase Models of the Pavilion, Brighton, and Saint George's Chapel, Windsor.  
Gentlemen's Residences modelled to order.  
Orders received by his Agents, Messrs. Reeves and Sons, 150, Cheapside, London, where Specimens may be seen; also by the Artist, 61, High-street, Guildford.

**PRIVATE VIEW FOR FOUR DAYS ONLY.**  
**MESSRS. HENRY GRAVES and CO.** have the honour to announce, that they will EXHIBIT in their GALLERY, to the Nobility and Gentry, for Four Days only, namely  
*Friday, the 1st, Saturday, the 2nd, Monday, the 4th, and Tuesday, the 5th of April next,*  
THE GRAND ORIGINAL PICTURE OF  
**THE HEROES OF WATERLOO,**  
Assembled at Apsley House,  
Previous to the  
BANQUET ON THE EIGHTEENTH OF JUNE,  
Most exquisitely painted by  
J. P. KNIGHT, Esq., A.R.A.

This magnificent Picture has almost exclusively occupied this talented Artist nearly four years, and contains Portraits of all the most eminent Officers engaged at Waterloo, each individual Portrait having been painted from life on the large canvass, and not, as is customary, from Sketches copied into the Picture. In consequence of the great desire expressed by the Army generally to view this important Painting, Mr. Knight has kindly permitted this Exhibition, but only for the four days above-named.  
Tickets may be had at their Gallery, 6, Pall Mall; and of Messrs. Leggatt and Neville, 79, Cornhill, by an early application.

**FRESCO, ENCAUSTIC, and TEMPERA PAINTING.**—Just published, by the Author, price 5s., and may be had of the Artists' Colourmen, A Practical Treatise on the above, being the substance of Lectures delivered in the years 1838-39-40. By EUGENIO LATILLA. The Author intends giving a COURSE of INSTRUCTION in TEMPERA and FRESCO PAINTING, which, from the peculiar nature of the latter, will occupy ten entire days. Terms for the course, Five Guineas, to be paid in advance. Artists and Amateurs desirous of joining, are requested to communicate with Mr. E. L., at his Studio, 75, New-man-street.

Just published, a New Edition, 18mo, price 5s. bound,  
**HOYLE'S GAMES, Improved and Enlarged** by New and Practical Treatises, with the Mathematical Analysis of the Chances of the most Fashionable Games of the day; forming an easy and scientific Guide to the Gaming Table, and the most popular Sports of the Field. By G. H. Esq.  
London: Longman, Brown, and Co.; J. M. Richardson; Hamilton and Co.; Whittaker and Co.; T. Terry; Duncan and Malcolm; Sherwood and Co.; Simpkin, Marshall, and Co.; T. Hearne; Cowie and Co.; J. Dowling; T. Bumpus; J. Templeman; Capes and Co.; H. Washbourne; J. Wacey; W. Edwards; T. Allman; and J. Thomas. Liverpool: J. and J. Robinson.

# GOLDSMITH'S "DESERTED VILLAGE,"

Illustrated by the Etching Club.  
The Plates to this Work have been destroyed. Impressions of the destroyed Plates may be seen at Messrs. Longman and Co.'s, in Paternoster-row.  
The edition in imperial 8vo. is all sold; a few copies, printed on half-columbian paper, price Ten Guineas, and of the Proofs before Letters, price Thirteen Guineas, may still be had.

London: Longman, Brown, Green, and Longmans.

This day is published, in royal 4to., half-bound in green morocco, with gilt labels, price 16s.

# SKETCHES FOR RUSTIC WORK;

INCLUDING BRIDGES, PARK AND GARDEN BUILDINGS, SEATS AND FURNITURE. 18 Plates. The Scenic Views in the Tinted style of Lincography; with Descriptions and Estimates of the Buildings. By T. J. RICAUTI, Architect.  
This work, in part the Gate-lodge, Winter-house for Plants, Pigeon-house, Fishing-cottage, &c. &c., contains a design for a Gardener's-cottage, with Fruit-rooms, constructed exactly upon the principles advocated by Dr. Lindley, in the "Gardeners' Chronicle" for Sept. 18, and Oct. 2, 1841.

London: James Carpenter, Old Bond-street.

# HANDBOOK to the PUBLIC GALLERIES

of ART in and near LONDON. With CATALOGUES of the PICTURES, accompanied by CRITICAL, HISTORICAL, and BIOGRAPHICAL NOTICES. By Mrs. JAMESON.

"To each Gallery is prefixed a short historical and explanatory introduction, giving an account of its formation, its present state, the days and hours when open to the Public," &c.  
"Mrs. Jameson has indulged in less of dissertation than we should have thought possible, producing instead, a Guide-Book of singular unity, clearness, and value. It could hardly be more thoroughly executed to keep the promise of its title."—Athenæum.  
John Murray, Albemarle-street.

# HANDBOOK of ITALIAN PAINTING.

Translated from the German of KUGLER, and Edited with Notes by C. L. EASTLAKE, R.A.

Extract from Editor's Preface.  
"This work is intended to supply a want long felt by persons endeavouring to acquire a knowledge of the Early History and Progress of the Art of Painting, which no other English work supplies, viz., a short and easily intelligible guide, pointing out to the unlearned the leading style of Art—the perusal of which will serve as a fit preparation for a visit to the collections of Painting on the Continent, and in our own Country; while the remarks it contains with reference to the characteristics of Schools and individual Artists, recommend it as a means of forming the taste."  
John Murray, Albemarle-street.

Published in 4to., Price £4 10s. in French Boards; and on Royal Paper, 4to., with proof impressions of the Plates, and a Portrait of the Author, Price £7 7s.,

# TREATISE ON PAINTING. In Four Parts.

Illustrated by One Hundred and Thirty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNET, F.R.S.  
1. On the EDUCATION of the EYE. Second Edition. Price £1 5s.  
2. On COMPOSITION. Fifth Edition. Price 15s. in boards.  
3. On LIGHT and SHADE. Fifth Edition. Price 18s. in boards.  
4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This work is particularly recommended to the Students in Art in the New Edition of the Encyclopedia Britannica—See the article on Drawing.

James Carpenter, Bond-street.

# THE VERY CHOICE COLLECTION OF MODERN PICTURES OF JOHN TURNER, ESQ.

BY Messrs. CHRISTIE and MANSON, at their GREAT ROOM, KING-STREET, ST. JAMES'S-SQUARE, on FRIDAY, MAY 13, the small and very select COLLECTION of PICTURES, the works of the most celebrated Modern British Artists, collected by JOHN TURNER Esq., and removed from his late residence, Clapham Common; comprising the 'Rabbit on the Wall,' the much-admired work of Sir David Wilkie, painted for Mr. Turner, in 1816; a 'Nymph and Cupid,' a beautiful work of the late W. Hilton; 'The Morning Sun,' a highly poetical design, by Howard, R.A.; a most capital and important work of Morland; 'Richard and Balaak,' and two others, by Cooper, R.A.; three Characters, subjects of Rustic Figures, by Witherington; and some of the happiest efforts of the following talented Artists:—

West, P.R.A.	Burnet	Cooke
Chalmers, R.A.	Linnell	Good
Collins, R.A.	E. Cooper	J. Wilson
Cooper, R.A.	Shetky	Shayer.
W. Daniell, R.A.		

The Collection may be viewed three days preceding the Sale, and Catalogues had.

# THE VALUABLE COLLECTION OF PICTURES OF THE LATE ALLAN GILMORE, ESQ.

MR. PHILLIPS begs leave to announce that on TUESDAY, APRIL 12, he will have the honour to SUBMIT TO SALE BY AUCTION, at his GREAT ROOMS, NEW BOND-STREET, by order of the Executors, the first portion of the Valuable and Extensive COLLECTION of ANCIENT PICTURES, selected with great liberality and taste, by the deceased, from many of the renowned galleries which have been sold during the last forty years; in particular those of Lucien Bonaparte, the Earl of Liverpool, Lord Radstock, Sir W. Drummonds, and Messrs. Hibbert, Turner, Webb, and Sir T. Lawrence; besides a number purchased during a tour which the deceased made on the Continent shortly after the peace. The pictures are all in a genuine state, uniting fine examples of the Italian, German, Dutch, Flemish, and French schools. The present portion will include many clever cabinet specimens of the Dutch and Flemish schools; in particular, the works of Cuyp, Backhuysen, V. Velde, Teniers, J. Steen, Ruysdael, Berchem, Netscher, and others, two fine Landscapes by Swaneveldt, and several scriptural pieces by masters of the Italian school.  
May be publicly viewed two days preceding the Sale, and Catalogues then had at Mr. Phillips's office and rooms as above.

# A PRIVATE COLLECTION OF CHOICE CABINET PICTURES.

MR. PHILLIPS begs to announce that he is instructed to SELL BY AUCTION, at his GREAT ROOMS, NEW BOND-STREET, on TUESDAY, APRIL 12, at One precisely, A CHOICE and HIGHLY PLEASING COLLECTION OF EIGHTY ANCIENT CABINET PICTURES, by distinguished Masters of the Italian, Dutch, Flemish, and French Schools, having been selected with judgment and taste as to subject, at considerable cost, by the present owner, J. PITTAR, Esq., during a long residence on the Continent. In particular may be mentioned a 'Virgin and Child,' by Fra Bartolomeo, and a similar subject by A. del Sarto; Landscapes, by G. and N. Poussin; 'Rembrandt in his Atelier,' by G. Dow, of exquisite finish; a 'Music-master and his Pupil,' G. Terburg; a 'Landscape, with Horses Watering,' Wouvermans; two by Cuyp; a 'Landscape, and Cattle,' P. Potter; a fine 'Composition,' by Both; 'Twelfth Night,' J. Steen; four 'Scenes in Venice,' by Canaletto; and other interesting works by masters of the highest repute.  
To be publicly viewed two days preceding the Sale, at Mr. Phillips's Rooms, as above, and Catalogues then had.

# MODERN WATER-COLOUR DRAWINGS, OF THE VERY FIRST CLASS.

BY Messrs. CHRISTIE and MANSON, at their GREAT ROOM, KING-STREET, ST. JAMES'S-SQUARE, on WEDNESDAY, APRIL 20th, and following day, at One precisely, the First Part of the unique COLLECTION of PAINTINGS in WATER COLOURS, by the most eminent English Artists, formed by HENRY ASHLIN, Esq., and selected with distinguished taste and boundless liberality, chiefly from the easels of the painters, and which have formed the leading attractions of the exhibitions of several successive years in the Gallery of the Society of Painters in Water Colours. Among them will be found 'Plymouth Sound,' by Turner, R.A.; 'Charles I. on Horseback, a prisoner,' the noble work of F. Teyler; the celebrated 'King Arthur,' Bridlington Pier, and 'Crowborough'; and many other of the finest works of Copley Fielding, and first-rate works of

Cattermole	Lance	Pyne
Chambers	J. Lewis	Richter
Cox	Nash	Vickers
Hunt	Nesfield	Wright.

May be viewed two days preceding, and Catalogues had.

# CAPITAL ENGLISH PICTURES.

BY Messrs. CHRISTIE and MANSON, at their GREAT ROOM, KING-STREET, ST. JAMES'S-SQUARE, on FRIDAY, MAY 6, at One precisely, a COLLECTION of PICTURES, by the most eminent English Painters, formed by that distinguished patron of British Art, ROBERT VERNON, Esq.; comprising works of upwards of sixty artists of the English School, among them will be found specimens of the following artists:—

West, P.R.A.	Turner, R.A.	Gill
Sir A. Callcott, R.A.	R. Wilson	Offland
A. Chalon, R.A.	Uwins, R.A.	Huristone
Collins, R.A.	Knight, A.R.A.	Linnell
Cooper, R.A.	Webster, A.R.A.	Linton
W. Daniell, R.A.	Witherington, A.R.A.	Liverstiege
E. Daniell, R.A.		Pidding
Etty, R.A.	Barker	Rippingill
Fuseli	Bonington	Thayer
Hart, R.A.	Mrs. Carpenter	Sharpe
Jones, R.A.	Corbould, sen.	Stanley
Lee, R.A.	Creswick	Starke
Roberts, R.A.	Davis	Wyatt.
Stothard, R.A.	Farrier	
Thompson, R.A.	Frazer	

May be viewed two days preceding, and Catalogues had.

# PAINTING AND DRAWING MATERIALS.

ROBERSON AND Co., 51, LONG ACRE, Artists' Colourmen and Pencil Makers, beg to call the attention of Artists and Amateurs to their New List of materials for Drawing, Painting, &c., manufactured and sold by them.

In addition to every article hitherto used, it comprises all the New Colours and improved methods of preparing them, both for Oil and Water Colour Painting.

OIL COLOURS of the finest quality, in Metallic Collapsible Tubes, Glass Tubes, and Bladders.

WATER COLOURS in Cakes and in the Moist State for Sketching, &c.

PREPARED CANVAS for Oil Painting, with Indian-rubber, Oil, or Absorbent grounds.

Flemish ground MILLBOARDS and PANELS.

VEHICLES and MEDIUMS, prepared from Silica and Borax, in bottles and powder, after the recipes of Lieut. Hardy, and J. Eagle, Esq.

Margelph, Gum Medium, Gumption, and Preparation of Copal for Oil Painting.

WHATMAN'S DRAWING PAPERS, London and Crayon Boards, and Harding's new pure Drawing Paper.

FRENCH BLOCKS for Sketching in Oil and Water Colours.

SABLE and CAMEL HAIR PENCILS, Goat, Hog, and Badger Hair Brushes.

FINEST PURE CUMBERLAND LEAD DRAWING PENCILS, of various degrees of hardness, at the recent reduction in price.

ROBERSON AND CO. have much confidence in respectfully stating, that they continue to supply the above, and every other article connected with their business, of the very first quality and at the lowest possible prices.

MANUFACTORY, 51, LONG ACRE, LONDON.

# WINSOR AND NEWTON'S COMPRESSIBLE METALLIC TUBES TO SUPERSEDE BLADDER COLOURS FOR OIL PAINTING.

W and N's Compressible Metallic Tubes are made on an entirely novel plan, of a series of layers or rolls of extremely thin metal; they are extremely light, yet have great strength and toughness, so that they are not liable to split and leak, as is the case with all Tubes made on any other plan.

By a process peculiarly original, W. and N. have every Tube with a thin membranous substance, and thereby prevent the very injurious effect occasioned to colours which are long kept in direct contact with a metallic surface. The most delicate colour is thus effectually protected from any chemical action that might otherwise cause its deterioration.

The oil colour is ejected from these Tubes in a manner similar to that in which colour is expressed from the common bladder colour, by squeezing or compressing between the thumb and finger, so that the colour is always kept gathered up in a compact state; the empty part of the Tube remaining closed or compressed behind it.

The bottom of the Compressible Tube is cemented in a manner entirely new, which gives a security to the Tube not before obtained, and renders it impossible for the contents to be forced out through accident or imperfect closing.

W. and N. beg to apprise their Patrons that their new manufacture of Compressible Metallic Tubes is entirely original, and, excepting the tubular form (which has been generally adapted in various contrivances for preserving oil colours for the last fifty years), their Tubes are not similar in their manufacture to any of the numerous other tubes applied to the preservation of oil colours now in existence.

They are light and portable, and may be packed with safety among linen or paper. They preserve oil colour for any length of time, are peculiarly adapted for expensive colours, and offer the most perfect mode of sending oil colours to warm climates.

The advantages of these Tubes may be thus enumerated.

The preservation of the colour free from skin.  
The cleanliness with which the art of painting may be pursued, either by artist or amateur.

The readiness with which the colour may be pressed from the tube without the necessity of laying down the palette and brushes.

Freedom from smell, and danger of breathing or bursting.

Economy in use, and moderate price.

TO BE HAD, WHOLESALE AND RETAIL, AT

WINSOR AND NEWTON'S ARTISTS' COLOUR MANUFACTORY, 38, RATHBONE PLACE, LONDON

Price 6d. each, to be filled with colour, (Cobalt, Madder, Lakes, &c., extra as usual).

## PICTORIAL IMITATION.

SIR,—In requesting a portion of your valuable space, I make no pretension to novelty; my object is, in the first place, simply to advocate a return to modes of practice which, in a particular branch of Art at least, have been superseded by others; and which, instead of improving the Art, have, I fear, in some respects, tended to its deterioration. I shall also avail myself of the opportunity of suggesting caution in the adoption of newly-proposed "Materials;" but as I do not intend to be the cause of further controversy on a subject which has already occupied too many of your columns with but little profitable result, I beg to assure you and your correspondent, to whom my remarks apply, that having thus fulfilled what I conceive to be a duty, I shall not be induced to add another word in extension of the argument.

Dryden, in his admirable parallel between poetry and painting, truly says, "To imitate nature well, in whatsoever subject, is the perfection of both Arts; and that picture, and that poem, which comes nearest the resemblance of nature, is the best: but it follows not that what pleases most in either kind, is therefore good, but what ought to please." And again, "Imitation pleases because *truth* is the object of our understanding, as *good* is of our will; and the understanding can no more be delighted with a lie, than the will can choose an apparent evil." These, Sir, are not merely trite sayings or inapplicable truisms; they are important practical truths, which, although too often neglected or violated, have formed the governing principles of all those great painters who are called masters. Reynolds also (whose authority is still more to our purpose), speaking of himself, says, "I always endeavoured to do my best; great or vulgar, good subjects or bad, all had nature; by the exact representation of which, or even by the endeavour to give such a representation, the painter cannot but improve in his art." There is, I be-

lieve, no practical branch of the Fine Arts in which there exists so little definite agreement, and concerning the principles of which so little information is to be found in books, as that which relates to the art of colouring in imitation of nature. Even Reynolds speaks of the "*uncertainty of his procedure*," and admits, with seeming regret, that he had never been "*settled with respect to colouring*."

The great difficulty in Art is the art of analyzing nature. The most valuable, and perhaps the rarest qualification for the practice of painting, is the faculty of seeing things not only as they actually appear, but also, as it were, analytically, through the perplexing obscurity of their combinations; for it is only in proportion as we possess this power, that we can expect to render the means of imitative Art accordant with the means which nature herself employs.

It appears to me that, as regards the imitation of nature, the circumstances which more especially demand the consideration of a painter, are—

First. The general light by which objects are rendered visible.

Secondly. The shadows, by means of which we judge concerning form, projection, and texture.

Thirdly. The colour of the general light.

Fourthly. The colours (called local) resulting from the varied powers of surfaces and substances, as regards the decomposition, reflexion, and transmission of light.

These circumstances would seem to comprise or affect whatever can be made the subject of imitative Art; and it is by them we ought to be guided in searching for principles of imitation.

The consideration which first presents itself to my mind is that mere light and shadow are independent of colour; and I gladly avail myself of the fact as a probable means of elucidating and simplifying operations of Art; for there is sufficient difficulty in giving a true representation of form and texture in natural gradations by means of light and shade *alone*; how much more, if the mind be perplexed by attempting to render, at the same time, and by means of a simultaneous commixture of pigments, another class of qualities materially distinct from, and independent of them.

We know that many of the productions of nature are devoid of colour, and it is evident that if *all things* were at once deprived of the property of decomposing light into its constituent colours, and consequently of reflecting and transmitting any but white light, black and white would then be the only pigments necessary. Indeed, colours would then have no existence. Let us suppose that, immediately on our completion of a faithful transcript of such a specimen of decoloured nature in all its gradations of tone and variety of texture, our models at once regain the power of reflecting and transmitting colour; that foliage resumes its vernal green or autumnal orange; the sky its azure, the rose its red; and that all things become tinged with endless variety of appropriate hue.

What relation does our colourless picture now bear to its coloured models? Must we recommence our work on some new principle? By no means; we know that the change we have described is one of addition merely; and could we but endue the various portions of our pictured tablet, with the same varied power of reflecting decomposed light with which we supposed its prototype to have been invested, we should have achieved the perfection of imitative colouring.

As ours is not, however, a creative power, but an imitative and adaptive art, we are compelled to apply to the colourless surface of our picture various materials, indispensable as affording colour, although objectionable on the score of their chemical or mechanical constitution; and we must obviate, as we best can, such difficulties and imperfections as the nature of those materials impose upon us.

The illustrative case, which I have thus stated hypothetically, is neither unnatural nor merely imaginary, for it may be made the subject of

actual experiment with any particular model, or arrangement of models; and it may serve to remind us that in nature the manifestation of form, and also of what is called texture, is an effect of light and shadow merely. I think it also tends to show that to attempt the representation of light, shadow, and colour in a single process or operation, is a deviation from natural principles.

The results of the mode of practice which I think nature herself indicates, proves how much the value of colour, and how many of its beauties, both of the delicate and splendid kinds, depend upon its being kept distinct from, and independent of, light and shade, in the conduct and execution of a picture.

If what we consider a principle be really such, it will consist with all styles of Art, and probably also admit of great variety in the methods of its application; it would therefore be equally presumptuous and unnecessary to prescribe for the practice of any one acquainted with the properties, and habituated to the use, of the ordinary means and materials of Art. I may, however, be allowed to enter somewhat into particulars for the purpose of rendering my views the more intelligible to amateurs and those to whom the practice of the Arts is new. In so doing, I shall avail myself chiefly of that branch of Art which appears to offer the clearest illustration of my meaning.

Of the two great branches into which the art of painting is divided, the method called distemper appears to be the most ancient; and although it was at an early period generally superseded by the practice of employing pigments mixed with an oily or resinous vehicle, *water-colour painting* has in our own time been revived with such extension of its capabilities, and such novelty in its manipulations, as to render it almost a new Art.

Oil colours and water colours have their respective and peculiar advantages: but my present object is not to compare or contrast them, although I shall have occasion to refer to both for purposes of illustration.

The early specimens of Art in water colours had certainly few claims to the title of paintings. They consisted of drawings in Indian ink, slightly stained or tinted with colour. We are chiefly indebted to the enlightened views of Dr. Munro, who incited Turner and Girtin to emulate the depth and richness of the fine specimens of oil painting in his possession; and still more to the establishment of the Society of Painters in Water Colours for the extraordinary development of this delightful branch of Art; many specimens of which leave nothing to be desired as regards solidity, force, or any of the requisites of verisimilitude.

There are, however, in my decided though humble opinion, two very important points in which the present prevalent style or method of using water colours is productive of far less satisfactory results than the "old-fashioned" mode of procedure: I advert to the representation of atmospheric space, and its concomitant quality—evenness of tone. Some admirable examples of these important and indispensable qualities, are to be found in the comparatively early works of Girtin, Turner, Clennell, and a few others whose names it might seem invidious to mention. These are evidently mere tinted Indian ink, or grey drawings, as any one will be convinced who may attempt to copy them; for their peculiarities are scarcely imitable by any other means than those by which they were themselves produced. And lest I should be misunderstood as to the quality of the particular works to which I refer, I beg to say that they are neither feeble in effect, nor deficient in colour; they are such as "*stand their ground*" among some of the most forcible of the recent works of Turner, Prout, Bonington, and Hunt.

Turner is one of the few instances of a landscape painter completely adhering to the good old plan of executing his effect of light and shadow, independently of colour. This is not

more evident in his earliest productions, consisting of mere flat washes, than in those more recent works, which exhibit a most accomplished acquaintance with all the various technicalities of Art, and a power of combining them with an extraordinary degree of skill, taste, and feeling.

Although you have heard much of late respecting vehicles and mediums, you may perhaps not be aware, that there is almost as much discussion amongst water-colour painters as to the vehicle of Turner, as amongst oil painters respecting that mysterious medium of Van Eyck, and with about the same degree of profitable results. No secret has in either case been discovered, simply because none existed. Starch, paste, rice water, and I know not how many similar things, have had the credit of certain peculiar qualities observed in Turner's water-colour drawings, especially as regards a luminous bearing out of delicate tints without gloss.

These peculiarities will be found to result from a delicately-balanced application of colour over the various gradations of a preparation of neutral light and shade, producing, with great actual transparency, extremely tender tones of colour, possessing such an appearance of solidity as to resemble the effect of opaque body colours. The value of his colour is enhanced by nothing so much as by the homogeneity of his light and shadow. I use the term homogeneity in opposition to that patchy effect which is the natural result of the practice which at present prevails of compounding tints and tones, lights and shades, upon the palette, and then placing them in a sort of juxtaposition on the picture. I suppose the best recommendation of this method is the one which we so often hear, viz., "it is so much more painter-like than the old method."

Pictures painted in this "painter-like" style (especially landscapes), however skilfully manipulated, scarcely ever appear to recede from the frames in which they are placed, but frequently the reverse. They have, moreover, a disjointed and *unquiet* look, in spite of all the spurious atmosphere which washing and sponging, even to the verge of woolliness, is capable of producing.

The eye of the painter, however accurate, is liable to be imposed upon during the process of compounding tints and tones. That which *per se* appears neutral, derives colour from the eye itself; and that which is coloured may assume a temporary appearance of neutralness; for we know that with whatever colour the eye is excited, its complimentary or accidental colour is transferred to and superimposed upon the immediately succeeding object of vision. And so it is that colourless shadows derive from the eye itself that colour which naturally enhances the colour of their lights, or in other words, the colour of shadow becomes complimentary to that of its light.

It would therefore seem a safer practice to "dead colour" with a neutral, previously compounded, than to encounter the conflicting circumstances attendant on its extemporaneous composition. And a perfectly homogeneous neutral is preferable to one compounded. A tint composed of red, blue, and yellow particles, varies according to the nature of the light by which it is seen; for instance, by candle-light the yellow particles lose their power; some of the blues look green, others grey, and the red particles have undue force. Whereas the carbonaceous blacks, seen by whatever light, are uniform, and they are moreover exceedingly permanent.

On a former occasion, I ventured to observe that "although there are dark substances enough in nature, and dark pigments among the rest, there are no such things as dark colours;" I might also have added, that whatever seems to partake of the nature of colour, yet is at the same time darker or more neutral than the secondary colours of the prismatic spectrum, may have such additional degree of neutralness represented in the same way, and with the same material, as though it were actually shadow. If the principle be sound, there need be no misgiving as to

the result of its being fairly tested by experiment and practice. Methods may be varied to meet exigencies induced by the defective nature of materials. All that I would contend for is, *merely that the effect of light and dark be, as far as possible, treated independently of colour, in a picture considered as a finished work of Art.*

In order to enable those who may dissent from my views the more easily to correct me if I be in error, I will suppose a picture—the material, water colour—the subject, landscape (and to render the test as secure as possible) with a light and cloudless sky, the sun nearly or quite in the picture. It is evident that to be natural, such a sky must be on a very light scale. There would still be *some* gradation, however tender. Now, I do not hesitate to say, that this sky may be rendered in a perfectly satisfactory manner if the *gradations* be obtained with pure black, and the subsequent colour will have its full value, although I am aware that a similar effect may be produced by a successive application of the primary colours; but, as a general mode of practice, it may be done better, and with *more atmosphere*, on the black system.

To save the valuable time and space of your readers, I will briefly observe, that the whole preparation for colouring such a picture as I have supposed should go considerably into detail, and would resemble a pale mezzotint print. On proceeding to colour this *chiaro-scuro*, it will be found that much of it may remain as a finished representation of distant objects and vapoury atmosphere.

All that has any important relation to colouring, is on this principle reduced to its most simple elements. Colouring may, in fact, be said to consist merely in the application of the three primitives, red, blue, and yellow; or (it may be) also of what are termed the secondaries, purple, orange, and green, to a previously executed representation of light and shade, which contains within itself an important, though not, perhaps, complete provision for the tertiary and those other more complex combinations of colour which deter the uninitiated, and render the act of colouring difficult and uncertain to all.

Although I have, for the sake of more easily stating my views, referred only to the processes of water-colour painting, the principle is, as I have before observed, equally applicable to the art of painting in oil, although the manipulations, and perhaps the order of the processes also, may need some degree of modification, to suit the peculiar requirements actual or conventional of that description of Art.

It is said to have been a favourite opinion of Titian, transmitted by Boschini, "that whoever aspires to become a painter, must make himself familiar with three colours, and have them ready on his palette—these are, white, black, and red."

Reynolds, in his notes of a journey to Flanders, speaking of a portrait by Titian, says, "The shadows are of no colour."

Reynolds' opinion, that "a picture should look as though it had been prepared in one colour," his "unity of light and unity of shadow," are all indications of what we may expect to find in their works, and what I think they actually contain. It is still, however, a question as to the best method of applying the principle, and one on which amateurs and the younger practitioners of Art might be materially benefited by the communications of their more experienced brethren.

The method which appears to be most *consistent with principle*, is similar to that of water colours, that is to say, painting with black on a white ground; the black being gradated by dilution with the fluid vehicle; the colour to be afterwards applied, partly by glazing, and partly by solid painting and scumbling.

The objections to this method are the oily appearance which results from a small quantity of pigment, combined with a large proportion of vehicle; and although the use of turpentine, or other volatile diluents, may considerably limit

this defect, still the deficiency of a body of paint, in a considerable part of the picture would, I am aware (though I know not on what principle), be an insuperable objection to those who consider that an oil picture should possess certain constitutional qualities of "impasta," texture, surface, &c., independently of their being regarded as means of imitation.

A second method, and one certainly embracing more of those conventional requisites, with a tolerable adherence to principle, is that in which the lights and darks, and the atmospheric gradations, are obtained by painting with black and white commingled on the palette. This mode of practice is also attended with its difficulties, by reason of the peculiarities of many of our colouring materials. In the first place, we know that a mixture of black and white paints rather resembles what is called lead-colour than it does white in shadow; and it requires good management to prevent a picture so prepared having a leaden appearance; although, I believe, that many finely-coloured pictures have been so prepared; and as regards landscape, it is even attended with some peculiar advantages. That which, when colourless, appeared heavy, becomes aerial on the due application of colour. "Impasta," to any extent of thickness, and texture, with any degree of roughness, may, of course, be so obtained. It is on proceeding to colour, that we are compelled to contradict our principle. I have under my notice, an instance (of a picture in progress) in which is a satin curtain, of a colour which only vermilion can imitate. We can apply this pigment in a perfectly satisfactory manner upon the *lights*; but from its extreme opacity, it obscures and even obliterates the previously executed shadows. There are many other pigments of equal value, the beauty of which is a consequence of their opacity; and in order to avail ourselves of them, we are compelled, if not to accommodate our principles, at least to *reverse the order of our processes*. As regards our instance of the curtain, we must first lay down a flat tint of vermilion, and when dry apply neutral and comparatively transparent shades and shadows over it.

This expedient naturally suggests the question, "How far is it desirable to adopt it as a general mode of practice?" As regards landscape especially, it would be exceedingly perplexing and difficult to attend to the general effect while laying down tints and tones of colour, to be afterwards wrought into form by shading upon them. In an interior, however, with a permanent arrangement of models, and an uniform admission of light, this method is very practicable. I have seen a well coloured and well connected picture painted by laying down the general colour of each object, as seen in the lights; then applying the broad shadows, and making out the detail with the neutral shade; and finally, by means of glazing and solid painting, giving the various parts, their individual peculiarities, both of colour and texture.

Processes may be varied for the purpose of imitating some peculiar quality of the model, or we may be driven to particular expedients, in order to evade or obviate the imperfections of our materials; but let us not be diverted from any principle which we know to be natural and sound. Let us not even be seduced into what may be called practical *compromises*.

Principles are best tested by their application to extreme cases, by carrying them out to the extent of their capabilities as far as our means and materials will permit. As an instance of what I mean by the term compromise—I would adduce the very common practice of representing shadow even in open landscape-scenes with a rich brown colour, which, in the foreground, is frequently left unaltered in the finished picture. To say nothing of the want of truth in such a representation of what is essentially neutral—it is almost impossible to impart to it those delicate, cool, and pearly reflections which give such

value to the shadows and half lights in nature, without either materially altering the depth of the shadow or interfering with its transparency.

A neutral tone may easily be rendered brown where it is requisite, or, indeed, of any colour, either warm or cold, by glazing: but brown can neither be rendered neutral nor pearly in the same satisfactory manner.

Such a practice, moreover, lays the abilities of a colourist under unnecessary limitations, and it compels him, as I have before observed, to throw away the advantage afforded by nature in the constitution of the eye itself, which necessarily transfers to a neutral shadow that hue which best sets off the colour of the lights.

There are several other points connected with this subject, of which I would willingly have availed myself, but that I fear you will consider I have already engrossed more of your valuable space than might have sufficed for my purpose, and which, doubtless, would have been ample for any practised and expert writer.

And now, Sir, if you can allow me to make a few observations with regard to Mr. Coathupe's compound of borax, water, and oil, I will be as brief as I can. Mr. Coathupe has very explicitly pointed out some of the objections to which his vehicle is liable, but none which seem to me of any importance.

The real objection to it is one which he appears to have entirely overlooked. *It renders the picture to a considerable extent liable to injury by the action of moisture after the colours have dried.* I have received, from an eminent artist, some trials with powder colours laid on prepared canvass with the boracic solution, which experiments I have also repeated myself, according to the directions contained in your number for February, viz., "mix the pigment, whether ground in oil or otherwise, with as much oil as may be considered necessary, and then add the aqueous solution of borax *ad libitum*."

Your correspondent goes on to say the quantity of borax that can be thus used, will not be sufficient to act specifically "as a drier." The pigments used in the experiments to which I refer were purposely selected as being good driers, that nothing might be added beyond what Mr. Coathupe prescribes—warm and dry air was found sufficient for their desiccation.

Now Mr. C. infers the insufficiency of oil and turpentine, "because they have required a covering of some other material that their original lustre might be displayed." Will he undertake the responsibility of advising, that pictures painted with his vehicle, *containing only just sufficient oil* "merely to cement firmly the particles of pigment," be left without such "covering," or, to speak more plainly, without varnish? The colours, of which I have spoken, "cemented" by the means Mr. Coathupe advises, are even now acted upon by cold water so as to readily stain the fingers. What is to be expected of them after exposure for a century or so to all the vicissitudes of damp and dry; and that, too, in permanent combination with a substance possessing (and retaining) those properties (with regard to oil) which first determined its attraction for and miscibility with water? Mr. Coathupe says, "Turpentine appears to have its utility confined within limits much too circumscribed;" but he does not inform us in what respects water is preferable as a diluent of oil to rectified turpentine, a fluid perfectly miscible with oil, without the assistance of any saline or alkaline adjunct, which, having done its duty, evaporates, leaving nothing behind to detract from the value of its services.

After stating that the borax of his vehicle will not act specifically as a drier, your correspondent adds, "glass of borax *does* act as a drier, and so does the borate of lead. Does Mr. C. by this

mean to recommend the use of those substances as driers to his boracic vehicle? I suppose not; for he afterwards informs us, that "linseed oil possesses some constituent principles that must either be wholly abandoned or united chemically with *some metallic oxide* before it can become dry." Afterwards we have, "and now with regard to silice," it has no chemical action whatever (J. E. positively asserts it is an "*anti-drier*") when employed as it has been recommended; it *may*, therefore, be introduced or omitted in any medium, agreeably to the fancy of the artist. I think Mr. C. will not quarrel with my translation of his "*some metallic oxide*" into litharge; and so we have his authority or permission to employ a "vehicle," whose ingredients are precisely the same as those of Mr. Hardy.

I suspect that the evil which Mr. Coathupe has been combating is not the one of which artists have most frequent cause to complain.

They are not so often troubled respecting any *chemical discolouration* of white lead or pigments as by a *loss of transparency in the film of dried oil*, with which each individual particle of colour is enveloped, so that the pigment, which, while its vehicle was fresh, appeared bright and clear, shortly becomes dull and obscure. *In this respect* copal is, I think, very preferable to oil, it dries more transparently, and a smaller proportion of it better answers the purposes of a cement. Even in those cases, in which the colour of white lead is *chemically* affected, as in the instance your correspondent adduces, of "the discolouration of recently-painted white wainscoting, subsequent to the suspension of a picture that had been placed before the painted wainscot had become thoroughly dry and hard," I do not believe that the agents of this discolouration proceed, as your correspondent imagines, from beneath the film which forms the surface of the paint; and for the following amongst other reasons. What is called "*flatted*" colour, in which so little oil is used that it dries dull and porous, is more susceptible of this discolouration, and retains that susceptibility for a much longer period after its desiccation than the common kind of oil paint. If Mr. Coathupe's theory were sound, the greatest discolouration of the lead would take place *within* the film, whereby he supposes certain gaseous vapours to be confined: but the reverse is the fact; there is no discolouration at all *within* this film when there is much on its surface.

I believe the real cause of this discolouration to be an undisturbed accumulation of sulphuretted, phosphuretted, and carburetted vapours (the sources of which are numerous in all dwelling-houses) between the picture and the wall; and I observe, that *with "flatted colour,"* in which the lead is but slightly protected by oil, the effect is produced for years after the paint has been applied.

The action of sulphuretted hydrogen affords so delicate a test for the presence of lead, that invisible letters, traced on a sheet of paper with even a very dilute solution of lead, become immediately legible on exposing the surface of the paper to sulphuretted hydrogen gas.

If I be in error in this view of the matter your correspondent is quite capable of correcting me; and I have felt it the more incumbent on me to venture these observations, because Mr. Coathupe, although (as I think) mistaken in the instances to which I have adverted, is evidently a man of practical knowledge in the science of chemistry; and he has endeavoured to render his argument effective by all the means in his power. Amongst other things tending to that purpose, he has cited a formidable list of eminent chemical authorities on so simple an affair as the addition of water to borax until it can dissolve no more. Whatever benefit Mr. Coathupe might have intended to derive from these celebrated names, they clearly show that great chemists may be greatly mistaken in matters respecting which ordinary folks would not have had sufficient ingenuity to find any difficulty whatever.—J. H. M.

## HISTORY OF ART.

(FIRST TO THE SIXTEENTH CENTURY.\*)

THE frivolous luxury of the Romans had successfully reproduced the varied form, under whose expression the Greek worshipped the beautiful. When called into existence by the mighty mastery of Divine truth over the errors of the human mind, Christian Art first timidly exercised its genius upon the historical development of the rise and progress of a new and spiritual religion. It might, indeed, have adopted the technical skill, the finished form of execution that existed; but by its early professors, Ancient Art was considered as the founder of idolatry, the encourager of heathenism, and of moral depravity. Artists at this period, like actors at a later, were denied sepulture; any Christian neophyte was excommunicated who followed the occupation; and the very form of the divine Saviour was degraded, to prevent the adoption of any positive iconic individuality. But there is in Art an undying spirit, in the mind of man an eternal spring of reproduction. A typical and symbolic form, a kind of idyllic character, was soon imparted; the simple monogram of Christ was succeeded by the varied representation of the 'Good Shepherd,' of 'Orpheus,' used as a mythic prefiguration of the 'Saviour;' and this was followed by a multitude of ideal forms, directly or indirectly expressive of his life, miracles, and mission. These representations were chiefly found in mural paintings in the catacombs; the best and most expressive are in the cemeteries which bear the name of St. Calixtus on the Via Appia and those of Naples; and in these we recognise the first principle of Christian Art, "which conveys with the objects it represents a still deeper meaning, thus exciting the mind of the beholder to corresponding activity of thought." Mosaic painting was discovered in the reign of Claudius, and when Rome became the seat of the Christian hierarchy, was greatly employed between the middle of the fifth and ninth centuries; it marks the second period of ancient Christian Art, and, in connexion with this, we must consider Miniature painting on the books used for the service of the church. This latter custom prevailed greatly in the eighth or ninth century—it is the last ray of the most ancient Christian Art in Italy, for the tenth and eleventh centuries produced, certainly, works,—remarkable for disproportion, awkwardness, and uncertainty. To the Byzantines we are indebted for the new life which was communicated to Italy in the thirteenth century; but their pictures, though containing significant and clever motives, nevertheless betray the art of the low Greek of the Byzantine empire.

The strife and tempest of opinion, the civil wars incident upon the establishment of empires, or of minor free states, and the energetic error of ignorance and superstition, had poured the West upon the East, or convulsed Europe, when, in the thirteenth century, intellectual literature and imitative Art

"—che ne la lor più fresca etade  
Sien degne d'aver titol di beltrade,"

arose to scatter and dispel the thick darkness which, like wintry clouds that obscure the beauty of the starry vault of heaven, had settled, and concealed by its gloomy oppression, that *knowledge of his powers*, which is the cause of the exertion, the high aspiration, the real greatness of man. But Art arose not with the imposed restriction of symbolic forms. It indicated an affinity with the taste of classic antiquity, an extended study of the antique, a corresponding purity of form, a closer observation of nature. The first of such artists is CIMAABUE, born in 1240; "in the free movements of whose figures, and in the successful attempt to express the *modelling* of the naked form, we recognise a decided and not unsatisfactory approach to the antique;" and who sought to give to traditional outline, the expression of a living intention. Resembling Cimabue, but in a more developed form, is Duccio, upon whom although Dr. Kugler has lavished praises, rather more elaborate than critical, he has well observed, that so great are the indications of genius, "that he wanted but a few steps more

\* Correctly speaking, I believe, the term *glass* is only applicable to the silicates of alkalis, earths, and metals. I do not make this observation for the sake of quibbling about words, but with reference to a passage in my last letter.

\* A Hand Book of the History of Painting. By Dr. Franz Kugler. Translated from the German by a Lady, and edited by C. L. Eastlake, Esq., R.A. &c. Murray. 1842.

to attain the summit of Modern Art." Nevertheless centuries separated him from the great masters of its final development. The cause of this Dr. Kugler has well and succinctly explained: we are not prepared entirely to adopt his opinions, but they are highly deserving of the reader's attention. We now reach the Tuscan school. In the subjective mode of conception of this period, the allegorical tendency has been too much considered as characteristic of the individual; it was the spirit of the age. Giotto, the friend of Dante, who thus speaks of him:—

"Credette Cimabue nella pittura  
Tener lo campo; ed ora ha Giotto il grido,  
Sicchè la fama di colui oscura."

is considered of this school the head. Dante or Giotto equally exhibit the allegorical conception in its grandest form, and first great effort. For poetry and painting are but varied expressions of thought. Of Giotto's pictures we wished extensively to transcribe Dr. Kugler's accurate account, but we must limit that pleasure to the following general description of his style: "In his heads, Giotto frequently exhibits a peculiar, and not very beautiful habitual form: the eyes are generally long and narrow, and very close to each other. In these newly-invented representations, founded on no ancient tradition, beauty was less his object than the expression of character, to make his inventions generally intelligible. Here and there, however, we find very graceful heads in his pictures, and the whole composition is always beautifully disposed in masses. Where the subjects require it, it is even treated in a peculiarly solemn, simple, and harmonious manner." The most eminent of Giotto's scholars was Taddio Gaddi. The greatest monument of the progress of Art, in this age, is the Campo Santo, or cemetery of Pisa. Many of these paintings are full of the deepest meaning, requiring neither symbol or allegory to convey the ideas contained in them, but exhibiting a direct union between the conceptive and expressive power. Of this, the cause may thus generally be assigned. It was a period when religion had greatly influenced the mind, and constrained the direction of the intellectual power. Dante and Petrarch, stimulating and elevating the passionate ambition of the Italian, quickening and refining his emotions, had also, by the stern grandeur or expressive beauty of their minds, imparted a similar, though far distant mode of individual conception to the artist, whose works thus assumed a form in which religious faith is combined and heightened by a kind of imaginative or lyric treatment. Art and poetry breathed alike an enthusiastic sentimentality. Simone di Martino, whom Ghiberti has so praised, developed, in some degree, this style, which finally attained its greatest perfection in Angelico da Fiesole. The poetic character, for it was poetic; an imaginative sensibility, serenity of feeling, and devout faith; and this, united with the humblest submission to his religious superior, were no less indicative of the mind of Fiesole, than of others, his contemporaries. The same style prevailed, at the same period, in other parts of Italy. Gentile da Fabriano is separated from Fiesole, as the active from the contemplative power. The present shed its joyous beauty, and formed the mind of Gentile; the purely spiritual happiness of the future was the creative excellence of the other. Hitherto the progress of Art has been traced as a scriptural language; as the form of individual feeling; the type of a powerful religious faith: we shall now consider its higher sphere, where truth, faith, and feeling are combined in composition with correct delineation, and guided by the study of nature. This characterizes the third period, from the fifteenth to the beginning of the sixteenth century. The preceding eras had bestowed internal life; those we shall now treat of gave it external excellence of expression. Tommaso, Maso, or Masaccio was the first who gave to Art this new direction, as Lippi to impart to its productions the sensual feeling of his own mind. Gozzoli caught the beauty of the material world, and "The 'Portrait,' in the largest signification of the word, is the prominent characteristic in the productions of Ghirlandajo." That which M. Rio terms the revival of the Paganism of Art, may be attributed to this period, for the study of the naked form, and of the masterpieces of antique sculpture was now pursued. The powers of fresco to enliven architecture, and represent historic truth, had al-

ready been displayed; and the Venetians had become "the first among the schools of Italy who practised oil painting, the greater fluidity and juiciness of which, compared with distemper, was highly favourable to their peculiar aim."

The particular inspiration of the Umbrian school, was its religious feeling. The crude forms of matter, have in all ages born the impress of the spiritual power of man. The elements yield to him their strength, their varied aspect of beauty, their living inspiration; his intellectual powers of perception and combination, the moral law which guides their application,—all these unite in harmony and truth, to make man no less the evidence of the wisdom and greatness of the Deity, than of his superintending power. At no time could the religious impressions of Art more effectually have contributed to the progress of Christian civilization. The knowledge of ancient Art, would alone have transported the mind to the domain of that Art; and the literature of Greece, by its imaginative beauty and graceful thought, would have spell-bound or precluded the transmission of those religious impressions of which Christian Art is no less the sign than cause. "Purity of soul, fervent unearthly longings, and an abandonment of the whole being to a pleasing, sad, enthusiastic tenderness—these are the prevailing characteristics of the school to which we now turn our attention." Perugino, Pinturicchio, and Francesco Francia, are of that school the disciples. We have now reached the great masters of the sixteenth century; we are to consider Art in its highest development, and in its gradual decline. All the varied powers of creative or of technical excellence, the resources of classic antiquity, the truths of a purely spiritual religion, the taste awakened by the rich spoils of the past, the patronage of the state, and the intelligent condition of the people, by which, in the aggregate, Art can alone be nourished or perfected,—were now united to raise it to the elevation it assumed. True it is, that of this era there is no fixed type. Genius is not the arbitrary form of thought, but its varied expression: yet it bears in all and through all its gradations, the living aspect of beauty and of truth. It is not the property of an age or of a land; of a wealthy class, a peculiar sect: it depends not upon external circumstances; its sphere is human life; its home nature;—

"Leaving that beautiful which still was so,  
And making that which was not, 'till the place  
Became religion, and the heart ran o'er  
With silent worship of the great of old;"

now speaking in the form of didactic poetry, or kindling emotion by lyric effusion; equally impressive in Æschylus and Sophocles, as in Shakespeare or in Milton: the antique type never rejected, the modern form never despised; but both made susceptible of a greater display of creative power by expansion, which seems to form its essence, its very nature: such is the power which Genius has exercised over social progress; and under such combinations, it was exhibited by Da Vinci, M. Angelo, and Raffaele. Poet, musician, geometrician; graceful in manner, eloquent in discourse; uniting the powers of imagination and reflection; exhibiting in his works invention, design, colour, expression, feeling; with faculties so various, that he seemed a circling sphere of light, we might well linger on the fame of Leonardo da Vinci, as one who advanced not only the greatness of Art, but the greatness of humanity. But to do this, to sketch his contemporaries as they were in their own day, or as they still are; by genius in solitary grandeur above man, by feeling in communion with him, would require not only a careful collation of opinion, but a critical consideration of their age,

"... daring,  
And length of watching, strength of mind—and skill  
In knowledge of our fathers."

For, of works not tentative or experimental, not founded on exact deduction or philosophic truth, yet proceeding from admitted rules, the judgment is formed, not only by a comparison of excellence with excellence, but the progression of the social state.

In colour inferior to some, in design superior to all, Michael Angelo may be compared to Æschylus or Dante, in that creative power of thought, that terrible energy of soul, which is conversant with images, from which the ordinary

mind recoils, either from the fear of their possible truth, or vague inability to grasp the sublime conceptions they display. Yet if they depress us by their unattainable excellence, they elevate us by the study they enforce.

"Considerate la vostra semenza  
Fatte non fosti a viver come bruti  
Ma per seguir virtute, e conoscenza."

The description of the 'Last Judgment' we shall copy from Dr. Kugler. "This immense work certainly stands alone in the history of Art. In the upper half of the picture we see the Judge of the world, surrounded by the Apostles and Patriarchs; beyond these, on one side are the martyrs; on the other, different saints, and a numerous host of the blessed. Above, under the two arches of the vault, two groups of angels bear the instruments of the passion. Below the Saviour another group of angels holding the books of life, sound the trumpets to awaken the dead. On the right is represented the resurrection; and higher the ascension of the blessed. On the left, hell, and the fall of the condemned, who audaciously strive to press towards heaven. The day of wrath (dies iræ) is before us; the day of which the old hymn says,

"Quantus tremor est futurus  
Quando iudex est venturus  
Cuncta strictè discussurus."

The Judge turns in wrath towards the condemned, and raises his right hand, with an expression of rejection and condemnation; beside him the Virgin veils herself with her drapery, and turns with a countenance full of anguish towards the blessed. . . . Trembling and anxious, the dead rise slowly, as if still fettered by the weight of an earthly nature; the pardoned ascend to the blessed; a mysterious horror pervades even their hosts—no joy, nor peace, nor blessedness are to be found here." To give the criticism of Dr. Kugler upon this would be impossible; to select a portion would be unfair.

An elaborate description of the ceiling of the Sistine chapel, a valuable note by the Editor, and an engraved illustration, will convey to the reader an accurate idea of the most perfect works executed by Michael Angelo in his long and active life. "Here his great spirit appears in its noblest dignity, in its highest purity; here the attention is not disturbed by that arbitrary display to which his great power not unfrequently seduced him in other works."

Raffaele, born the 28th of March, 1483, in whom mind, feeling, and beauty of form seemed to unite, to give the world assurance of a man; and in whom, it has been well observed, the most opposite qualities are developed in their highest perfection, and combined in their most harmonious union, must close our sketches of the characters of the artists, whose productions Dr. Kugler has reviewed. Carefully detailed as are the descriptions given of his works, yet as these must be familiar to the majority of our readers, we prefer extracting the following remarks; not only because they present a general view of the power of the artist, but because they indicate the tone of the criticism, which forms a valuable and interesting feature in this work: "Like all other artists, Raffaele is always greatest when, undisturbed by foreign influence, he follows the free, original impulse of his own mind. His peculiar element was grace and beauty of form, in as far as these are the expression of high moral purity. Hence, notwithstanding the grand works in which he was employed by the Popes, his peculiar powers are most fully developed in the 'Madonnas' and 'Holy Families,' of which he has left so great a number. In his youth he seems to have been fondest of this class of subjects; and if his earliest works of this kind bear the impress of a dreamy, sentimental fancy, and the later ones of a cheerful conception of life, the works of this third period form the happiest medium between cheerfulness and dignity—between innocent playfulness and a deep penetration of the spirit of his subject. They are conceived with a graceful freedom, so delicately controlled, that it appears always guided by the finest feeling for the laws of Art. They place before us those dearest relations of life which form the foundation of morality, the closest ties of family love; yet they seem to breathe a feeling still higher and holier. Mary is not only the affectionate mother: she appears at the same time with an expression of almost virgin timidity, and yet as the blessed one of whom the Lord was born. The

'Infant Christ' is not only the cheerful, innocent child, but a prophetic seriousness rests on his features, which tells of his future sacred destiny."

It may be said of Raffaele as of Shakspeare, in detached passages, as in single works, they may have been rivalled or surpassed; but in varied and general excellence they are unequalled. "Raffaele died of a short and violent fever; his delicate constitution, wrought to the highest degree of susceptibility by the increasing activity of his mind and body, offered no resistance to the violence of his disease. Men regarded his works with religious veneration, as if God had revealed himself through Raffaele, as in former days through the prophets." He was buried in the Pantheon, under an altar he had himself decorated,—a consecration-offering of his genius. Doubts having been raised as to this, a search was made in 1833, and Raffaele's bones were found; and on the 18th of October, in that year, they were re-interred in the same spot, with great solemnities.—Our sketch of the progress of painting must here close: at a future period we trust to be enabled to return to this subject; to trace the characteristics of other masters, the influence and excellence of other schools. The rise, progress, and decay of Art presents to the mind many of the saddening incidents of life. How often do we not see the winning sweetness and simplicity of the child, succeeded by the truth, the buoyant animation, and beauty of womanhood? and whilst the mind dwells in tender veneration upon the fulfilment of the earliest hopes of its most natural affections, how often do we not see the gifted being whose features rest upon the mind; or whose memory—a dream-like image,—a star veiled by the fleecy vapour of a cloud, is still recalled through the long vista of the past in a weakened aspect of beauty;—a sweet and melancholy sound, as music on the waters; or as the glory of day less bright, but not less beautiful, shadowed still, or lingering in the repose and blended charms of twilight.—

"Binding awe and melancholy of high strain or low,  
Not solely on th' imaginative mind;

But e'en on fleshlier natures?"

How often do we not see a being, such as this, stricken by some slow and wasting disease, conveyed to the corruption of earth as it were the spirit of a lovely sound,

"born and dying,

"With the blest tone that made it?"

It was thus with the Arts of classic antiquity,—of Art, which was the mistress of Greek life, the servant of the luxurious sensual Roman; it was thus with early Christian Art; and from the sixteenth century, when, as we believe, though utterly opposed to the doctrine of M. Rio, it had assumed its highest tendency, by blending inward feeling with beauty of external form, and thus has been its gradual, beautiful, yet perceptible decay. This must inevitably be the case when its mission is misunderstood. Art, in the widest sense of the term, is the representation of ideas, facts, or forms ideally treated. We can scarcely affirm the property of one of its varied modes of expression, which is not equally true of another. Poetic art realizes truth by imaginative similitudes; or by narrations so employed, that the mind conceives the existence of the fact, as being in accordance with life and nature, or by exciting emotions which real objects would create, if palpable to sight. If this be true of poetry, it is equally so of painting. Art is life; animating matter, pre-conceiving the future, the historian of the present;—words, the statue, the temple, or the canvass, are but *signs* communicating its spirit unto man. As true eloquence is thought rightly expressed; as poetry is thought refined, and heightened by imagination; so painting is the same power blended with ideal excellence of form and elevated by its graceful characteristic of dramatic truth. We would most earnestly recommend this work to the attention of the student, the artist, and the connoisseur; to every one, in fact, but that last being in the scale of creation—an Utilitarian, who is but the creation of Man in the coarsest deformity of his earthy and most material nature. The narrative is carefully compiled, the criticism original, and proceeds from well-considered definite principles, by which the rise, progress, contrast, and perfection of different

artists or schools is carefully developed. The defect, too, consequent upon following various authorities, of indifferently adopting or opposing their decisions—now exalting the romantic, then the classic; at one place admiring the feeling of early Christian Art, at another reprobating the revival of Grecian influence—is also avoided, while the moral individuality and responsibility which the author assumes in his decisions, assists and guides the reader in the formation of his own. There are works not directly original as regards matter, which yet possess the character of originality from their mode of arrangement: this is one. Dr. Kugler has spared no pains to compress an extensive scheme within narrow limits; and Mr. Eastlake's valuable notes, by the extent and variety of his attainments, his perfect mastery of the subject, and graceful mode of communication, have given a value, and imparted an additional interest to the work, which will be at once admitted, both by the German and English reader. Nor is it with less pleasure, we notice that the translation is by a "Lady." It is exact, and neither laboured nor constrained; unlike some recent works, which appear to have been "*done out*" of obscure German into broken English. The difficulties of a foreign language have been surmounted by the translator, and without detriment to the construction of her own. An eminent living author has said, "Among men of sense and liberal politeness, a woman who has successfully cultivated her mind, without diminishing the gentleness and propriety of her manners, is always sure to meet with attention and respect bordering upon enthusiasm." When we review the names of those by whom our recent literature has been most graced, can we feel otherwise than proud, to notice those of Mrs. Somerville, Mrs. Marcet, and Mrs. S. C. Hall? To that of Mrs. Austin, who has added so much to our knowledge of German literature, the lady who has prepared this English version of Dr. Kugler's work, may in justice unite her own. Let no man who wishes to attain eminence, consider that the honours of society are its free gift; fame, or present and future esteem, the natural consequence of casual exertion. He who addresses a multitude, addresses a multitude oppressed with care, or gratified with the pursuits of avarice and ambition. No man is willing to admit a superiority that he does not feel; but each is ready to censure the excellence he cannot emulate, and to deride that superiority which is not familiar to his imagination, or which is opposed to his pursuits. The vain have no enjoyment but in the reflective spirit of their vanity; the timid and the ignorant censure or applaud from fear; the great and rich from condescension; nor is it till genius has mastered opinion, that the majority of littleness swells the ovation offered by the hitherto silent minority of intellectual power. Therefore, we say to the artist, study: and strive, from the knowledge of the past, and by the observation of daily life, to obtain that success which may secure the applause of your own time, and transmit your claims with justice to posterity.

S. R. H.

#### THE BRITISH INSTITUTION.

##### THE EXHIBITION—1842.\*

[We resume our notice of this Exhibition; it was with great regret we found ourselves compelled to divide it; an evil we must contrive to avoid hereafter.]

No. 178. 'The Curfew Time,' J. MARTIN.

"The Curfew tolls the knell of parting day,  
The lowing herd winds slowly o'er the lea,  
The ploughman homeward plods his weary way,  
And leaves the world to darkness and to me."

The above and some following verses of "Gray's Elegy" furnish the subject of this admirable picture. The effect is a favourite one of Mr. Martin's, a shadowed ground cutting a light sky; and his well known manner prevails as markedly throughout the whole as in any of his late works. The canvass is the usual size he employs—large compared with the works amid which it hangs. From the near shadows the eye is carried down a valley, the opposite and distant sides of which are lighted up by the faint rays of the declining sun. In the dusky

hollows are seen the "lowing herd," and on the right of the picture are the "ivy-mantled tower," "the rugged elms," and some other of the incidental objects of the poem. This is a sublime composition; we cannot condemn it for the mere reason that we are familiar with Mr. Martin's style of Art, and that we have been for years accustomed to look annually for his productions, and have not been disappointed. In it he is constant to himself—we wish he had been less so here; for the same materials of illustration are not at once applicable to Gray's poetry and a scriptural text. To have painted 'The Curfew Time' with truth, Mr. Martin must have *descended*—he must have painted a landscape essentially English. The sentiment, however, of the poetry is there in all its spell-like force, whether the scene be of our own or of any other land. It is impossible to look upon this work without conviction that the painter is a man of genius; he may have subjected himself to the charge of mannerism, as all great men do, where the thoughts, and feelings, and observations run commonly through one channel; but his conceptions are always magnificent; "his soul is steeped in poetry;" nothing mean, or even common-place, finds its way into his mind; and if, occasionally, he scorns the thrall-drom of "the schools," and dares to think for himself, the chances are in his favour, not alone with the mass of mankind, but with the critic—in the end. He may startle us by his departure from established rules; yet the Arts are not, like the law, governed by precedents. But in this work he has kept more than usually his imagination within fixed bounds; and as a production of Art it will bear a severe scrutiny. Perhaps it is not too much to say, there is no living painter who could have produced so perfect a back-ground to a picture—a back-ground by no means unimportant. The outlines of the mountains, and the delicate tints upon them, are as near perfection as they can be.

No. 199. 'Pere la Chaise, Paris,' F. NASH. A remarkably interesting copy of a singularly interesting scene, long without its parallel in Europe. Every object within the artist's ken has been minutely noted—too minutely, indeed—for the lavish introduction of the poppies in the fore-ground injures the effect of the picture.

No. 200. 'Study of Two Heads, intended for Lear and Cordelia,' T. UWIN, R.A. We have here the work of a master—a grand conception of the reality. How powerfully the accomplished artist has contrasted the effect of death upon the countenance of Cordelia, with the agonizing return to consciousness expressed in the features of the old, afflicted King!

No. 201. 'Raffaele's Madonna della Ledia, Florence—an Effect,' MARSHALL CLAXTON. A lady is copying the 'Madonna della Ledia,' which is in the Pitti Palace at Florence. The fair copyist is painted in shade, and is thrown out in strong relief by a powerful light upon the picture she is working from. It is a fine and very effective example of colour, and manifests great improvement in the artist.

No. 206. 'The Landing of Jeannie Deans at Roseneath,' A. JOHNSTON. A work of much ability, but scarcely sufficient to sustain the reputation the artist has acquired by his sweet transcripts of rustic life and character. The aged father and daughter are conceived and pictured with much force; but the portrait of the pastor is poor and mean. The colouring is thin and crude; it seems, indeed, as if the painter has scarcely yet sufficient vigour to cope with a subject of size.

No. 208. 'Scene in Windsor Forest,' J. WILSON, jun.—Few better landscapes have been produced in modern times. We have long appreciated the great capabilities of the young painter; but feared he was in danger of contracting habits of "prettiness." This, however, is a bold and masculine production; making it manifest that the artist uses his pencil with a consciousness of power. Although the trees are admirably painted, yet the main feature is a gloomy cart track embowered in the depths of the forest. Never can colour be applied more successfully than it has been in giving air to the shadowy part of this work. The pencilling of the foliage is solid and free, and the picture is altogether a fine specimen of a style of Art in which the English school excels all others.

No. 210. 'Slave Merchants,' COKE SMYTH.—A brilliant sketch, for it is little more; the pro-

\* Continued from page 60.

duction of an artist with whose name we are not familiar; we cannot doubt that his capabilities are great, and bid him, at once, exert his powers upon some grander subject. The picture is small; a sound and effective example of colour; and manifesting no ordinary skill in portraying character. The painter will "come out" in greater strength when he again makes his appearance—or we shall eschew prophecy.

No. 212. 'Millbank,' E. WILLIAMS, Sen. A fine effect of moonlight; very cleverly painted.

No. 213. 'Luncheon Time,' T. F. MARSHALL. If we may judge of this picture—for it is sadly placed—it possesses much merit. A ploughman is resting beside his team; his wife and dog sitting near: the colouring appears slight and thin, but the composition is, we think, very natural and true.

No. 217. 'An Extract from Nature,' R. ROTHWELL. So Mr. Rothwell christens as veritable a Nora Cricca, as ever brushed the dew from the shamrock sod on a May morning. The portrait is exceedingly beautiful; so full of animation that one may almost hear her merry laugh. It is, indeed, a fine conception of character; every part is in harmony; the eyes absolutely sparkle; and the raven locks, that float over her shoulders, seem keeping time to the motions of the buoyant figure. As a work of Art, Mr. Rothwell has never surpassed it. It is singular that he should have committed the error of adorning with "glittering gold and jewels rare," so thorough a production of wild Nature. The necklace and the earrings should have been far away. He may, perhaps, have found the original in sunny Italy; and will thus account for a singular departure from truth—but "le vrais n'est pas toujours le vraisemblable;" she is far more Irish than Italian; we can swear to having met her among the mountains of Kerry; with no other adornments than those with which nature so bountifully endowed her.

No. 218. 'Scene from King John,' E. M. WARD. A most capital picture of character; the work of an artist of high ability. The smith is "letting his iron on the anvil cool," while he stands "with open mouth, swallowing the tailor's news," and while a group of eager and anxious listeners thrust themselves half through the latticed window. The expression in each countenance is admirable; exhibiting the rare skill, judgment, and observation of the painter; though all are bent upon a like purpose, there is great variety in the features of all. It is, indeed, a very masterly work, the production of a strong and rightly directed mind, and manifesting a complete acquaintance with the capabilities of Art in telling a story.

No. 220. 'A Welsh Style,' P. F. POOLE. A most delicious work; one of the sweetest compositions we have ever seen; and one that we could look upon again and again with increased enjoyment. A little toddling child has crawled to the top of a stile, and dares not venture to come down; her sister, however, is at hand to aid her. The idea is a very simple one, as simple as nature itself; but it has been happily worked out, and must tell with all who can appreciate truth. The tone of the painting is also equally in keeping with reality. There are few pictures in the exhibition we more covet.

No. 228. 'The Contrast,' C. STONHOUSE. This work was exhibited at the Royal Academy. It is not a good one, either in reference to subject or execution.

No. 229. 'The stolen interview of Charles I., when Prince of Wales, with the Infanta of Spain,' F. STONE. With this also we are already familiar; but Mr. Stone has evidently worked upon it—and to advantage—since its exhibition in the Royal Academy. It is an admirable picture, highly wrought, and in all respects creditable to the accomplished artist.

No. 233. 'Aspiration,' GAMBARDILLA. We shall rejoice to welcome foreigners into our gallery if they paint as this artist does; for they will give valuable hints to some of our English painters. It is pleasant to find the contribution of Signor Gambardella favourably placed. His work is sound and good; the flesh-tints are remarkably true to nature; and the picture manifests rightly directed study and matured thought. It is indeed an effort of high order as regards execution; but the artist has committed the not unfrequent blunder of placing a more than half nude woman in the open air, and as it seems, in the midst of a desert—a needless and useless departure from fact.

No. 242. 'Tasso's Villa Sorrento,' G. E. HERING. In the exhibition of the last year was a picture altogether so similar to this, that this appears to be a companion to it. The Villa is upon the right of the view, and is painted in the bright sun-light tones of David Roberts. Below reposes the blue and tranquil sea over-canopied by the vivid azure of the daylight Italian sky; the whole forming a sunny repose, made out with the finest apprehension of the beauties of the land in which the scene lies. The artist possesses great power in depicting the graceful and the beautiful; he has been a close observer of nature; but invariably selects with judgment the more attractive passages from her full and fair volume.

No. 245. 'Drovers Seeking their Sheep after a Storm,' T. SIDNEY COOPER. This is a work of some size, and of a more ambitious character than the cabinet "bits," of which the artist is a large contributor. We cannot like it as well; the dog and the sheep are too similar in tone with the rocks and the water.

No. 248. 'A Pilot Going on Board,' J. WILSON. The canvass of this picture is heaving under the rising squall, and we look far into the depths of the green waves upon which the heavy craft is riding. The pilot is just in time, for the horizon is black with the coming storm. Every part of this picture is beautifully executed.

No. 254. 'Peasant Girls of the Abruzzi,' F. Y. HURLSTONE. Containing some good work, but of a "muddy" character, as if the picture wanted cleaning; and greatly opposed to our notions of the clear atmosphere of the "sunny clime."

No. 255. 'A Serenade,' D. MACLISE, R.A.

"I send my heart up to thee—all my heart,  
In this my singing!

For the stars help, and the sea bears part;  
The very night is clinging

Closer to Venice-streets to leave one space  
Above me, whence thy face

May light my joyous heart to thee, its dwelling place."

The scene of the story, as intimated in the poetry, is Venice. A cavalier has ascended, by means of a rope-ladder from the canal below, to almost within whispering distance of his lady's bower. He is seated upon a stone balustrade, and the object of his devotions is looking down upon him from within the shadow of her balcony. His back is, unaccountably, turned towards her; but the distinguished artist is original in the position of his figures generally. The expression given to the countenance of the singer carries us beyond the mere serenade; he is a sonnetting galliard, who will sing the same vows to many other maidens before he sleeps; his looks bespeak the insincerity of his heart. This picture is admirable in composition; in colouring, it is less so. As a subject, he has selected many better; but in all he does a genius of the highest order is observable throughout. In almost any other hands this material, thus treated, would have been a failure. We have quoted the passage pictured, less to justify the somewhat fantastic air and character of the cavalier, than as an example of exceedingly rich and graceful versification from the pen of a poet, kindred to MacLise in imagination and mind.

No. 259. 'Going to the Hay-field,' J. N. RHODES. A work of great merit in parts, though defective as a whole. The tree is unreal, and the sky far too blue; the foreground, however, is boldly and cleverly painted, and the boy excellently put in.

No. 260. 'Broadstairs Pier—Morning,' C. R. STANLEY. A wooden jetty, and one or two small vessels, with a view of the cliffs towards Ramsgate, are the main objects in this picture; but it affords an example of the pleasing effect of the simplest objects when judiciously thrown together and well painted. The water is rather opaque. We cannot conceive that the sun could communicate any appearance of this kind.

No. 266. 'A Study from Nature,' E. GRIMSTONE. The head of a hound, painted with remarkable force and vigour.

No. 267. 'Oberwesel on the Rhine, with Castle of Schonberg,' H. GRITZEN, jun. A landscape of a right good order; and sufficient to sustain the rising fame of the young painter.

No. 270. 'The Marquis of Saluzzo and Griselda,' W. CARPENTER, jun. A picture of safe promise; and will justify hopes of the artist's future career. The portrait of the Griselda is very

sweetly conceived; that of the Marquis is liable to the charge of affectation.

No. 275. 'A Neapolitan Girl,' J. INSKIP. She is by no means a beauty, but we have her as she is painted, and the manner in which she is presented to us merits attention. This picture is in the usual style of its author, a style modified from those of Rembrandt, and all after him, down to Reynolds, who wrought with a free brush and a flowing palette. This head, and most others of Mr. Inskip's, seem to be painted at two sittings, receiving afterwards, a slight glaze, which settles in the shrinkings of the surface. Without touching upon the charming sentiment of the heads generally of this artist, we cannot, with regard to his method of working, pay him a higher compliment than to say, that his flesh looks as if it would yield to the pressure of the finger. There are few more perfect examples of colour to be found in the whole range of modern Art, than we find in this exquisite little bit. It is a specimen of the master that all will covet.

No. 278. 'Alpine Sportsmen,' also by Mr. INSKIP. Is also an admirable work, though very different in style and character. Amazingly bold and free; manifesting high power in dealing with the materials which the art supplies.

No. 276. 'A Landscape,' H. JUTSUM.

"A hidden brook

In the leafy month of June."

A nook of the greenwood overhung with redundant foliage, which may have just burst from the bud; but it frets the eye, not being supported by approximating degrees of tone. This little work is painted with a fine feeling; yet it bears marks of the timidity of a young artist. It may not, however, be the worse for that. Mr. Jutsum has a pure and refined feeling for the beauties of nature; he will, ere long, rank foremost among our landscape painters; power exists in his mind and hand—let him give it full sway.

No. 277. 'Hoar Frost,' J. B. PYNE. A good and sound work; though not of as pleasant a character as the excellent painter usually selects. He has pictured complete winter; and in taking such a subject has at least proved his ability to copy nature in any aspects she presents.

#### SOUTH ROOM.

No. 281. 'A Buccaneer's Daughter Releasing a Prisoner,' MRS. McLAN. The production of a finely toned mind; of a lady who has gone far to establish the intellectual equality of the sexes. Her works are always of a high order, both in conception and execution; a considerable knowledge of Art is brought advantageously to bear upon imagination and keen perception of character. Moreover, she goes on improving; her latest picture is invariably an advance beyond its predecessor; and it is reasonable to anticipate that she will, ere long, occupy a very prominent professional station. She does so, indeed, even now; for in the manner in which she treats her subjects she gives the spectator always materials for thought; and while they satisfy a present examination they leave matter for memory. We may here, perhaps, object to a little too much of dramatic effect; but she has given to her story great interest—rousing our sympathies and anxieties; and this, after all, is the great triumph of the painter.

No. 282. 'The Ballad,' H. J. TOWNSEND. An excellently painted and finely disposed picture; somewhat too scattered in colour, it may be, but giving ample evidence of large ability. The characters of the two village maidens are well preserved; and great interest is given to the subject. The accessories are all skilfully introduced; and every part of the work is carefully finished.

No. 307. 'A Monk reading to the Brotherhood,' T. W. MACKAY. The brethren are not seen; the work is, therefore, confined to one figure in the monastic habit, before which is a desk supporting the book which he is reading. There is, as it may be supposed, but little colour in the picture; but the head, in its painting and relief, has been carefully studied, and with a most successful result. The picture is placed somewhat high.

No. 308. 'Scene in the Highlands—Morning,' (figures by T. M. Joy), A. MONTAGUE. The foreground and figures are richly painted, and being in shadow, throw off, with the best effect, the distant hills and crags which are made out with the

grey and tender tones communicated to remote objects by the light of the sun, subdued by the mist of the morning.

No. 319. 'The Campagna of Rome, with the Ruins of the Aqueduct,' T. C. HOFLAND. A vast expanse of the plain lies under the eye of the spectator. The aqueduct is in shadow in the middle distance, beyond which objects graduate, until they are lost in the haze of the remotest distances. The picture is small, but clearly and firmly painted.

No. 324. 'Spencer's Faerie Queen, containing Portraits of Queen Elizabeth and her Court,' F. HOWARD. There is in this picture much to praise; the subject is a bold one; and the choice of it is creditable to the artist. It is a gratifying departure from the beaten track into a path, more difficult no doubt, but far more worthy. The portraits of the great men of the Court of Elizabeth are all given—and evidently after continual and laboured study of the best authorities; we have all the immortal minds of the most glorious era in British history; and may recognize each, in a moment; for the countenance of each has been made familiar to us. Mr. Howard conveys the idea that the 'Faerie Queen' was, in reality, an allegory, in which were introduced the several famous men who made the Court of Elizabeth a marvel to all; a happy notion, happily renewed.

No. 327. 'Sketch for a Picture of the Good Samaritan,' W. J. MÜLLER. A brilliant and very effective example of colour.

No. 330. 'Fresh Breeze—Dutch Pilot Boat,' R. JUMP. The sea in this little picture is forcibly painted, and the effect of wind tells in every part of the composition.

No. 339. 'Mother and Child,' R. S. LAUDER. Scarcely an improvement for the artist, who is of established fame; the colours are too prominent and glaring, and the reflection in the glass much too strong.

No. 340. 'Highlander's Bothie,' C. HANCOCK. An exceedingly clever picture, of a striking and interesting subject; painted with much skill, and worthy of a better place.

No. 341. 'Riposo Italiano,' J. SEVERN. We have seen better pictures than this by an artist to whose high capabilities we have heretofore endeavoured to render justice.

No. 351. 'Christ in the Tempest,' G. W. BUTLAND. This, although by no means a perfect work, is one of no ordinary merit; and amply deserves a word of praise for the boldness of the design, and the manner in which the painter has overcome great difficulties. Its tone is sadly injured by that of the oak frame in which it is enclosed, which fails to harmonize with the colour; and gives to it, indeed, a crudeness and hardness which it would not possess if seen under more advantageous circumstances. The "storm on the lake" is admirably given; the waves boiling and wrathful, and the other indications of the tempest, afford proofs of no ordinary power in dealing with matter not easily made subservient to the artist's purpose. We like the boldness of the attempt; the poetic feeling that suggested it: and if not entirely successful, the painter has produced a work that does him much credit.

No. 359. 'Ballast Boat on the Texel,' J. ZEITLER. A simple composition, consisting of the boat and a few figures, which are perhaps somewhat too sketchily put in; the effect, however, compensates for this in some degree.

No. 362. 'Cattle and Figures—Autumnal Evening,' W. SHAYER. A common but always agreeable effect; a group in the foreground painted upon a fading distance, and a clear and airy sky.

No. 371. 'England's Pride,' W. KIDD. A capital bit of character; a couple of maimed pensioners of Chelsea.

No. 374. 'Interior of the Keep, Richmond Castle,' W. FOWLER. An excellent landscape, sound and true.

No. 378. 'Scene on the Coast of Brittany,' T. DARBY. The sea-shore with a low horizon, over which hangs the sun, that has, with its mantle of light, enveloped the entire extent of the view.

No. 380. 'The Slave Market, Cairo,' W. J. MÜLLER. A work of great ability; and, we have no doubt, an accurate copy of a painful and revolting scene.

No. 386. 'Samson bursting his Bonds,' H. LE JEUNE.—This picture obtained the honorary

medal of the Royal Academy; it undoubtedly bears too much evidence of being an academical study; and therefore, perhaps, its public exhibition is injudicious. Character has been sacrificed to the painting of a muscular figure. This would have been a story for Michael Angelo to have told; and none less than the most accomplished master of expression should have tempted its difficulties. Of such a subject no model can supply the essential force; for no man could dramatize the part of Samson during the number of hours necessary to paint the figure. Something more is necessary than an expression of alarm at the words—"Samson, the Philistines be upon thee!"—irresistible power should have been seen in every part of the body; but the artist has copied too faithfully the fatigued position of his model. It is the highest achievement of Art to catch and express consistently a moment of paroxysm. We regret that Mr. Le Jeune did not exhibit some less ambitious work; for he is able to take a high place in any exhibition. We have seen, elsewhere, productions of his that show genius of the rarest and best order; and judging from these we watch his career with earnest hope and confident expectation.

No. 392. 'Coast Scene,' H. BRIGHT. A white cloud, a cliff, and a sidelong glimpse of the sea, wrought into a beautiful and highly effective little picture, which seems to have occupied altogether scarcely two hours in painting.

No. 395. By the same. Is of equal beauty, but of another character.

No. 404. 'The Bay of Naples,' G. E. HERING. Another admirable transcript of a sweet scene of Italy, by an artist who is entitled to the highest praise. The point of view is judiciously chosen; the solitary figure in the foreground happily contrasts with the delicately-pictured distance, in which the noble bay is seen outspread, with the mysterious mountain towering above it.

No. 405. 'The Duke promises Sancho the Government of an Island—Don Quixote,' J. GILBERT. A work of very high merit; one of the best productions in the gallery. It is marked by boldness of tone and vigour of execution, as well as by accurate and judicious development of the characters portrayed. The figure of the duchess is very undignified; but this may be the artist's reading of the part; and it is not opposed to the intention of the author, although displeasing in a picture. Mr. Gilbert exhibits also a scene from 'Tristram Shandy,' No. 437. The two figures, Corporal Trim and "My Uncle Toby," are accompanied, in the way of accessories, by the bare necessities of the humblest condition—men even of the simplest habits would be impatient of such treatment—but the artist's motive is a worthy one; he is resolved to be tried by the expression of his figures. "His honour" is seated at a small table, while the Corporal is erect, pointing to a map of Dunkirk on the wall—the latter is language itself; and his raised left arm puts the wall of the room in its place, without the aid of any fortuitous shadow.

No. 412. 'On the River Tamar, Devonshire,' F. C. LEWIS. A picture that artists will like, and which some artists will do well to study; but public appreciation it cannot receive. It is singularly uninviting; yet, looked closely into, it exhibits a thorough acquaintance with Art.

No. 416. 'Scene from the Sentimental Journey,' W. P. FRITH. We have for a long time marked the onward and upward progress of this young artist; and, from the commencement, with a full conviction that he was destined to achieve the greatness at which he was aiming. It has been our good fortune to have cheered him, when circumstances appeared—as they do now—unpropitious; for by the "heedlessness" of the hangers at the Institution, his picture is placed where it will inevitably escape the notice of all who do not already know sufficient of his abilities, to feel assured that his contribution must possess merit sufficient to have demanded for it the post of honour in the gallery. Fair play would have made him a candidate for one of the prizes instead of the dark nook to which he has been condemned. A time will come—and that as surely as we now write the sentence—when he will obtain the most distinguished station in any collection of the works of British artists. His present picture represents the scene so often pictured, where "the sentimental traveller" feels the pulse of the pretty French *modiste*, and receives the

gracious acknowledgments of the husband for the honour conferred upon him. It is beautifully conceived; the countenances of the group are perfect in character and expression; it is elaborately finished, and yet in a free style: as a whole it may vie with any production of our younger school of Art.

No. 420. 'The Nile, with the Village of Beni Hassan in the distance, looking towards Cairo,' W. J. MÜLLER. In this view the river is seen from a cliff, rising high above its waters. Its winding stream diminishes to a silver thread in the distance, and is at length lost in the flood of light shed by the sun upon the horizon. The distant pyramids bespeak the land; but to stamp it more strongly, an Arab tent occupies the foreground with a few figures; the "ship of the desert," the camel and a feathery palm telling forcibly against the palpable ether. This is a highly-finished and valuable work, and presents a striking contrast to the Oriental street and bazaar scenery by the same hand, the figures in which seem, from the decision of manner in their treatment, to live and move.

No. 421. 'The Leith Steamer off Purfleet,' J. TENNANT. A clever picture; but the fire that issues from the chimney of the steamer is far too great, and gives an unnatural tone to the whole subject.

No. 426. 'Moses defending the Daughters of Jethro from the Shepherds,' MARSHALL CLAXTON. An ambitious work, and in many respects a successful one; containing parts that are admirably drawn and coloured, and manifesting right feeling and sound judgment.

No. 427. 'The Cottage Door,' J. LINNELL. A beautiful copy of English domestic life; very touching in character, and painted with great skill. The subject, however, is ill suited to the size of the canvass; the picture seems as if it were the fragment of a larger one.

No. 428. 'America dei Vespucci,' J. PARTRIDGE. A striking likeness of a lady whose life is a romance.

No. 430. 'Scene on the Coast of Yorkshire,' A. CLINT. A landscape of the very highest merit, which, taken altogether, may be ranked as in value the second, or at least the third, in the collection. It is a true and accurate copy of nature; highly wrought, but without the smallest token of restraint. This artist, also, will ere long establish his right to "go up higher."

No. 435. 'Effie Deans in the Prison,' T. SMART. A fine conception of a leading part in one of the most exciting of Scott's dramas; we have never seen it more completely realized. The drawing is good; and the sober tone of colour is in admirable keeping with the subject.

No. 436. 'The Unrelenting Lord,' J. R. HERRBERT, A.R.A. This is a noble work; a work of the highest class of Art, and worthy the reputation of the accomplished painter. The story is a painful one: the "lord" is giving the signal for the execution of the lady's paramour; and the flashing blade is seen in the distance in the act of descending upon the neck of the victim. It is a tragedy on canvass, and opens a mine to the imagination.

The Sculpture, as usual, is "made nothing of" here; yet this year three or four works have been sent, which, elsewhere, would have attracted marked attention. 'A Boy (in the south room) playing at Marbles'—his "last stake"—is a noble and beautiful statue; satisfactory to the anatomist, and most valuable to the lover of Art. It is the work of Mr. CARNEW, an artist of the rarest power. Above the steps, as the visitor enters, is a work of still higher merit by the same great master—'The Adoration of the Magi,' a small model; the centre of which is a Madonna and child, which is also exhibited, finished in marble. It is a fine effort of mind and hand; a glorious conception, executed with almost perfect skill. A small statue in marble, by W. C. MARSHALL, 'Rebekah at the Well,' demands a word of warm approval. It is a graceful and very elegant production, and of a size to render it a desirable acquisition to those who have neither large houses nor large fortunes, but who have the taste to prefer original creations to inferior copies.

## THE ARTS IN CONTINENTAL STATES.

**ITALY.—ROME.**—A tomb has been opened in the neighbourhood of Chiusi which contains two sarcophagi of Grecian marble, adorned with painting and rich gilding. This discovery has excited much interest, as, hitherto, all the Etruscan coffins that have been found, are either of burnt clay, travertine, or alabaster.

**Painting.**—*P. Williams.*—Universal admiration is attracted to the studio of the English artist, Penry Williams, on account of a picture which he has painted, and which is now to be seen there. The subject is a woman bringing offerings, on her recovery, to a miraculous image of the Virgin. The principal figure is riding on an ass surrounded by peasant men and women. The landscape exhibits a mountainous scene. The picture, it is said, is painted for the Marquis of Westminster, and destined for his gallery in London.

**Overbeck.**—The celebrated German artist, Overbeck, has just completed here the cartoon for a large picture of 'The Entombment,' intended for a church in his native town, Lubeck; it is full of originality, is simple in composition, and shows much just thought. The cartoon, it is said, will be placed in the collection of Count Raczinski, in Berlin.

**ROME.—Sculpture.—Thorwaldsen.**—The great Thorwaldsen has now finished the six bas-reliefs for the King of Wurtemberg. Four were exhibited last year, the other two are, 'a Shepherd who finds the God of Love in a Bird's nest,' and 'Love complaining to Venus that he has been stung by a Bee concealed in a Rose.' The models for the statues of two apostles, destined for the metropolitan church of Copenhagen, are completed.

**Bissen.**—The Danish sculptor, Bissen, has modelled a 'Venus adorning her Hair,' a 'Love sharpening his Arrows on a Stone,' also other works, which show a fine fancy and good execution. He has executed eighteen statues by order of the Danish government—a government which does much for arts and artists.

**Sohn.**—A young German artist, named Sohn, has discovered a substance, in which he has copied some of the best works of Rauch, Swankhaler, and Thorwaldsen, and also some antique groups. He is now at Paris, and he proposes to model some of the groups in the garden of Versailles and the Tuileries; he calls the substance, French Meerschaum.

**FLORENCE.—A New Theatre.**—Various Italian and foreign artists, among whom is one Englishman, have presented plans and elevations for a magnificent theatre to be built here, and to be called 'Teatro Leopoldo.' It is proposed that the theatre should stand alone with spacious arcades for the carriages that come and go, so that the ladies are guarded from all fear of rain; before the theatre will be a large square or 'piazza.' On one side will be the station of the fire-engines; on the other, a large hall for scene painting, and apartments for other decorations. In short it is proposed to be a model-theatre, and when the plan is chosen we shall inform our readers. Marble and granite will be the materials employed.

**BOLOGNA.—Works on Art.—History of Architecture.**—The Marquis Amico Ricci, deservedly celebrated as an excellent and correct writer on the Fine Arts in many works, especially that on Arts and Artists in the "Marca of Ancona," has commenced a gigantic labour—"the History of Architecture in Italy." The first volume is now printing, and our correspondent assures us it is an eminently classical work; which we believe from the talent of the author.

**Lives of Painters.**—The venerable Marquis Amorini, president of the Academy of Fine Arts, continues, unweariedly, his lives of the Bolognese painters. We have now the lives of the five Carracci. All are written with great care as to the correctness of facts; clear, just, and impartial criticism, and a fine taste in Art, alike honorable to the venerable president, and the academy to which he belongs.

In other parts of Italy the following works are being published:—

At MILAN, the first Italian edition of Stuart's "Antiquities of Athens." The architect, Alvisetti, superintends the work, of which eighteen parts are already published.

At TURIN, the Sardinian Consul general, Barranta, publishes a large work called "The Beauties of the Bosphorus." The first part, in quarto, is already out.

At VENICE, "Feste Veneziane" with illustrations by Professor Passini.

At FLORENCE, the great work by the cavalier, Inghirami, on vases, entitled, "On the fictile Vases," is nearly completed.

**FRANCE.—PARIS.—Improvements in Paris.**

—Workmen were employed in the following places, at the close of last year, either in new erections, or in repairing old buildings. Employed by Government—in the Jardin des Plantes, Polytechnic schools, Pantheon, Normal schools, Luxembourg, College of France, Palace of the Fine Arts, Palais d'Orsay, Church of the Magdalen, Archives of the Kingdom, Guardhouse des Celestines. At the expense of the city of Paris—in the Hotel Dieu Saint Severin, Saint Etienne du Mont, Saint Sulpice, Hospital for the Blind, Champs Elysées, Notre Dame de Lorette, Saint Vincent de Paul, Saint Germain l'Auxerrois, La Sainte Chapelle, the Hotel de Ville, La Charité, the fountain of Molière, Street of Jervois. At the expense of the civil list—the English Museum in the Louvre. Duban, the architect of the Palais des Beaux Arts, has completed the repairs of the Chateau d'Amiens, in the vale of Chevreuse; and Ingres is about to paint the hall of this magnificent building. The restoration of La Sainte Chapelle is placed under the direction of M. Duban, and the general wish seems to be, that the plan adopted should be the original one, built in the thirteenth century: a tower seventy feet high, like that of the cathedral of Amiens.

**Monument of Molière.**—The works for this monument are about to recommence: it is desirable that they should be completed in the course of this year, so that the inauguration may take place on the 7th of February, 1843, being the hundred and seventeenth anniversary since the death of Molière.

**SAXONY.—DRESDEN.—Rietschel.**—It is not long since the masterly chisel of Professor Rietschel adorned the principal entrance of our theatre with the two intellectual statues of Schiller and Goethe. We have now to admire, by the same artist, a group which breathes the spirit of Grecian antiquity, and is excellently executed. The figures are thirteen, above the size of life, in sandstone; the subject is Orestes pursued by the Eumenides, and the moment represented is when in the Areopagus he throws himself before Minerva, imploring her aid.

**BOHEMIA.—PRAGUE.—The Tower.**—It is with great regret we see preparations making to take down the old steeple of the town-house. Three years since, when the repairs and new buildings were decided on for the town-house, it was determined, as well on account of the beautiful and grand style of the building, the old clock-work it contains, and the many historical recollections attached to it, that the steeple should be preserved. The clearing away, however, of some under parts of the building, and other alterations, had not been done with sufficient care, and the consequence is, this noble old tower has received a shock which, as the danger of its fall became immediate, has left no choice as to taking it down; and with it, from the consequence of the same accident, must also be sacrificed various adjacent parts of this most interesting old building.

**GERMANY.—VIENNA.—Monuments.**—Our readers are probably aware that at the last great music meeting here, it was resolved to erect monuments to the memories of Haydn, Mozart, Beethoven, and Gluck, the four greatest musicians Austria has produced.

**Destructive Fire.**—The splendid church belonging to the hospital, erected at the close of the twelfth century, by Otto II., Bishop of Bamberg, for the reception of pilgrims travelling to and from the Holy Land, was destroyed by fire on the 25th and 26th of October last.

**PRUSSIA.—BERLIN.—L. Von Cranach.**—Herr Forstemann, of Halle, has, in a number of the *Staats Zeitung*, put forward a contradiction of a long received tradition, namely, that the family name of Lucas Von Cranach is not Cranach, but Sunder or Sonder. Amongst other strong evidence, he brings the matriculation book of the University of Wittenberg, in which is recorded the

matriculation of John, the son of him who has been hitherto called Lucas Granach, on the 9th of October, 1517; it is thus inscribed: "*Joannes Sonder de Wittenbergh, Brander b. dio. propter defectum ætatis nondum juravit.*"

**COLOGNE.—The Cathedral.**—There can be no doubt that the completion of the Cathedral will soon be commenced. Building materials are brought, foundations are digging, and other preparations are made. It is still undecided what stone shall be used—whether it shall be brought from the quarries of Swabia, or whether a basaltic stone, from the volcanic rocks of the Rhine, shall not be preferred. The latter is hard to work, but would give an almost imperishable durability to the building. A great solemnity, it is said, will be held to commemorate the commencement of the works, which excite much enthusiasm here. The month of August is the time named, being also that of the great military manoeuvres; it is said the King of Prussia will himself be present, and that his invitations will be accepted by the King of Bavaria, the King of Wurtemberg, the King of Belgium, Prince Albert, and the Duke of Orleans.

**GREECE.—Artistical and Archeological Travels.**—We have not before noticed the travels of M. Didron, assisted by Messieurs Cenatole de Saint Aldegonde, Emanuel Durand, and Hippolyte Parfait, in the Grecian Continent and the Peloponessus, to study, and make drawings of the many fine Christian monuments that adorn these countries. They passed sometime at the convent of St. Luke in Livadia, in that of Mégaspilmon in Achaia, at Sparta, Corinth, and Salamis. The great church of St. Luke is covered with marbles from the pavement to the springing of the arches. The sanctuary and transept are enriched with mosaics, while the arches and arcades are also worked in mosaic on a gold ground. It is St. Mark's of Venice, among desolate mountains and wild precipices. Mégaspilmon is still more rich, but less beautiful. Mistra possesses the largest, the most beautiful and original churches in Greece; these edifices are half Gothic, half Byzantine. One would be inclined to say that a Frenchman, Pierre de Charnolite, who built the fortress of Mistra, early in the thirteenth century, was also the founder of these churches; in which he wished to temper the oriental style, by a mixture of the style of the "ogivales" cathedrals of France. At Corinth, the church, where it is said St. Paul preached, is cut in the rock, and has nothing of the eastern style—a proof of its high antiquity. At Salamis, the great church of the Virgin Phaneromeni is painted in fresco, from the pavement to the arches; and these frescoes contain, it is said, in all, including busts and medallions, 3500 figures: it is the Pantheon of Christian Greece. These pictures are perfectly preserved, and remind us, in style, of the statues and paintings in the cathedral of Chartres. M. de St. Aldegonde has taken casts of the inscriptions in marble which mark the date of the foundation of the churches and monasteries, and the names of the founder, and also the Christian inscriptions engraved on ancient columns, which are the archives of the church of Mistra—its marble parchments. He has also taken casts of the chiselled copper doors which close the church of Mégaspilmon, and of the small chiselled silsetes tabernacle, which contains the image said to be sculptured by St. Luke. M. Durand has copied in drawings the mosaics, a legend painted in the refectory of Mégaspilmon, and the 'Last Judgment,' which cover the west wall of the church of Salamis. M. Parfait has taken various elevations at St. Luke and Mistra.

**CONSTANTINOPLE.—A Turkish firman prohibiting an engraving.**—A periodical called "La Revue Orientale," printed at Paris, has published in one of its numbers an allegorical print with the title, 'La Regeneration de l'Empire Ottoman,' which represented, by symbolical figures, the four fundamental principles of the late celebrated firman, which is a species of new constitution of the Turkish empire. It is well known that these four principles are—1st, Equal civil and political rights to the entire population;—2nd, Complete religious freedom;—3rd, The separation of the spiritual and temporal power;—4th, The right of possession granted to foreigners. The Sublime Porte has, by an express firman, prohibited this engraving.

## ART APPLIED TO MANUFACTURES.\*

## NO. II.—DRAWING CLASSES AT EXETER HALL.

We have been much gratified by witnessing, at Exeter Hall, the commencement of an experiment, on a grand and comprehensive scale, for rendering linear drawing a part of popular education, as music has now become. The system adopted by the committee of council is that of M. Dupuis, which is followed at the Normal School at Versailles: thus England is indebted to France for having methodized systems of instruction in two of the sister Arts, for the purpose of educating the masses—Mr. Butler Williams teaching perspective drawing with the use of the models of M. Dupuis, as Mr. John Hullah teaches part-singing according to the formulæ of M. Wilhem.

The principles before laid down as the basis for a course of instruction are carried into operation by the method of M. Dupuis, though in a different way: models only are used; illustrative diagrams drawn by the teacher being merely exhibited to exemplify the theory, not to be copied. The pupils draw from solid forms wholly, not from drawings; therefore every line they make is the result of intelligence, and a test of knowledge. Before they begin to delineate, they are made to understand what they are about to do, and the scientific rule they are taught to exemplify. This is, in our opinion, the only sound and true theory of elementary training in the *science* of drawing: for with the *art* this introductory course has nothing more to do than exercising the hand; its object is limited to teaching the pupils to see correctly the apparent forms of objects, and the seeming direction of lines, and to know the optical laws by which the real forms and actual direction of lines appear differently to the eye, according to the angle of vision under which they are seen: the pupils are not at first required to draw evenly or neatly, but only to express intelligibly, by rude lines, their comprehension of the rule exemplified by the model. To make this clear, let us describe the process of the initiatory lessons, as they are given by Mr. Butler Williams, at Exeter Hall, to three successive classes of adults, sixty or seventy in number, two of males and one of females, on the evenings of Mondays and Thursdays. The pupils are seated at desks ranged in rows, each pupil having before him or her a black board, with a sponge attached to it and a portcrayon with white chalk: in front of them stands the teacher on a platform, having beside him a stand with a sliding top terminating in a ball and socket joint, to which is affixed each of the models as it is successively required; so that the model may be elevated and depressed, and placed in any position at pleasure. The used set of models includes three kinds: the first consisting of single and parallel lines, curves and angles, and outlines of simple geometrical figures, in iron wire, about the thickness of stair-rods; the second of similar forms in wooden bars, of about an inch and a half square, including the frame of a cube, and combinations of curved and straight lines, angles and circles; and the third of solid forms, such as the sphere, the ovoid, &c., of a large size, and painted white: the whole apparatus is most ingeniously designed and well made. In the introductory lessons which the classes at Exeter Hall are now receiving—the first having been given on Monday the 14th of February—only the wire outlines are needed; and they are employed chiefly to illustrate, conjointly with diagrams, the rationale of linear perspective, as exemplified in the laws of vision. They also serve to exercise the eye and hand of the pupil in perceiving and delineating the inclination of lines. The teacher has, of course, to look seriatim at the performance of each pupil, and to point out individual errors, explaining the rule again if not understood by all: this makes the conducting of a drawing-class a troublesome as well as an arduous duty; for, excepting only the perpendicular line, every line or shape appears differently to each, so that one pupil is no guide to another. This, however, ensures a self-dependence, which, though it may retard progress at first, promotes certainty.

It would be premature to offer an opinion as to the ultimate success of M. Dupuis' method: its formation on right principles is sufficient to

justify its adoption, especially since the Normal School of Versailles affords satisfactory evidence of its efficiency; but we have a doubt as to its being the best or the most simple and expeditious course, and we shall be glad to have this doubt removed by the result. Meanwhile, we may be allowed to state the objections that present themselves at the outset. In the first place, the models mostly represent arbitrary forms, that suggest no ideas of real objects; and thus the fancy is not awakened sufficiently to relieve the tedium arising from the constant repetition of the same forms seen under different points of view. The models designed by Mr. Deacon are suggestive of a variety of buildings, as is shown in the accompanying sketch, which is only a picturesque version of one of many combinations, of which the different pieces are susceptible. M. Dupuis' models are susceptible of very limited combinations, though the pieces are much more numerous than Mr. Deacon's. In the second place, the wire outlines represent nonentities; they are diagrams, useful to comprehend, but not so beneficial, to copy, as the same forms in a solid shape: for instance, we saw Mr. Butler Williams's class very much at fault in drawing a detached horizontal line foreshortened—and well they might be, for it is a very difficult matter for a beginner; but had this line been the edge of a square or other form, the task would have been easier, because the purpose and inclination of the line in its connexion with others would have been more evident to the mind. We cannot approve of copying representations of outline by itself; knowing that it is only the boundary or outer edge of solid form, and as such has no separate existence, and is only discernible in a plane or solid form: there is less objection to using wire outlines merely as demonstrations of the effect of the angle of vision on the appearance of lines; but we think planes would be preferable, because they represent sections or superficies of solid form. The difficulty of using planes in large classes, if they are to be viewed geometrically, that is, placed directly before the eyes of the pupils, is that one plane would only suffice for one or two files of delineators: but if drawn perspective, they would, in our opinion, be preferable to outlines, for the reasons before stated; and also because the forms would be more distinctly visible. In the instance before mentioned of the horizontal line foreshortened, some of the class complained that they could not see it; the light was partly the cause of this, and the defect therefore remediable in part; but the superior distinctness of an outline defined by a broad mass of light reflected from a white surface, standing out at a distance from a dark background, is unquestionable. Another objection to the use of wire outlines to draw from is, that the imitation of a cylindrical substance by a single line involves a fallacy; and although the delineation is not exact, being employed not as an imitation of the object, but as a test of knowledge, still it is not well for pupils to start with practising a false mode of delineation. In delineating a plane in geometrical elevation, the definition of

the outline completes the representation; and this, requiring no acquaintance with perspective, would be a good introduction for young people who have never taken a pencil in hand, and know nothing of the science. In the third place, the models are numerous, and necessarily costly; needlessly so, because they are too many: this fault is easily remedied, and must be, if they are to be extensively adopted. Our objections are not to the system, but to some of its details; and in offering them at this early stage, we are desirous to call attention to what we consider defects in M. Dupuis' models, with a view to their being remedied before manufacturing sets for distribution. Mr. Butler Williams is not only competent to decide upon the expediency of any alterations, but candid enough to consider any suggestions that may be offered. We would recommend Mr. Deacon to have a set of his models made on a large scale, with introductory plane forms for young beginners, adapted to large classes. We should be glad to see a comparison instituted of the effects of his teaching, with that on M. Dupuis' plan. From the experience we have had of Mr. Deacon's success, both with young and adult pupils, we incline to the opinion that his would be found quite as efficacious as that of M. Dupuis' for training teachers; and more expeditious and pleasing for teaching the young, and initiating adults in the practice of sketching from nature. Let both be tried: there is a field wide enough for them and more. Good teachers are wanted; the harvest is plentiful, but the labourers are few. We rejoice that the "committee of council" have adopted a plan based upon sound principles; the result, notwithstanding our objections, cannot but be favourable to the progress of the Arts, as well as beneficial to the individuals who will thus learn to use a sense that has comparatively lain dormant for want of cultivation. Any rational system carried out by Government means, and supported by Government influence, must have advantages over others; and in the present case there are classes ready formed on the spot: but it does not, therefore, follow that it is the only system, or the best; even if it were, competition is a wholesome stimulus to improvement, and will tend more effectually to spread knowledge that will be the means of cultivating the study of form.

Thus far we have treated only of the *elementary* part of teaching drawing; which is positive science, and forms the basis of the superstructure of Art. To this point every one may attain; for it is a process dependent upon the understanding, requiring but little manual dexterity, and not calling for much exercise of taste or fancy. The student will have gained the power of seeing with correctness and intelligence, and of delineating distinctly the shape of any object of fixed form that he shall first thoroughly be acquainted with: for knowledge of the object to be represented is essential to accurate delineation. At this point the Art of Drawing comes into play; for to make a pleasing and attractive picture of one or more objects, requires the exercise of those powers of

\* Continued from page 45.

mind and hand which go to make an artist; and the object of this elementary course of instruction is not to produce artists—though for this purpose it is valuable as ancillary to further progress—but to enable every one to perceive and delineate the forms of things so as to express ideas of shape, which cannot be conveyed to another without drawing. In effect, the end of this course of linear perspective drawing is to exercise the sense of vision in relation to forms, by training the mind and hand to understand and delineate what the eye perceives.

M. Dupuis' models also extend to the study of the human figure; but this branch of the subject, and the application of models to picturesque drawing, requires a separate paper.

W. S. W.

#### WORKS IN PROGRESS.

**SEPULCHRES OF TARQUINIA.**—The result of the labours of the learned archaeologist, Byres, on the sepulchres of Etruria, is about at length to be published, after having been long supposed to be lost to the world. The original prospectus of the work was issued in 1767, and the plates were drawn and engraved on the spot by Mr. Norton, under the superintendence of Mr. Byres, while the paintings were fresh and uninjured. The announcement of such a work excited the deepest interest wherever it became known, among all men of antiquarian taste and knowledge; but the deaths of the author and his coadjutor, together with the invasion of Italy by Napoleon, caused the work to be lost sight of, and the plates remained packed up at Leghorn from 1796 until 1840, when they were sent to England. Many of the paintings represented in this work have now entirely disappeared; hence it acquires an increased interest. Even in 1780, M. Agincourt, who was then at Rome, states that they were at that time so much faded, that he was indebted for drawings and details of those interesting remains to Mr. Byres, a Scottish architect, whom a long residence in Italy had eminently fitted to treat the subject. Lanzi, in his "Saggio di Lingua Etrusca," says, that "certain of the sepulchres of Tarquinia, judiciously selected from the multitudes which are to be seen around Corneto, would be given in coloured plates, by Mr. Byres." A very mysterious subject is represented in a grotto at Corneto, the painting of which Mr. Byres has engraved upon copper, in the finest taste. The labours of Mr. Byres were alluded to by Winkelmann, as also by Italian antiquarians. The plates are engraved in line, they are 57 in number; and will appear in monthly numbers, accompanied by letter press containing all that is known of the sepulchres.

**THE DEATH OF DOUGLAS AT THE BATTLE OF LANGSIDE.**—Painted by C. Landseer, A.R.A. Etched by J. G. Murray. Publishing by Mary Parkes, Golden-square.—This is a large plate, the subject giving abundant scope for admirable grouping, and a display of numerous figures, of which the artist has skilfully availed himself. The story is found in one of the earlier novels of the Waverley series; placing at the disposal of the painter some of the most striking characters that figure in the "Monastery" and the "Abbot." The battle of Langside crushed the hopes of Mary Queen of Scots and her adherents, and in the plate before us, she is seen proffering to one of the most devoted of her followers, who is dying in her cause, all in her power to bestow—consolation and acknowledgments. It will be remembered that George Douglas, subdued by the fascinations of the Queen, facilitated her escape from the castle of Loch-Leven, and attached himself to her fortunes. He is in the print before us extended on the ground in the agonies of death, and even while vision is departing from his eye, it is yet fixed upon the features of the Queen, who is bending over him. The figure is in armour, but the head is unhelmed, and the whole is deeply expressive of approaching dissolution. Immediately behind the Queen are the Abbot Ambrosius, Lady Fleming, and Roland Grene. The figures on the left of the composition are Sir Halbert Glendinning and Adam Woodcock, behind whom is a mounted knight, the bearer of news from the immediate scene of conflict; Catherine Seaton is in anxious attendance on the Queen. Of these, together with a few others, is the composition made out; and they are just sufficiently numerous to give importance to the event without dividing the interest. The grouping is highly successful, and the eye is led to the principal figures without any forced effects. The work, which is mezzotinto, is marked by many of the best qualities of its style.

**ALFRED.**—Painted by S. A. Hart, R.A. Engraving by J. G. Murray. Publishing by Mary Parkes.—This when perfected will be an engraving of high pretension; much of the work is little advanced beyond the outline, but the character, expression, and drawing, ably sustain the reputation of Mr. Hart. A beautiful simplicity pervades the picture, which consists of only three figures—the infant Alfred, the subsequent deliverer of his country; his mother; and an aged bard, to whose minstrelsy both are listening. We repeat our conviction, that this work is in promise altogether an effort of a high class.

MR. ALEXANDER HILL, the enterprising publisher of Edinburgh, announces for publication two works of much interest and considerable merit. The first is "Windsor Castle—Summer Evening," the painter D. O. Hill Esq., (we believe the publisher's brother); a production, to the great merit of which we have already borne testimony, on the authority of our esteemed correspondent in Edinburgh, where the picture was exhibited, and where it obtained high and extensive fame. The other is a work with which all visitors to the Royal Academy are well acquainted; for in the exhibition, 1841, it was a very primary attraction, not alone for its admirable qualities as a production of Art, but for the able and skilful treatment of an exceedingly striking and interesting subject. Very few, indeed, have forgotten the gratification they received from examining Mr. Duncan's picture of "Prince Charles Edward (the "Pretender," as he is called in history) and the Highlanders entering Edinburgh after the battle of Preston." It is now in course of engraving, in line, by Mr. F. Bacon. We are compelled to give this mere announcement of the intended appearance of the work; but we shall seek an opportunity of devoting to it greater space and attention.

**AFGHANISTAN.**—A work that will possess a strong, but melancholy, interest, is announced for early publication by Messrs. Graves and Co. It is descriptive of the recent operations of the British forces in Afghanistan; and will consist of views of the most beautiful scenery through which the army passed, with figures illustrative of memorable events which occurred during the campaign, and characteristic of the manners and costumes of the natives; to be drawn on stone by Louis Haghe, Esq., of a uniform size with his work on Belgium and Germany, from the original and highly-finished drawings executed on the spot by James Atkinson, Esq., superintending surgeon of the army of the Indus. The volume will consist of twenty-six plates, royal folio.

**HADDON HALL.**—Another work, to range with the series by Stanfield, Prout, Roberts, Haghe, and Müller, is about to appear. It is descriptive of Haddon Hall, Derbyshire, consisting of twenty-six of the most beautiful interiors and exteriors of this interesting remnant of the olden time. Drawn on the spot, and on stone, by Douglas Morrison, Esq. It will be published by Messrs. Graves and Co. during the present season.

**WINDSOR CASTLE.**—Messrs. Gandy and Baud's illustrations of this national edifice is announced for completion at the end of this month; and we are informed that the historical and descriptive letter-press will be written by Mr. Britton, who had formerly engaged to write the account for the late Sir Jeffry Wyattville.

**YORKSHIRE ABBEYS.**—A very splendid work is preparing to illustrate the architecture and scenic features of these interesting ruins. Mr. Richardson of York has made some fine drawings, which are to be lithographed by Mr. Haghe.

#### ARCHITECTURAL MEMS.

THE union of the Architectural Society with the Royal Institute of Architects, was consummated at a closing conversazione in the rooms of the late Society, on the 1st of March last, when Mr. Tite read a paper on the pyramids of Egypt, and a large number of the profession and friends of Art were present. Having long advocated this junction, and shown how much more might be done for architecture by the united efforts of all engaged in it; the saving of expense, and the prevention of ill-feeling that would be effected; it is hardly necessary to say we hail gladly this event, and trust nothing will occur to prevent the realization of our anticipations. Strong as the Institute now is, and numbering amongst its members all the chief professors in England as it does, very much may be expected from it: indeed, the future position of architecture in this country is now in its

hands. The election of Mr. Barry into the Royal Academy, in the face of his avowed intention of remaining a fellow of the Institute, has settled a question, too, of some importance to its progress.

The *opus magnum* of this latter gentleman, the new Houses of Parliament, is proceeding very satisfactorily, and bids fair to be one of the finest pieces of Gothic architecture modern times may boast of. The whole of the river front, comprising corridors, committee rooms, and offices, is brought up to the second story, and the brick foundations for the houses themselves are built to the ground-level. Over the main windows in the river-front are placed the arms of all the various Kings of England, one over each, very boldly sculptured in one stone about eight or nine feet square: on either side of each of these is a panel with the sceptre and other insignia. The hundreds of masons who are at work in all directions, and the carvers in their little straw sheds each engaged on his separate task, recall the labours of the old free-masons, and a period when the erection of such a building was a more common occurrence in England than it is now.

In the decoration of Trafalgar-square Mr. Barry is also proceeding rapidly: the ground is levelled and the terrace wall next the National Gallery is fast approaching to completion. As to the Nelson column there, the problem appears to have been, to do the least possible amount of work consistent with the slightest appearance of progress: and very successful they seem to have been in solving it. The builders, it is clear, like wise men, will not go on any faster than money be forthcoming, and to this the committee, who are avowedly not backed by public opinion, do not clearly see their way; whether or not, therefore, it will be ever finished, without the interposition of Government, seems a great question. The model of the capital is nearly completed; but a fresh difficulty has arisen as to the casting of it in consequence of the death of the party to whom it had been entrusted. The architect to this sad affair is certainly to be pitied.

The restoration of the Temple Church, although many men are at work, has not greatly advanced in appearance since our notice of the works in December last; still it is progressing steadily, and we may hope satisfactorily.

At the New Royal Exchange they are now beginning in earnest, a solid and excellent foundation was long ago put in at an expense of £8124, and a contract entered into with Mr. Jackson for the completion of the building for £124,700.

Recently several attempts have been made to improve the character of our shop-fronts, a wide and fruitful field for the architect of talent, which as yet has been but little worked. An exchange, a senate-house, and even a church, falls to the lot of the general practitioner but seldom, whereas private dwelling-houses and shops are matters of constant occurrence; they are nevertheless entitled to more consideration than is usually given to them; and afford more opportunities for the display of ability than are generally made use of. Amongst the most recent of the new fronts is that of the Lowther Bazaar, and the adjacent house in the Strand. The arrangement of the shop itself, and the archway filled in with glass, are exceedingly effective, and with many of the details highly creditable to the architect, Mr. Kendall. The adjoining front, however, which is a repetition in little, is too much like it or not enough, and produces a whole somewhat inharmonious. The way to improve it would be to make the house on the west side of the bazaar correspond with that on the east side: indeed this may be the architect's intention.

To the decoration and improvement of dwelling-houses we would direct the attention of all, whether those who want houses or those who build them. Hear what old Sir Henry Wotton says on this subject, and so let this note end with a text instead of beginning with one, "Every man's proper mansion house and home being the theatre of his hospitality, the seat of self-fruitfulness, the comfortablest part of his own life, the noblest of his sonnet's inheritance, a kinde of private principedom, nay, to the possessors thereof, an epitome of the whole world, may well deserve by these attributes, according to the degree of the master, to be decently and delightfully adorned."

## EXHIBITION OF THE LOUVRE.

## MODERN WORKS OF ART.—ARTICLE I.

ENTERING an exhibition of modern painting, the first impression is cheerfulness and gaiety: the scene is brilliant in itself. Before we consider details, or think of criticism, it promises gratification to our curiosity; we anticipate the pleasure of meeting old friends, and we expect to enter, as it were, into the history of their thoughts and occupations during the past year, in the speaking witnesses of them on the walls. But if we think with gladness of those whose new works we are about to see, we remember also those who will never offer us their inventions more. Among these, in entering the gallery of the Louvre this year, who, acquainted with the progress of painting, will not remember M. Buchot, so early lost to the art he so much loved, to the friends by whom he was so much beloved? M. Guenepin, whose modest merit, both as an architect, and as the head of a school of architects, many of whom have done high honour to their master, will make him long remembered. M. Danvin, whose landscapes last year gave us so much pleasure, and who died almost in an instant, while finishing new works about a month since. M. C. H. Laberge, a landscape-painter, is also dead; and M. Athanase Jovart, a young sculptor, aged only twenty-six. These are the losses that cannot be repaired. Next come the absent, and these embrace many of the greatest names. M. Ingres will send nothing to the exhibition, resolving to exhibit his works hereafter in his studio. M. P. Delaroche has but just finished his labours in the "Palais des Beaux Arts." M. H. Vernet is employed at Versailles on the "History of the Conquest of Algiers." M. Ary Scheffer is completing a new composition, whose heroine is the Margaret of Faust. "The Federation of 1790" entirely occupies M. Couder. M. Louis Boulanger is finishing the paintings in the Chamber of Peers. M. Delacroix is painting a roof in the same place. M. Vauchelet has only completed the pictures in the hall of meeting of the peers. M. Abel de Pujol has also painted some compositions there. M. Decaisnes is occupied at present in the decoration of the church of "St. Denis du Saint-Sacrament." M. Ziegler, we know not why, has sent nothing to the exhibition. These are great blanks; and we regret to be deprived of the pleasure the sight of the works of these artists conferred. But let us remember these artists have won their laurels, and regret less the absence of their compositions, since more room is left for the young and anxious student, to whom the walls of the gallery are, perhaps, the goal of many hopes; the opening of a bright future, the means of reward for many a laborious hour. But we are in the gallery; and what is the first noted event that occurs almost as soon as the doors are open? Four pickpockets are in full action; so also are the police, who inquire of one gentleman what he has lost? He replies, "Nothing." They desire him to examine, and he finds he is indeed minus various articles. The person who addressed him told him to go to the bureau of the next commissary of police, and he would find his missing goods. The depredators are quickly discovered and disposed of. Now, let us turn to the two thousand and twenty-one subjects of Art which the gallery contains. Four thousand, it is said, were presented for selection to the jury; and the number of young artists is also very great. Of these four thousand subjects, nine hundred are said to have been portraits in various styles; of these four hundred and fifty only were retained. We shall first give a general *coup d'œil*, naming some of the principal works in the exhibition, and then return to those that require longer description. In sacred and historical subjects we have in the grand style, 'The Flagellation,' by M. Lehmann; 'An adoration of the Magi,' by M. Lepaulle; 'Bathsheba,' by M. Lestang; 'Parade,' a 'Vision,' by M. Roger; 'The Miracle of the Loaves and Fishes,' by M. Laynaud; 'St. Louis dictating his *Capitulaires*,' by M. Flandrin, intended for the Chamber of Peers; 'The Estates under Henry III.,' by M. Oscar Gué; a 'Moses,' by M. Sturler; 'The Defence of Mazagran,' by M. Philippoteaux. The unfinished, but most beautiful work of Buchot, at which he laboured at the time of his death, a 'Repose in Egypt,' is also here. 'Jesus Christ giving the care of the Catholic Religion to the Fathers of the Church,' M.

Debon; 'Vision of Christ,' M. Riss; 'Christ borne away by Angels after his Death,' Charles Moench; 'Joseph explaining the Dreams,' M. Senties; and many others, some of which, not mentioned here, we shall name hereafter more particularly. The landscape-painters are very strong this year, although much regret is expressed that M. Dagnan has sent nothing. A 'View of Nice,' which he has now unfinished in his studio, is spoken of by the artistic world as a remarkable work. We have rich contributions from Messrs. Diday, André Giroux, Hostein, Calame, and Isabey, jun.; Bertin, Gaspard Lacroix, Prevel, and Mlle. M. Dupan, &c. &c. There is a very beautiful composition by M. Aligny, and some of those landscapes by M. Corot, which seem to breathe the fresh pure air of the woods and fields; also some admirable views in Brittany by M. A. Leleux. M. Biard gives several of his peculiar subjects. Our readers will not have forgotten his terrible views of scenes in the frozen regions last year. Now we have 'Jane Shore condemned to die of Hunger in the streets of London'; 'Shipwreck in the Icy Seas'; 'Hunting in Spitzbergen.' M. Décluze adds, 'The Hogarth of France has also displayed his comic vein in the 'Passage from Havre to Honfleur,' in which, without infringing on the rules of good taste, he has amusingly represented all the modifications of sea-sickness which the passengers begin to feel. The serious air which begins to overspread the party of pleasure, has the most comic effect imaginable, and the attraction is so great, that this picture of M. Biard is so surrounded, it is hardly possible to see it.' Of pictures, 'de genre,' those of Messrs. Charles Beranger, Robert Fleury, and Jacquand, are much admired. There is an admirable piece of animals, by M. Bracassat; 'Marine Views,' by M. Gudín and Morel Fazio; and M. Borget gives us 'Views in China.'

Of water-colour drawings there are some admirable specimens in a style almost rivaling oil in power. There are three pictures by M. Decamps, and a composition by M. T. Viollet le Duc, representing the 'Baptism of the Count of Paris,' in water-colours, all most remarkable productions. Amongst miniatures, those of M<sup>me</sup>. Mirbel and M. Isabey, sen., keep their usual high place. Some paintings on glass, compositions in a high style, are exhibited by M. Maréchal, of Metz, who also gives us some very pretty crayon drawings, 'A youth in a frail bark in a Storm,' and its companion, 'A Nymph sporting on Grass.' Of the four hundred and fifty portraits retained, we may note those of M. Winterhalter; a beautiful female portrait by M. Armaury Duval; by M. Champmartin 'A Family Group.' Some charming portraits of children by M. Geoffroy; the portraits by Messrs. Guignet and Eugene Deverin, by Messrs. Henry Scheffer, Bouget, and Rouillard. In sculpture we have in marble a 'Young Child reposing on the Grass,' by M. Droz; 'A Drunk Fawn,' M. Faillot; a 'Statue of Henry IV.,' by M. Raggi, destined for the city of Pau; a 'Judith,' by Mlle. de Faureau; 'A Young Woman,' by M. Le Gendre Herald. The portraits in marble by Mlle. Zimmerman, are admirable works. This lady is the daughter of M. Zimmerman, the celebrated pianist, and married lately the son of the portrait painter, M. Dubuffe.

We return to the sacred and historical subjects in detail, but shall enrich our article by a few of the general observations of M. Décluze—abridged on this year's exhibition. He is of opinion that there is much technical and material excellence; much knowledge of effect; wise and agreeable arrangement of subject, and all the artifices of Art—that the number of agreeable pictures, well composed and arranged, is considerable. What then is wanting? "Depth of thought, as regards composition; style, as regards forms." To this there are exceptions, which we shall note; but, in general, the pictures to be described are wanting in the essential qualities of Art, those which strike and move the minds of spectators. "The quality which is most precious in Art, is that faculty which some men have of expressing with force and truth what they experience, conforming, at the same time, to certain laws which are the result of good sense and general taste; while they admire the masters who have gone before them, they do not copy them; their own ideas and impressions being sufficiently strong to result in forms which give them expression." As an example of this quality,

M. Décluze cites three small water-colour drawings by M. Decamps—but great size is not necessary to a great style, nor to the expression of elevated thoughts. Of one of these drawings, the subject is 'The Siege of Clermont, in Auvergne,' of another, 'An Episode on the Defeat of the Cimbrians.' Here we have true beauty and grandeur of invention; action in the personages, that moves the heart and feelings, and draws you out of yourself; with groups that recall the most beautiful examples of antiquity. The third composition of M. Decamps is, 'Young Turks coming out of School,' a charming drawing—what buoyant life these little beings exhibit!

We turn to larger works. A large canvass, with figures a little above the size of life, is the production of M. H. Lehmann, the subject 'The Flagellation of Christ.' The figure of Christ is noble and grand, dignified in suffering. The horrid energy of the executioners we think somewhat too strongly expressed; the contrast was sufficient without this. M. Lehmann has two other works in the gallery, a 'Portrait of H. Payens,' first grand master of the Templars; and 'Women Bathing,' or rather going to bathe. In all these pictures we hail an artist who is making rapid progress. Since his residence in Italy we see his works again for the first time, and find an increased truth and beauty in his colouring, and ease in his compositions. We greatly admire 'Saint Louis dictating his *Capitulaires*,' by M. Hypolite Flandrin, 'in the presence of the Sire de Joinville, Guillaume de Nangis, de Mathieu, Abbot of St. Denis, Regent of the Kingdom, Robert de Sarbonne.' The four principal personages are portraits; the heads, hands, and all the details are painted with great delicacy and study. The subject is grave, and it is gravely treated; the painter having even disregarded the brilliancy of ornament and costume which historical truth might have permitted. 'The Adoration of the Shepherds,' by M. Cottrau, has great charm and brilliancy of colouring. We shall here conclude the present account, reserving other pictures to be described in a future article.

## VARIETIES.

ROYAL COMMISSION FOR PROMOTING AND ENCOURAGING THE FINE ARTS IN THE DECORATION OF THE NEW HOUSES OF PARLIAMENT. —We have much pleasure in being at length enabled to notice to our readers, that two meetings for this truly national purpose have been held at Gwydir House. His Royal Highness the Prince Albert presided; and the other Commissioners assembled were the Marquis of Lansdowne, the Earl of Aberdeen, the Earl of Lincoln, Viscount Melbourne, Viscount Palmerston, Lord John Russell, Lord Francis Egerton, Sir Robert Peel, Sir James Graham, Benjamin Hawes, Esq., Henry Hallam, Esq., and Samuel Rogers, Esq. Mr. Barry was also in attendance, and submitted his plans, generally, we believe, with reference to the architectural details, and the opportunity they afford for artistic decoration. The meetings are for the present postponed, but the Commissioners will recommence their inquiries soon after Easter; and we have little doubt but that the result will be equally beneficial to the progress of Art, and honourable to the genius, the intellectual advancement and social condition of the nation. Considering this subject, even in its strictly limited connexion with the new Houses of Parliament, it has become, and must continue, a matter of extreme interest. But to this point it cannot be confined. In the completion of great designs the concession of the first power is of as much importance as its gradual increase. The conception may be the individual property; the perfection of the work very frequently awakens the dormant energies of a nation. A few eminent and refined geniuses will communicate their taste to a whole people; and whatever be the manners of one generation, the next reflects them, and progresses beyond. Whether it be that the human mind is of so very imitative a nature that the excellence it sees it is desirous to vary or reproduce; or whether the love of acquisition be the useful and lower stimulant; yet it is observable, that let but one great design be well completed by one artist, or the combination of many, and instantly there arises a general desire to possess, and to extend the sphere of their productions. If, therefore, the new Houses of Parliament be

decorated in a manner we may reasonably expect, either from the known taste of the Commissioners, or the acknowledged merit of our artists, they will become the standard, the point from which opinion will radiate, until in time the private dwelling, instead of being, as it too frequently is, the mark of the frivolous luxury of the owner, will become one of the numerous instances and evidences of social refinement. Men talk of the moral and physical causes which impede the growth of national character; they extend this opinion to an idolatry; and rest content with inability. The progress of the mind is as certain as that of vegetation; but you must sow, and then cultivate the seed, if you would reap the harvest. In like manner, by incipient, steady, and vigorous exertion for the promotion of the Fine Arts, we shall gradually, but finally, insure success.

**ART-UNION OF LONDON.**—In competition for the premium offered by the Committee of this Association, now so widely spread and influential, one hundred emblematical devices were submitted to the Committee, amongst which were many of very great merit and beauty, evidently by practised hands. In the majority of them, however, there was great want of correct drawing, the most essential requirement in an outline design; while some few were positively absurd, and worthy the pages of "Punch," or any other caricaturist. The design chosen by the Committee was found to be by Mr. F. R. Pickersgill, and represents 'Wisdom Rewarding the Sister Arts,' typified by an elegantly entwined group of three female figures, kneeling at the feet of Minerva, who, seated, is extending a wreath above them. There is much dignified simplicity and fine feeling in the composition, which well fit it for the intended purpose. From the other designs, we will select a few for brief mention: the names of the authors are unknown. 'Britannia replenishing the Lamp of the Genius of Art,' one of a series, is a charming idea nicely treated; a little too Egyptian an outline, but nevertheless beautiful. 'Children, emblematical of Painting and Sculpture, led by Genius to receive rewards from the Society,' is a pretty composition; and the same may be said of 'Britannia encouraging Design to high aspirations, having first poured wealth at her feet.' 'Genius fostered in the Lap of the Society,' marked with an angle in a circle, represents the Society as a sitting female with a sceptre surmounted by a wheel, extending a wreath over a winged infant on her knee: this is an exceedingly nice design; and, indeed, we could pick out at least half a dozen others deserving of the same commendation. We are glad to find that subscriptions have been pouring in from all quarters during the last few days, and that the total amount will in all probability reach the sum which we last month anticipated, namely, £10,000. The distribution of the prizes will take place on the 26th inst., in Drury Lane Theatre, by the kind permission of Mr. Macready, who is one of the Committee, and the Duke of Cambridge will take the chair. The business of the Society having become so large as it is, more accommodation was found to be necessary than it at present possesses, and the Committee have accordingly taken spacious chambers in Trafalgar-square—a situation, being closely adjacent to the various exhibitions, and moreover in the centre of the town, well adapted to their wants.

**ASSOCIATION FOR THE PROMOTION OF THE FINE ARTS IN SCOTLAND.**—On the 26th of February, a general meeting of this association was held in the Royal Hotel, when prizes to the amount of £780 were drawn. The prizes were forty in number, the highest being £100. There were two of £50 each, one of £40, two of £25, six of £20, ten of £15, and the remainder were £10 prizes.

**HAMPTON-COURT PALACE.**—It will hardly be believed, but nevertheless is true, that the officers in attendance in the great hall, recently opened to the public, have strict orders to prevent any person from sketching so much as a moulding or an enrichment, without a written order to that effect from Mr. Jesse. Anything more injurious, more contrary to the proper spirit in which a national structure should be, and, in fact, has been, thrown open for the cultivation of taste and the advantageous enjoyment of all classes, it is impossible to conceive. To carry it out fully, the servants should be directed to command her

Majesty's liege subjects *not to remember* any part of the building they may have seen, still less any of the pictures, on pain of Star-chamber process! Surely, surely this illiberal absurdity, for which not a shadow of an excuse can be advanced, needs only to be pointed out to those who have the control of the Palace, to be immediately abrogated: at all events, it ought to be so, and we look to see it done.

**THE THREE WELLINGTON STATUES.**—History nowhere presents an instance of the simultaneous erection of three such monuments as the Wellington statues, voted under similar circumstances by the public voice, to a fellow-subject. Mr. Wyatt's colossal work will be the first to be erected. That intended for the City, and begun by Sir F. Chantrey, is in progress under Mr. Weekes. The Glasgow statue is proceeding under Marochetti. It is a matter of some surprise that the last work has not been finished before; considering that likeness, character, &c., &c., are points of no importance in the eyes of the majority of the Committee.

**METROPOLITAN IMPROVEMENT SOCIETY.**—Since our last notice of this Association, Sir Lytton Bulwer, Lord Nugent, Lord Robert Grosvenor, Mr. Ewart, M.P., Mr. Brockedon, the Earl of Lovelace, Sir F. Trench, and others, have been added to the committee; and several meetings have been held, preparatory to sending a deputation to Sir R. Peel, to press upon the Government the necessity, in the first instance, of obtaining a map of London on a large scale, founded on actual survey; a document which, strange to say, does not at present exist; and ultimately, a report on the general subject of metropolitan improvements, from the first talent of the country. At the suggestion of Mr. Godwin, the Society have commenced a collection of maps and plans connected with the metropolis, and have applied to the various parishes, commissioners of sewers, &c., to aid this, which will be a very useful step.

**SCHOOL OF DESIGN.**—We state, with exceeding pleasure, that the council of the School of Design have formed arrangements for adding to the institution a branch for the instruction of females; and we add, with almost equal gratification, that they have confided the direction and superintendence of it to Mrs. M'lan, a lady whose reputation as an artist stands deservedly high—very nearly, indeed, as first of her sex in the profession; second, at least, but to one, and passing that one in a class of art, usually and properly ranked as the most difficult of attainment. We learn, also, that few ladies are more largely esteemed and respected by a very extensive circle of friends and acquaintances, alike for the energy of her mind, the amiability of her temper, and uprightness of conduct; matters, perhaps, even more essential than talent in the situation to which she has been—we understand unanimously—appointed. This establishment of a female school of design, is an event of no ordinary importance. The subject requires greater space and attention than we can now bestow upon it. In this country, unhappily, opportunities of giving employment to women are grievously limited. It is hard to point out any position which they can occupy that does not come, properly, under the head of "manual" labour, or is not mere menial drudgery. We believe that immense benefits may arise from this most judicious and laudable application of the public funds; and trust they may be augmented so as to render the plan as advantageous as it may be, undoubtedly, made.

**PAINTERS' ETCHING SOCIETY.**—In our last, we announced the formation of this Society; it is now completed, and proceeding with great ardour and rightly directed zeal. The Society has resolved upon first illustrating the Poems of Gray. They rank among the noblest compositions in the language, are of "infinite variety," and universally popular. But, we understand, the principal motive for this selection is, that within a comparatively limited space, they will be enabled to publish the whole of the Poems—an illustrated edition of Gray complete. Undoubtedly, this is a far better plan than to take an isolated poem, and, in consequence of the necessity of embellishing it largely, taking passages, all of which do not afford desirable subjects for the artist. By this improved plan, the prints will be very varied; each artist will have ample scope for the display

of genius; he will be entirely unfettered; and when the whole is completed, the Poet—the entire of his works—will have obtained a large series of illustrations—larger than under any other circumstances they could have received. The Society consists of twenty members; we are not informed concerning the whole; but we can mention the names of several, each of whom holds a foremost professional rank, and occupies a prominent place in the regard and esteem of the public; without exception, indeed, these are of established repute. Among them are Mr. J. B. Pyne, Mr. J. Wilson, jun., and Mr. A. Clint, landscape painters; Messrs. Meadows, Dadd, Frith, McInnes, O'Neil, Franklin, Scott, Melan, Ward, Joy, Gilbert, Sibson, Egg, and Poole.

**ARTISTS' EYES.**—At a recent meeting of the Academy of Sciences, Paris, M. Rocamir de la Torre presented the results of his historical researches, which he undertook with the view of confirming the justness of an opinion he had entertained on the physiological question—whether the colour of the iris of the eye exercises on vision a certain effect, and whether it tends to modify, in every individual, the sensation of colours. With this in view, he has collected together documents which give the colour of the eyes of a great number of celebrated painters of different schools, and he finds that, on grouping them according to this character, the artists of each category, whatever be the style of painting for which they acquired fame, have, one and all, a similar prevailing tone of colour in their pictures. Thus the prevailing colours were greyish in the paintings of men whose eyes were grey, greenish in those verging towards green, dark in the pictures of artists whose irides were of a dark brown, &c. A committee was appointed to examine into this memoir, composed of MM. Arago, Chevreul, and Babinet.

**THE PONIATOWSKI GEMS.**—Mr. Tyrrell, the proprietor of the Poniatsowski Gems, has published a pamphlet in defence of the originality of this series, which has been questioned in some of the newspapers and periodicals. To all persons capable of appreciating these exquisite works of Art, no vindication of their authenticity is necessary; although, undoubtedly, Mr. Tyrrell must have felt very strongly on becoming acquainted with a direct challenge of their originality. So celebrated in the North of Europe has the Poniatsowski collection been ever since the commencement of its formation by King Stanislaus, nearly a hundred years ago, and latterly so well known was it in Italy, that it is not reasonable to suppose that an imposition could have been successfully masked until now. It is not likely that all the most astute judges of our times could have been misled. In Mariette's *Traité des Pierres Gravées* it is observed, in speaking of imitations, that "For the most part, also, they (modern imitators) are inexact in their manner of engraving the names inscribed on them, and the result is, that this vicious orthography, if it is combined with any irregularity in the forms of the letters, any inequality in their size, or that the different parts of each should not be exactly proportioned, and distinctly sculptured, or even should the minute strokes which form the upright portions be thicker in one part than another, no hesitation is felt by connoisseurs in pronouncing them to be fabricated." Besides those negative rules, the same writer gives others descriptive of the marks which genuine antique gems should possess, reducing to a matter of little difficulty, discrimination in a department of art so important and interesting. Like most angry people, however, Mr. Tyrrell has been unwise; having brought a charge against "THE SPECTATOR," which in that journal has been completely refuted; and for having made which, Mr. Tyrrell is bound to apologize. Although complaints may be urged, sometimes, as to the generosity of that newspaper, its justice and honesty are, and always have been, unimpeachable.

**THE APPLICATION OF PAINTING TO ARCHITECTURAL DECORATION.**—Mr. E. T. Parris has lately read before the Royal Institute of Architects a very interesting paper on this subject, which is now beginning to occupy the serious attention of men in power. Ever since 1821, when, it will be remembered, Mr. Parris invented an apparatus for the purpose of getting to the paintings in the dome of St. Paul's Cathedral, with a view to restore them, he has given much attention to the subject of fresco, and has made many ex-

periments as to the best mortars and colours, so that his opinions are unquestionably entitled to consideration. Without pledging ourselves to any of his views, we therefore present an outline of them nearly in his own words, and may probably take some other opportunity to return to the subject. No longer ago than from 1820 to 1825, Cornelius, Overbeck, Veith, and others were employed by the Chevalier Bartholdy to paint his villa at Rome in *fresco*. The attempt to revive this method of painting was considered an experiment, and the English patrons and artists looked on and talked about it, but did nothing: what has grown out of that experiment every one knows. Oil paintings for architectural decoration are not efficient in some situations: the ceiling by Rubens at Whitehall will explain this; for since it was last cleaned the canvas of the centre oval appears quilted, in consequence of the cords which confined it rendering the surface uneven: it can be seen now only from a very few places in the chapel. Starch, rice, white of egg, and spirits, are used to destroy the gloss of oil pictures, but in every case that I have seen, the deep colours and shadows are reduced to the dulness of distemper. In all my experiments in *encaustic* painting I have never been able to remove a cloudy appearance, or to drive in the wax equally when on a surface of any size; but I believe recent discoveries of the French have brought this method to maturity. It must be very permanent, and resists the damps of a moist climate: durability without gloss is its chief advantage; further, it may be retouched at any time so that a thorough knowledge of drawing, and careful cartoons are not so essential as in *fresco*. *Fresco* has been supposed to be a secret and mysterious operation, whereas, it is in reality the most simple of all modes of painting. From numerous experiments I believe that all our usual mortars will answer equally well, so far as receiving the colours is concerned. The durability is another consideration; and must be settled by the practical man. I am convinced that the painter may obtain good walls and stuccos for *fresco*, either in England, Russia, India, or America. Vegetable colours will not stand. The colours that should be used are few, of a deep sober tone and of great intensity. As a means of decoration *fresco* surpasses all others: it combines excellently with large masses of architecture, has a grand and impressive effect, the colours never grow darker, and its durability is beyond a doubt. The colours need not all be transparent as some have said; opaque and solid lights may be laid on in the dark parts as in oil. The artist will be disappointed however, who imagines the same effects can be produced as in oil. There can be no toning down, no scumbling, no magical touches, or fortunate hits. Each part must be matured in the cartoon: all is sober, steady, hard work on a damp wall, far from the warm studio: all details must be avoided, the whole must be grand and severe, the artist must live with statues, heroes, and temples in his thoughts, and forget the temptations of annual exhibitions. He must work long days without intermission too, for, when the plaster is once set, nothing can be done with it. By the practice of *fresco* painting with few colours and limited time, the powers of the artist are more called upon than when he can take his ease, alter, and re-arrange. It is curious to note the scale of charges for architectural decoration from the arrival of Rubens, in 1630, to 1730, when Thornhill was in his zenith, and from that time to its almost total abandonment in 1842. Rubens, in 1630, for Whitehall ceiling received £7 10s. per yard. Delafosse, in 1670, for the British Museum, £7. Verrio, in 1690, exclusive of gilding, £3 12s., with £200 per annum for life, when he became blind. Thornhill, in 1725, for Greenwich, £3; and for pilasters, £1. Cipriani, in 1775, for cleaning Rubens' ceiling, £2000. Barry, for the paintings in the Adelphi, received by the exhibition of them £503 2s. It is now necessary that English artists should prove not only that they can convey their ideas in *fresco*, but that they have ideas to convey, and that they are as competent for large historical works as the artists of Bavaria, France, and Italy; this could easily be done were commissions offered them on the same bold scale as have been given to the latter. In *fresco* painting, the artist requires numerous assistants and pupils, and is not obliged to devote so much of his own manual

labour to express his thoughts. His pupils, on leaving him, have become practical workmen; and some few, like the dwarf on the giant's shoulders, may see further than their master, and so advance the Art.

**PROCESS OF ELECTROTINT.**—This new process, a patent for which has been taken out by Mr. Palmer, of Newgate-street, if brought to perfection, would be to the oil painter what the newly invented lithotint is to the water colour painter. We have seen two or three specimens, a landscape with figures and a portrait, on a small scale; and a study of grapes the natural size that promise favourably, though perhaps imperfect, especially in the delicate tints; the grapes were painted by Mr. Lance, and the electroint impression has much of the *fruity* character; the forms are solid and pulpy, the texture is well discriminated, and both the effect and handling of the painter are rendered with fidelity and force; here, too, the roughness is not so objectionable as in the more minute sketches. So far as regards the preservation of the vigorous freedom of painter's studies on a large scale, but of small size, the process of electroint appears to be even now serviceable; but much has to be done in the way of improvement before it can be employed with certainty of success in anything more finished or delicate. As to the question of impressions, the number calculated upon by the patentee is very limited. The mode of proceeding is briefly as follows: the artist paints in the usual way on a prepared surface, and from his painting a cast is taken by the electrolyte process, from which the impressions are printed by the copper-plate printer. Sufficient evidence has been given of the feasibility of the principle, to encourage perseverance in perfecting the invention, which we believe originated in a discovery of some German experimenter. Another and more practicable mode of applying the electroint process is likely to prove of extensive utility; this consists in its application to surface-printing: the artist paints his design as before, and from the electroint plate a mould is made, from which casts may be taken in the metal used for metallic relief printing; and thus the pages of a printed book may be adorned with original designs, in which the feeling and touch of a skilful painter are visible. In this operation the obstacle that exists both to electroint and electrototype, namely, the softness of the copper plate deposited, is avoided; but until some other method of hardening copper than hammering it is discovered, the application of these beautiful Arts on a large scale, as regards both the size of the plate and the number of impressions, must be limited: this, however, is not hopeless; for as the Egyptians must have had some method of tempering the copper of which their tools were composed, and with which they cut granite that turns the edge of our chisels, it may be expected that in this age of scientific discovery, the same or an equally efficacious method may be found out. Artists who feel interested in this process—and every artist ought to do so—will do well to call upon Mr. Palmer, and see and judge for themselves. He has authorised us to state that he will gladly exhibit and explain to them all matters connected with his patent.\*

**'LA ZINGARA,' AN ORIGINAL DRAWING OF A. ALLEGRI, CALLED CORREGGIO, AT MR. COLNAGHI'S.**—The Royal Gallery at Naples contains many gems of Art, such as 'The Magdalen,' by Guercino; 'The Sybil' of Domenichino, and many others. But amongst all these, the most celebrated is a work of Correggio, sometimes called the 'Madonna del Sacco,' sometimes the 'Zingara,' or 'Zingarella.' Every one knows how rare and difficult to be procured are the works of this master; and from Tiraboschi, Pungileoni, and all the biographers of Correggio we know how peculiar was the manner in which he prepared the sketches for his pictures, rendering these sketches as precious as his finished works. We have just been delighted with the sight of the drawing for the 'Zingarella,' which has every character of originality. We do not speak of the quality of the paper, of the materials, nor the history attached to it. The true artistic characters are sufficient; they are the same in every respect as in many other drawings of Correggio which we have had

\* Since the above was written, a pamphlet on the subject has been published by Mr. Thomas Sampson, to which we shall have occasion to refer.

occasion to examine: and it is sufficient to observe the manner in which this drawing is conducted to pronounce it a treasure in any collection. If it be true it has already found a purchaser, we congratulate him on his acquisition. For those persons who, instead of judging by their eyes and knowledge, prefer to judge of works of Art by the histories attached to them, we can affirm that there is enough to satisfy such *pseudo-connoisseurs* in the history of this drawing, which it can be proved was brought from Parma (the favourite town of Correggio), when Maria Louisa, the "Infanta," left it to go to Madrid as the wife of Charles IV. At a sale during the civil war in Spain the drawing was bought, which we have been admiring at Mr. Colnaghi's, Pall-mall East.

**STRAWBERRY-HILL.**—The disposal by auction of the effects at Strawberry-hill, is at length fixed for the 25th inst. The sale, which is in the hands of Mr. Robins, will occupy nearly a month, although continued daily; and must, as well from association with the name of Walpole, as from the variety and rarity of its contents, be one of the most interesting sales that has ever taken place in this country. The assemblage of valuables and curiosities, for which Strawberry-hill has long been famous, was in progressive formation during half a century, and is constituted of such productions, in every class of art and literature, as signalize the cultivated taste that has been exercised in collecting them. Admirable specimens of the most valuable, antique, and modern fabrics, have been here brought together. The porcelain is Sevres and Dresden, the richest of the respective manufactories. The numismatic cabinet contains nearly 5000 coins and medals, in gold, silver, and bronze; and the cammei and intagli are of extreme beauty. The collection of armour is not extensive, but one particular suit calls for especial notice; it is a splendid panoply, designed for Francis I. by Benvenuto Cellini, by whom there are also other works. Of the pictures, it is scarcely necessary to observe, that they are by artists of the highest reputation; and the prints and drawings beautiful and select. While Strawberry-hill was the residence of Horace Walpole, a catalogue was formed of this *embarras* of curiosities, but this is now quite out of print.

**NASH'S DRAWINGS.**—The original drawings of Mr. Nash, from which were lithographed his valuable work, "The Ancient Mansions of England," are now being exhibited at Messrs. Graves and Co's, in Pall Mall. They are forty-six in number, and, independently of their masterly execution, constitute, in historical, architectural, and picturesque interest, the most attractive series of the kind we have ever seen. It is difficult to estimate the powers of this artist without seeing his original works. His labours supply invaluable illustrations to our national topography; for next to the sayings and doings of remarkable persons, we are desirous of knowing something of the places they inhabit, or have inhabited. The mansion of Knole, or Knowle, in Kent, furnishes several subjects. By a charming view at Penshurst, we are reminded of Sir Philip Sidney; and by one at Charlote of the Lucy family, and the youthful vagaries of Shakspeare. Three subjects are taken from the magnificent mansion, Hardwicke Hall, near Chesterfield, which was built by the Countess of Shrewsbury, to whom was committed the custody of Mary Queen of Scots. There is a beautiful *memento* of Bramshill, Hants, a residence built for Prince Henry Frederick, the eldest son of James I. In this drawing a company, of the time of Charles I., are introduced engaged in the now obsolete game of bowls. Another remarkable drawing shows the garden front of Wollaton, near Nottingham, one of the most beautiful remnants of the Elizabethan style. There is, indeed, not one view in the entire series that does not advance claims to the highest consideration, being all nearly akin to historical pictures.

**THE HEROES OF WATERLOO.**—Another work of very great interest is about to be exhibited, privately, in the gallery of Messrs. Graves and Co., but during the *next four days only*; so that all who desire to examine it must "make haste." Some time ago, indeed, we were about to say some years ago, we offered some observations on a work in progress by J. P. Knight, Esq., A.R.A. It is now finished, having occupied the greater part of his time since the year 1838, when it was commenced. It is entitled, 'The Heroes of

Waterloo; and contains a series of portraits of all the leading officers who shared in the glory of the eventful 18th of June, 1815. We have rarely seen a more successful work, considering the very unmanageable nature of the materials; for the difficulty of grouping them, so as to give that which was indispensable, a *likeness of each*, was so great as to defy the utmost strength of genius "to cope withal." Either the historical character and pictorial effect must have been sacrificed, or the picture must not have rested its claims to value upon its preservation of the forms and features of the many great men represented in it. This disadvantage will be at once obvious; but the evil is amply compensated for. We recognize in a moment every individual of the assembly; from the chiefest of them all—the Duke himself—down to the historian of his acts and mind, Colonel Gurwood. And this, after all, is the grand purpose of the artist; his production, so considered, does him infinite credit, and may be looked upon as an historical record, that will be valuable not alone to the existing age, but for centuries to come,—as long, indeed, as the memory of the battle of Waterloo shall continue a cherished memory of Great Britain. We are glad that this picture is to be placed in the hands of a competent engraver, and to be produced on a scale sufficiently large, to give the resemblance with accuracy. It will be a most desirable acquisition to every British soldier, to leave as an heir-loom to his descendants; for it will supply in one volume, as it were, the personal histories of nearly all the most distinguished officers who rendered the nineteenth century glorious and famous. We had forgotten to notice, that the scene takes place in the waiting room of Apsley House. The Waterloo heroes are the guests of the Waterloo hero; and they are represented as assembled previous to the annual dinner by which the Duke commemorates the victory, to which they, each and all, contributed. The party is in the act of rising, to be ushered by his grace into the dining-room.

**WYATT'S STATUE OF THE DUKE OF WELLINGTON.**—The model of this great work is finished, and has been shown by the sculptor to a party of his friends, from more than one of whom we have learned that it will be in all respects worthy of the original, the country, and the arts. It is, as our readers are aware, to be affixed above the gateway leading into the Green-park, directly opposite to Apsley House,—a site most injudiciously chosen, and objectionable on many grounds; chiefly, because its immense magnitude will be lost, if placed so high: it is understood that this situation for it, is opposed to the views and wishes of the sculptor. Some idea of its prodigious size may be formed from the facts, that the ears of the horse measure two feet in length, and that a mounted dragoon may ride under its belly. It will be the largest equestrian statue ever executed. We shall, perhaps, before next month, have an opportunity of examining and reporting upon it more fully. We learn from so many safe authorities that it will be a work of the loftiest genius, that we feel justified in even now congratulating the age upon an acquisition worthy of it; the more so, as the outrage upon art, decency, and common-sense, and the libel upon the Duke, is of a certainty to be perpetrated at Glasgow.

**BURFORD'S PANORAMA OF THE BATTLE OF WATERLOO.**—This Panorama was exhibited by Mr. Burford some twenty years ago; that is to say, it is repainted from the same drawings. The spectator is supposed to be placed near La Haye Sainte, whence he commands a view of the operations generally of both armies. The point of time chosen by the artist, is the last grand effort made by Buonaparte on the appearance of the Prussians. He concentrated his artillery in front of La Belle Alliance, and under cover of nearly 300 pieces, advanced the twelve columns of the Imperial Guards under Ney, who had not yet been in action. The first column ascended the heights supported by cavalry, notwithstanding the appalling fire that was opened on them from the front and flanking batteries. It was upon this occasion, that the Duke of Wellington gave the memorable command, "Up, Guards, and at them!" when the dark columns of the enemy were attacked by the British infantry, and repulsed with immense slaughter. The Duke

of Wellington and his staff are immediately in rear of the Guards, and the Marquis of Anglessea is leading the grand charge of cavalry which completed the confusion of the French lines. The picture is carefully painted throughout, and the reality approached as nearly as is possible upon canvass.

**DAGUERRETYPE PORTRAITS.**—Unwearied experiment has astonishingly improved the knowledge of the application of the Daguerreotype to portraiture. We cannot help remarking this from some specimens publicly exhibited by M. Claudet; yet, viewing the discovery and its capabilities in the same light in which it appeared in its earliest state, the general complaint against these portraits has been their extreme coldness of tone: this defect, however, M. Claudet has succeeded in obviating, by great improvement in the management of the back ground, which cannot fail to augment the popularity of these portraits.

**LEATHER IMITATIONS OF CARVING.**—We have been gratified by an inspection of a collection of imitations in leather, of wood carvings, in every variety of taste. Among the specimens are entire panels in the *cinqcento* and Elizabethan styles, as also in every kind of florid and figure carving usually met with in wood. Colour and gilding are received by these works with admirable effect; and when painted to resemble oak, they are with difficulty distinguishable from veritable carvings. The process of their production is simple; so much so as to render the cost of this kind of decoration small, compared with the expense of carving. The leather is prepared by being subjected to the action of steam in a tank, whereby it is reduced to the consistence of gelatine, in which state it receives the destined impression from a metal die—thus are produced, in every degree of relief, figures, flowers, fruits, foliage, &c. &c., as adapted to interior embellishment.

**ISLINGTON ART-UNION.**—We have received the prospectus of a projected Art-Union, to be entitled the "Islington and North London Art-Union." On the subject of these admirable associations, we have already on every occasion of their falling under our notice expressed our sentiments; indeed there can be but one opinion on the subject, for the increase of the number of these institutions shows that it is desirable to multiply the benefits already arising from them. The plan proposed differs from that of the London Art-Union in some main points, one of which is the determination of the managing committee "not to expend its resources in the production of engravings, but in addition to the larger prizes, to distribute various small ones, of which a selection of prints may form a part." The subscriptions are fixed at half-a-guinea, and the state of the funds at the closing of the subscription books will, of course, regulate the number and value of the prizes. The committee have determined that no prize shall ever exceed one hundred pounds in value; until the annual subscriptions amount to two thousand pounds. The London exhibitions of Art are named as those from which works may be selected, provided the prize drawn shall in amount exceed ten pounds. The holders of prizes of amounts below ten pounds may select "pictures, drawings, medals, engravings, casts, or other works of Art, the productions of living artists, subject to the approbation of the committee." Subscribers, to whom may fall prizes of or exceeding one hundred pounds, will have the option of choosing two works of Art. This Art-Union is announced upon principles which ought to secure it abundant success; and it exhibits an example of spirit and taste on the part of the inhabitants of the northern suburbs, which will not assuredly be lost upon the other wealthy and populous districts of London.

**ARCHITECTURE AT KING'S COLLEGE.**—PROFESSOR HOSKING, in his introductory lecture, after pointing out the numerous branches of knowledge with which an architect must be well acquainted, if he desires to discharge his duties satisfactorily, dwelt forcibly on the fact that the profession of architecture does not hold that place in public estimation to which it is most justly entitled. Architects are confounded in the public mind either with artisans or with draughtsmen; whereas they are entitled to rank as much above the latter as the latter do above artisans. Dilating on the different arrangements required for the

palace, the courts of law, villas, galls, picture galleries, and private dwellings, the lecturer remarked, that to recommend attention to the arrangement of peasants' cottages might seem to be trifling: certain, however, he was, that if more study were given to these, less would be needed for hospitals and workhouses. With respect to his opinions of Vitruvius, long since published, he had to complain of many mis-statements and unmerited abuse. After mature consideration, his opinions on this head had not at all changed. He was convinced that a man might as well attempt to learn history from the "Seven Champions of Christendom," or "Gulliver's Travels," as to become an architect by studying Vitruvius. Different styles of architecture might be compared to different languages; they were the media through which thoughts were to be expressed. How few men can speak, still less think, in many tongues. So was it with styles; and he would advise the student earnestly to use one style well, rather than many badly. The degradation which the profession suffered by the present system of competition was forcibly pointed out. The difficulties of arranging proper conditions and obtaining a proper tribunal, Mr. Hosking considered were insurmountable. He strenuously advised all who wished to make their profession respected, to furnish no design without a fee: those who are to have the advantage ought to pay for it. If this were done, the ideas of all the competitors might be used, and the selected plan thus rendered more successful.

**DEATH OF MR. GEORGE CLARKE.**—We regret to announce the death of this sculptor, which took place suddenly, at Birmingham, on the morning of the 12th ult. He was in his 47th year, and has left behind him a family of nine children, unprovided for. At the time of his death, he was engaged in casting the leaves for the foliage of the Nelson monument. His principal work was the statue of Major Cartwright, in Burton-crescent.

Pictures sold at the British Institution during the last month:—No. 374. 'Interior of the Keep—Richmond Castle,' W. Fowler, £6. 'Wethered,' Esq. 73. 'Campagna of Rome—Herdsman preparing to drive the Cattle,' C. Josi. 266. 'Study from Nature,' E. Grimstone, 10 guineas, W. Meyrick, Esq. 54. 'Gleaning—a Scene in Kent,' W. F. Witherington, R.A., 25 guineas, T. Garle, Esq. 67. 'The Lake of Zug, the Rigiberg, &c.,' Charles Runciman, 20 guineas, H. Holland, Esq. 184. 'View of St. Ann's Hill,' T. S. Wainwright, Rev. H. L. Bennett, 244. 'Olivia—Vicar of Wakefield,' T. M. Joy, £15, Sir Edward Bowater, 379. 'South-east View of Windsor Castle,' R. B. Davis, 40 guineas. 320. 'Flemish Peasant,' J. D. Wingfield, £25. 40. 'View from Bowhill, near Chichester,' Copley Fielding, 40 guineas, the Hon. the Vice-Chancellor Wigram, 58. 'Too big for the Basket,' J. Bateman, £25, C. W. Packe, Esq. 43. 'Amalfi,' J. Uwins, £40, C. W. Packe, Esq.

**SALES OF THE MONTH**—past and to come.—Mr. Phillips, on the 23rd and 24th ultimo, sold the cabinet pictures of M. de St. Denis, among which the following subjects realized the prices affixed:—'Interior of a Corps de Garde,' Greuze, 30 guineas; 'Landscape,' S. de Kouing, 24 guineas; 'Cattle and Landscape,' 23 guineas; 'A Lady listening to a Cavalier playing the Guitar,' Watteau, 30 guineas; 'A Young Lady listening to a Gentleman reading Delfs,' Van der Meer, 66 guineas; 'The Fortune-teller,' Watteau, 68 guineas; 'Cattle, and distant View of Dort,' Van Stry, 47 guineas; 'The Interior of a German Kitchen,' Van Hirsch, the Sorcerer of Luxembourg, 48 guineas; 'Drawing-room in the Government-house at Luxembourg,' Van Hirsch, 50 guineas. The two last-named pictures were purchased by the Marquis of Lansdowne. 'An Infant with a Paroquet,' Greuze, 80 guineas; 'A Cavalier with a White Horse,' Philip Wouvermans, 30 guineas; 'La Belle-Paysanne,' one of Greuze's most celebrated works, 280 guineas; 'Portrait of Madame de Montespan,' Watteau, 40 guineas; 'Winter Scene,' Van Stry, 42 guineas; 'Interior, with Village Musicians, &c.,' Zorg, 43 guineas; 'Interior of a Church,' De Witt, 47 guineas; 'A Lady surrounded by her Children,' G. Netscher, 44 guineas; 'Landscape, with Figures,' Albert Cuyp, 36 guineas.

Messrs. Christie and Manson will sell by auction the pictures, drawings, &c. &c., of the late Sir David Wilkie, about the end of this month, but the day of sale is not yet definitively fixed. It is worthy of note, that at a recent sale at Sotheby's, an unlettered proof of 'Bolton Abbey in the Olden Time,' published at eight guineas, was sold for twenty-three guineas; and, at the sale of Mr. Wallack's prints, a lettered proof of Wilkie's 'Kent Day,' produced twenty-two guineas. This is encouragement to publishers to issue works of which time will increase the value. We rejoice to learn that our anticipations relative to the publication of Eastlake's 'Pilgrims arriving in sight of Rome' have been fully realized. A fine impression is, already, scarce.

# SOCIETY OF BRITISH ARTISTS. SUFFOLK-STREET, PALL-MALL EAST.

THE Nineteenth Annual Exhibition of the Society of British Artists was opened to the public on Monday the 28th ult.: at so late a period of the month—almost on the eve of publication—it will be impossible for us to do more than notice the collection in general terms. It is of the average quality; to describe it as possessing much merit, or even as holding out great promise, would be only to mislead the public and the artists; while, to decry it as discreditable and valueless—as we perceive two or three of the diurnal critics have already done—would be equally ungenerous, unjust, and unwise. It consists of 804 works; he who looks among them merely to find fault will have plenty to satisfy his appetite; but those who desire to be pleased, or, at all events, are willing to see what is good, will find much wherewith to be content.

The whole character of the Society has, however, undergone a change—a change thorough and complete; and one which we cannot describe as an improvement, although it may be advantageous to the members, and one, which we are willing to admit has been, in a degree, forced upon them.

In former times, until within the last three or four years, indeed, the Society in Suffolk-street, was regarded as a sort of nursery of genius; a state of preparation for the paradise of the Royal Academy. And our memory reverts to the time when among its exhibitors were many who have since been elevated to high places. The greater minds rose and soared to a purer atmosphere; still, many men of large ability and extended popularity remained; and year after year saw upon their walls, the productions of younger candidates for fame, who made here their reputations to have them confirmed elsewhere.

This advantage the Society has latterly sacrificed. Last year we saw the lingering relics of the good old system; this year there are scarcely any traces of it; and next year it is (as we understand) to be exploded altogether. In other words, the exhibition at Suffolk-street will consist, hereafter, exclusively of the works of members of the "Society of British Artists." This plan will, at all events, have *honesty* to recommend it; the public and the profession will comprehend the case exactly; and contributors will have no ground of complaint that their pictures have been intentionally ill-placed in order to compel them to join the Institution. Viewed apart from prejudice, there is reason and some justice in this resolution. The Society has still to encounter the disadvantage of an income not equal to the expenditure; their costly building still hangs like a dead weight around their necks; and it seems but fair that all who partake of the benefits it confers should participate in the sacrifices necessary to obtain these benefits.

To form a correct judgment upon this matter, we ought to revert to the past history of the institution. The Society was formed in 1824. The earliest of its catalogues upon which we can lay our hand is the third—i. e. 1826; it then consisted of twenty-eight members; in 1827, the number was twenty-nine; in 1832, it was still twenty-nine; in 1837, instead of an increase, there had been a considerable falling off. We find by the fourteenth catalogue that its members amounted to no more than twenty-three. In 1840, it had somewhat augmented, being twenty-eight—exactly the number, however, to which it was limited in 1826—two years after its formation. Now all this while, the artists who contributed nothing to its support, were as much benefited by it as those who were bearing the "heat and burthen of the day;" their pictures were, up to this period, as well placed as those of the members, and it is notorious that large sales were annually effected of the contributions of parties who received all and paid nothing.

This, when we look closely into the subject, seems neither fair nor just; and it does appear reasonable that some plan should have become necessary for more equitably dividing the responsibilities, anxieties, and expenses consequent upon the maintenance of the Institution.

Whether there could have been a purer and manlier mode than that which *has* been adopted, is a question we are not prepared to answer; that mode may be stated in a few words—it was so to discourage voluntary contributors who sent pictures that they should be induced to withhold their

contributions altogether, or be compelled to join the Society in order to secure "good places," and obtain equal chances of sales.

That this project has answered as far as the interest of the Society is concerned, will be sufficiently obvious to all who examine—as we have done—the catalogues of past years, and contrast them with that more immediately before us—the catalogue of the year 1842. There are now THIRTY-SIX MEMBERS; eight have been added to the body within two years, since 1840; while, during the seventeen years preceding, it had received no additions whatever.

And these accessions have been, in the strictest sense, satisfactory; among those who have this year joined the Society are Mr. T. B. Pyne (a landscape painter of acknowledged talent; one, indeed, who holds a very high rank in his profession, and would confer credit upon any institution); Mr. Boddington (another landscape painter, to whose abilities we have borne testimony upon almost every occasion in which we have been called upon to notice an exhibition, either metropolitan or provincial); Mr. Hill, (a portrait painter, whose works are marked by much force and delicacy, and hold out a promise of great excellence hereafter); Mr. Zeitter (who in his own peculiar style—and that a right good style—has very few rivals anywhere) and we believe there are two others elected since 1841, to whom we cannot directly refer, as the catalogue for 1841 is not at hand for reference.

These facts should not be lost sight of. It becomes, therefore, alike the interest and the duty of many artists, whose professional rank or merits cannot secure them "good places" elsewhere, to consider whether it be not their wisest plan to join this Society; and, by joining it, to infuse purer blood into its constitution; to render it worthier public patronage; and advance its character by rendering its annual exhibitions more conspicuous for excellence than they have hitherto been.

At all events, we do think that the Society will do rightly and honestly to declare their intentions in a plain and straightforward manner; not to place at all the offered contributions of artists who will not become members, and so share the responsibilities, anxieties, and expenses of the establishment—a mode far worthier than that which they now pursue, and have, of late years, studiously adopted.

It just strikes us, that there is, or rather was, a bye-law of the Royal Academy, which rendered ineligible to election into that body, a member of any other institution connected with the Arts. We believe, if, indeed, it ever existed—of which we are by no means sure—that it has been either abrogated or suffered to become a dead-letter. The recent election of Mr. Barry (who still continues a member of the Institute of British Architects) into the Royal Academy is a case in point. But sure we are, that if proper steps were taken, a rule so unsuited to the present times—although wise and necessary when the means and appliances of the Royal Academy were scanty—would be instantly dispensed with.

As we have said, the late period of the month at which the exhibition was opened, precludes us from noticing its contents; and we have thought that such remarks as those we have submitted were more pressing and might be more useful.

## ART IN THE PROVINCES.

THE ROYAL HIBERNIAN ACADEMY.—The last day for receiving pictures, by the Royal Hibernian Academy, will be the 16th April. English artists should bear in mind that the "Irish Art-Union" will have a large sum to expend in the purchase of works of Art: we understand between £3000 and £4000; and that the selection of prizes is not limited to artists of any country. We repeat our entire conviction that, although the choice of pictures rests with a committee, that committee consists of noblemen and gentlemen whose names afford sufficient guarantee for the integrity and judgment to be exercised. We feel assured that no really good and valuable works, of comparatively moderate size, that may be sent to Dublin, will be returned to London. Cases containing pictures should be, we imagine, addressed to George Petrie, Esq., secretary, Royal Hibernian Academy, Abbe-street, Dublin; and

forwarded *via* Liverpool; the carriage must be paid by "uninvited" contributors.

BRISTOL ART-UNION.—A meeting has been held in the committee-room of the Literary and Philosophical Institution at Bristol, to consider the formation in that city of an Art-Union, upon the plan of those instituted in London, Edinburgh, Liverpool, &c. It was expected that the Rev. John Eagles would preside, but that gentleman was prevented by another engagement. Mr. Robert Tucker, who acted as Honorary Secretary, read the minutes of a meeting held on the 28th January, at which it was resolved that such an association be formed, and that this meeting be held in furtherance of that object. Mr. Tucker represented the benefits and advantages derivable from the formation of such a society, and called attention to certain practicable improvements in the administration of the affairs of the proposed institution, which would tend much to the benefit of the subscribers. After some remarks from the Chairman, a short conversation took place between that gentleman and Mr. Tucker, on the propriety of electing artists to seats in the committee, when both concurred in an opinion that no better plan could be adopted than that on which the Art-Union of London was modelled. Mr. Kennedy, in answer to a question, said, that a reserve would be made from the funds to meet expenses, so that no subscriber would be liable to any call beyond his subscription. Mr. Tucker then read the rules of the London Art-Union, together with an address which he proposed for circulation, both of which were approved by the meeting.—At a subsequent meeting held at the same place, and with the same view—the Rev. John Eagles in the chair—Mr. Tucker, the Honorary Secretary, *pro tem.*, having read the minutes of the last meeting, announced that his Grace the Duke of Beaufort had condescendingly expressed his willingness to accept the presidency of the society. Some conversation ensued with respect to confining selections to the works of the artists of Bristol, against which serious objections were urged. The Reverend Chairman said that Bristol was, of all others, a place especially in which an Art-Union ought to be formed. It had, from nature, the most beautiful scenery that could be desired for the pencil of Art—scenery abounding in all the varieties of grandeur and beauty, and she had produced artists of distinguished fame throughout the world. She could claim as her own Sir Thomas Lawrence, once President of the Royal Academy; Turner, whose intrinsic genius, however chequered by his eccentric vagaries, no man could deny; and Bayley, who was equalled in his art only while Chantrey lived. Bristol, if not the birth-place of the men, was at least the birth-place of the genius of Danby, Rippingille and Bird, whose home and domicile during the zenith of their fame was here. With respect to Bird, Bristol had been unjustly defamed; and the character of her merchants charged with illiberality, and even malevolence, towards the genius of Bird. He had been requested to state the truth of the case in this matter, and had adduced facts, with substantial proofs of them, in vindication of the character of Bristol. He was convinced that, if fair encouragement were given to the Arts in Bristol, her artists would in future fully sustain her fame for talent in times past. After some resolutions of minor importance, thanks were voted to the Chairman, and the meeting broke up.

LIVERPOOL ARTISTS' CONVERSAZIONE.—SIR,—It is beyond all question, that great and permanent advantage is gained by a free intercourse among artists and patrons of Art; and much good must result from a plan which "combines the amenities of social life with the encouragement of the Fine Arts." Impressed with this conviction, and in the hope of imparting an additional interest to them, I proposed the formation of a Society in Liverpool on a novel plan, to be called the Artists' Conversazione; whilst it is calculated to extend greatly the connexion of the artist, by bringing both himself and his works into more intimate knowledge with those gentlemen who feel a pleasure in patronizing rising talent, it, at the same time, gives to the non-professional member of the Society, at the close of each season, the possession of two sketches, which he will estimate as pleasing reminiscences of the several artists' styles, in addition to their value as works of Art. It is gratifying to find that both artists and patrons entered into the plan with avidity, and consequently there is no doubt but it will be productive of lasting benefit. The peculiar feature of the Society is, that it consists of an unlimited number of members—one-third professional, and two-thirds non-professional; each professional member presents to the Society, on each evening of meeting, an original sketch as his contribution. There are four meetings in the year: on the last of which the presentation sketches are to be distributed by lot among the non-professional members, by which means each gentleman becomes possessed of two original sketches at the end of the season. All expenses of tea and coffee are defrayed out of the subscriptions of the non-professional members. The first meeting was held at the Adelphi Hotel, on Wednesday evening the 23rd of February. In addition to the presentation sketches, there were on the table many fine works on Art, and several pictures in progress were introduced by the respective professional members, which added greatly to the interest of the evening, and some substantial proofs were afforded of the benefits resulting from the Society.—I am, &c., SAMUEL EGLINGTON, Secretary to the Liverpool Academy of Arts.

## CORRESPONDENCE.

## THE SCOTTISH ART-UNION.

TO THE EDITOR OF THE ART-UNION.

SIR,—We have, at different times, observed in the ART-UNION various letters and articles on the subject of the Association for the Promotion of the Fine Arts in Scotland, the object of which seems to be to create an impression that Scottish Artists act in a most illiberal manner towards their brethren in the south, by using every means in their power to induce the Association to exclude from their purchases the works of English artists not resident in Scotland.

So far from the artists interfering in this matter, when the Association was first formed, they held a meeting to consider whether they should co-operate in any way with the Association, and they came to an unanimous resolution, that it would be improper, on their part, to interfere or to express any opinion as to its management. Accordingly, no artist has ever been a member of the committee of the Association, or has ever had the least control in the management of its affairs.

This principle of non-interference was carried so far, that when, some time ago, it was in the contemplation of a number of the artists to make an application to the Association to throw open its benefits to ALL ARTISTS, the resolution above-mentioned was thought to stand in the way of their taking such a step. But this resolution, though framed with the best intention, has had no good effect, and, as it has not protected artists from unjust suspicions, it cannot exclude any one from vindicating himself from unjust censures.

We (the artists subscribing) therefore come forward, and, through the medium of the ART-UNION (which we have no doubt will be as open to us as to those who have censured us), deny the truth of these accusations; and state to the public and to the Association, that there is nothing we so much desire as the opening of the Association to artists from every quarter. That we think that in their purchases the committee should be guided by the merit displayed in the works, and by no other consideration; in short, that they should act on the principle so admirably expressed in the late Sir Francis Chantrey's will, that regard should be had by the judges "solely to the intrinsic merit of the works, and that they should not permit any feeling of sympathy for an artist or his family by reason of his or their circumstances or otherwise to influence them."

We desire no monopolies, considering them equally hurtful in Art as in everything else. All we wish is the advancement of Art—British Art—which we think will be best forwarded by fair and open competition.

We are, &amp;c.,

[The above letter is forwarded for insertion in the forthcoming number of the ART-UNION. But for anxiety that the letter should be in time for the April number, more signatures could have been obtained.]

Edinburgh, March 23, 1842.

[We have never received a communication that has given us greater satisfaction than the one we here publish. We rejoice to be made the instrument of conveying to British Artists generally, the liberal and enlightened sentiments of their brethren of the north. The letter does them infinite honour; and we think cannot fail to produce an impression upon the "Society," by whose unwisely exclusive system it has been called forth. We trust we may be permitted to defend ourselves from the charge advanced against us—or, at least, implied—that we have represented the Scottish Artists as having been a party to this system, by endeavouring to "induce the association to exclude from their purchases the works of English Artists, not resident in Scotland." We really cannot call to mind any observation of ours that can bear such construction; but if we *have* made any remarks that convey such a notion, we readily and cheerfully recall them.]

SIR,—Agreeing as I do in principle with the observations you have appended to the letter in your last number, in which "A Member of the Art-Union of London" objects to the restriction of purchases by the Edin-

burgh Association to works of *Scottish Art*, it is impossible to deny that, when tested by its success in improving the character of our Exhibitions, that Association has hitherto fulfilled the end in view. The great progress displayed in successive years, proves that the stimulus of even a limited competition has, *as yet*, been sufficient among our artists. But it is obvious to all impartial observers, that this state of matters cannot continue, and that the very plea of past success becomes the strongest argument for opening up a competition, that must stimulate to further exertions. It is, therefore, to be hoped that your remonstrance will have its due weight, and that the committee will ere long turn their attention seriously to this very important question, apart from all narrow views. Indeed the time seems to have arrived, when the most advisable disposal of now vast resources of this body ought to be re-considered, and their whole constitution reviewed. Principles and details admirably suited for the due administration of some hundreds, may be questioned when applied to a revenue of as many thousands; and the committee would do well to borrow a hint from the recent proceedings of the Art-Union of London, as noticed by your correspondent, "Vigilans," in your number for this month.

You express your conviction that, "no one annual exhibition here, ever contained *good* pictures by Scotch artists to the value of £6000 or £7000;" and you are quite correct, if "value" is to be tested by the scale of prices paid elsewhere for similar works, executed by artists of equal professional repute. But it is a notorious fact that, as the funds of the Association have been annually augmented, the demands of the artists have advanced; and it would seem that each of them, convinced of the truth of your remark, has resolved to do his utmost towards relieving the committee of their unmanageable wealth, by asking an exorbitant quota in exchange for his own exertions. The plan adopted by the committee to cure this growing evil has enormously increased it, besides introducing a practice painful to themselves and degrading to the artists. That in many instances the committee offer a sum considerably below that demanded, is notorious, and it is no secret that unpleasant remonstrances have sometimes been the natural result of this most objectionable proceeding. Nor does the mischief cease here; for an artist who has received twenty or thirty per cent. less than the price which he in good faith affixed to his picture, is in some degree compelled to provide against the recurrence of a similar disappointment, by demanding on the next occasion a sum proportionally higher than he means to realize. It is whispered, that by this means even more has been sometimes obtained, than was expected or wished; and of course, under such a system, the motives of the committee are exposed to constant cavil. Far better would it be that the committee openly refuse to purchase such works as they consider priced above their value; but here again occurs the difficulty, that being, by the constitution of the Association, obliged to expend annually the subscriptions, they would, by adopting this resolution, be thrown back upon pictures unworthy of purchase or encouragement. Even this, however, seems the lesser evil of the two, and if practised for one year, the necessity for this measure would probably not recur.—Yours, &c.,

Edinburgh, March 8.

D. D.

SIR,—You say in your attack on the Art-Union of Scotland, that you will pay attention to any defence that may be sent you on the subject of the rule referred to by you and your correspondent.

Before you denounce, you should maturely consider the question in all its bearings; this you do not appear to have done; you seem to overlook the grand point, that the Scotch Art-Union is established for the express purpose of fostering and encouraging native talent; and will that be done if Irish and English artists come into the field? I throw not.

Then again, look at the wealth of England as compared with Scotland; it is to that land we look for aid. And would not the object of the Art-Union, North Britain, be frustrated, if the selection were not confined to Scottish artists? The generosity of England is so well known and understood among us, that we shall be sure to gain by our plan; and I do not think we have anything to fear from your rather ill-natured attack.

On the other hand, the English Art-Union would lose by confining its selection to England, for there would be shut out the finest, or some of the finest pictures produced; and again, England will benefit by fostering Scottish talent. Where is a name equal on the English list of Painters to Wilkie? And the Art-Union of

Scotland may be the means of bringing out another; indeed I think they would be delirious to their duty did they otherwise; and so the wealthy men of England would have an opportunity, I am sure they would gladly avail themselves of, of enriching their cabinets with gems, such as a Wilkie, or a Scotch artist only could produce. I do not know what you can mean by warning Englishmen against the applications on the part of the Art-Union, North Britain; they will subscribe with their eyes open, and you take it up as though some fraud were attempted.

Neither can I discover anything narrow-minded in the fact of a Society being established for the encouragement of *native talent*, and accepting foreign aid.

Yours, &amp;c.,

DUN SCOTUS.

[We insert the above letters, the one a comment upon, the other a reply to, our observations last month in reference to the illiberal and unwise principle upon which the Scottish Art-Union is conducted. We did not, indeed, expect an answer to our objections—and we have had none; for "Dun Scotus" leaves the matter where he found it, and will not alter the opinion of a single individual as to the policy and practice of changing a rule alike injurious and discreditable.

"DUN SCOTUS" is not, we presume, a *selected* champion; for instead of aiding he most materially damages the party he advances to defend. It would be very easy, but very unprofitable, to take his arguments to pieces.

The fact is, that the law of the committee of the Scottish Art-Union *must be abrogated*, or instead of augmenting their subscriptions annually, they will dwindle from year to year.]

MODELS FOR TEACHING PERSPECTIVE  
DRAWING.

SIR,—In the last number of the ART-UNION, I observe the name of a gentleman whom you state has recently introduced models as a novel system of teaching perspective. Precisely the same sort of models were used by the late Mr. Nattes for a period of nearly fifty years, ending in 1819; and I have ever since then continued the use of them in teaching practical perspective. You may see the boxes of models at Mr. Smith's, 34, Marylebone-street, Piccadilly (to whom I have made over the furnishing of them), if you think fit to call; and you will also see a very useful and ingenious additional set of models of buildings, &c., calculated to further the same object, which Mr. Smith's nephew has constructed. I give you the trouble of this, that you may know that the system alluded to in your work is not new, and that certainly Mr. Nattes was the artist who first brought the use of models into notice. I cannot but add that you will have conducted to the advancement of the science of perspective by your mention of the very admirable plan of communicating it, as it is a most complete and effectual method of attaining that which otherwise must ever be found not only a difficult task, but really a very dry one.

Yours, &amp;c.,

CHAS. RUNCIMAN.

5, Oxford Terrace,  
Edgware-road, Mar. 10, 1842.

[We have seen the models alluded to, and cannot agree with our correspondent that the little paper models sold by Mr. Smith are "precisely the same sort" as those figured in our last number; for useful as they are, they are neither so numerous, so well made, nor so ingeniously contrived as Mr. Deacon's; neither are they susceptible of those varied and picturesque combinations of geometrical figures into forms suggestive of actual buildings, which constitute the great merit of Mr. Deacon's. Our correspondent incorrectly assumes that the system advocated of teaching drawing from models was put forward as novel; the writer of the articles alluded to, was well aware that models had been occasionally used for years past, and more especially by that distinguished artist and teacher, Mr. J. D. Harding; and he has been gratified to find, that since the appearance of Mr. Deacon's models, the practice of teaching drawing from models has become much more popular than before. Some teachers, who had almost given up the occasional use of models, now employ them more frequently; and others, who had never made use of them previously, now resort to this means of teaching elementary drawing.]

CORK.—A letter, published in the *Cork Examiner*, states that Mr. Hogan, the distinguished sculptor, is engaged in completing his statue of Mr. Crawford. "The marble for which is said to be the most splendid and most transparent block that ever entered the Eternal City—being excavated from the first quarry at Carrara, and known by the name of Grestallo. It is more than 11 feet, and measures nearly 260 cubic palms—the largest block recollected to have been removed from that celebrated cave, as such pure marble runs chiefly in small pieces, and is generally used for busts and cabinet figures—always bearing an exorbitant price, even at Carrara."

## REVIEWS.

**THE TOWER; ITS HISTORY, ARMORIES, AND ANTIQUITIES.** By J. HEWITT. Published by W. SPIERS, 17, North Audley-street.

This might be the title to a voluminous history, considering the importance of the subject; but it is prefixed to a brief and unpretending essay upon arms and defensive armour, comprehending a period commencing with the Conquest, and terminating with the substitution of buff for steel in the seventeenth century. The Tower is described, gun-founding treated of, and the contents of the Jewel House are enumerated; but we are most interested in the treatise on armour, not only because it appertains legitimately to the category of subjects to which the artist applies himself, but because judicious study has been so neglected, that there are continually exhibited works of Art, the value of which is depreciated by the most glaring anachronisms. French artists spare no pains in the cause of accuracy in ancient armed and civil costume; and the result is, as may be expected, a singular fidelity to time and circumstance. Artists have complained of having no means of making themselves acquainted with the varied fashions of armed costume; and we can see abundant reason for such complaint, even up to the conclusion of the first quarter of the present century. Before Sir S. Meyrick arranged the armour in the Tower, chronology was, in that collection, everywhere outraged; and the complaining antiquarian was offended by the most absurd associations. William the Conqueror was equipped in a suit of plate armour; and even some of our latest kings, among whom were George I. and George II., were represented in like manner, armed at all points. The armour attributed to Henry V. was composed from suits of the periods of Henry VII. and Charles I.; John of Gaunt was accoutred as a knight of the time of Henry VIII.; and the helmet given to Queen Elizabeth was of the reign of Edward VI. We could multiply instances of similar discrepancies in the Tower armoury; but enough has been said to show into what errors artists have been led who placed any reliance in its arrangement previously to the changes effected by Sir S. Meyrick. It has moreover been a matter of some difficulty for unfriended artists to obtain permission to sketch in the Tower; we cannot, however, help thinking, that, for the sake of truth in historical Art, if representations were conveyed to the proper quarter, every facility would be afforded for study and research. It is gratifying to observe, that this collection has of late been improved by the addition of a few of the most remarkable suits of armour used at the Eglintoun tournament.

We have seen even the followers of the Conqueror painted in panoply; the heroes of the reign of Edward III. have been similarly treated; as have also the Paladins of Tasso, Scott, and of almost every esteemed writer whose *historia personæ* lived and moved before the period of our Richard II. Of English historical painters, West has, perhaps, been the most accurate in the chronology of the equipments of his armed figures; but for this he was indebted to the information kindly afforded him by Sir Isaac Heard, rather than to any research of his own. There is, however, one remarkable error in a picture by this distinguished painter, 'The Battle of Crecy,' now at Windsor. He has therein subscribed to a vulgar impression, by painting the Black Prince in black armour. There is no authority to show that this epithet was applied to the Prince because he wore black armour; but it may have arisen from his surcoat and caparison, which were both sable when he attended tournaments in France and England, but in the field of battle he always wore a surcoat emblazoned with the arms of England.

The defensive armour worn by the Conqueror and his followers was the hauberk—a cloth or leathern tunic covered generally with flat rings, sown on horizontally and contiguously. Sometimes this vestment was mailed with small plates of iron of other forms according to the taste of the wearer. The haubergeon was also in use at this period, and as well among the Saxons as the Normans. As mailing or covering a coat with *mailles*, or flat rings was the only method then known of guarding it with iron, the difference

between these defences existed rather in their fashion than in the manner of arming them. The head was defended by a hood overlaid with iron, in the manner of the hauberk to which it was attached; and this covering was surmounted by a head-piece, from the front of which descended a bar of metal called a *nasal*. The legs were protected by mailed hose, called *chausses*, which reaching to the top of the thigh, were covered by the hauberk or haubergeon. The offensive arms of the Norman knight consisted of the lance, at the end of which floated a streamer; the long sword and iron mace were also in use.

From the twelfth to the fourteenth century the hauberk was worn with tight sleeves; but considering the length of the interval, the improvements were not remarkable. It was made to fit the figure more closely from being drawn in at the waist, and the feet were protected by lengthening the chausses; the hood continued in use, but was separated from the hauberk.

Thus was constructed the first armour used in England for the defence of the entire person; and this we may term pure or unmixed mail, from its being formed entirely of the *mailles* already mentioned. It is a common error to speak of all kinds of defensive armour indiscriminately as *mail*, though the meaning of the word clearly defines the kind of defence to which it ought to be applied. There were three fabrics of armour entirely distinct from each other; these were mail, chain armour, and plate armour; a fourth may be added, being the mixed armour in use during the long period necessary in those ages to the improvement of the body defence into the ultimate casing of steel plates. Although the term mail is applied to most descriptions of armour consisting of rings and small *lamine*s of metal, it can, however, only properly designate vestments armed with the former, for the latter were cut into every shape which fancy and caprice could suggest. To distinguish two of these, Sir S. Meyrick proposed the terms *rustred* and *legulated*; another kind is sufficiently described by the simple appellation, scale armour. We cannot, in an article so brief as this must be, even enumerate the varieties of *pourpointrie*, or paddings employed for the protection of the person, as it is our object merely to mark the term of the prevalence of this or that fashion of armour (than which, we can here do no more), for the purpose of exhibiting to artists the necessity for observing that consistency which gives value to their works.

No part of the knight's harness was subject to so many changes as the helmet. During more than four centuries and a half the security of the head and face was an object of continued solicitude and experiment; but even in its latest and most elaborate construction the head piece was not sufficient, successfully to resist a skilful assault. Henry II. of France, received at a tournament in 1159, a wound through the bars of his visor which ultimately deprived him of life; an accident which had the effect of diminishing the popularity of these gallant assemblies; indeed, from about this period may be dated the positive decline of such amusements.

As early as the commencement of the thirteenth century detached plates of steel were in use. The first of these were the elbow pieces, after which knee plates, called *poleyns*, were added, then succeeded aillettes for the shoulders, and thus piece by piece the frame was encased in a suit of steel plates. Mixed harness, as an improvement upon a defence entirely of mail or chain, was worn of necessity only until the suit of plate was perfected. It can be said to have been generally in use only towards the end of the thirteenth century, and to have prevailed during a hundred years.

It is a curious fact, that a knight equipped for the tournament was encumbered with a mass of metal nearly equal to twice the weight he bore when armed for the field of battle. Defensive armour attained its utmost degree of perfection towards the end of the fourteenth century. The work under notice presents us as a frontispiece with an engraving of one of the most beautiful suits of armour in existence. This is the well known panoply in the Tower, which was made for Henry VIII. It is highly ornamented; but the most striking part of it is the *lamboys*, or steel plates pendent from the breast plate and garde-de-reins, and so forming a kind of skirt.

The accompanying engraving (No. 1.) of this

splendid equipment we extract from the work under notice.

This suit was fabricated to commemorate the marriage of Henry VIII. and Katharine of Arragon; and upon various parts of it are engraved the devices of each—the rose and the pomegranate. Upon the bars of the genouillieres is engraved the sheaf of arrows, the device adopted by Ferdinand, the father of Katharine, on the occasion of his conquest of Granada. The badges of Henry, the the portcullis, the fleur-de-lis, and the red dragon, are also seen in many parts of the suit; and on the lamboys appear the initials "H. K.," within a true-lover's knot. On the croupiere of the horse are the same letters, similarly united by a knot, which also includes a love symbol formed of half a rose and half a pomegranate. The breast plate is embellished with the story of St. George, on foot, encountering the dragon; and the back plate with that of St. Barbara. On the poitral, St. George is seen mounted, destroying the dragon; and in another design he is accused before Dioclesian. The croupiere contains six subjects—St. George extended upon the rack; a saint partially enclosed within the brazen figure of a bull filled with oil, which is about to be boiled by lighting a fire beneath; a female saint suffering decapitation, while in the background is described the retribution that awaits the persecutor; another saint about to be decapitated; St. Agatha led forth to be scourged; and St. Agatha being built up in prison. Round the lower parts of the horse armour appears repeatedly the motto, *Dieu et mon Droit*; and, in addition the subjects mentioned, the minor spaces of the equipment are filled up with arabesques, heraldic devices, human figures, animals, &c. This armour is of undoubted German fabric, and has been gilded, whence a superb effect must have been communicated to it. Much of the tracery is almost lost, but this could be restored by the process of regilding.

When plate armour had attained its utmost perfection, the suit was composed of the following parts:—The helmet, being of two kinds, the war helmet, and that for the lists; the gorget, covering the neck; the pauldrons, defending the shoulders; the rerebraces and vambraces for the arms, united by the elbow plates; the gauntlets; the breast and back plates; taces which were appended to the lower part of the breast plate; the garde-de-reins, similar pieces attached to the back plate; *cuisses*, small supernumerary plates to strengthen the defences of the hips and thighs; *cuissees*, or thigh plates; genouillieres, knee plates; jambaes for the legs; and sollerets or steel shoes, to which were attached the spurs. The additional pieces for the tournament were the placcate; a second breast plate; the volante-piece, more effectually to secure the helmet; the grande-garde, a piece of armour covering the breast and left shoulder, secured to the breast plate below by screws; the shoulder shield, a fixed shield protecting the left shoulder; the garde-bras, a similar piece covering the left arm; the tilting gauntlet, which was a long gauntlet for the bridle arm; the equipment for the tournament was completed by the ankle-guard, in addition to these supernumerary pieces.

In the early part of the seventeenth century the integrity of the suit was broken by the abandonment of the plates used for the defence of the feet and legs. The custom of wearing armour to the knees continued until the time of Cromwell, because the cavalry did not until then cease to use the lance; but when this weapon fell into disuse, the thigh plates were laid aside. The cavalry of the time of Charles II. wore the coralet, with the additional of shoulder and arm pieces.

The little work before us is not only an excellent guide to the Tower armories, but it will supply artists with a fund of information on this interesting subject. The accompanying cuts exhibit some specimens of head-gear which were in use at periods subsequent to the reign of Edward III.; for the use of these we are indebted to the proprietor of the work.

Fig. 1 (No. 2) is a salade; time of Henry VI. 2. Bassinet; time of Richard II. 3. Burgonet; time of Henry VII. 4. Burgonet; time of Henry VIII. 5. Tilting helmet; time of Elizabeth. 6. Morion; time of Elizabeth. 7. Combed morion; time of Elizabeth. 8. Spider helmet; time of Henry IV. of France. 9. Helmet; time of Charles I. 10. Open helmet; time of Charles I. 11. Barred helmet; time of Charles II. 12. Pot helmet; same

period. The cuts of ancient and curious weapons which we have also, by permission, selected from the illustrations, give a correct idea, allowing for size and proportion, of the method of arming the infantry of earlier times. (No. 3.)

From the importance to artists of the subject of this little treatise, we have noticed it at some length, with the hope of inducing more attention to armed costume in the works of those who paint history, and what our neighbours call, *le moyen age*.

The book is compiled from official documents in the Tower, and published by authority of the Board of Ordnance. Its appearance at this time is accidental: it was undertaken some months previous to the late fire, and but for that calamity, would have been published before. A singular circumstance in connexion with the work is that during the week immediately preceding the conflagration, that portion of the matter which describes the Grand Storehouse, was written. For want of a hand-book such as this, the antique

contents of the Tower armories must have been wholly unintelligible to the masses who have visited them since the fees have been reduced; and others deeply interested in such remains must have sought information in the tomes of Meyrick or Grose. The well directed labours of Mr. Hewitt have supplied a deficiency which we ourselves have felt; his well arranged digest of the contents of the Tower armories will be useful to all who may desire to know more of the armour than is afforded in the verbal summary of a warder.

REVUE GENERALE DE L'ARCHITECTURE ET TRAVAUX PUBLICS. Edited by M. CESAR DALY, archt. Nos. I. to XVIII. WEALE, London.

This very valuable monthly periodical, which addresses itself to architects, engineers, and archaeologists, and is written by some of the first men in their respective paths, in Paris, is much less known in England than it deserves to be: could we succeed in rendering it more so, we should confer a favour, not so much on the proprietor of the work in question as on the public. In all matters of Art, and all investigations of antiquity, our neighbours are at this moment most actively on the alert: further decoration of their beautiful capital, and the restoration of all their ancient buildings, are now dominant desires, and are displaying themselves universally in numerous ways. Any work, therefore, which will keep us *au fait* of their efforts to these ends, show us by engravings the prevailing character of their new buildings, and make us acquainted with all fresh information in the various departments of Art which may there arise, must, we should think, be eagerly welcomed, when known, by a large class of readers; especially if, as in this case, it be conducted with liberality and talent. Each number contains thirty-two pages of letter-press (large 4to.), three detached engravings, and numerous illustrative wood-cuts: it is beautifully printed, and, in all respects, well got up. Amongst the most important papers which the numbers already published contain, may be pointed out an "Essay on Byzantine Architecture," by M. Albert Lenoir, the well-known architectural antiquary; "on the Christian Architecture of the West," and the "History of Ornamental Sculpture in France," both by the same author; "on the Nimbus in Works of Middle-age Art," by M. Didron, one of the most zealous and able writers in France; and on the "Use of Bronze in Works of Art," by the talented conductor of the work, M. Daly. In one of the last numbers published, are given views and details of the facade of the Chateau Gaillon, erected in the year 1500 for the Cardinal d'Amboise. This facade, which is set up in the court of the Ecole des Beaux Arts, is an exceedingly interesting specimen of the Renaissance period, displaying a curious mixture of Gothic and Italian forms. All the parts are given at large, so as to become really available to designers, and are accompanied by an ample history and description from the pen of M. Lenoir. We cordially recommend the work to our readers.

THE PRINCESS ROYAL. W. C. ROSS, A. R. A. Engraved by H. T. RYALL. Published by T. M'LEAN.

This engraving will be hereafter accounted one of the select portrait gems of our time. The work is slight and free—the lines are well defined and decisive without being hard, and the flesh, with the happiest effect of *morbidezza*, would seem to yield to the touch. The portrait is a miniature; and is at once highly interesting from the expression of intelligence given to the features. All who see this engraving will be immediately struck with the resemblance of the Princess to the illustrious race whence she is sprung. In the lower part of the face she bears a singular likeness to her royal mother and other female members of the family, while the upper parts resemble the corresponding features of George the Fourth.

Portrait of the DUKE OF WELLINGTON. Painted by H. P. BRIGGS, R. A. Engraved by H. T. RYALL. Published by COLNAGHI and PUCKLE. Often as portraits of this great man have been presented to the public in every popular and available department of art, we have seen none more satisfactory than this. Mr. Briggs, in his picture, has consulted well the character of the Duke, as one to whom ceremony is distasteful—for nothing can exceed the simplicity of the arrangement. The *solo pinqi* aversions of the Duke seem to serve him but little, for even until the latest hour of his life the public will have before them one of these pictorial bulletins. The background is perfectly plain—but a word of that anon. The portrait is a half-length, and the Duke is standing with his arms folded, habited in a plain frock buttoned up to the throat; the eyes are cast downward, and the entire position is a thinking one. The head is admirably set upon the shoulders,

and seems capable of movement, the reverse of which is so often the case in our (as the Germans call it) "portrait-land." The entire treatment of the work reminds us strongly of the unabashed simplicity and uncompromising style of the late John Jackson, R. A. There is extraordinary power in the head—the hair is white, but without flatness or insipidity, and the shadows so truly graduated as to disengage it entirely from the background. The Duke's Peninsular honours and the glories of Waterloo are not forgotten; the latter are commemorated by the medal on the left breast, which materially aids the earnestness of the whole. Of the work of the engraver it behoves us to speak distinctly: the power and expression of *mezzo-tinto* engraving can never go beyond the effects of this plate; the figure is absolutely brought up to the white margin by the air and transparency thrown into the background; in short, the entire work is a combination of the happiest results of painting and engraving.

THE LAUNCH OF THE TRAFALGAR. Drawn by W. RANWELL. Lithographed by T. PICKEN. Published by Messrs. ACKERMANN and Co.

The size of this Lithograph is 30 inches by 21, and it is altogether one of the most important we have ever seen of its class. The point of time is the moment when the magnificent vessel has cleared the ways, and is fairly afloat. To do justice to such a scene as the launch of a first-rate, so near the metropolis, honoured by the presence of royalty, and touching with the talisman "Trafalgar" the chord of patriotism in the bosom of every Briton is an essay sufficiently daring; but the artist has acquitted himself to admiration. The print derives considerable value from the assistance of which the artist had opportunities of availing himself in its execution, for instance, Mr. Lang, from whose designs, and under whose directions, the Trafalgar was built, consented to draw the vessel, whence an undoubted resemblance of the noble ship is assured. The view is taken from the city side of the river, which, as the foreground, is crowded with craft of every description; the ship is shooting up the stream, and presents her broad side to the spectators, her main deck rising so high above all the surrounding vessels as to reduce them to a most insignificant account. The work throughout is so elaborate and careful as to present the appearance at first sight rather of an engraving than a lithograph. The print is a valuable acquisition to all "naval men;" and, indeed, to every Briton who desires to possess a worthy record of our "wooden walls." We are not acquainted with the artist, and know not if he has produced other works; but he has given evidence of ability bordering upon genius in the treatment of his subject.

THE COTTAGERS SABBATH; a Poem by SAMUEL MULLEN. Published by THOMAS MILLER, 9, Newgate-street.

A most pleasant and profitable poem; the production of a gracefully and happily toned mind; very simple in style, and very true to nature. It is illustrated by 17 vignettes, well engraved by Mr. W. R. Smith, from the designs of H. Warren—an artist whose pencil would confer value upon any publication. We have an especial object in noticing it—apart from its own intrinsic merit. It is, we believe, the first book issued by Mr. Thomas Miller; who has recently commenced business as a publisher. He has for some years obtained—and steadily maintained—high reputation as an author; his own earlier volumes, of poetry, have justly, a national fame; and his more recent novels rank foremost among works of fiction of our age and country. He is better known as "the basket maker;" for this humble calling he was pursuing when he first began to publish. We earnestly hope he will find, in the selling of books, equal fame, and more profit than in the writing of them.

THE ABBOTSFORD EDITION OF THE WAYERLEY NOVELS.—Our attention has been directed, but not until we were closing our labours for the month, to the advertisement which occupies a page of the ART-UNION. It is scarcely necessary to recommend to our readers the work to which it refers; it will be in all respects a magnificent undertaking; worthy of the Arts, the country and the estimable publisher whose name is unspeakably associated with that of Sir Walter Scott. He is producing the volumes on a scale of great liberality; few men, indeed, have ever

manifested a stronger anxiety to consider their labours deserving of the highest possible recompense—the enormous sale upon which he may calculate justifies such a course. We shall have more to say upon this subject ere long.

#### TO CORRESPONDENTS.

We have received an anonymous communication from Paris, upon the subject of the paintings executed by Paul Delaroche at the "Ecole des Beaux Arts." Had the writer not descended to personal abuse, or ill-tempered censures of literary men and artists—had he even evinced the slightest regard for the commonest rules of that courtesy which is due to all men, as it is the right of every man, we should gladly have given his letter insertion in our journal. But much as we respect truth, we must regard also the *mode* of its expression; and although truth requires no ornament, it is in our minds far too sacred a subject to be connected with vulgar passions. We are well acquainted with the variety of opinions upon the mediums employed by Paul Delaroche and other artists in their works at Paris. Mistakes upon this point have probably arisen, from the supposition that mural paintings are of necessity executed "al fresco;" nor were we unacquainted with the state of the frescos in Italy; but as men cannot give to plaster the durability of granite, or prevent the effects produced by earthquakes, and as it is not possible to combine in one age the advantages derived from the knowledge and scientific progress of many centuries, we are not surprised at an effect, for which it appears to us there is a well-acknowledged, adequate cause. We are, however, obliged to our correspondent for the information relative to "the various paintings on walls in churches and elsewhere at Paris;" we shall give it every becoming attention. We solicit contributions from every quarter, and from all men—from the young artist and the experienced professor—men of literature and the amateur; but as we do not pretend to a vigilance that we cannot exercise, so are we also decided on not making our columns vehicles for prejudice or abuse. Let him write in a different vein, and he will not find us heedless readers.

"UTILITY OF ART."—We thank W. C. S. and W. H. H. for their communications. The arguments of those who contend against what they term the "Utility of Art" are so palpably absurd, as really to demand no serious attempt at refutation. Society is in advance of the propounders and supporters of such theories; they have been born some centuries too late.

ART-UNION FOR SCULPTURE.—The hints and opinions of "A Subscriber" on this subject are not new to us. Much surprise has been expressed that a society has not been formed for the encouragement of Sculpture on the plan of an Art-Union. Our Sculpture consists for the most part of busts, monuments, &c., and we would gladly see the adoption of any effective means of elevating its character. We shall recur to this subject hereafter.

CITY MEDALS.—A correspondent (T. M. B.) writes to us on the subject of the proceedings of the Corporation of London, with respect to commemorative medals issued by that body, particularly alluding to the Exchange commemoration medal noticed in our last number; in addition to which unworthy transaction, "T. M. B." mentions circumstances in connexion with the issue of a former medal (that struck on the occasion of Her Majesty's visit to the City), which reflect deep disgrace on the greatest and wealthiest municipal body in the world. Of this, one of Mr. Wyon's best productions, it is said only a sufficient number were struck for the Aldermen and Common-Council; and our correspondent asks why an unlimited issue (to be paid for of course) was not permitted? Verily it were not difficult to assign reasons for such restriction. It is to be lamented that City affairs are administered by persons ("a plague upon their bringing up") under a certain standard of education.

LINE ENGRAVING.—We are, of course, desirous of seeing a greater degree of encouragement bestowed upon this beautiful and most important branch of Art, and concur entirely with the spirit of the remarks of "Candidus." The use of the electrotype is much to be deprecated for the supply of engravings to the Subscribers of the "Art-Union of London;" but we cannot help thinking that it arises only from a resolution of temporary expediency. We shall, however, seek further information.

Mezzotinto plates of all sizes are prepared to order by any of the houses which supply engravers with the line surface plate.

An Amateur who wishes to secure "an early copy of the work in preparation by THE PAINTERS' ENCHINO SOCIETY," is informed there can be no doubt of their intention to issue copies strictly in the order in which they are subscribed for. He may attain his object by writing to either of the members, whose names he will find printed elsewhere; or if he pleases, we will forward a letter for him to their secretary.

We fear we shall be again compelled to postpone an article on "Clay for Modelling." We have also, in type, three or four "Letters from Correspondents;" and several reviews of published works.

A few copies of the ART-UNION for March, with the sheet containing examples of wood engraving, still remain with the publisher; and may be obtained, of course, without any increase of price.

## MILLER'S SILICA COLOURS.

In introducing these Colours to the notice of Artists and of the Public, it will not, perhaps, be deemed obtrusive, if the Manufacturer presumes to offer a few remarks upon the subject, seeing that, by the application of many years' experience, aided by numberless experiments, he has, at length, most successfully accomplished his object, in bringing back to light a long buried secret of ancient Art.

The countless and laborious efforts that, from time to time, have been made by modern Artists, to produce Colours that might bear comparison in point of brilliancy and durability, with those of the Old Masters, are sufficiently known to need no further comment. It is likewise, unfortunately, but too well acknowledged how fruitless these efforts have been. For although, at first, their works might appear to vie successfully with the antique originals, yet when placed, a twelvemonth afterwards, by the side of their prototypes, how great a falling off was there! What an universal degeneracy of tint and tone! While the ancient productions seemed as fresh and vivid as if they were the creations of yesterday, and appeared by their undecaying brilliancy and clearness to deride alike, the attacks of time and the feeble competition of modern Art.

The injurious effects of light and atmosphere on the colours of the present day, are very clearly evidenced by the contrast of Ultramarine, which being manufactured on the same principle as the Colours of the Old Masters and the Silica Colours, has been erroneously supposed to have derived an accession of brilliancy from age. Such, however, is not the fact. The phenomenon of its apparently increased vividness, is the result of its simply retaining its original lustre, whilst that of the other colours of the picture has invariably declined and faded. Were any one sceptical of the superiority of ancient colour, every doubt might be easily removed by a glance at the two pictures of Francia, recently added to the collection in the National Gallery, and painted between three and four hundred years ago. The transparency and freshness of their tints have that time-defying character and gem-like lustre, that modern paintings seldom perhaps possess and never retain.

In the early periods of Art, the painter, having no colourman to prepare his colours for him, was compelled to seek and compose them himself, from whatsoever substances were at hand, from earths and stones; and chiefly from their use of such imperishable materials, unimpaired by chemical agency, may be inferred the great durability of his productions.

The present Silica Colours, now confidently submitted to the ordeal of public opinion, have already been severely tested by Artists of the first eminence, and by persons of scientific attainment, whose judgment has been unequivocally expressed in their favour; and who do not hesitate to affirm that they reveal the mystery of ancient colouring; and that they possess all the invaluable qualities of transparency, brilliancy, and durability, which are so eminently conspicuous in the works of the ancient painters.

The SILICIA OIL COLOURS are prepared in collapsible tubes, and can be forwarded per post to any part of the country, on receipt of an order, for any of the under-mentioned tints, viz.:

Pale and Deep Red.	
Pale and Deep Blue.	Pale and Deep Yellow.
Pale and Deep Orange.	Pale and Deep Purple.
Pale and Deep Green.	Pale and Deep Brown.
White and Half Tint.	Grey and Black.

VAN EYCK'S GLASS MEDIUM  
FOR OIL PAINTING.

This Medium having been tried by Artists of the first eminence, is found to be the grand desideratum for removing the existing evils of the Modern School; namely, the destructive effects of Varnishes, Oils, and M'guelps, as all pictures painted with them, after a time, lose their transparency and brilliancy, and become horny, spotted, and dark-coloured; whereas those painted with the Glass Medium have a most brilliant effect, and will be found to remain perfectly unchanged, as its durability can only be compared to painting in enamel.

## Glass Medium in Bottles.

- No. 1. For first and second painting.
- No. 2. For rubbing up powder colours with.
- No. 3. For third painting, finishing, and glazing.

Any of the above Media may be thinned, according to the taste of the Artist, with Florentine Oil.

## Glass Medium in Powder.

Nos. 1, 2, and 3.

If these powders be mixed stiff upon the palette with a small portion of Poppy Oil, it will enable the Artist to lay colour, pile upon pile, and to dip his pencil in water or oil at pleasure. It will also dry so hard that it may be scraped with a knife on the following day.

Artists are recommended to replenish their Colour Boxes with Colours prepared in Medium, as they will be found better in every respect than those prepared in the ordinary oils.

It is also requisite to remark, that while Artists continue to use colours as commonly prepared in oils, they only reap half the advantage resulting from the great improvement in the art—which the Media are acknowledged to be by upwards of one thousand Artists who have already tried and approved them.

**SILICA GROUND CANVASS.** This Canvass, not being prepared in the usual method with common oils, causes all colours used on it to dry from the bottom, and not from the surface, as is now the case, thereby, in the painter's phrase, giving a light within.

**SILICA VARNISH.** This varnish, not being made of soft gums, like the ordinary varnish, neither is it acted on by the atmosphere, which frequently occasions the effect of a thick bloom, similar to that of a plum, thereby entirely destroying the effect of the picture. All these evils are completely obviated by the use of the Silica Varnish.

T. MILLER, being the original preparer of this INVALUABLE MEDIUM, has the honour of supplying  
SIR MARTIN ARCHER SHEE, President of the  
Royal Academy,

Sir A. W. Calcott, R.A.	F. Y. Hurstone, Esq.

And many other Artists of Eminence.

T. MILLER gladly embraces this opportunity of publicly expressing his grateful acknowledgements to his numerous Patrons and Friends, both in this country and on the continent: and particularly those gentlemen, who, unsolicited, have so kindly forwarded to him letters testimonial of their entire approbation of the Glass Medium. Nor must he omit to mention (which he does from a sense of gratitude, rather than from a feeling of vanity), the presentation of a Silver Cup, by an artist of eminence, for his invention of the Silica Colours;—and Artists and the Public may be assured, that, with such a flattering stimulus to exertion, as the sufferages of gentlemen of first rate talent, he is not likely to relax in those efforts, whereby he first obtained their notice and approbation.

The SILICA WATER COLOURS are prepared in small squares, which possess many and great advantages over the Cake and Moist Water Colours, at present in use; and can be forwarded per post to any part of the country, on receipt of an order for any of the under-mentioned tints, viz.:

## Pale and Deep Red.

Pale and Deep Blue.	Pale and Deep Yellow.
Pale and Deep Orange.	Pale and Deep Purple.
Pale and Deep Green.	Pale and Deep Brown.
Pale and Deep Gray.	White and Black.

## To Water-Colour and Miniature Painters.

## MILLER'S GLASS MEDIUM.

It is well known that some preparation for giving brilliancy and depth to Water-Colour Painting, and for enabling the Artist to repeat his touches without disturbing the colours already laid on, has been long sought after; this new vehicle possesses all these advantages. When mixed with the colours it has a most brilliant effect, and will preserve delicate tints unimpaired; in durability it will approach nearer to Oil Painting than anything hitherto in use.

## Glass Medium in Bottles.

No. 1. For first colouring or laying on masses of colour. This dries so hard that the second colouring or finishing will not disturb it.

No. 2. For second colouring, glazing, and finishing.

## MILLER'S SKETCHING PENCILS.

- No. 1. Black for fore ground.
- No. 2. Grey for middle distance.
- No. 3. Neutral tint for distance.

1. The Chalks may be pointed to a very fine degree, by which they are capable of producing a most delicate outline.

2. The Drawings will not rub off, and may be kept in a folio.

3. The colours will blend together with or without the use of water, or with any other fluid.

For those parts of the Drawing which require a deep shade, the paper should be slightly wetted with a camel's hair brush when the Chalk of the required shade is to be applied, and the colours then spread according to the depth required.

## DISSOLVING VIEWS.

Colours prepared in small boxes, for painting the Dissolving Views, with directions for use. The same Colours are also applicable for painting the slide glasses of Magic Lanterns, and devices or ornaments on ground glass, in imitation of the old masters.

## MILLER'S NEW PALETTE

Is held in the same manner as the one in general use, but the thumb-hole is dispensed with, thereby obviating the annoyance resulting from oil and colour running through upon the hand, and will doubtless entirely supersede the present one.

T. M. has great pleasure to inform Artists that he has on sale all the Colours made by G. Field, Esq., author of "Chromatography," &c. &c.

He has also all the remaining stock of Ultramarines, manufactured by the celebrated Italian maker, the late G. Arzone.

## MILLER'S PREPARATION FOR CLEANING AND RESTORING OIL PAINTINGS,

In small boxes complete, with directions for use.

MILLER'S ARTISTS' COLOUR MANUFACTORY, 56, LONG ACRE, LONDON.

**RICHLIY ILLUSTRATED WORKS,  
PUBLISHED BY HOW AND PARSONS.**

## I.

Now publishing, in imperial 8vo., in Monthly Half-crown Parts,

**ENGLAND IN THE NINETEENTH  
CENTURY;**

**AN ILLUSTRATED ITINERARY,  
COMBINING VIEWS AND DESCRIPTIONS OF ALL THAT  
IS PICTURESQUE IN NATURE, WITH ALL THAT IS  
WONDROUS IN ART;**

And exhibiting England as it is, under its several aspects of Natural Scenery, Historic Memorials, and Productive Industry.

Edited by Mr. C. REDDING.

"The design of this work may be called a stupendous one. It is intended to present, as far as pen and pencil can accomplish it, a complete view of the present condition of England. English agriculture, and English manufactures, are to be brought into harmonious combination, and the picture is to be filled up with the varied peculiarities of national scenery, works of Art, and antiquarian remains. The commencement of this immense undertaking is as promising as can be desired. Lancashire, with its cotton manufactures, is well described by Dr. W. C. Taylor; and his exposition of the processes are aided by numerous excellent engravings. Due notice is also taken of natural and architectural beauties, and of public institutions of various descriptions. Mr. Redding (the editor of the work) has treated Cornwall with at least equal spirit, and his itinerary of that region will have for many readers the novelty and interest of travels in a strange country. His descriptions are also profusely illustrated; and the whole conveys a very vivid conception of Cornish scenery. There is a good map of each county given; and the general getting-up of the work, as regards the style of engraving, typography, and paper, deserves high praise. The publication has already sufficient merit to entitle it to public approval."—Morning Chronicle, March 3.

## II.

In imperial 8vo. (uniform with "Ireland"), containing Five Engravings on Steel, after drawings by D. M'Clise, R.A., and Fifty-eight superior Woodcuts, price 25s. in half-morocco,

**SKETCHES OF IRISH CHARACTER.**

By Mrs. S. C. HALL.

A New Edition, with Additions.

The Woodcuts embrace Scenes, Portraits, and Landscapes from Nature, by the following artists:—

PAINTERS.	ENGRAVERS.

**THE SPORTING SKETCH-BOOK:  
A SERIES OF CHARACTERISTIC PAPERS, CON-  
TRIBUTED BY CRACK AUTHORITIES.**

Edited by J. W. CARLETON, Esq.

Preparing for the press,

**THE BOOK OF BRITISH BALLADS.**

Edited by S. C. HALL.

The work will include the choicest of those that have been gathered, with so much industry and labour, by

PERCY, EVANS, RITSON, ELLIS, SCOTT, JAMESON, PILKINGTON, MOTHERWELL, AND OTHERS,

which rank among the most popular compositions in the language, but which have never yet been brought together. The engravings are to be on wood, from drawings

**BY THE MOST EMINENT BRITISH  
ARTISTS;**

and it is intended to introduce an illustration upon every page, so that the volume may contain

**ABOVE FOUR HUNDRED EMBELLISH-  
MENTS.**

Ample scope will thus be afforded for the display of that genius in design, in which the Artists of Great Britain have been hitherto unjustly contrasted (to their disadvantage) with the Artists of Germany and France, whose works, drawn on the wood, are generally considered of unapproachable excellence.

The volume will be "got up" so as to vie, in all departments, with the best productions that have been issued in any country. The precise form of publication will be forthwith announced by the publishers, Messrs. How and Parsons.

**PAPIER MACHE' PICTURE FRAMES.**

ARTISTS, PICTURE DEALERS, and others, are respectfully informed, that C. F. BIELEFELD has formed a large collection of new and elegant designs for Picture Frames, in the IMPROVED PAPIER MACHE'. The superiority of these Frames consists in their having all the effect of old carved work; many of the patterns represent exactly the finest carvings of the seventeenth century. The small parts are far less liable to injury than putty work. Papier Maché being a remarkably tough and hard substance, it never shrinks, and takes gilding very freely. The frames do not weigh one quarter the weight of others, and their price is below that usually charged. Many specimens are now on view at BIELEFELD'S PAPIER MACHE' WORKS, 15, Wellington-street, North, Strand; where, also pattern books may be had, price 14s., consisting of a variety of patterns of Picture and Glass Frames, and Window Cornices, already erected, and on sale.

**POOLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razor-makers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

**ELEGANT AND ORNAMENTED PICTURE  
FRAMES OF A SUPERIOR DESCRIPTION,  
WARRANTED TO CLEAN.**

C. J. ECKFORD, 45, FLEET-STREET, corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

**SPLENDID AND SUPERIOR GILT FRAMES.**

CHARLES M'LEAN, 78, Fleet-street (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**THE CHEAPEST MANUFACTORY FOR GILT  
AND FANCY WOOD PICTURE FRAMES.**

P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane, respectfully informs Artists, &c., that as he manufactures entirely on his premises every description of ORNAMENTED GILT and FANCY WOOD PICTURE FRAMES, he is enabled to offer them at such low prices that he defies competition. A most extensive assortment of every size Picture Frames kept ready. Re-gilding in all its branches in a most superior manner, cheaper than by any other house in the trade. Estimates given free of charge.

A large assortment of handsome ornamented swept Gilt Miniature Frames at 6s. each (glass included), not to be equalled for price and quality by any other manufacturer in the kingdom.

A list of the prices of Plate Glass, Gilt and Fancy Wood Picture Frames, &c., sent, pre-paid, to any part of the kingdom.

**HANOVER-SQUARE, OXYDATOR  
OFFICE, 35, GEORGE-STREET.**—The PATENT OXYDATOR and LAMP-GLASS PRESERVER, price 5s. complete, accomplishes all that is desirable in the table lamp. Simple in form, scientific in principle, and certain in action, it effects its object by giving from the surrounding atmosphere a large supply of Oxygen to the burner of the Lamp—in short, it carries low-priced oils to the level of the Spermi, and raises Spermi to a point of excellence unattainable by other means. No chimney-glass can be broken where it is used. A lamp kept burning for free inspection. Extra Glasses, 1s. each. Refined Table Lamp Oil, 4s. per gallon. The finest Spermi Oil, 9s.

UPTON and CO., Agents for Young's Patent.—The Trade supplied. Agents wanted.

**PAINTING IN OIL.**

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC  
TUBES, for COLOURS, OILS, VARNISH, MA-  
GYLP, ASPHALTUM, &c.**—THOMAS BROWN begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "BROWN'S PATENT" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

ON SATURDAY, 30th APRIL,

WILL BE PUBLISHED, IN ROYAL OCTAVO,

PART I. OF

## THE ABBOTSFORD EDITION

OF THE

## WAVERLEY NOVELS,

ILLUSTRATED BY

UPWARDS OF TWO THOUSAND ENGRAVINGS ON STEEL AND WOOD, BY THE MOST EMINENT ARTISTS.

The Work will appear in Half-crown Parts, each alternate Saturday, till completed; and, it is expected, will be comprised in about 106 Publications—if practicable, in 100; the Price, therefore, will very little, if at all, exceed that of the Edition of 1829—33, in 48 Vols., which had no more than 96 Engravings.

Each Part will have a Landscape Engraving, or a Portrait, done on Steel in the best manner, with a profusion of Illustrations on Wood, given with a Letter-press of 64 pages. The prominent Scottish Scenery, drawn by CLARKSON STANFIELD, R.A., in 1841, expressly for this Edition.

## EXTRACT FROM EDITOR'S NOTICE TO ABBOTSFORD EDITION.

This is the age of graphically illustrated Books; and it remained to affix to these Works, so interwoven everywhere with details of historical and antiquarian interest, such Engraved Embellishments as, had the author himself been now alive, his personal tastes and resources would most probably have induced him to place before students of antiquity and lovers of Art.

It was a favourite pursuit of SIR WALTER SCOTT throughout life, but especially in his most active period, to collect and arrange objects of Art connected with the historical events and personages recorded and illustrated by his pen: and it cannot be doubted that a series of Engravings, representing the Pictorial and Antiquarian Museum at Abbotsford, would furnish the most instructive graphic commentary that the body of his writings could receive from any one source whatever. This collection, therefore, valuable in itself, and doubly interesting as having been made by such a hand, has now been studied with care, and its various curiosities faithfully copied, for the exclusive purposes of an Edition of the Waverley Novels, which is to bear the title of

## THE ABBOTSFORD EDITION.

Fancy and ingenuity have already been largely employed on subjects drawn from these Works. The aim on the present occasion is to give them whatever additional interest may be derived from the representation of what was actually in the contemplation or memory of the Author when he composed them.

Accordingly, for this Edition, the real localities of his scenes have been explored; the real portraits of his personages have been copied; and his surviving friends and personal admirers, as well as many public bodies and institutions, have liberally placed whatever their collections afforded at the disposal of the eminent Artists engaged by the Proprietors.

The embellishments of THE ABBOTSFORD EDITION will exceed Two Thousand. Among the Painters whose Sketches have been employed, may be enumerated WILKIE—LANDSEER—ALLAN—ROBERTS—MACLISE—NASMYTH—LAUDER—SIMSON—DUNCAN—KIDD—BONNAR—TAYLER—SARGENT—and both the HARVEYS;—among the Engravers on Steel and Wood, MILLER—GOODALL—HORSBURGH—WILMORE—BRANDARD—RICHARDSON—THOMSON—BRANSTON—WILLIAMS—GREEN—JACKSON—LANDELLS—WHIMPER—and SMITH. The prominent Scenery described in the Novels has been adhered to with the utmost care, by CLARKSON STANFIELD, R.A., who spent last Summer in its investigation.

It is not proposed to enlarge, to any extent, the Annotations with this Edition; but some curious additions will be found, especially as to Guy Mannering, and the Bride of Lammermoor.

A MONTHLY JOURNAL OF THE FINE ARTS.

No. 40.

LONDON: MAY 1, 1842.

PRICE 1s.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE TO ALL PARTS OF THE UNITED KINGDOM.

## ROYAL COMMISSION OF FINE ARTS, WHITEHALL, APRIL 25, 1842.

1. The Commissioners appointed by the Queen for the purpose of inquiring first, whether, on the re-building of her Majesty's Palace at Westminster, wherein her Parliament is wont to assemble, advantage might not be taken of the opportunity thereby afforded of promoting and encouraging the Fine Arts in the United Kingdom; and, secondly, in what manner an object of so much importance might be most effectually promoted, have resolved, that it would be expedient, for the furthering of the objects of their inquiry, that means should in the first place be taken to ascertain whether Fresco painting might be applied with advantage to the decoration of the Houses of Parliament.

2. Although some years must elapse before the walls of the new buildings can be in a fit state for paintings of any kind, yet, as Fresco painting has not hitherto been much practised in this country, and as, therefore, candidates for employment in that mode of painting, whatever their reputation or general skill may be, will probably find it necessary to make preparatory essays, her Majesty's Commissioners think it expedient that the plan which they have resolved to adopt, in order to decide on the qualifications of such candidates, should be announced forthwith. With this view—  
Her Majesty's Commissioners hereby give notice—

3. That three premiums of £300 each, three premiums of £200 each, and five premiums of £100 each, will be given to the artists who shall furnish cartoons which shall respectively be deemed worthy of one or other of the said premiums by judges to be appointed to decide on the relative merit of the works.

4. The drawings are to be executed in chalk, or in charcoal, or in some similar material, but without colours.

5. The size of the drawings is to be not less than ten nor more than fifteen feet in their longest dimension; the figures are to be not less than the size of life.

6. Each artist is at liberty to select his subject from British History, or from the works of Spenser, Shakespeare, or Milton.

7. The finished drawings are to be sent in the course of the first week in May 1843, for Exhibition, to a place hereafter to be appointed.

8. Each candidate is required to put a motto or mark on the back of his drawing, and to send, together with his drawing, a sealed letter, containing his name and address, and having, on the outside of its cover, a

motto or mark similar to that at the back of the drawing. The letters belonging to the drawings to which no premium shall have been awarded will be returned unopened.

9. If a drawing, for which a premium shall have been awarded, shall have been executed abroad, or shall have been begun before the publication of this notice, the judges appointed to decide on the relative merit of the works may, if they shall think fit, require the artist to execute in this country, and under such conditions as they may think necessary, an additional drawing as a specimen of his ability; and in such case the premium awarded to such artist will not be paid unless his second drawing shall be approved by the judges.

10. The drawings will be returned to the respective artists.

11. The competition will be confined to British artists.

12. The judges hereafter to be appointed to decide on the relative merit of the works will consist partly of artists.

13. The competition hereby invited is open to all artists, although it has more immediate reference to Fresco painting.

14. The claims of candidates for employment in other methods of painting, in other departments of art besides historical painting, and in decoration generally, will be duly considered.

15. Her Majesty's Commissioners will announce at a future period the plan which they may adopt in order to decide on the merits of candidates for employment as oil painters and as sculptors.

16. The range of choice in regard to subjects which has left, in paragraph 6, to the discretion of the artists, has reference to the present competition only, and is not to be understood as implying the adoption of any particular scheme for the decoration of the Houses of Parliament.

17. The judges to be appointed to decide on the relative merit of the drawings will, it is presumed, be disposed to mark their approbation of works which, with a just conception of the subject, exhibit an attention to those qualities which are more especially the objects of study in a cartoon; namely, precision of drawing, founded on a knowledge of the structure of the human figure; a treatment of drapery uniting the imitation of nature, with a reference to form, action, and composition, and a style of composition less dependent on chiaro-scuro than on effective arrangement.

By command of the Commissioners,  
C. L. EASTLAKE, Secretary.

THE EIGHTH ANNUAL EXHIBITION of the NEW SOCIETY of PAINTERS in WATER COLOURS is NOW OPEN, at their Gallery, Fifty-three, Pall-mall. Admission, 1s.; Catalogue, 6d.  
JAMES FAHEY, Sec.

THE THIRTY-EIGHTH ANNUAL EXHIBITION of the SOCIETY of PAINTERS in WATER COLOURS, at their GALLERY, PALL MALL EAST, is NOW OPEN. Open each day from Nine till dusk.—Admittance, One Shilling. Catalogue, Sixpence.

R. HILLS, Sec.

SOCIETY of BRITISH ARTISTS, Suffolk-street, Pall-mall East.—The NINETEENTH EXHIBITION is NOW OPEN Daily, from Eight till Dusk. Admission, One Shilling. Subscription to the *Conversazione*, One Guinea.

The SECOND CONVERSAZIONE will be on SATURDAY next, the 30th instant.

EDWARD HASSELL, Sec.

CLOSING of the PRESENT EXHIBITION.

—BRITISH INSTITUTION, PALL-MALL.—The GALLERY for the EXHIBITION and SALE of the WORKS of BRITISH ARTISTS is OPEN DAILY from Ten in the morning till Five in the evening, and will be CLOSED on SATURDAY, MAY the 7th.—Admission, 1s.; Catalogue, 1s.

N.B.—The GALLERY will be RE-OPENED the end of the Month, with the Works of the late Sir DAVID WILKIE, R.A., and a Selection of the Ancient Masters.  
WILLIAM BARNARD, Keeper.

ROYAL MANCHESTER INSTITUTION.  
AN EXHIBITION of PICTURES, in Oil and Water Colours, Specimens of Sculpture and Casts, Architectural Designs, and Proof Impressions of Modern Engravings, will take place in AUGUST next. Works of Art intended for Exhibition to arrive at the Institution not later than the 25th to the 30th of July.

No carriage expenses will be paid by the Institution, except on works from those artists to whom the Exhibition circular has previously been forwarded.

Artists in London are referred to Mr. Green, 14, Charles-street, Middlesex Hospital; and to Mr. Chamberlain, at the Suffolk-street Gallery.

T. W. WINSTANLEY, Hon. Sec.

IMPORTANT in CONNEXION with the FINE ARTS.—The FOREIGN and BRITISH GALLERY of PAINTINGS, 213, PICCADILLY (late Lucca Gallery), is NOW OPEN for the first time, containing a magnificent exhibition of genuine first-class Gallery and Cabinet Pictures, by the following great masters:—Michael Angelo Buonarroti, 14 wonderfully executed Historical Paintings in distemper, upon canvas, extending upwards of 90 feet. The subjects from the Sacred Scriptures and the heathen mythology, painted by order of Pope Julius the Second; Titian's chef-d'œuvre, 'Joseph and Potiphar's Wife'; Correggio's celebrated 'Sleeping Cupid'; from the Angerstein Collection; Guercino's 'Virgin and Child,' called La Madonna della Scodella, from the Duke of Lucca's gallery; with others by Claude Lorraine, Guido, Murillo, Estevan Marc (the famous Spanish Battle Painter), Rubens, Schut and Segers, Paul Potter, Cuyp, Wilkie, West, Sir J. Reynolds, &c.: forming altogether one of the finest and most valuable and interesting Collections of Original Paintings ever brought before the British public.—Open daily from Eight a.m. until dusk.—Admission 1s.; Catalogues, with historical descriptions, 1s.

**THE LATE JOHN CONSTABLE, R.A.**  
A few Choice Pictures by this scarce and truly eminent English Landscape Painter to be disposed of.—For particulars apply to Mr. Templeman, Bookseller, 248, Regent-street.

ENLARGED AND CHEAPER EDITION.

Now ready, with 24 Plates, fcap. 8vo., 5s.,  
**MAXIMS AND HINTS ON ANGLING, CHESH, SHOOTING, and OTHER MATTERS; also, MISERIES OF FISHING.**

By RICHARD PENN, F.R.S.  
John Murray, Albemarle-street.

**FRESCO, ENCAUSTIC, and TEMPERA PAINTING.**  
Just published, price 5s., A

**PRACTICAL TREATISE on FRESCO, ENCAUSTIC, and TEMPERA PAINTING:** being the Substance of Lectures delivered in the years 1838, 1839, and 1840. By EUGENIO LATILLA.  
Published by H. Herring, 9, Newman-street, and sold by the Artists' Colourmen.

Lately published,

**THE PORTRAIT OF NAPOLEON, DURING THE HUNDRED DAYS.** Most exquisitely Engraved in the Line manner, by ARISTIDE LOUIS, from the original Picture painted by PAUL DE LA ROCHE.

Proofs before Letters, all sold; Proofs, ditto; Prints, India (a few left), £1 11s. 6d.; Prints, Plain, £1 1s.  
London: Published by Henry Graves and Co., Printers and Publishers, by Special Appointment, to her Majesty, and his Royal Highness Prince Albert, 6, Pall Mall.

Now ready,

**THE HIGHLAND DROVERS.—**  
Engraved in the line manner by J. H. WATT, Esq., from the splendid original picture painted by EDWIN LANDSEER, Esq., R.A.

Price: Prints, now ready, £3 3s. First Proofs, all sold.

Nearly ready,

**THE HIGHLAND WHISKY STILL.** Most exquisitely engraved in the line manner by ROBERT GRAVES, Esq., A.R.A., from the splendid original, painted by EDWIN LANDSEER, Esq., R.A.

Price: Prints, £2 2s. Proofs, £4 4s. Before Letters, £1 6s. A few Artists' Proofs, £8 8s.  
London: Published by H. Graves and Co., Printers and Publishers to her Majesty and H.R.H. Prince Albert, 1, Pall Mall.

**THE ROYAL MARRIAGE PICTURE.**

**MESSRS. HENRY GRAVES and CO.,** Her Majesty's Printers and Publishers in Ordinary, have authority to announce that, by her Majesty's special Permission, they have now the honour of exhibiting in their Gallery, 6, Pall Mall, the Grand Historical Picture of

**HER MAJESTY'S MARRIAGE,**

Painted by her MAJESTY's command for Buckingham Palace, by GEORGE HAYTER, Esq., M.R.S.L., her Majesty's Historical and Portrait Painter, and Painter in Ordinary.

Any attempt at description of this grand and noble Picture must be very imperfect. Not only has her Majesty been graciously pleased to honour Mr. Hayter with numerous sittings, but the whole of the Royal Family, Dignitaries of the Church, the Ladies and Officers of State, have all, by special desire, sat for their individual Portraits for this splendid National Picture (the private property of her Majesty); and which combines a Series of Authentic Portraits of the most illustrious personages of the age, and illustrates the only authorised memorial of the most interesting event

IN THE REIGN OF QUEEN VICTORIA.

**MESSRS. HENRY GRAVES and COMPANY,** Printers to her Majesty and his Royal Highness Prince Albert, have the honour to announce that they have nearly ready for publication, a beautiful and highly interesting work of HADDON HALL, DERBYSHIRE, consisting of twenty-six of the most beautiful Interiors and Exteriors of this interesting Remains of the Olden Time. Drawn on the spot, and on Stone, by DOUGLAS MORISON, Esq. Of a uniform size with the work on Belgium and Germany, by Louis Haghe.

Messrs. GRAVES and Co., in announcing this work to the public, beg to state that it is the most complete Series of Views of one building they have been able to select for publication. Many collections of Sketches have been submitted to them, but wanting that artistic merit which would enable them to place in the hands of Amateurs a volume equal to those which they have already published from the pencils of Stanfield, Roberts, Lewis, Prout, Haghe, and Müller.

Such a Series has now offered in the admirable Drawings of Mr. Morison, which, for fidelity and beauty, cannot be excelled; and the publishers feel assured it will not, under his experienced hands, be inferior to any of the volumes they have previously published.

The Volume will consist of Twenty-six Plates, Imperial Folio, price £4 4s.

Subscribers' names received by Henry Graves and Co., Printers and Publishers, by Special Appointment, to her Majesty, and his Royal Highness Prince Albert, No. 6, Pall Mall.

On Saturday, the 14th of May, will be published, No. 1. of a NEW WEEKLY JOURNAL, entitled

**THE ILLUSTRATED LONDON NEWS.**  
Price Sixpence, Stamped, containing Thirty Engravings every week. From Designs by eminent Artists, being Pictorial Representations of the most interesting Events of the Day, in addition to Forty-eight Columns of News.

Orders received by every Newsman and Bookseller throughout the Kingdom. Office, 320, Strand, London, where Advertisements, Books for Review, and all communications are requested to be addressed.

Just published, in 4to., price £2 2s., in French boards, and on royal paper; with proof impressions of the Plates, price £4 4s., half morocco, gilt tops.

**DISCOURSES delivered to the STUDENTS of the ROYAL ACADEMY,** by Sir JOSHUA REYNOLDS. Illustrated by Explanatory Notes, and Twelve Plates. By JOHN BURNET, F.R.S., Author of "Hints on Painting," in 4to., price £4 10s.

James Carpenter, Old Bond-street.

Published this day,

**FINDEN'S ROYAL GALLERY of BRITISH ART.**

PART IX. containing—

**OBERWESEL on the RHINE.** Painted by J. M. W. TURNER, R.A.; engraved by J. T. WILMORE.

**OTHELLO relating his ADVENTURES.** Painted by D. COWPER; engraved by E. FINDEN.

**THE REDUCED GENTLEMAN'S DAUGHTER.** Painted by R. RYDGRAVE; engraved by R. HATFIELD. Engraved in the finest line manner from the Original Pictures.

London: Published for the Proprietor, by T. G. March, 4, Hanover-street; and sold also by F. G. Moon, 20, Threadneedle-street; and Ackermann and Co., Strand.

Just published, in royal 4to., price £1 5s. bound,

**RUSTIC ARCHITECTURE—**

**PICTURESQUE DECORATIONS OF RURAL BUILDINGS in the USE of ROUGH WOOD, THATCH, &c.** Illustrated by Forty-two Drawings; consisting of Plans, Elevations, Sections, and Perspective Views; the Doors, Windows, Chimney Shafts, &c., drawn geometrically to a large scale; with descriptions and estimated costs. By T. J. RICAULT, Architect.

"We have repeatedly and strongly recommended this elegant and useful work, and can safely say, that we think no gentleman who purchases it will be disappointed."—London's Gardeners' Magazine.

James Carpenter, Old Bond-street.

ALBEMARLE STREET, May 1842.

WORKS ON

**ART, PAINTING, ARCHITECTURE, &c.**

I.

**ANCIENT SPANISH BALLADS:** Historical and Romantic. Translated, with Notes, by J. G. LOCKHART, Esq. Embellished in a New and perfectly Original manner. 4to., £2 2s., or in Morocco, £2 12s. 6d. A New Edition now ready.

II.

**CHILDE HAROLD'S PILGRIMAGE.** By LORD BYRON. A New and Beautifully Illustrated Edition, with Sixty Engraving by Finden, from Original Drawings made on the spot, by Eminent Artists. Royal 8vo., £2 2s., or Proofs on India Paper, £3 3s.

III.

**THE MANNERS, CUSTOMS, RELIGION, AGRICULTURE, &c., of the ANCIENT EGYPTIANS,** derived from a twelve-year's residence in that country, from the study of Hieroglyphics, Sculpture, Paintings, and other Works of Art, still existing, compared with the Accounts of Ancient Authors. By Sir GARDNER WILKINSON. With 600 illustrations, 6 vols. 8vo. £6 6s.

IV.

**HAND-BOOK of ITALIAN PAINTING.** Translated from the German of KUGLER, by a LADY; and edited, with Notes, by CHARLES LOCK EASTLAKE, R.A. Post 8vo., 12s.

V.

**HAND-BOOK to the PUBLIC GALLERIES of ART in and near LONDON.** By MRS. JAMESON. Post 8vo., 18s.

VI.

**ESSAY on ARCHITECTURE.** By the late THOMAS HOPE, Esq. Illustrated with nearly 100 Plates. Third Edition, revised. 2 vols. royal 8vo., £2.

VII.

**GOETHE'S THEORY OF COLOURS.** Translated from the German, and edited, with Notes, by CHARLES LOCK EASTLAKE, R.A. With Plates. 8vo., 12s.

Preparing for Publication.

**THE LIFE of SIR DAVID WILKIE, R.A.,** his Tours in France, the Netherlands, Italy, Spain, Germany, Turkey, the Holy Land, and Egypt; with his Select Correspondence, and Remarks on Arts and Artists. By ALLAN CUNNINGHAM, Esq. 3 vols. 8vo. John Murray, Albemarle-street.

Preparing for immediate publication,

**A BEAUTIFUL and highly interesting work of the RECENT OPERATIONS of the BRITISH ARMY in AFGHANISTAN.**

Consisting of Views of the most interesting Scenery and Passes through which the Troops marched, with Figures illustrative of the memorable events which occurred during the Campaign, and descriptive of the Manners and Customs of the Natives. By JAMES ATKINSON, Esq., M.D., Superintending Surgeon of the Army of the Indus.

Drawn on Stone by LOUIS HAGHE, Esq., of a uniform size with the beautiful work on Belgium and Germany, from the original and highly finished drawings executed on the spot. Price: Royal folio, £4 4s.; coloured and mounted in folio, £10 10s.

London: Published by H. Graves and Co., her Majesty's Publishers in Ordinary, 6, Pall Mall.

**UNDER THE IMMEDIATE SUPERINTENDENCE OF THE COUNCIL OF THE GOVERNMENT SCHOOL OF DESIGN AT SOMERSET HOUSE.**

**A DRAWING-BOOK;** containing Elementary Instructions in Drawing, and illustrating the Principles of Design as applied to Ornamental Art.

This work will be published in Numbers, and the Council have arranged that it should be sold at a price little exceeding the cost of production; so that, as far as possible, it may come within the reach of all classes of persons desirous of instruction in Drawing and the Art of Design.

**THE FIRST DIVISION**

Is to be devoted to elementary instruction, and will exhibit a course of Outline Drawing (including both geometrical and free-hand drawing) and Shading, illustrated by numerous examples, as well modern as ancient, so as to form a complete course of instruction preliminary to drawing from the life. This will consist of FOUR PARTS, each containing Fifteen Sheets, of Examples and Letter-press, price 3s. 6d.

**THE SECOND DIVISION**

Will contain examples illustrative of the Principles of Design, and also Designs applicable to particular branches of Manufacture. It is intended that each Division should be accompanied by an explanation of the figures, and also directions as to the mode of teaching, so that the work may be used in schools, or by persons intending to learn without the assistance of a master.

\* \* The First Part will be published on the First of June, and the others will follow at regular intervals of Two Months.

Chapman and Hall, 186, Strand.

**OLIVER'S PICTURESQUE SCENERY OF THE PYRENEES.**

Shortly will be published,

**TWENTY-SIX VIEWS in the PYRENEES,** drawn on the spot, in 1839, by Mr. WILLIAM OLIVER, and lithographed in the first style of Art by Messrs. LEWIS and CHARLES HAGHE, Boys, Bourne, &c. &c.

These Prints are executed in the same style and are of the same size as the popular works on Spain, by Messrs. Vivian, Roberts, &c., and present a remarkable series of well-chosen Views of the interesting and picturesque Scenery of a country rich in the sublime and beautiful, and as yet but little known to the public through the agency of the Arts.

The subjects chosen from Mr. Oliver's very extensive collection are as follow, viz.:

Barèges les Bains; looking towards St. Sauveur les Bains.

Château de Lourdes; Hautes Pyrénées.

Amphithéâtre of Gavarnie, and Brèche de Roland.

Château de Beaucens, Valley of Argelez.

Old Church of the Templiers at Lux.

Pass into Spain from Cauterets to the Baths of Ponticouze.

St. Sauveur les Bains, Valley of Barèges.

Lac de Gaube, near Cauterets.

Château and Town of Pau. Birthplace of Henry IV. of France.

Eaux Chaudes; Basses Pyrénées.

Bagnères de Luchon.

Bagnères de Bigorre, and Valley of Campan.

Pierrefitte; Valley of Argelez.

Cauterets.

Chaos; Pass of Gavarnie.

Château de Corroze; where Henry IV. of France was educated.

Eaux Bonnes; Basses Pyrénées.

Castle and Chapel of St. Aventin, near Bagnères de Luchon.

Castle and Town of St. Beât.

Village of Gèdre and Brèche de Roland.

Town and Château of Foix; formerly the residence of the Counts of Foix.

Pic du Midi, from the Pass of the Tourmalet.

Monastery of St. Savin, Valley of Argelez.

Arles, near St. Beât.

Town and Bishopric of St. Lizier.

Toulouse.

Plain copies, with tint, half-bound morocco, £4 4s.; coloured copies, mounted on card-board, and imitating the original drawing, with a Portfolio, £10 10s.

London: published by Messrs. Colnaghi and Puckle, 23, Cockspur-street, where the original drawings may be seen. Names of Subscribers received by them, and by Mr. W. Oliver, 26, Charles-street, Berners-street.

## COPYRIGHT.

THE bill which Mr. Emerson Tennent has just brought in for extending the Copyright of Designs for ornamenting articles of manufacture is too deeply interesting to artists and to the public generally, not to attract the attention of all who are interested in securing the rights of property to industry and talent on the one hand, and all who deem that the moral interests of society will be promoted by the diffusion of taste on the other. Often as the subject of copyright has been discussed, there are still many errors prevalent respecting its nature and importance, and there is none more common nor more flagrantly absurd, than a belief that authors and artists are looking for a special boon at the expense of the rest of the community. Mr. Emerson Tennent's bill relates chiefly to designs for calico-printers, but it involves principles of much wider range; it raises the question whether a man has a right of property in the thoughts of his own mind; whether the work of the head is to be thrown open to every invasion of fraud and plunder, while the productions of the hand are secured by every fence which legislative wisdom can devise.

That a man's thoughts are his own is a proposition which nobody would dream of disputing; that these thoughts are of no value to the community, while they are confined to his individual consciousness, is equally undeniable; the exact question then is, whether the production of thought for the benefit of society deprives the producer of all right of property in the results of his mental labour, and transfers the right to that host of freebooters, calling themselves free-traders, who love "to reap where they have not sown, and to gather where they have not strawed." This convenient phrase, "free trade," has been for ages a genteel expression for open robbery; the buccaneers called themselves "free-traders" in the last century, and the slave dea-

lers have adopted the same designation in the present. Their notion of freedom is not original; it is at least as old as the days of Cromwell. "I wish I were free! I wish I were free!" shouted one of the Levellers at one of the tumultuous assemblies called organs of public opinion, because they were craftily directed to forward private ends. "Free!" replied an officer, "are you not free to do as you please?" "Ay," answered the honest politician, "but I am not free to make you do as I please." Equally ancient, and even more so is the notion of "fair exchange" promulgated by these ingenious economists; it is borrowed from the moral code of the Arabs and Turcomans, and may be stated in the simple aphorism, "Seize all that you can grasp, and give nothing in return." Their notion of property is also venerable for its antiquity; when translated into plain English from the jargon in which it is disguised, we find that they simply mean to say, "what's yours is mine, and what's mine is my own."

Let us take an instance of one of the many possible wrongs which may be perpetrated under the name of free trade. A painter has produced a picture in which are combined the finest suggestions of sublimity and beauty that can be derived from form and colour. The thoughts of years, the study of a past life, the researches of unwearied industry, repeated trials and repeated failures have been working together and breaking down health, spirits, and constitution before the glorious composition, passed from the airy nothingness of ideality into embodied vitality on the canvass. Is this, which actually partakes more of the nature of creation than of fabric, a property recognised by law? Is this design or this composition, the result of toil and suffering, and hopes and fears, such as none but an artist can appreciate, secured to the producer? Not a bit of it; he has property in the piece of canvass, but the entire design with all its details belongs to you or to me, or to anybody else who can find an opportunity of copying it. You are at perfect liberty to bribe his servants, or the officers of any exhibition to which it may be entrusted, to copy it in any way which an unscrupulous conscience can suggest or manual dexterity execute. You may engrave, lithograph, or daguerreotype; you may carry off the outline on tracing paper, or employ some inferior artist to steal a sketch; you may caricature or represent faithfully; you may exhibit the subject on sign-posts and tea-boards, until it has wearied out the world by sheer repetition; but you need not bestow a thought upon the original artist, because forsooth his right would interfere with the "freedom of trade." Some old philosopher has said, that "nonsense will pass for wisdom when it is frequently repeated;" and it appears also, that robbery may be accounted honesty provided it has the same advantage.

Take another instance: a calico-printer is anxious to raise the standard of taste in the article of furniture cottons; he actually engages artists of the first taste to visit Spain, and bring him designs from the arabesques of the Alhambra, and the Alcazar of Seville; he spends large sums in having patterns framed from those designs, so as to accommodate them to the materials on which they are to be printed; as nothing but a high price will remunerate such an outlay, he has these designs printed on the best cloth that can be made, in the finest and permanent colours that can be procured. You, gentle reader, may probably suppose that he will be allowed to reap the reward of enterprise, outlay, and public spirit. No such thing; long before he can come into the market, with such a publicity as to command a remunerative sale, any unscrupulous rival may copy his designs without contributing a fraction towards their cost, print them on inferior cloth with fading colours, and not only undersell the original proprietor in the market, but actually ruin his entire sale, by leading purchasers to believe that the deficiencies of the

counterfeit extended to the original production. Ordinary persons might suppose that such a proceeding was not very unlike fraud,—but the class of political economists, profiting by such transactions, will tell you that it is a necessary consequence of the freedom of trade; and add, with more truth, that they could not get on very well without such a system.

Any one who will take the trouble of wading through the evidence brought before the committee of the House of Commons on the Copyright of Designs, will find therein an edifying code of morality, such as could not be surpassed if the banditti of the *campagna di Roma* took it into their heads to draw up a system of ethics. The policy of encouraging piracy as a branch of national industry was very eloquently recommended to the legislature by several worthy witnesses; and, in order that their logic should correspond with their moral science, they assigned reasons so utterly inconsistent, or rather so completely contradictory, that they could supply all the Universities of Europe with professors of self-refutation. But people must make mistakes when the train of reasoning is directed by the breeches-pocket.

One argument, or rather semblance of argument, is frequently urged by this sapient school of political economists, which they believe to be conclusive against the claims of authors, artists, and designers. They aver that "there is nothing new under the sun," their own nonsense not excepted, and that consequently every composition of skill, talent, or genius, is but a fresh arrangement of old materials accumulated by the exercise of similar qualities of mind in past ages; and hence they infer that society has a right to the results of which it has furnished the essential elements. Let us try the validity of this result by applying it to a parallel instance. There is no doubt that the most skilful farmer is indebted for a great portion of his harvest to the agricultural knowledge which has been accumulated by the experience of past ages; but does this give any right to John Nokes or Peter Styles to enter into his fields and carry off as many sheaves of his wheat as they in their wisdom believe to be a surplus produce obtained only through his derivative knowledge? No doubt we are all indebted to science, using the word in its proper sense, accumulated knowledge; but it is the application of that science which gives it value, and every man knows that to give value is in all human affairs but another form of expression for the creation of property. The combining power of the artist or designer is actually as much his own as the superintending skill of the agriculturist.

In fact, the processes by which intellectual property is created differ in degree rather than in kind from those by which material property is produced, and an examination of the differences would prove that the former has the greater claim to protection, inasmuch as there is more individuality engaged in the production. Society lends far less aid to the poet, painter, or designer, than it does to the mechanic or artisan; and we should be glad to know on what principle society claims to take most from those to whom it gives least.

Intellectual property is recognised by the laws of every civilized community: and strange, indeed, would it be if the labour of the head should be refused any share of the protection accorded to the labour of the hands. But, at the same time, it is undeniable that there is a less scrupulous observance of intellectual than of physical rights; and that men will not hesitate to filch ideas who would shudder at the notion of robbing a house or picking a pocket. Property, which from its immateriality, can be stolen through a window, without cutting out a plate of glass; which can be carried off by the eye, without being traced or found upon the person; which is beyond the jurisdiction of those laws that punish by a criminal, and not by a civil process; which is guarded neither by high moral feeling, nor the dread of moral re-

proach, enjoys but a precarious security. Are we therefore to declare, that the property most liable to be invaded is that to which the protection of law should ostentatiously be refused? In other cases, facility of injuring valuable property has been set forward as a reason for investing that property with additional fences and securities; we may instance the case of forgery; but in literature and art the very helplessness of the proprietors is assigned as the cause why law should afford no aid to the maintenance of their rights. We have been told from our infancy, that law was instituted to defend the weak against the strong; and now comes a school of politicians maintaining that weakness is a proper and sufficient ground for withholding legal protection altogether.

The advocates of piracy very rarely condescend to argue the morality of the question; like the slave-dealers, they assert that, because trading with other men's labours and trading with other men's lives, has been allowed in ages of barbarism and ignorance, that therefore the system of wrong should be perpetuated, and injustice beget injustice to the end of the chapter. There is an association of calico-printers to maintain piracy, as there was an association of merchants to support the slave-trade; the arguments of both have a whimsical identity, and are equally remarkable for displaying a splendid contempt, both for logics and ethics.

Thus we are told that piracy in design, though not justifiable on abstract principles, is beneficial to the community by keeping down the price of printed calicoes, just as the slave-trade was recommended for supplying cheap sugar. Experience, however, has shown us that the surest means of insuring a cheap supply of anything is by competition; there will always be such a competition if all the calico printers be placed on the same level and started fairly in the same race, protection to design being granted as a counterpoise for the very light weight of conscience with which some of them are loaded. But excellence is desirable as well as cheapness; and excellent designs will not be produced unless there is some reasonable prospect of a remunerative sale. The printing of the choicest patterns on the best materials is necessary for encouraging the production of tasty designs; and a restriction in the use of the pattern, so as to remunerate the designer, is simple justice to him and an injury to nobody.

One of our philosophic wisacres has controverted these positions. He says, "It would be a scandalous grievance if every servant maid could not wear the same print in cotton that her mistress does in silk or muslin." In Sheridan's farce of the *Critic*, we find that when *Tilburina* goes mad in white satin, her attendant goes mad in white dimity; but it is certainly an improvement to extend the connexion between maid and mistress to cases of sanity. Perhaps this learned *arbitrator elegantiarum* would condescend to draw up a code for regulating the relations between the costume of the drawing-room and that of the kitchen, and prepare a tariff of the substitutes for furs and feathers to be worn in the lower regions. Assuredly men must have been driven hard to find arguments, when they discovered it to be a grievance that the maid should not wear the same patterns as the mistress. Still this pompous blockhead has unwittingly directed attention to a fact of considerable importance to the discussion, the advancement of a taste for elegance and refinement corresponding with the general progression of society. This taste has become a want which must be gratified; and if handsome patterns are not produced at home, they will be, as indeed they are, imported from abroad.

France is decidedly superior to England in the Art of Design, and this superiority is evinced not only in the production of magnificent and costly, but also in the more chaste and simple patterns. How could it be otherwise? In France property in design is recognised and taken under the full protection of law. So long as July 14th, 1787, a

decree of the royal council gave a copyright of fifteen years in silk tapestries, and of six years in patterns designed for dress and other purposes. The words of the decree are so remarkable, that we must make a short extract:—

"The King, in Council, having caused to be laid before him the representations and memorials of the manufacturers of Tours and Lyons respecting the attacks upon their property and the general interest of manufactures, by copying and counterfeiting designs, his Majesty recognises that the superiority which the silk manufacture of his kingdom has acquired, is principally due to the invention, correctness, and good taste of designs; and that the emulation which animates the manufacturers and designers will be annihilated, if they were not assured of reaping the reward of their labours; and that this certainty in accordance with the rights of property, has maintained this manufacture to the present time, and secured for it a preference in foreign countries."

Compare this decree with the following open, deliberate, and avowed attack on intellectual property, contained in a petition presented to the House of Commons by a numerous and wealthy body of the manufacturers of Manchester, described by Mr. Thompson, of Clitheroe, as "that section of the print-trade whose chief distinction is their unscrupulous morality with regard to property in designs." Their precious petition sets forth,

"That the inventors and printers of designs have no just title to any further advantages than those they must always necessarily possess—the means of entering the market with a pattern before any other house can do so; of being the only holders until other houses can bring it round, and of being known in the trade as the originators of that pattern."

The coolness with which this astounding proposition is put forward is admirable. It is just as if Fagan's gang had proclaimed "That the earners and possessors of money have no just title to any further advantages than those they must always necessarily possess; the means of entering the market with cash before the thieves can do so, of being the only holders of gold until artful dodgers abstract it, and of being known in the trade as persons capable of earning money." The morality of both is alike, and if there be any difference it is in favour of the pick-pocket, for he runs some risk who steals by means of the hand, which is evaded by those who steal by means of the eye.

But copyright is necessary even to secure the miserable advantages which the worshipful body of pirates concede to proprietors. Did they never hear of workmen being bribed to betray patterns, and of the counterfeit appearing in the market at the same time as the original? Three months' copyright are now allowed; and it is notorious, that the pirated patterns of successful designs are prepared so as to enter the market on the very day that protection expires.

While the art of printing has made gigantic strides, that of pattern-drawing has actually retrograded, and we are forced to depend for designs on the artists of Paris. We are told, indeed, that designers are engaged at print-works, but with some few exceptions their art is treated as a mechanical employment and rated at weekly wages, and the rate of their wages is in some instances below that of the more respectable class of operatives. Here then is a branch of intellectual industry which we are actually banishing from the country by cruelly and unjustly refusing protection to its produce. "Such," says Mr. Thompson, "are the effects of inadequate protection. Insecurity of property produces on industry and exertion the same withering effect, whether the spoiler be a Turkish Pacha in the despotic East, or an English pirate in this land of liberty and law."

Copyright, it has been said, will establish a monopoly; but it will do so only in the same sense that the possession of any property estab-

lishes a monopoly. Are we to deprive the squire of his estate, because he has the monopoly of all the land in the parish? We should be very glad to ask the advocates of piracy if they are excluded from producing new designs when they are prohibited from copying the inventions of others? They may tell us that they have neither the talent to devise patterns themselves nor the liberality to remunerate the talent of others. What, then, is their demand when they resist the establishment of a copyright in design? It is simply that the nation should sanction piracy for the purpose of giving prizes to stupidity and rewards to avarice.

We do not confine our claims for the protection of intellectual property to copyright in designs, though we have dwelt chiefly on this branch of the subject, because it involves the widest and most pressing interests, and also because in this branch the policy of piracy has been openly avowed and defended. We have examined serially the chief arguments, or rather apologies for argument which they have brought forward, and shown that they are not one whit better than palliatives of selfish injustice, which, in a case where their own interests were not involved, could not possibly have imposed upon themselves. On the score of morality nothing more need be said; but it is necessary to make some remarks on the connexion between copyright and the general interests of the country.

Production of novelty is utterly impossible in a country where a system of copying is carried on to a great extent. The Americans are just beginning to discover that the reprinting of English works is fatal to the growth of their native literature, and are lending an ear to the proposition for establishing an international copyright. It is true that Leopold, King of the Belgians, has actually taken the trouble of recommending the piracy of English books to the printers of Brussels, they being already notorious for their piracy on French and German works. But the Belgian monarch stands nearly alone in this exhibition of public morality; the other potentates of Europe have learned that an honest protection of intellectual property is necessary for the development of original genius and talent.

It is utterly absurd to suppose that the English are naturally inferior to the French in taste and the Arts of Design. But it is unfortunately too true, that in France the taste of the people has, for more than a century, been sedulously cultivated; and that for half that space of time the property in designs has enjoyed a far greater amount of protection than has been yet claimed for it in England.

We are of opinion that Mr. Emerson Tennent's bill does not go quite far enough. The painter ought, as in France, to have the copyright of his pictures secured to him for life; and three years is too small a term for some of the models which might be designed for casting in metal. There are also certain classes of printed goods, such, for instance, as hangings or imitations of tapestry, to which so short a term of protection as nine months is miserably inadequate. Proprietors in France have the option of the duration for which they will register a design; such a rule should also be established in England, and the fees for registration should rise by a graduated scale, according to the extent of the protection afforded. If manufacturers knew their own interests, they would combine to obtain the establishment of copyright instead of resisting it with so much pertinacity. They would see that a good pattern may become a valuable property, and, at the same time, cost less than the multitudinous variations of frippery trash which are now produced under the name of patterns.

They complain very loudly of the caprices of fashion requiring a constant succession of novelty and variety; it would be very surprising if fashion were not capricious when no efforts are made to give patterns the stable elements of beauty and taste. At present the calico-printers work so

much by guess, that they do not calculate on more than one pattern in five meeting with perfect success. No stronger proof could be given of the absence of security to all parties, arising from the primary injustice of refusing protection to the intellectual efforts which are made to devise a remedy. It is impossible to visit certain print-works without seeing patterns applied to materials for which they are utterly unsuited. We have seen a pattern, which was beautiful in chalis, rendered supremely ridiculous when transferred to muslin, and absolutely disgusting when exhibited on coarse calico. The relations between the designs and the substances on which they are to be employed as patterns, are never taken into consideration by the pirates: acting on the principle of the patron of kitchen-wench, who would have the gowns of every servant display the same forms and colours as that of her mistress, we have witnessed several incongruities which would supply materials for caricature to all Europe. The frauds of pirates are also very injurious to consumers. The manufacturer, who goes to the expense of a superb pattern, will also incur the cost of fast colours and sound material; the pirate will rarely do the one or the other; and thus a fading trashy article is foisted on the public under the guise of one that is really valuable. This is "sailing under false colours" with a vengeance; and that it is by no means an uncommon practice the purchasers of furniture cotton have learned by bitter experience.

There is a portion of the calico-printing trade which invents; there is another portion which pirates its inventions: both have appealed to the public; the one for protection, the other for free scope in privateering. The question between them, when stripped of the verbiage with which it is encumbered, is not, after all, very difficult of solution. It ultimately comes to this, "Ought property to be protected?" We never have been disposed to argue a question of principle on the low grounds of political or commercial expediency; but in this instance expediency, however viewed, supports the arguments of principle: security of property must ever be a stimulus to production, and must, therefore, give the advantages of the cheapness arising from competition to the consumers.

France exports her printed articles to every quarter of the globe where fashion and refinement are to be found; and she beats us in every market where superiority of elegance and taste is a more important consideration than the difference of cost. Now, this is precisely the form of manufacture in which an outlay brings the quickest and most profitable returns. The profits of taste enable the French manufacturers to bear up against the disadvantages under which their country labours; they have, however, failed in every effort to rival our low-priced goods, or to compete in any branch of trade where mechanical ingenuity and dexterous manipulation are elements of success.

There are many persons who are discouraged from supporting the just claims of the proprietors of designs to protection, because they believe that the change would affect the entire cotton and weaving trades, with all their vast and varied interests. But the truth is, that the present staple-trade in cotton is very slightly connected with the question. Low-priced calicoes do not depend for sale upon their patterns; three-fourths of our exported cloths would be neither diminished nor raised in value by the printing. In fact, the call for protection is raised in order to create in England a branch of trade which as yet can be scarcely said to have a sensible existence—the trade in which the element of taste will be of more importance than the element of cheapness. We want, that instead of being beaten by the fine prints of France in our own markets of London, we should compete with her in her market of Paris.

There is no doubt that a limited extension of copyright will now be granted by parliament; and

though this will be a far less complete measure of justice than that for which we contend, yet we have no doubt that its beneficial effects will be sensibly felt, and that many who are now the opponents of a limited copyright, will be convinced of their errors by experience, and join their more enlightened brethren in seeking a further extension of protection. We know that since the measure has been discussed, many converts have been made to the rights of property, and that the productions of mind are more generally recognised as entitled to security than they were when first the question was mooted. France has gained the honour of being the state in which intellectual property is most sedulously guarded; and we cannot better conclude these remarks, than by inviting the attention of our readers to the following tables, for which we are indebted to Mr. Thompson, of Clitheroe, giving the duration of protection extended to intellectual property in both countries:—

## ENGLAND.

Nature of Property.	Term of Duration.	Additional Protection.
<b>LITERARY PROPERTY.</b> General Literature, Drama, published or acted .....	28 years	and for the life of the author if he survive that period.
<b>MUSICAL COMPOSITIONS.</b> Oratorios, Songs, Waltzes .....	28 years	Ditto.
<b>FINE ARTS.</b> Designs as Prints, Maps, Charts, &c. Sculpture, Models, Casts.	28 years	Ditto.
<b>INDUSTRIAL ARTS.</b> Designs to be cast, modelled, or embossed, or chased or engraved, being of any metal or mixed metal.	14 years	and if the author survive 14 years longer.
Designs ditto on any other substance ....	8 years	
Designs to be worked into or printed on certain textile fabrics, and also designs for the shape or configuration of any article, &c., ribbons, Spitalfields silks, Paisley shawls, goods figured in the loom or embroidered, ladies' habit-shirts, satin shoes, &c. ....	1 year	It is proposed to protect glass or earthenware for three years, and to extend similarly the copyright for carpets and paper-hangings.
Designs printed upon linen, cotton, calico, and muslin .....	3 months	9 months proposed.
Designs printed on silk, wool, or hair, or any mixture of cotton, linen, woollen, silk, or hair, chalis, mousseline de laine, &c. ....	3 months	9 months proposed.

It is proposed that design ornamenting any other article, except lace, for which no copyright is specified in the above schedule, shall have the protection of twelve months.\*

\* The producer of a design will do well to remember the absolute necessity of registering it. The act expressly provides, "That no person shall be entitled to the benefit of this act, with regard to any design in respect of the application thereof to ornamenting any article of manufacture, or any such substance, unless such design have, before publication thereof, been registered according to this act, and unless at the time of such registration such design have been registered in respect of the application thereof to such article of manufacture, or such substance, and unless the name of such person shall be registered according to this act as a proprietor of such design, and unless, after publication of such design, every such article of manufacture, or such substance, to which the same shall be so applied, published by him, hath thereon, if the article of manufacture be a woven fabric for printing, at one end thereof, or if of any other kind or such substance as aforesaid, at the end or edge thereof, or other con-

## FRANCE.

Nature of Property.	Term of Duration.	Additional Protection.
<b>LITERARY PROPERTY.</b> General Literature.	28 years	and life of the author and spouse, with 20 years after their decease to the heirs.
Published drama, acted drama. ....	28 years	20 years to the heirs.
<b>MUSICAL COMPOSITIONS.</b> Musical pieces for the stage. ....	28 years	5 years to the heirs.
Operas, Concert Pieces, Songs. ....	28 years	20 years to the heirs.
<b>FINE ARTS.</b> Sculpture, Painting, Engraving, Maps, Charts, Plans, &c. ....	LIFE.	10 years to heirs after decease.
<b>INDUSTRIAL ARTS.</b> Designs for figures, whether cast or worked in metal, wood, or any other material. ....	LIFE.	10 years to heirs after decease.
Designs reproduced by mechanical not artistic means, whether woven or printed on any material. ....	1, 2, 5 years or PERPETUITY.	At the will of the manufacturer.

Compare these tables, and the cause of French superiority in the art of design will no longer be difficult to discover.

In closing this subject—for the present, that is to say, for we shall be compelled to recur to it again and again—we desire to offer a few suggestions to the Artist. In his case, the law is to undergo no improvement. The cotton-printer, the paper-stainer, the carpet-weaver, every inferior grade of designers, indeed, is to have (need we say how cordially we rejoice at it) some advantage, though trifling. But the great creator of intellectual enjoyment, the great promoter of social and moral improvement, by the surest means of effecting it, the ARTIST, in the highest meaning of the term, is to remain precisely where he was—*totally without protection*. His designs may be stolen and multiplied once or a thousand times, and he is denied even the right to ask for redress. The law gives him none. To say nothing of the power of copying his picture by engravings—line, mezzotint, aquatint, lithography, or by any of the new processes that would make a monster of the Apollo—by any person who "gets hold of it;" do we not perpetually meet in shops in the Strand wretched daubs which purport to be originals of the master, and which are sold openly, because there is no dread of punishment for the fraud or the forgery? An engraving, indeed, may not be copied; let an imitation of one be painted on a pocket-handkerchief, and the copyist may be punished; but let a pirate buy his way for a shilling into the Royal Academy Exhibition, and steal one of the almost divine creations of Eastlake, and he may go "scot free," laughing at the just complaints of the painter.

Artists must stir in this matter; must call upon the Legislature to do that which it ought to do, and we are sure would do, if the case were brought properly before it.

Let the members of the Royal Academy set the example.

venient place thereon, the letters "Rd.," together with such number or letter or number and letter as shall correspond with the date of the registration of such design, according to the registry of designs in that behalf; and such marks may be put on any such article of manufacture, or such substance, either by making the same in or on the material itself of which such article or such substance shall consist, or by attaching thereto a label containing such marks."

## CORRESPONDENCE.

## THE SCOTTISH ART-UNION.

Edinburgh, April 18, 1842.

SIR,—I venture to offer some remarks upon the articles and letters which have at different times appeared in your journal, on the subject of Scotch Art and Artists, and on the Scottish Association. I believe that artists here give you credit for being a sincere well-wisher to Art, and most anxious to promote its interests, where you can; but they are not convinced that in all you have published on our Art, and on subjects connected with it, you have carried out your good intentions, but rather the reverse; this, however, they attribute to the very questionable sources whence you seem to derive your information, as a profound ignorance of the sentiments of Scottish artists and of the real state of our Art is visible in all communications sent to you, and in the comments made upon them, or it. I trust, Sir, that an amendment of this will secure to your paper that popularity amongst Scottish artists which its objects and the disposition of its Editor merit, and you will, I hope, pardon the frankness of my observations. I think that in making them, I exhibit myself, as I am, your sincere well-wisher.\*

I shall now turn to the subject of our Art-Union—our great Association for the promotion of the Fine Arts. When this Society was founded, the patronage of Art in Scotland had so dwindled away, that artists could not sell the works which they yearly exhibited, and our school was threatened with extinction. Our nobility and upper classes purchased very few pictures, portraits excepted, and although our middle classes honour themselves by purchasing to a certain extent, their patronage is not sufficient to support a school, nor can it exalt Art; as pictures of familiar subjects are invariably preferred by this class of buyers. The prospects of Scottish Art were indeed gloomy, when a Scottish artist first suggested an Association for its promotion, which project was afterwards brought forward by a gentleman who displayed an earnest zeal in the cause, and became the first Secretary to the new Society.

Now, Sir, under these circumstances was it strange that the patriotic band of subscribers should think only of their own neglected, suffering, but deserving school? Its salvation was their great object. The "committee system" was adopted in preference to the "money prize system," and any one, even slightly acquainted with the history of Art, must, I think, acknowledge, that in *theory* the first is greatly the better plan; I was its ardent supporter. I cling to it still, but I must confess that a contemplation of its *practice* has somewhat shaken my faith in its perfection.

Your correspondent "D. D." says that Art has been improved by the Association, this I must deny. It has, it is true, prevented the extinction of our school, as our artists have remained at home instead of seeking fortune elsewhere, and many of these artists being young men and full of talent, with years and experience, have improved of course; but Art, I repeat, has not been improved by the operations of the Association, there is not an artist who will not accept of any commission rather than paint for the Association. We have artists eminently calculated to shine in historical painting; but they must live, and portraiture or cabinet pictures offer a comparatively certain source of

\* As we have not thought it right to erase any of the observations contained in this letter, in reference to other parties, we have felt bound to retain this, applied to us. We must, however, be permitted to offer a comment upon it. We have strenuously laboured to obtain in Scotland, Ireland, and the provinces, the safest co-operation we could; our first object being integrity, our next ability. The gentleman who has, hitherto, or at least up to a recent period, acted for us, we believe to have been influenced only by a sense of justice; and we certainly consider that he has discharged his duty with strict impartiality and sound judgment. We should be unjust to him, if we did not say so much. We are, ourselves, fully aware of the difficulty—not to say impossibility, of so thinking and so writing as to content all parties upon whose works observations become necessary. The critic, if he be actuated by generous feelings as well as just principles, has, often, a most irksome, and, sometimes, a most painful task to discharge; and he too generally finds that where he makes one content he makes a score discontent. For ourselves we have always borne in mind the axiom,

"Ten censure wrong for one who paints amiss."

And ever write under a conviction that, "if to do were as easy as to know what were good to do, chapels would be churches, and poor men's houses princes' palaces."

revenue, whilst, if an artist devote his time to the production of a picture of a high class, he is compelled, if he wish to sell it, to submit to the judgments of men whose taste he has every reason to question—his picture will not be hailed with the approbation which the attempt itself merits; on the contrary, he will be harassed with all manner of criticism, not the less discouraging, because often absurd; and finally if he get an offer at all, it will probably be less than two-thirds of the price he asks. It may be urged that two-thirds are offered because the artist asked too much: permit me to enter briefly into this question of price.

I have alluded to the state of the encouragement of Art when the Association was founded; prices, of course, were correspondingly low, but the committee in their endeavour to make their funds go far, commenced with their baggaging system that very year; they struck the first blow in this war. Next year prices rose, partly because the market was improved, and *justly so*, and partly as a measure of protection; from that time to this prices have been a source of dissension and ill-will.

The most absurd observations have been made upon this subject by many people—one wiseacre, in a letter published in your journal, sought in Holland and Belgium for a scale of prices to guide us; that letter was unanimously viewed by the artists of Scotland with the contempt it merited, and I have only noticed it as a glaring instance of the twaddle which has been written on the subject.

A question which arises is, who are the men who pronounce upon the prices? The answer is, a dozen of gentlemen, elected *nominally* by the Association, but in reality by their dozen of predecessors; some of whom, it is true, love Art, some of whom know something of it, and some of whom manifestly know nothing of it at all. These gentlemen exhibit their capacity for judging of prices by paying enormously for indifferent pictures, and depreciating others of real merit. Whilst I make this statement with regard to the committee, I am bound in justice to admit, that whatever be their motives, some artists unquestionably estimate their pictures at enormously high prices; these generally accept whatever is offered, and their conduct may, perhaps, be explained by the hypothesis of "D. D." that their price is protective. But this is very far indeed from being the case with all: in fact it is so with a very small minority, and the *sweeping* accusations brought against artists in this point have been most unjust.

I am one of those who think that the purchase of English pictures by the Association, will do much to settle the disputed question of prices, and without entering into any discussion as to the propriety of *now* throwing open the Association—having already accounted to you for the first adoption of the exclusive system—I hail the letter of the artists published in your last paper with much satisfaction. I cannot concur in the observations of *Dun-scotus*; but at the same time, I must say that I think them quite as good in their way on the one side, as many that have appeared on the other.

Our Association, most probably, must adopt the "money prize system," that is, if better committees cannot be found. That of this year is by far the worst which we have had; you will hardly credit the fact, that these gentlemen utterly abjure the commonly received notion that to encourage anything, the true system is to buy the best which the market produces (to adopt a vulgar way of talking). Instead of commencing with the best pictures and then working gradually down the scale, they generally (with a few exceptions doubtless) commence at the other end: some of the worst pictures in the exhibition being bought the first week; and under the specious pretence of encouraging youthful genius, indifferent things are purchased because painted by boys! You, or any one who has thought on the history of Art, must at once see the dreary consequences of such absurd proceedings. No sooner, however, does a young man paint a really good picture and take a position as an artist, than he is abandoned by the committee: he is not then weighed in the scale by the progress which he has made, but by a comparison with men of long tried ability, and his picture is left on the walls unsold. I appeal to the Exhibition of this year in support of this shameful fact.

The committee, at times, buy pictures from *charitable* motives, at times, because *influenced by the pressing representations of friends of the artist*; frequently from motives which it is impossible to penetrate—merit in the work manifestly having nothing to do with them; all this tells against the true encouragement of

Art. Some members of committee seem to supply the places of taste and judgment with crotchets and strange fancies: one declares himself the enemy of one kind of Art; and another of some other class; some won't hear of buying water-colour drawings for instance, and so on. To this the artist also is exposed. It is unpleasant to contemplate this state of things.

This letter is already too long, and therefore I cannot venture to enter upon any speculations as to the cure of the evils of which artists have so much reason to complain. The committee should be reduced in number, the secretary deprived of his vote (how he came to have one, and how he comes to *retain it*, is the wonder); a more decided expression of public opinion is also wanted. Unfortunately little can be hoped from our press; the lucubrations of our editors on the subject of Art, having little or no weight with the intelligent. In fine, if we cannot achieve an improvement of the committee system, we must *abandon it*. We have an Association on "the money prize system," but hitherto it cannot be said to have effected any real good, prizes of a sufficient amount to do a great deal *have been* distributed, but these are always frittered away—thus, if a man gets £100, he buys ten £10 pictures; besides, under this system, there has been a case or two of more abominable jobbing than ever has taken place in the first Association. I hear, however, that an attempt is to be made to amend these evils. The greatest objection to the system is, the low state of judgment and taste amongst the Scottish public. There is, however, evidence of a growing taste; and a probable result of "the money prize system" being adopted, would be the promotion of taste amongst the public, as prize holders would be called upon to think seriously of the subject in making a choice.

Almost all that has been published, hitherto, on the subject which I have been reviewing, has been against the artists; they have patiently endured these attacks whether printed or spoken, their position has been one of doubt and difficulty, and a warm appreciation of the efforts made by their countrymen in their favour has often sealed their lips when they had cause to complain; but the evils under which they labour, instead of diminishing, seem to increase from year to year, and they can no longer be borne; something must be done to carry out the intentions of the subscribers to an Association, declared in its title to be, for the *PROMOTION OF ART*—to those subscribers let the artists appeal.

In these observations, I disclaim all imputations upon the members of the committee as individuals, as such, I firmly believe them to be actuated by good motives, *according to their lights*, but every one has a right to express his opinion of them as a *committee* acting for a powerful public body associated for a most important purpose, but of which purpose they have wholly lost sight.

Yours, &amp;c.,

A SCOTTISH ARTIST.

[We leave the above letter to speak for itself. It is needless to repeat that our columns are again at the command of any champion who will take up the gauntlet. We earnestly hope the committee will not take offence at these communications; and presume, very respectfully, to entreat them to consider seriously whether the suggestions offered are not of great importance; and whether some steps ought not to be taken by them, even though they should go to the extent of sacrificing the whole of that which most of us love to cherish—PATRONAGE.]

## VEHICLES.

Wraxall, near Bristol, April 23rd, 1842.

SIR,—I have to complain, that in your correspondent J. H. M.'s comments upon the communication which you did me the honour to insert in the January and February numbers of the ART-UNION, my meaning has been most sadly perverted, and that garbled and misquoted passages have been made to represent language which in its original position really appears to be sufficiently intelligible to ordinary capacities. Having nothing to lose, nor ought to gain, by the attempt to introduce for experiment the properties of an aqueous solution of borax in combination with oil, for painting, I certainly did not anticipate such blundering and uncivil remarks as those with which J. H. M. has concluded his letter. Of course I deny that pigments, if mixed agreeably to the directions prescribed in my communication, can be washed off by means of water. Such an untoward result would at once imply the use of *too much* of the boracic solution.

Secondly.—I deny having stated any inference of *my own* relative to the insufficiency of turpentine, having merely advanced a few hypothetical reasons why *others*

have objected to the use of *turpentine alone* as a diluent for oil.

In answer to the insinuation, that I had omitted to state in what respects water is preferable to rectified turpentine as a diluent for oil, I should say, 1st, by its enabling the artist "to lay colour, pile upon pile," without the liability of each successive addition to deviate from the precise spot upon which it might be placed. 2nd. From the absence of that resinous property which commercial rectified turpentine generally possesses. And, 3rd. From its economy.

In reply to the question, "does Mr. C. mean to recommend the use of such substances as glass of borax, or borate of lead, as driers for his vehicles?" Mr. C. does not specifically name any driers whatsoever, but has left the choice of such matters to the discretion of the artist.

I do object to the translation of my words, "any metallic oxide" into *litharge*, for I am strongly impressed with the idea that every salt and oxide of lead that is employed by artists, should be replaced, if practicable, by some equally efficient substitutes that are less sensible to the chemical influence of several of the gasses. It may, therefore, be inferred that I do most respectfully disclaim any willingness to recommend "a vehicle whose ingredients are precisely the same as those of Mr. Hardy."

With regard to J. H. M.'s difference of opinion as to the theory I ventured to suggest relative to the discolouration of pigments composed of white lead and oil, when deprived of a free current of atmospheric air; I still maintain my own, which may be thus simply expressed, viz., that during the desiccation of oil certain gasses are generated which possess the property of acting specifically upon the salts and oxides of lead with which the oil may be combined, and that this specified action may alter their colour.

Admitting the truth of J. H. M.'s very popular experiment, viz., the discolouration of paper that has been moistened with dilute solutions of salts of lead, when subjected to an atmosphere containing sulphuretted hydrogen gas; I pass, with much surprise, to the concluding passages of his letter, viz., amongst other things tending to the purpose of rendering Mr. C.'s argument effective *by all the means in his power*, he has quoted a formidable list of eminent chemical authorities on so simple an affair (please to attend to the words), *as the addition of water to borax until it can dissolve no more!!* Adding that, "whatever benefit Mr. Coathupe might have intended to derive from those celebrated names, they clearly show that great chemists may be greatly mistaken in matters, respecting which ordinary folks would not have had sufficient ingenuity to find any difficulty whatsoever."

From this very shrewd remark, it might be imagined that I have aspired to the reputation of being considered a "nostrum monger," and that ambition, or avarice, has urged me to attempt to prove some extraordinary fallacy.

Now, the real truth is simply this—the whole of my former communication consisted of suppositions *derived from data furnished by artists*—of experiments emanating from such suppositions—of a recommendation to artists to test the qualities of an innocuous volatile diluent for oil, as a substitute for turpentine (or in conjunction with it, if they pleased), and so far only as it might appear available for specific, or for ordinary purposes; of a very full descriptive account of the substance borax, which had been recommended to the notice of artists under a variety of modifications, through the pages of the ART-UNION, and finally, of a few chemical investigations of the properties of some of the compound vehicles for pigments that had been publicly advertized. Regretting that so much time should have been so uselessly bestowed,

I am, yours, &c.,  
C. THORNTON COATHUPE.

#### MODELS FOR DRAWING.

34, Marylebone-street, Piccadilly.

SIR,—Seeing in your estimable publication of last month, some observations respecting a set of drawing perspective models that I have prepared for some years for Mr. Runciman, which are calculated in some measure to injure their utility and sale, and trusting to your known impartiality, I ask as a favour to correct a mistake regarding their description.

You call them "little paper models," which, with other remarks, may impress the public with the notion that they are mere common-place children's toys, when they really have higher pretensions, and the same object in view as those mentioned by you, although quite distinct in form. Now, I beg to assure

you that they are not paper, but geometrical cubes of solid wood, covered with white paper for the purpose of illustrating more distinctly the degrees of shadow of those parts opposed to the light, than the dark yellow wood. The separate pieces are, I think, as large and as capable of the same number of variations; as the accompanying few diagrams will, I hope, convince you. I remain,  
Yours, &c.,  
JAMES SHADE.

#### AN ARTIST'S COMPLAINT.

SIR,—As an artist, however humble, I think I have a right to complain of uncourteous and unfair treatment on the part of a brother artist. It would be equally unwise and unjust in me to complain of censure, when it comes from a quarter justified in applying it and entitled to respect. Censure, when generously given, is often more useful to the young artist than praise. But the authority from whence it proceeds should be above suspicion of impure motives.

I enclose you a copy of a weekly publication, entitled "Punch," and I ask you to say if the remarks are justifiable. From what I, in common with other artists, know of your right and generous feelings, I am sure you will condemn these observations, the more when I tell you they are written by Mr. —, a member of the Society of British Artists. I have, of course, authority, from persons *who know the fact*, for making this statement.  
Yours, &c.,  
T. K. PEXSON, Member of the New Society of Painters in Water Colours.

[We consider it our duty to insert the above letter; the complaint is perfectly justifiable. If an artist goes out of his way to wound the feelings or prejudice the interests of a brother artist, he does that which ought to be severely condemned. It is not his *business* to review an exhibition; and we can scarcely conceive it possible that it can be a *pleasure* to him to do so. Sure we are that it is by no means a pleasant task to ourselves. We believe that occurrences of this kind are very rare.]

#### ST. STEPHEN'S CHAPEL, WESTMINSTER.

SIR,—It must be known to many readers of your journal, that soon after the lamentable destruction of the Houses of Parliament by fire, many drawings were made of the ruins, and particularly of this famed chapel. Messrs. Britton and Brayley published a very interesting volume on the history and architecture of the ancient palace; and Mr. Mackenzie was employed by the Commissioners of Woods and Forests, to make a series of elaborate drawings of the chapel. It is reported amongst artists, that these are given out for engraving, and that they are placed in the hands of inferior engravers, whereby the drawings, the architecture, and the first class of artists will all be depreciated in public estimation. Coming from a wealthy Government office, the works should be of the highest order, worthy of the subject, the country, and its artists! I think it your duty to direct public attention to the subject.  
Yours, &c.,  
A. B.

#### LITHOGRAPHIC ART-UNION.

SIR,—It is proposed to establish a Society upon the principle of the Art-Union of London, to be called the "*Lithographic Society*," with the twofold object of encouraging the efforts of British artists in Lithography, and also of promoting a general love of Art, by a wide circulation of some of the best productions in this very beautiful and effective branch of engraving.

The plan suggested would be, to form a Society consisting of members paying an annual subscription of half-a-guinea and upwards, and to appropriate the funds thus raised to the *purchase* of copies of the best works in Lithography executed in this country; such, for example, as David Roberts's 'Palestine,' Nash's 'Mansions of England,' Müller's 'Francis the First,' &c. &c.; such works to be *drawn for once in every year* by members as *prizes*; and also to set apart a portion of the funds for the purpose of having two or more drawings executed in each year, in the best style of Lithography, copies of which should be *distributed gratis* to each member of the Society.

Any persons who may wish to assist in forming and establishing such a Society as is above suggested are requested to communicate (by letter, postage free) with M. A., Post-office, St. Albans.

Yours, M. A.

#### OBITUARY.

MR. JOSEPH THEAKSTON.

Mr. Joseph Theakston, the sculptor, died, at his house in Belgrave-place, on Thursday, the 14th April, aged 69 years. He was the last of the scholars of the elder Bacon, and formed his style on the amenities of that eminent artist. He was several years under the more eminent Flaxman, wrought in the studio of Bailey, and for the last twenty-four years of his life was in the employment of Sir Francis Chantrey, and carved most of the draperies, &c., of that artist's statues and groups. He was, perhaps, the ablest drapery and ornamental carver of his time, as he was certainly the most rapid. To look at him while working, which visitors loved to do, his hand seemed scarcely to move; and few could imagine the rapidity of his execution from his quiet manner of handling his tools. This proceeded mainly from his great knowledge of all the varieties of drapery, and from a sense of perfect ease and flowing nature of the draperies of Chantrey. When he began to carve a statue, he knew perfectly well what was required of him, and cut away the superfluous marble at once. He had not to try again and again, like most other artists, and by frequent touching and retouching accomplish his object. While seeming to work least he was working most; and so well did his sleight of hand assist his knowledge and taste, that he may be said never to have struck the chisel with the hammer in vain. Besides aiding in the works of others, he produced several original works of his own, and he had more than common skill in Gothic architecture. He was born in the city of York, of respectable parentage; was by nature gentle and affectionate, yet firm, as most calm hearts are. He was buried, by the side of his wife, at Kensal-green. These words (which we borrow from the *Times* newspaper) are written by one who knew his worth as a man and his merits as an artist, and respected both.

GEORGE BARRETT, ESQ.

The Arts have sustained a severe loss by the death of this excellent artist and estimable gentleman, who has so ably contributed to their advancement both with the pencil and the pen. He was one of the oldest members of the Society of Painters in Water-colours; and their present exhibition contains ample proof that his great powers continued unimpaired to the last.

We shall next month be in a condition to supply our readers with that which they will ardently desire to possess—some particulars of his life, and his interesting and valuable career as an artist.

[We take this opportunity of requesting the kindness and courtesy of correspondents in reference to memoirs of deceased artists, or of persons connected with the Arts. In us it would be indelicate to make early applications to relatives; but others can do it for us; and it is scarcely necessary to say that by so doing they might very essentially aid us in a most important part of our duty.]

Madame Vigée Lebrun, a paintress of history and portraits, member of the Ancient Academy of Painting in France, and of almost every academy in Europe, died in Paris on the 31st of March, at the age of eighty-seven.

The distinguished archeologist, M. Neston l'Hôte, is dead. He had made two journeys in Egypt, under the auspices of the Minister for Public Instruction. He has left most important notes on Egypt, drawings of its monuments, and impressions of hieroglyphics. A commission has been named, to superintend the publication of these researches, in as complete a manner as those of M. Champollion.

#### THE ARTS IN CONTINENTAL STATES.

FRANCE.—PARIS.—*Statue of Silver of Louis XIII.*—It is said, that the Duc de Luynes has given a commission to M. Rudde, the sculptor, to model a statue of Louis XIII., to be cast in silver, and placed in the hall of Louis XIII., which was painted by M. Ingres. It is to be cast by M. Louis Richard; the pedestal is to be of bronze; and it is said will cost 15,000 fr.; the statue itself, 40,000 fr. It was M. Louis Richard who cast the gates for the church of the Madeleine.

*The Monument of Napoleon.*—The *Messenger*, an official journal, announces that the Minister of the Interior has awarded a gold medal, of the intrinsic value of 1000 fr. (£40), to each of the ten artists whose plans were most highly approved by the committee of judges of the tomb

of Napoleon. These medals are now being coined at the mint. M. Visconti is finally entrusted by Government with the erection of the monument, with the limitation, that his plan be consistent with the last programme issued by the committee. M. Marochetti has at the same time received the official order from Government, to erect an equestrian statue of Napoleon in the middle of the *Cour d'Honneur at the Hotel des Invalides*. The artists who are to receive the prizes are, 1. Baltard, 2. Duc, 3. Duban, 4. Labrousse, 5. Lassus, 6. Isabelle, 7. Deligny, 8. Gayrad, 9. Triquetti, 10. Danjoi. It is said, that the commission has met again to-day, (April 4th), to decide on giving a medal to six other artists, who were competitors; another on *dit* denies this.

**Ecole des Beaux Arts.—Competition for Prizes.**—The students who are to compete for the great prizes of 1842, at the *Ecole des Beaux Arts*, commence their works in the following order:—The engravers take their places on the 15th of May, and remain ninety days; the sculptors on the 10th of June, and remain seventy-two days; the architects on the 10th of May, and they will remain one hundred and five days; the painters on the 1st of June, and will remain seventy-two days.

**AVIGNON.—Picture ordered by Government.**—The Minister of the Interior has ordered a large historical picture, from a young artist of much merit, M. Jules Varnier. The picture is intended to adorn the town house of the town of Orange, and the mayor of Orange chose the subject, which is very happily selected, recalling a scene honourable to his fellow citizens, namely, 'The National Guard of Orange putting a stop to the Massacres at Avignon during the Reign of Terror.'

**SWITZERLAND.—The Artists of UNTERWALDEN.**—It is remarkable how many artists this canton has produced. Perhaps it is the loveliness and grandeur of the scenes amidst which they live, that refine the taste of the inhabitants and inspire a love of the beautiful. This is seen in their churches, in their houses, in the picturesque dresses of the women, and even in the tasteful arrangements of their festive meetings. Unlike his neighbour, the Bernese, who follows the plough over a heavy soil, the peasant of Unterwalden pursues the lighter labours of the orchard, or the care of his cattle, for which the soil is best adapted. He seldom becomes as rich as a Bernese, but his life is more easy, his temper is cheerful and serene. The churches of Stanz, Sachseln, and Alpnach, are adorned with columns of the beautiful black marble, from the quarries of Stanz and Melchthal; and with a good taste, that does honour alike to the architect and the inhabitants.

In these romantic and solitary valleys, dwell and have dwelt sculptors and painters of no small talent. Towards the close of last century, the sculptor Jost practised his art, with little aid but from his native genius; and of the existence of this last, the works he has left offer abundant proofs. He never quitted his native valley, and the artist could leave no patrimony to his son but having taught him the art of making crucifixes.

Jost's countryman, Christen, was more fortunate. A benevolent Swiss sent him to study at Rome, and he went afterwards to Munich, and then returned to Switzerland, where he has left many busts of distinguished persons. At Kerns, in Upper Unterwalden, old Abart still lives, but his statues in wood of Nicolas von der Flüe, Hirten, &c., are less in request than they were in his younger days. Franz Kaiser, who is now thirty-one years old, studied first under Jost, Abart, and Imhof; he then passed three years at Munich, and finally two years at Rome. At Rome, he executed several works on interesting subjects of Swiss history; 'William Tell in the Moment of Ecstasy, when he sees his Child safe from his Arrow,' 'The Dragon-slayer,' 'Struthan von Winkelried,' 'Arnold von Winkelried, the Hero of the Battle of Sempach,' &c. In all these statues, the heroic spirit is expressed in noble forms, with a pure design, that recalls classic antiquity. This admirable artist has now returned to his solitary valley, where many impediments offer themselves to his career. The materials he requires are expensive, and difficult of transport; the encouragement he receives is

small, for in Switzerland, the rich are seldom lovers of art, and the lovers of art are seldom rich. If some traveller who has heard the name and fame of Franz Kaiser stops to visit his studio, he admires the talent displayed in his works, and ends by purchasing a dying lion for a letter-weight, or a sleeping hound for notes.

The painter Wursch was born at the beautiful village of Buocha, on the Vierwaldstettersee, in the latter half of the last century. Many of his pictures are to be seen in the churches and private houses of Unterwalden. His masterpiece is 'Nicolas von Flüe,' in the government house of Sarnen. Amongst his works may also be noted, a 'Crucifixion,' in the chapel of Grafenort. There is much feeling and mind in his pictures; they are well designed and coloured, but have little ideal beauty. The expression of desolation and religious sorrow that surrounds the mother of Christ, in the last mentioned picture, is very striking. Wursch was professor of painting in the Academy of Besançon for many years; he lost his sight, it is said, by too much study, and returned to his native village, where, at the time of the French invasion, he was shot dead by a French soldier, while in the act of exhorting to peace. At the present moment, the little town of Stanz possesses three excellent painters. Zelger, who has devoted himself entirely to painting Swiss scenery, and who most admirably represents it; conveying the feeling of the still loneliness that pervades the scenery of the high Alps, as well as representing its peculiar features. The dark wood, the torrent springing from its bosom, and losing itself as it descends in foam; the gloomy valley; the deep precipice—these are Zelger's favourite studies. Some of his works are lithographed, but in that style no just idea is conveyed of his oil pictures. His last work is 'The Tirlis, seen from the Engelberg Road.' The glacier of this mountain king is glancing under a dark sky; in front and below are green hills, with broken and reflected lights, and lower, is a precipice, where the illusion is wonderful: you seem to look into it. The fault of Zelger's pencil is a want of lightness. H. Kaiser, the brother of the sculptor, having completed his studies at Rome, has established himself at Stanz, and he has already been worthily employed in painting several pictures for churches in Freyburg and the convent of Engelberg.

Paul Deschanden, also now at Stanz, has passed several years in Italy, at Florence, and at Rome, and he has returned imbued with the simplicity, pious feeling, and truth, of the early Italian masters. It is easy, also, to see how deeply he has studied Raffaele, by the style of his designs and his manner of colouring. In the restored chapel at Lucerne, are four pictures by him—'Jesus a Child,' 'Jesus struggling with Death,' 'Jesus Risen from the Dead,' 'Jesus as Judge of All.' There is a fine poetic feeling in the contrast of the figure of the Saviour just risen from the grave, the weakness of mortality apparently still clinging to him, and the force and power expressed in his figure at the last judgment. Among other works, Paul Deschanden is now employed on two pictures of Moses and St. John. These are to be exhibited at the first Swiss exhibition. It is said, when the works he has begun are completed, this artist will go to Munich.

**BAVARIA.—MUNICH.—Zalography.**—A commission has been received at the celebrated manufactory of stained glass, annexed by his Majesty to the porcelain manufactory, from St. Petersburg, for an immense window, which is to form one of the ornaments of the Isaacs church. It is to be painted from designs by the Bavarian architect and private councillor, M. de Kleaze. The painting will be about thirty feet in height, and will therefore surpass in size any work hitherto executed in *zalography*, or stained glass.

**PRUSSIA.—BERLIN.—Academy of Fine Arts.**—The celebrated pianist and composer, Liszt, is named a member of the Academy of Fine Arts here.

**RUSSIA.—ST. PETERSBURGH.—Statue of Poniatowski.**—Some claims having been made in regard to the statue of Poniatowski, the emperor has ordered the statue by Thorwaldsen to be broken in pieces, and also the clay model.

## THE ANNUAL EXHIBITIONS—1842.

### THE SOCIETY OF PAINTERS IN WATER COLOURS.

**THE THIRTY-EIGHTH** Annual Exhibition of this Society was opened to the public on Monday, the 25th of April. It has now attained to a vigorous age; year after year its influence has been made manifest over a class of art essentially English; and there can be no question that from its establishment may be dated the very vast improvement which the art of Painting in Water Colours has undergone during the present century. There are, undoubtedly, many whose attachment to the *old* style makes them sceptical as to the value of the *new*; and some examples, produced thirty years ago, are quoted as proofs that modern skill is not in advance. But of the *general* improvement on the part of the artists there can be no question. The public feeling, opinion, and patronage, have kept pace with them. Of the year's produce, when exhibited, very few return to the producer's home. Already a large proportion of the present collection are marked with the agreeable word "sold."

The society, as a whole, has, we have no doubt, carried the art of Painting in Water Colours as far as it can be carried. Some great and original mind may, possibly, strike out a new path, and lead the way to improvements of which we can now have no conception; but until this has been done, the annual exhibitions will exhibit only the *same* pictures we have seen—differing only in subjects from those which the respective artists have already produced. We cannot, therefore, speak of the exhibition as a "move forward;" it is something to say there is no retrograde movement; that no member has fallen off; but that each maintains his reputation to the full. Two or three recent accessions, however, have given to the society additional strength. And as, no doubt, they will manifest their accustomed judgment and acuteness in augmenting the body—in this respect, changes for the better may take place from year to year.

Public gratitude is due to the society for the stimulus they have so long given to the art: to them we are mainly indebted for the supremacy it enjoys and retains in England. On the whole, perhaps, it is not to be regretted that in the collection there is no peculiarly attractive work. The interest, consequently, is not concentrated, but scattered. And it is scarcely too much to say that of the entire assemblage there are very few that can be justly described as mediocre; and scarcely half-a-dozen that may be characterised as bad. Of the 338 pictures exhibited, there are certainly 300 which possess high merit.

No. 1. 'View of Como,' W. CALLOW. A rich and true copy of a scene with which genius has so often made us acquainted that we may fancy every portion of its shore to be as familiar to us as the banks of our own fair Thames at Richmond. The pencil of the artist and the pen of the poet have been equally eager and earnest to extend the fame of its exceeding beauty.

No. 2. 'Hotel de Ville, Brussels,' S. PROUT. We rejoice to meet our old and honoured friend in all the freshness and vigour of his younger days. It is not always that sickness impairs the mind; although it may postpone the production of evidence of its power. We trust, however, that we may regard this work as proof of the estimable artist's recruited health; for it is a more than usually elaborate performance, and manifests labour as well as thought. It is, indeed, remarkably full of details: the groups around the edifice are numerous and characteristic; each being a portrait, illustrative of the habits of the people, and the costume of the country. The same manly and masterly touch that distinguishes the paintings of Mr. Prout is expressed in every portion of the picture; and though competitors in abundance have started up of late years, they have not yet surpassed the painter by whom they have been taught; the best of them may be proud to own they have profited by his lessons.

No. 8. 'Girl with Pitcher,' O. OAKLEY. The production of a new member; and one who must be regarded as a valuable acquisition to the society. He is true to nature; and yet true as poetical painters ought to be, seeing only, or at least noting only, that which is agreeable as well as faithful.

A gnarled oak may be, at times, a useful accessory to a picture, but who would tolerate the artist who painted nothing else? There are many "Graces" in our English corn fields, although rude and coarse "Moggys" are plenty enough. Mr. Oakley is right in copying the former, and he has done so, we think, without exaggeration, very delicate and beautiful as his portraits are.

No. 28. 'A Family of Primitive Christians reading the Bible,' J. W. WRIGHT. A well conceived and ably painted work, drawn with a vigorous pencil and coloured with corresponding force. The portrait of the young wife with her first-born is especially fine.

No. 42. 'Torc Lake, Killarney,' W. EVANS. A delicious picture of a most delicious scene, and one, the truth of which will be at once appreciated by all who have visited the far-famed lakes.

No. 46. 'Study of Gypsies,' O. OAKLEY. Another of Mr. Oakley's admirable pictures—a group such as we have met scores of times in some secluded dell away from the main road.

No. 47. 'View from the Churchyard at Thun, Switzerland,' W. CALLOW. A picture of high merit; affording a clear and convincing idea of the reality.

No. 49. 'View on the River Lowther,' P. DE WINT. A fine, broad, vigorous, and most effective English landscape, painted in a bold and manly style.

No. 54. 'Dorney Common,' W. EVANS. A sweet composition; very graceful and beautiful, abounding in small episodes, which show the artist to be a close observer.

No. 58. 'Don Quixote, fed by the high-born Damsels,' J. M. WRIGHT. A capital picture; full of point and character, and atoning for much hardness of style by the feeling with which the artist has entered into the design of the author.

No. 83. 'The Necropolis at Glasgow,' H. GASTINEAU. An interesting subject, pictured with much skill. Introduced into it are the monuments to Knox, Dick, and "Mr. Lawrence, a young sculptor."

Nos. 86 and 87. 'Falls on the Rhine, at Schaffhausen,' 'On the Frome at Stapleton, near Bristol,' G. A. FRIPP. Two clever pictures; ably contrasting the scenery peculiar to Switzerland and England.

No. 88. 'Torc Fall, Killarney,' W. A. NESFIELD. Although the artist intimates that his sketch was made "during a clearing," under his "superintendence," we must be permitted to suspect that his fancy has greatly exaggerated the breadth of the fall, and surely he has added something to the "dacent draperies" of the "boys" who are in attendance.

No. 92. 'A Composition,' J. VARLEY. With much that is natural, and much that is unnatural, this is still a remarkable work. A piece has been added to the right of the picture; its value would have been enhanced, if precisely the same quantity had been cut away from the left.

No. 96. 'The Highlanders' Burying-ground, on an Island in the Loch Maree, Ross-shire,' W. TURNER. A remarkably picturesque and interesting subject, treated with much ability.

No. 101. 'View on the South Downs, with Cisbury-hill, near Worthing,' Copley Fielding. A work of extraordinary merit. A triumph of art over a most unpropitious subject. We have here nothing but a bleak and brown heath, in the distance some sloping hills, and in the foreground a couple of figures; yet all the parts are made to harmonize so happily that we do not miss the accessories, usually considered essential to make up a picture. The whole is beautifully toned; the production of a great and justly popular master.

No. 102. 'Ferry on the Thames,' W. EVANS. A most exquisite picture, full of beauty and interest.

No. 112. 'Fingal's Cave, Isle of Staffa,' Copley Fielding. A noble picture; conveying a fine idea of one of the grandest of nature's works.

No. 122. 'A Match Girl,' O. OAKLEY. Another rustic portrait, true to the life, although of passing grace, delicacy, and beauty. The sad feeling of desolation in the hopeless orphan girl is finely expressed. The work is one of great merit and of great value. It is, perhaps, the most striking and interesting of all Mr. Oakley's contributions; they are just the works which tell with the mass, while they do more than merely satisfy the connoisseur.

No. 130. 'The Castle Chapel,' G. CATERMOLE. A noble composition, full of fine feeling. The castle inmates are at prayers, on the eve, it may be, of some attack, for the countenances express a solemn awe of some approaching trial rather than a pure devotional feeling. The picture is rather sketchy in style, but is full of character.

No. 113. 'Tréport, Coast of Normandy,' C. BENTLEY. A fine copy of the sea, the several accessories to which are admirably rendered.

No. 143. 'Lisbon, from Porto Brandas,' J. HOLLAND. A noble and beautiful work, the production of a skilful pencil and an accomplished mind.

No. 144. 'Endsleigh, a Seat of his Grace the Duke of Bedford,' J. D. HARDING. Perhaps, on the whole, the most delicious landscape in the collection; very true to nature, but subjected to all the refinements of art. The subject is a simple one—a river, running between sloping banks; in the fore-ground is a small rock, upon which cows are standing; the thick foliage overhangs the current, now eddying along, and now breaking onwards. It is in all parts perfect.

No. 151. 'A Farmer's Boy,' W. HUNT. Of many capital pictures by Mr. Hunt, this is, perhaps, the best; the portrait is real, in no degree exaggerated, alike free from coarseness and over-refinement. The boy is, indeed, just such an one as we have met, a score of times, when the music of the scythe is heard in the meadow.

No. 153. 'Narcissus and Echo,' J. CRISTALL. A work of great merit, although, apparently, unfinished; and the Echo is a thought too substantial.

No. 154. J. VARLEY. The very antipodes of Mr. Harding, a bold, rough copy of nature, or rather of what nature may be, for the picture is a creation of the artist's fancy. It is painted with great vigour, and, in parts, possesses excellence rarely surpassed.

No. 164. 'Thoughts in a Church-yard,' the late G. BARRET. The admirable and estimable artist will be "missed from his accustomed" walk; this memory of him is especially interesting; it exhibits the tone of his mind towards the close of his valuable life; for it is one of the most recent, if not the latest, of his productions. He was a most pleasant painter, one who delighted in the cheerful looks of nature; and although it has been objected against him, that he "liv'd too much i'the sun," no artist ever more ably or more truly pictured the great producer of existence, either at his rising or his setting.

No. 167. 'Saying Grace,' W. HUNT. We cannot speak of this as we have spoken of No. 151. Here the boy has a forced expression: the countenance is more that of a repentant, but hopeful, Magdalen than of an embryo farmer returning thanks for a bountiful meal. It is painted, however, with great care; the face is wrought up to a marvellous degree of refinement.

No. 171. 'Powis Castle,' D. COX. A powerfully painted work. Mr. Cox "comes out" this year with renewed vigour.

No. 172. 'Scotch Peasants, Loch Etive,' Another graceful and pleasing picture by Mr. GASTINEAU.

No. 175. 'Hospitality to the Poor,' G. CATERMOLE. A work of the very highest merit; admirable in conception and execution; all the details are well made out, and the story, simple though it be, is told with emphasis.

No. 178. 'Cattle returning from Milking,' J. D. HARDING. This also is one of the most agreeable landscapes in the collection; painted with great delicacy, and producing pleasure by the skilful admixture of nature with art; the veritable with the imaginative.

No. 179. 'Vessels in a Breeze,' Copley Fielding. Another of the many admirable contributions of the artist, who seems equally "at home" on the open sea, the sandy beach, the green wood, the mossy down, and "mountains inaccessible."

No. 195. 'Porch at Montacute, Somersetshire,' JOSEPH NASH. Mr. Nash has done more than any living artist to restore admiration, and consequently appreciation, of the fine old structures of a remote age, when "the good old English gentleman" built for posterity. This is an example of a class of art in which the painter is unrivalled: he conveys a noble idea of the beauty and grandeur of an ancient edifice; and his restorations always

carry back the spectator to "the high and palmy state" in which they flourished. Nothing can be more judicious and nothing more agreeable than his introductions of figures in the habits of the times in which the parties lived. Considered as mere productions of art, his paintings are admirable; but they derive additional value from the evidence they supply of matured thought and study.

No. 200. 'Venice,' J. HOLLAND. A beautiful transcript of a fine passage.

No. 201. 'A Day on the Upper Lake, Killarney,' W. A. NESFIELD. A most sweet picture, giving a good idea of the scenery that surrounds the lake, and of the stag-hunt, for which its shores are famous.

No. 214. 'Petrarch's House, at Arqua,' S. PROUT. A subject of much interest, skilfully and accurately painted.

No. 215. 'A Barn-door,' R. HILLS. Although it would be impossible to describe the works of the excellent and estimable secretary of the society as on a par with those of many whom he has in a measure called into existence, his pictures always convey pleasure—in spite of the glaring green he perseveres in introducing into them.

No. 216. 'The Wedding,' Mrs. SEYFFARTH. A finely painted work; but the sentiment is not true. The broken-hearted bride is made to leave her home for the church, with her rich bridegroom, in the presence of her deserted lover. There are parts in the picture of great excellence. How capital is the portrait of the young heedless girl who is forcing on her glove! But, as a whole, it fails to produce the effect desired and intended.

Nos. 222, 223. 'Camellia Japonica; Convolvulus,' V. BARTHOLOMEW. It is difficult to conceive that mere copies of flowers can ever surpass these. The works of this artist are of astonishing accuracy, and of marvellous beauty.

No. 234. 'New Year's Eve,' A. CRISHOLM. In spite of a murkiness of style there is great merit in this work—a subject from Burns, full of incident and interest. It is good, but mainly because it is true.

No. 239. 'A Corn Field,' P. DE WINT. A capital work, one of the best of its class; it strikes us, however, that the picture would have been more effective if the figures and other objects in the fore-ground had been somewhat less in size.

No. 239. 'Scene from the Black Dwarf,' FREDERICK TAYLER. A triumph over a difficulty. The figure of the Dwarf, although true to the author, is not repulsive; and that of the fair maid to whom he presents the rose is very happily rendered. The party ascending the hillock is beautifully and skilfully grouped. The execution of the work is of high merit. The screen contains several small pictures by Mr. Tayler, and all of them are of great excellence. No. 261, 'The Old Admiral and his Daughter,' is capital. In No. 270, 'Sophia Western playing the Squire to Sleep,' the artist has caught the very spirit of Fielding. In 285, 'Interior of a Keeper's Cottage,' there is a group of dogs, wonderfully real; and in 288, 'Market Girl,' there is nature itself.

No. 306. 'F. Stone.' Mr. Stone is this year by no means a large contributor, and this is to be regretted, for there is a manifest lack of "figure subjects" in the exhibition, in consequence of which landscapes have, necessarily, an undue preponderance. Nos. 306 and 310 are, we believe, the only works he has sent; and they are not sufficient to sustain his reputation, although very graceful and effective "portraits," for portraits they are, although designed to illustrate passages in the "Penseroso," of Milton.

The space to which we are compelled to limit ourselves is exhausted, yet we cannot pretend to have noticed half the works of interest and merit exhibited in the gallery. It will, no doubt, be visited by all who really love art, appreciate its higher qualities, and desire to watch the progress of "our English School."

A visit to the Exhibition will be a rare treat to the public; it is so compact and so complete; there is so small an admixture of the inferior with the excellent, and so much to interest, gratify, and encourage. A daily visit to this gallery is, in fact, a daily lesson in the art of painting in water colours, and where a vast deal may be learned from the best of our English masters, at the cost of a shilling.

## NEW SOCIETY OF PAINTERS IN WATER COLOURS.

THE eighth annual exhibition of this Society, was opened to the public on Monday the 18th of April. The private view, which took place on the Saturday preceding, was attended by the Premier, and a large number of distinguished lovers of the arts; and on the day before, the Prince Albert spent above two hours in the gallery, where he purchased one picture, the work of Mr. Edward Corbould, at the price of 200 guineas. This fact is worthy of record, as among the encouraging signs of the times. His Royal Highness occupies a position which gives him immense power to foster the arts of his country—for Great Britain is his country, in a more important sense than that which gives a claim from the mere accident of birth; and the Prince has already afforded abundant proof that he so considers it. It is therefore gratifying to find him entering an exhibition-room, and selecting, at the suggestion of his own natural taste and unbiassed will, *the best picture it contains*. It argues, *safely*, for the hereafter state of British Art, shows that he is guided by sound judgment, uninfluenced by a mere care to patronage (for we believe, until he entered the gallery, he had never heard of Mr. Corbould's name), and disposed, or rather determined, to bestow the sanction of his approval only upon true merit. To what an opposite conclusion must we have arrived, and how full of melancholy forebodings would have been the circumstance, if instead of purchasing this work, he had bought the piece of canvass for which some tasteless amateur paid the like sum, 200 guineas, at the exhibition of the Society of British Artists.

The "New Society of Painters in Water Colours," has made extraordinary progress from year to year; each exhibition has been a decided improvement upon its predecessor. A natural consequence has resulted from its success: greater caution in the choice of members as vacancies occur. The more recent elections are all good; and although some of the older contributors remain unrivalled, the infusion of new blood has given a stronger and healthier tone to the whole body. Men of matured experience and established reputation, such as Mr. Warren and Mr. Haghe, must "look sharp," when they find neophytes like Messrs. Topham, Jenkins, and Absolon, treading so closely on their heels; to say nothing of Miss S. Setchel, who promises to rival, if, indeed, she have not already rivalled, the best of them.

We rejoice at the onward progress of the Society, at its increasing merit, and at the certainty that this increased merit is appreciated by the public. It struggled through an adverse current for some time, wind and tide against it; auspicious gales have set in, and the result can now scarcely be otherwise than prosperous voyages year after year.

The present exhibition contains 341 works; the proportion of landscapes being by no means over great. The collection is certainly not of entire excellence. There are many mediocre productions, and some utterly bad. A few there are of ambitious size and subject, but so manifestly inferior, that the judicious visitor cannot fail to wish them away. But the gallery contains many of the very highest merit; high examples of a class of art in which the English school is, and has long been, pre-eminent.

No. 13. 'View on the Reuss, Pass of St. Gothard, Switzerland,' W. OLIVER. A landscape of great merit; a fine and accurate copy of nature, of one of the most beautiful and interesting scenes, in a land most rich in the picturesque. It is wrought with care, and coloured with judgment and taste. Mr. Oliver is an extensive contributor, and all his contributions are good.

No. 17. 'The Cooling Room (Meslukh) of an Egyptian Bath,' H. WARREN. A work of the rarest excellence, grouped with considerable skill, and finished, in its more prominent features as well as in its minor details, with delicacy and power. It conveys a vivid idea of the scene depicted; the luxurious ease of an eastern life; the beautiful forms and faces of the women of the East. The artist has happily contrasted the exceeding grace and loveliness of the bride, with

the dark countenances of the attendant slaves, accessories to the "ceremony" of the bath, and very valuable auxiliaries to the materials of the picture.

No. 31. 'Grapes and other Fruit,' MRS. MARGGETTS. A work of the highest class; it is scarcely too much to say, that it has been, hitherto, unsurpassed by any British artist as an accurate copy of reality, in the style to which it belongs. It is painted with amazing force. There is no indecision, or "niggling" effort to imitate nature: a bold and firm pencil has copied "facts."

No. 58. 'Scene from Crabbe's Tales of the Hall,' MISS S. SETCHEL. This also is the production of a lady, and one which does honour to the accomplished mind and vigorous hand that have produced it. The picture describes the visit of Rachel to her lover, Robert, in prison. The "sad couple" are seated, and she is asking the criminal if he will save his life by resigning her—by resigning her that she may become, as the price of his safety, the wife of "his brother and his foe."

"I ask'd thy brother James, would'st thou command  
Without the loving heart, the obedient hand?  
I ask thee, Robert, lover, can'st thou part  
With this poor hand when master of the heart?"

The incident is a very touching one. In the sequel, the lover relinquishes her hand; and his safety is secured by the sacrifice. The poor girl becomes the wife of his brother-rival, and subsequently, the brothers, the one a poacher, the other a keeper, meet, and each falls by the hand of the other.

"Two lives of men, of valiant brothers, lost;  
Enough, my lord, do hares and pheasants cost."

So much, and indeed more, of the deeply pathetic story is necessary, fully to estimate the value of the picture. The countenance of the maiden (that of the lover is hidden) tells her sad tale. It is a history of self-sacrificing virtue. Nothing is exaggerated, nothing added to the expression with a view to dramatic effect; calm and resolute, yet tender and affectionate, the woman waits the answer that is to fix her destiny. The execution of the work is on a par with its conception; better painting has been rarely seen upon the walls of any gallery of British art.\*

No. 77. E. CORBOULD. 'He that is without sin among you, let him cast the first stone at her.' This was a bold attempt for a young artist—for any artist indeed, and one in which a falling short of great success would have been positive failure. To have succeeded, is to have done that of which very few of our English artists, eminent as they are in other branches of the profession, are capable. The art of painting in water colours has rarely achieved a more signal triumph. The conception of the subject is exceedingly grand, the grouping is unexceptionable, and the execution is of the very highest merit. The Jews who tempt the Saviour, are, it may be, of too "savage" a character—the introduction of an oily and insinuating Pharisee, would have been an advantage; perhaps the cords which have bound the woman, and are not loosened, but broken, savours somewhat of affectation; and a seated "Scribe," who looks peculiarly amiable, seems to have no business there—he cannot be one of the apostles, and he certainly is not one of those who "tempted the Saviour, that they might have to accuse him." If the defects were ten times as numerous and as glaring, there would be, however, in the picture,

\* This picture has been purchased for the sum of twenty-five guineas, a sum greatly below its value. But that is a small matter; the reputation it will procure for the accomplished artist cannot fail to make her "rich;" for there is no *accidental* merit in the work; and the mind that produced it can, and will produce others, of equal or greater value. It was bought, it appears, by a Mr. Vaughan. But it seems that the Prince Albert on visiting the gallery, made a note of three pictures which he desired to possess; he determined on obtaining two of them, and sent an enquiry to say which of the two he would like. The enquiry was certain as to Mr. Corbould's picture, but uncertain with respect to the other two; and stated that a message should be sent to settle the point. When the message arrived, the picture was marked "sold." The Queen, it appears, greatly desired to call it hers; and expressed her disappointment to the secretary who was sent for to the palace. We take for granted that long ere this Mr. Vaughan has signified his wish to transfer the possession to that of her Majesty. We have not heard that he has done so; but there can be, we imagine, no doubt upon the subject. Such a courtesy is due to the first lady of the age, to say nothing of other reasons.

ample to compensate for them. The figure of Christ is beautifully wrought; not altogether answering to our notions of the "Divine nature," but what painter ever realized them? The expression is exceedingly holy, calm, dignified, and reposed. The robes are broadly painted; the feeling has been caught from the old masters. The portrait of "the woman" is peculiarly happy; the shamed countenance is hidden, the hand of the accused conceals it, but the story is thus more emphatically told. The drapery is delicate to a degree; and is finely contrasted with the breadth exhibited in the robes of the Saviour. The group to the left of Christ, explaining the law as "Moses commanded us," is of the highest possible merit. Mr. Corbould has, by this work, established his reputation. He may take his place among the foremost of our English painters in water colours. Let him next paint the Divine Master alone with "the woman," asking the question,

"Where are those thine accusers?"

No. 95. 'Confession before Battle,' L. HAGHE. A knight is confessing to a monk. The picture is painted with great power; the colour is indeed as forcible as if wrought in oils, but the subject is not well chosen—it tells nothing; there is no character in the expression of either of the two persons introduced. The face of the knight speaks of many a fierce fight; but of strong passion, of crime unatoned for, of high hope, or murky despair, there are no traces. The work has, in fact, little to recommend it beyond its merits as a finished work of art, and these are great: as a composition, it is of small value. This is to be lamented, for Mr. Haghe has heretofore given abundant proof that he can conceive as well as execute.

No. 99. 'Sale of a Nubian Girl,' H. WARREN. A beautiful and very touching composition, full of the finest feeling, and of high merit as a work of art. The draperies have been "put on" with exceeding skill.

No. 110. 'Scene from Romeo and Juliet,' MISS F. CORBAUX. A work of considerable talent; painted with much vigour; of a firm and bold tone of colour; yet scarcely so decided an improvement upon former works by this accomplished lady, as we might have been justified in expecting. The subject is scarcely one that suited her graceful and facile pencil.

No. 146. 'Rich Relations,' JOHN ABSOLON. This is one of many meritorious works by an artist who affords promise of future excellence. In his choice of subjects, he appears to be guided by judgment and taste: his powers of conception and arrangement may be trusted safely; and in the "executive" of his art, he is by no means deficient. We shall watch his progress with much hope and some confidence.

No. 196. 'The Wearied,' F. W. TOPHAM. This is a new name, but one that will become famous. The artist is an extensive contributor; and all his works betoken genius of no common order. His style is bold and free, yet sufficiently finished in the parts that require more elaborate "working up." In this picture, No. 196, he has represented a group of young, but wearied, wayfarers, resting awhile beside an ancient bridge; from the stream it crosses, one of the party is drinking a refreshing draught. The figures seem to require more careful drawing; but the landscape is natural and true, and a happy harmony pervades every portion of the work.

No. 214. 'Boulogne Shrimper,' J. J. JENKINS. We select this, among many excellent contributions by the artist, for especial praise. It is forcible and effective, and natural and true. Mr. Jenkins has made great progress during the past year; he has always manifested taste and feeling in his compositions; he now establishes his claim to qualities still higher—judgment and power.

No. 220. 'Summer,' E. DUNCAN. A most agreeable landscape, painted with a fine perception of nature in her pleasantest garb. The cattle are pictured with great ability. This is one of many good works by the same hand.

No. 225. 'Calais Pier,' T. S. ROBINS. A small painting of great value. One of the most satisfactory "bits" in the collection.

No. 237. 'Lord Nigel's Introduction to the Sanctuary of Alsatia,' E. H. WEHNERT. A work of much talent, but not a pleasant one; the treatment of the subject, perhaps, naturally induced

vulgarity, and there is here no lack of it. The characters, however, are well conceived and skilfully arranged.

No. 240. 'The Wanderers,' F. W. TOPHAM. Another excellent work; the same group as that referred to (No. 196), and telling a part of the same story.

No. 258. 'Hagar the Egyptian, and Ishmael her Son, cast out into the Wilderness,' H. WARREN. One of the leading attractions of the exhibition; a work of the very highest merit. The figure of the patriarch is exceedingly dignified; that of the unhappy Egyptian, whom he is driving from his tent, is touching to a degree. The melancholy look speaks a volume. Every part of the picture has been carefully studied, and is highly finished.

No. 259. 'A Nibble,' J. J. JENKINS. A group of little urchins angling. A pleasing thought, worked out with great and good effect. The countenances of the young fishermen are full of anxious meaning. The landscape is happily coloured, and the water very real.

No. 276. 'The Tomb of the Cardinals d'Amboise,' R. K. PENSON. A gorgeous work, painted with great skill and high finish; but the material of which it consists is scarcely equivalent to the great size of the picture.

We have noticed only the more prominent pictures in the collection, and upon these alone we are enabled to remark at any length. There are, however, many others that demand a word or two of commendation, as affording evidence of either promise or progress on the parts of the respective artists. Such are No. 48, 'Group of Roses,' by Miss HARRISON. An exquisite and accurate copy of nature.

No. 66. 'Mount Orgueil, Jersey,' E. DUNCAN. A fine picture of the sea; with the usual accessories; painted with much delicacy and force.

No. 65. 'The Conflagration of the Tower,' G. S. SHEPHERD. A remarkable and interesting subject, treated with great skill, and affording an accurate idea of the scene.

No. 67. 'A Bull,' C. H. WEIGALL. A very clever drawing.

No. 57. 'Edinburgh Castle,' T. M. RICHARDSON, sen. A work of considerable merit, the production of an artist who copies nature with fidelity, and yet tinges his copies with the feeling of a poetic mind.

No. 91. 'Meditation,' E. H. WEHNERT. A bold and vigorous example of rustic portraiture.

No. 137. 'The Milk-Maid,' E. CORBOULD. A very pretty and graceful young lady, sitting on a stile "near a milk-pail," that she will never "carry." Like some other most agreeable drawings by Mr. Corbould in the collection, his village lasses are in masquerade; they are offshoots of the drawing-room, and not of the cottage; or, at least, belong to no cottage but a cottage ornée. Against this danger of over-refining, at the expense of nature, the accomplished artist should be upon his guard.

No. 131. 'Susan Holiday,' J. ABSALON, is really what she purports to be—a veritable lass, who milks the cow before the sun has taken the dew from off the grass.

No. 169. 'A Coast Scene,' T. S. BOYS. A pretty little bit, but by no means sufficient to uphold the reputation of an artist, who has a reputation which he ought not to risk. This is merely an excuse for keeping his name on the exhibition list.

No. 177. 'On Holt Heath, Norfolk,' H. BRIGHT. The remark applies still more strongly to this "sketch," a mere apology for doing nothing. If Mr. Bright designs to abandon painting in water colours, he should do so more gracefully—more honestly we were about to say. We have been foremost among those who have borne testimony to his abilities in either art. He is not justified in making us appear false prophets concerning his fame, by exhibiting, as the produce of a year's preparation for this Society, a crude and undigested thought.

No. 213. 'Church of St. Maclou, Rouen,' G. HOWSE. A work of great merit, elaborately wrought in all its details, whether of the noble and time-honoured structure, or the characteristic groups assembled at its base. There are, in the gallery, many excellent and valuable works by this artist.

No. 224. 'Richard Cœur de Lion, arrested at

Berlin,' W. H. KEARNEY. In some respects a work of much merit, but most defective where it should have been most successful.

No. 232. 'On the Alton Downs, below Exeter,' JAMES FAHEY. A pure and true transcript of nature; a delicate bit of English landscape; copied by an able and excellent artist.

No. 264. 'The Romp,' A. H. TAYLOR. A capital sketch of character.

We must be pardoned for having still left many good works unnoticed; and we pray that our omissions may be attributed to any cause rather than the demerits of the exhibitors.

#### SOCIETY OF BRITISH ARTISTS.

We cannot afford much space to a notice of the works contained in the gallery of the Society of British Artists; nor do they, indeed, call for it. The foolish system, so long pursued, has this year grievously damaged the exhibition. We earnestly hope it will not be persevered in—that the accession of a few more rational and right-thinking men will render nugatory the efforts of some wrong-headed members to convert the Institution into a mere trading body—that it will be at least conducted with integrity; and that if fair competition is not to be permitted, a declaration to that effect will be, at all events, honestly put forth; so that neither the artists nor the public can be misled.

The following passage, which occurs in the preface to the catalogue, is not sufficient:—

"The Society consider it due to those artists whose works have been returned (upwards of two hundred in number), to state that want of room to exhibit them favourably has induced the adoption of this course—many works of talent so returned being worthy of a better situation than, if retained for exhibition, could have been assigned them, without prejudice to the interests of the members of the Society, by whose strenuous exertions and contributions (pecuniary and otherwise) the Institution was originally founded, and has been since maintained."

The Society, to have made this arrangement appear an act of integrity, should have hung no unprivileged works *at all*, or at least none in *bad places*; and should have previously announced their intention, in order that contributors of "works of talent" might not have been subjected to the humiliation, annoyance, and expense of having their pictures returned to them, after the Society had made an examination into their merits.

No. 4. 'Duncan's Horses,' J. F. HERRING, sen. Mr. Herring contributes several works, all of which possess very considerable merit. No artist, indeed, has ever 'used the horse' more skilfully or gracefully. His pictures are highly poetic. The noble animal is fully understood, and never has been painted with greater accuracy; but he is made to seem a creature of the "upper" and not of the "lower" world. The painter has given to him almost the character of reason as well as the expression of thought. This, No. 4, and its companion, No. 16, are admirable performances—unsurpassed in their way; while still finer is that, No. 521, which represents Mazeppa, borne by the mad steed among the herd of wild horses. The artist has, however, shown that he can picture mere facts with as much ability as he can imagine poetry. The collection contains some mere portraits of the horse, which are admirable in all respects.

No. 12. 'My dear Brother,' F. Y. HURLSTONE. If Mr. Hurlstone had died four years ago, his name would have endured for ages among those of the ablest of our British artists. Year after year, however, he has been losing his reputation; and this year it is scarcely an exaggeration to say, that the value of his canvasses would be enhanced by a new priming. We cannot point out among his twelve contributions one that is not utterly worthless.

No. 55. 'Rachel Ruish—forming a group of Fruit and Flowers,' G. STEVENS. Luckily for the artist this picture is "sold;" some enlightened amateur having taken it in exchange for *two hundred guineas*. If he be content with his purchase, we have no right to complain; we wish him joy of his bargain; but we may be thankful that such "patrons of the Arts" are not very numerous.

No. 118. 'The Reverie,' Miss M. FAULKNER. A very sweet and graceful composition, worthy of a better place; and which certainly ought to have been found for it, "without prejudice to the interests of the members of the Society," in favour of the pro-

duction of a lady; the only one she contributes, or rather the only one exhibited, "from want of room." The hanging it in a more prominent position would have "prejudiced the interests of the members" in more ways than one; in a way in which, perhaps, the passage in the catalogue preface ought to be taken.

No. 129. 'Sterne's Maria,' F. STACKPOOLE. A new name, and one that gives good promise. The picture may be somewhat too bright, but it is composed with a fine feeling for nature, and an accurate estimate of the capabilities of Art.

No. 130. 'St. Edmund's Chapel, Westminster Abbey,' E. HASSELL. An interior, very elaborately wrought. A production of considerable interest and value.

No. 191. 'An Italian Hay-cart,' C. JOSI. A work of the highest possible merit; one that, to be appreciated, must be looked closely into. The best of the old Flemish masters have hardly surpassed it in combining with grand effect minuteness of finish. The heads of the oxen are wrought with marvellous skill. It is, indeed, a gem of the first water; and worth a score of its neighbours. No. 211 is nearly of equal value.

No. 193. 'Dolly Varden,' W. P. FRITH. A small contribution, by an artist who will ere long play a "premiere rôle" upon a higher stage.

No. 237. 'Scene in the Harem,' A. J. WOOLMER. In spite of Mr. Woolmer's persevering efforts to copy in figures the affectations of Turner in landscape, his works are of great merit. He is a man of genius, undoubtedly; and if he would go to the school of nature, and learn from her to be "wise," he would very soon occupy a position still within his reach. If he continue much longer in his present style he will never attain it. Among the pictures he this year exhibits, there are several of great beauty—rich and rare examples of poetry; and some of them are more free than others from the vicious habit of colour into which he has fallen. It will be easy for him to become more true without being a whit less fanciful.

No. 258. 'An Hungarian Diligence,' J. ZEITZER. An exceedingly clever work; one of many interesting and valuable productions, by an artist of great merit.

Nos. 259 and 271. 'Passages in the Life of Man; "He goeth forth"—"he returneth,"' E. PRENTIS. Mr. Prentis must take care; he is bordering upon caricature, and has already passed the boundary which divides the natural from the vulgar. Heretofore he has generally atoned for much hardness of style, and inelegance of character, by the pleasing sentiment he has conveyed, or the familiar incident he has sent home anew to the heart. In No. 259, he has pictured a most disagreeable scene, unworthy of him; "A Clubbist" is setting out to "the feast," neatly arrayed in all his points by his wife, who gives him the warning lecture on sobriety. In the next picture he is returning, a positive beast, to the home where the lonely wife sits disconsolate.

No. 295. 'Shoreham, Sussex Coast,' J. B. PYNE. Mr. Pyne deservedly ranks among the most accomplished of our English landscape painters. He is, as a matter of course, foremost in this exhibition, to which he is a large contributor; and where he is *now* seen to great advantage.

No. 313. 'Boppard on the Rhine,' C. F. TOMKINS. A right good picture, one of many excellent works of the artist.

No. 320. 'A Cottage Girl,' C. BAXTER. A picture of good promise, sweetly composed, and well coloured.

No. 373. 'The Vale of Llangollen,' T. C. HOFLAND. Mr. Hofland this year contributes no large work; but he exhibits small pictures, painted with his accustomed ability; beautiful and accurate copies of veritable nature.

No. 389. 'The Garden Seat,' J. W. KING. A new name; the work is sound and good; full of fine feeling and taste.

No. 407. 'Chrysis, the Priest of Apollo,' J. WILSON. "Saul among the Prophets!" Who would have expected to see John Wilson painting poetry? Yet, here is a proof that he can do it, and do it well.

No. 408. 'Genevra,' A. EGG. A work of "high" class—we do not use the word in reference to its position. The characters of the lovers are admirably expressed; its tone of colour is firm and manly. In all respects it is a work of great merit.

No. 42. 'Sunset, near Hastings,' A. CLINT. A landscape of the best class.

No. 509. 'Prayer,' H. O'NEIL. One of the sweetest and most touching works in the collection; full of expression, and composed in the purest spirit.

No. 510. 'Phædra,' H. LE JEUNE. A capital study, possessing qualities that give assurance of the artist's eminence hereafter.

No. 518. 'At St. Valery-sur-Somme,' H. LANCASTER. A landscape of considerable merit.

No. 519. 'The last Quateino,' E. LATILLA. A pair of young Italian scapegraces gambling. Painted with great ability; and to our minds to be preferred before the more ambitious productions of the artist.

It is unnecessary to say that, in this comparatively brief notice, we have passed over many pictures of merit—many that will repay a careful examination. We have, however, we believe, commented upon the best; and we have no desire to offer any remarks upon those that call only for censure. As a whole, the collection is not a satisfactory one; and, for the reasons we have given, is not to be regarded as affording proof of what can be achieved by British artists who do not occupy first places.

### THE LOUVRE.

WE resume the subject of the exhibition, according to our promise, to give a few details of some of the more remarkable pictures. Of religious subjects, and there are many, none interested us so much as the unfinished work of M. Buchot, a 'Repose in Egypt.' It possesses all the material and mechanical merits which we formerly remarked as at present so generally characterizing the painters of the French school; but it is, besides, full of feeling and poetry, expressions of that higher gift of genius which no study nor practice can teach. The subject is differently treated from the usual manner. We commonly see, in the 'Repose in Egypt,' Mary and Joseph watching while Jesus sleeps; here, on the contrary, they sleep while the infant is awake, and, with eyes directed upwards, seems to implore his heavenly Father to protect those earthly parents to whom his childhood is entrusted. The painter has given to the infantine head of Christ a character entirely distinguishing him from ordinary children, without losing the peculiar features of infancy. There is an expression of elevation, feeling, and intelligence, as if he saw into the immense future for which he is destined, that quite goes to the heart, and gives such a character to the picture, that this work alone would stamp M. Buchot a true painter. There is also a sketch by his hand, a study for a picture, which we can imagine might have become a companion for his 'Funeral of Marceau'; it is Napoleon on the heights of St. Bernard, showing to his soldiers the fertile plains of Italy spreading below. M. Buchot has caught and idealized, in an elevated style, those rough military traits which often inspired the soldiers of the empire, which others have given in their popular form, and which are well preserved by M. E. M. de St. Hilaire in his 'Traditions of the Empire.' The sight of these works of M. Buchot renews our regret that the artist is withdrawn from so bright a career. His friends mourn a double loss, especially his father-in-law, Lablache, himself an enthusiastic lover and a good judge of painting.

'Christ entering Jerusalem,' by M. Joseph Jouy, is a well conceived picture, and not defective in execution. The manner in which all the accessory personages are conducted, so as to lead the attention to the principal one, is particularly to be admired, also the dignity so well expressed in the figure of Jesus. M. Murat's 'Hagar in the Wilderness' is a clever picture; so, also, is M. Blanchard's 'Noli mi tangere,' though a little cold in execution, it has solid merit.

The 'Christ in the Temple,' by M. Lousteau, has much of nature; but there is a want of elevation in the treatment of the subject. M. Carillet exhibits a repentant Magdalen, possessing nearly the same good qualities and the same defects as the last-named picture. M. Mareschal, of Metz, whose pictures we so greatly admired last year, gives us, in the same noble and severe style which then distinguished his works, a part of a painted window intended for the cathedral of Metz. The subject is the 'Apotheosis of St. Catherine.' The

life and truth which are combined with the other high qualities of this picture render it, in our eyes, a true example of religious monumental painting. We trust we may often again meet M. Mareschal in this elevated region of art. Of the other two works he has in the exhibition we shall speak afterwards.

Among historical pictures, their immense size draws the eye to two works, one by M. Vinchon, the other by M. Omer Charlet. We may safely assert that both would have gained greatly by being confined in smaller dimensions. To M. Vinchon the size was perhaps not a matter of choice, as it is painted for Versailles, and may be intended to fill a certain space. The subject is, 'The Opening of the Chambers, and the Proclamation of the Constitutional Charter in 1814.' The scene is well expressed, and the planes of the different groups detach themselves clearly, though, on the whole, it appears to us that in this vast page of painting there is more facility of hand apparent than deep study. The subject of M. Omer Charlet's work is 'Jean Guiton, Mayor of Rochelle, animating the Courage of his Fellow Citizens at the Siege of that City in 1614.' The colouring of this picture is both true and strong, and the general effect good; but we recommend to this young artist the study of the great masters, in order to acquire a deeper knowledge of what constitutes a truly grand style. M. A. Hesse's picture of 'Godfrey de Bouillon before the Emperor Alexis Comenus,' is executed in all its parts with correctness and ability. 'The Assembly of Protestants surprised by Catholics,' by M. Karil Girardet, is true in expression and cleverly painted.

M. Gué gives two pictures, which are like his other popular works, full of details, and contain an immense number of figures; in both he has been successful, and the public are attracted and pleased this year as formerly. The subject of one picture is the 'Three Maries at the Tomb of Christ'; the other is entitled 'Raymond VI., Count of Toulouse, being reconciled to the Church,' although the reconciliation consists apparently in the Pope's legate making him enter the church with a stole round his neck, and administering a flagellation with rods. The curious historical details contained in this picture increase much the interest it excites. M. Roger exhibits a picture intended for the Galleries of Versailles; the subject is the 'Pope Leo IX., Prisoner of Humphrey and Robert Guiscard.' He is receiving from his two conquerors, who are kneeling before him, the hardest conditions; and M. Roger has skilfully availed himself of this singular contrast, and has treated the scene with much dramatic effect.

Among the many pictures of varied subjects not strictly historical, we have already noted several; we would further observe, on the two crayon drawings by M. Mareschal, that we see with regret in these works a change in his manner. The severe disciple of Masaccio and Giorgione appears here in a style of exaggerated softness, even a sort of return to the French School at the beginning of the eighteenth century. Why is this? It should not be in one who has so true a feeling of the beautiful as M. Mareschal has shewn. His 'Young Girl playing on the Grass,' appears to us also false in taste, in composition, and there is a degree of uncertainty in the drawing. A young girl, half-undressed, does not play on the grass in these days. We must fancy her a nymph or a Naiad, or some individual of an extinct genus—and yet the looks of M. Mareschal's young girl are living and modern, and not suited to such a view of things. We much prefer his other work called 'Distress,'—a youth in a slight bark in a storm. He guides his little vessel with much spirit and firmness; and the exertion he makes is expressed in every limb, not by a contraction of his features.

The wrestlers of M. Sturlet are modestly called a study, but that cannot prevent our seeing that they are painted with great force and expression and form an excellent picture, the group being very happily arranged. We pass over the usual tribes of chained Prometheus, Hercules continuing their long labours; and Ledas and Psyche that are never wanting on the walls of exhibition-rooms. Also several subjects from antiquity; but of these fewer than usual. 'The Damocles' of M. Leon Viardot is especially pleasing, from the composition being somewhat new on this well known subject. The banquet is not given—only Damocles in the intoxication of power, the slave who serves

him; Plato and the King making their philosophical observations.

There are many battle pieces, subjects little adapted to interest in painting; they seldom tell their story; we see soldiers, but we do not know what they are doing, or are going to do,—if the battle is a great one, they dwindle into the size of flies, and all we see is smoke and confusion, men and horses, some standing, some down on the nearer parts of the picture. Many think a battle cannot be well imagined by one who has never seen one; and in proof of this, the painter of battles whose fame is greatest, Borgognone, was himself a soldier, and served various campaigns. In the solitude of the cloister in after years, he recalled the scenes of his youth, and left them to posterity.

Perhaps it is best for an artist to choose an episode in a battle as the subject of his picture, and keep the battle itself as an accessory. This subject requires a further explanation than we have here room for, but at a future time we may return to it; in the meantime we may name the 'Battle of Noëls' (1799), by Mr. Charles Langlois, as possessing much effect and strong colouring; and the 'Defence of Mazagan,' by M. Felen Philippoteaux, has much merit in the details.

Among the landscapes, which are many and excellent, we may add to the names of those already mentioned, a very remarkable 'Interior of a Forest,' by M. Theophile Blanchard; a 'Stream in the Campagna of Rome,' by M. Chevandier; a fresh and charming 'Scene in Provence,' by M. Gresy. Of flowers there are some well painted pieces by Mdles. d'Arson and Polon, and by Messieurs Lesourd, St. Jean, and Jacober.

Many pictures, in every class equal in merit to several that we have noticed, remain undescribed, because we are unwilling to tire our readers by a list that becomes as long as a catalogue. On the whole, further observation and comparison has led us to believe, that the general opinion of the exhibition of this year coincides with that we expressed in the beginning of our first article, that the pictures attaining a certain standard are many—that bad pictures, truly bad, are scarcely to be seen; but that works of that high class that move and interest the feelings and elevate the mind, are rare indeed. We do not mean to be understood as not considering painting also as an art that may amuse; we only wish that painters should regard this and other arts as a means of contributing to high social ends. We like a waltz by Strauss, but we feel ourselves better after listening to the 'Creation' by Haydn.

### VARIETIES.

ROYAL COMMISSION OF FINE ARTS.—We direct the attention of BRITISH ARTISTS to an advertisement printed in the first page of our journal, issued by the "Commissioners appointed by the Queen for inquiring whether, on the rebuilding of her Majesty's Palace at Westminster, wherein her Parliament is wont to assemble, advantage might not be taken of the opportunity thereby afforded of promoting and encouraging the Fine Arts in the United Kingdom; and, secondly, in what manner an object of so much importance might be most effectually promoted," announcing that they "have resolved, that it would be expedient, for the furthering of the objects of their inquiry, that means should in the first place be taken to ascertain whether Fresco painting might be applied with advantage to the decoration of the Houses of Parliament."

This announcement is sudden and startling; but it is also very gratifying and highly satisfactory. It is a proof that the country has been roused in earnest; and that the Fine Arts in Great Britain are, at length, to be aided by the British Nation. We received this advertisement almost on the eve of going to press; it is, therefore, impossible for us now to do much more than point it out to the artists generally—by whom, universally, it will be carefully read and considered. Next month we shall be a condition to comment upon it; and to canvass, upon all points, the vast advantages to which the national project, now clearly developed, cannot but lead. The document is honourable to the Commissioners. It was utterly impossible to have produced one more distinct, more comprehensive, or more satisfactory, in all respects. It contains

two passages especially cheering and encouraging: they are these:—

1st. "THE COMPETITION WILL BE CONFINED TO BRITISH ARTISTS."

2nd. "*Her Majesty's Commissioners will announce, at a future period, the plan which they may adopt in order to decide on the merits of candidates for employment as OIL PAINTERS, AND AS SCULPTORS.*"

Now the most ardent advocates for paintings in oil, and the most strenuous opponents of works in fresco, cannot, and we believe, do not, object to ornamenting *parts* of the new Houses of Parliament, in a style *new*, generally speaking, to British artists, but excellence in which they are surely as capable of achieving as any of the painters of Germany, Italy, or France. There can be no question that the parts so embellished will be such as are particularly suited for fresco; and comparatively unsuited for any other style. We cannot doubt that the same sound judgment and good taste, by which the Commissioners appear to have been hitherto guided, will be exercised in all their decisions and upon all their arrangements. The artists and the public have confidence in the Commissioners—and in their accomplished and upright Secretary, who, they will readily believe, has not been an idle looker on or an indifferent spectator when the reputations and interests of his brethren were at stake. It would be indelicate to say more upon this subject; but it would be unjust to say less. That confidence is now extended and confirmed; the Commissioners have entitled themselves to the gratitude of the profession, and of the British people; and the royal Prince, who is at the head of them, has established a new claim upon the affection of the Nation.

HIS ROYAL HIGHNESS has attended every meeting of the Commissioners that has yet been held; and takes the warmest interest in the proceedings.

HIS ROYAL HIGHNESS the Prince Albert, on Tuesday, visited, attended by Charles Barry, Esq., R.A., and C. L. Eastlake, Esq., R.A., the new Houses of Parliament—or rather their foundations. He remained within the building for above two hours, inspecting every portion of it minutely, and comparing the progress of the work with the plans of the artist, which he had in his hand. His Royal Highness subsequently went into Westminster-hall, where Mr. Barry explained his proposed decorations, &c.

THE OPINIONS OF CORNELIUS.—The opinions given by Cornelius to the Commissioners, when examined by them, during his brief stay in England, touching the decorations of the Houses of Lords and Commons, more especially in reference to fresco, have been *privately* printed for the Commissioners. Although we have seen the document, we do not consider ourselves justified in printing it. Nor is it necessary, inasmuch as it will be introduced into the "Report" of the Commissioners now preparing, and which we shall probably be in a condition to comment upon next month.

PRIZES AT THE BRITISH INSTITUTION.—The four prizes will be announced shortly; but, we understand, no inconsiderable difficulty has been experienced by the directors in allotting them; the best pictures having been painted undoubtedly by those who received prizes last year, and who are, therefore, excluded from competition. We confess we are not surprised at this circumstance; for it is unquestionable that few artists contributed their best works. We imagine that *two* prizes of £100 each will be more likely than *four* prizes of £50 each, to induce candidates to enter the field; the sum is not sufficient to induce a painter to withhold his best work from the Royal Academy. We believe that no pictures have been "sold" at the Institution during the past month; but, of course, the prize gainers in the Art-Union will, by this time, have visited it.

THE ROYAL ACADEMY.—"The Exhibition" will be opened to the public on the 2nd of May; to-day (April 30) the private view takes place. We hear that it will be, in all respects, admirable; and have reason to believe that the rumours of its great excellence are well founded. As the public will so soon have an opportunity of judging as to its merits, it is needless for us to offer any remarks concerning it until next month, when its contents will be under review.

WILKIE'S WORKS.—It will be observed by an advertisement in our pages, that the works of Sir

David Wilkie will be exhibited at the Gallery of the British Institution soon after the close of the present exhibition, which is to take place on Saturday next.

ARTISTS' BENEVOLENT FUND.—We hope our readers will bear in mind that the anniversary dinner of this admirable institution will be held at the Freemasons' Tavern on Saturday, the 7th of May, when Lord John Russell will preside. It is needless for us to do more than give this announcement; an institution so valuable, so necessary indeed, in the most emphatic sense of the term, demands the support of every artist, every lover of the Arts, and every true patriot. The good it has effected, and the suffering it has prevented, is immense. In all respects the plan upon which it is conducted is admirable; we shall, in some degree, test the sincerity of an artist's affection for his profession by his absence from, or presence at, this meeting.

WOOLLETT, THE ENGRAVER.—We earnestly seek to direct the attention of the lovers of the Fine Arts to an advertisement which appears in another column of our journal, to obtain a subscription for the purpose of raising a sum of money by which an annuity might be purchased for the daughter of Woollett, the celebrated engraver, a lady now in her 69th year, and who in the decline of her life is left without any resource. The name of Woollett is one so deservedly eminent in the annals of Art that it will survive to the latest period, and be held in respectful remembrance by all who possess a knowledge of his works. But a stronger appeal than to the *tastes* only of his admirers is now made; their *sympathies* are demanded in favour of one who is the only surviving member of his family, and we trust they will be promptly manifested.

DECORATION OF THE HOUSES OF PARLIAMENT.—We have read, and with considerable pleasure, an able article in *Blackwood's Magazine* for March, "Thoughts upon the Modes of ornamenting the New Houses of Parliament." With many of the details of the writer we cordially agree, but we cannot admit the general conclusion, that scriptural or ecclesiastical subjects, are alone or predominantly historical. The argument is based after all upon the decision of this question—What is history? In a wide sense it may be defined—the narrative of the progress of the social state. It cannot be separated from facts; it must rest entirely on reality. So long as this is borne in mind, the ballad, the picture, or the elaborated narrative are similarly historical in degree. The old Castilian poetry, contains mutilated historic fragments of the most tender feeling, so does the Nibelungen Lied; and we ourselves could scarcely pardon the critic who denied the historical character of Chevy Chase; and, we think, that of the pictures of the great masters would be hardly doubted. History descended to the earth, "when the earth was without form, and void, and darkness was upon the face of the deep; but the Spirit of God moved upon the face of the waters." It was to trace this great and merciful First Cause, in that sublime truth—His moral government of the world—and to show His unceasing, guiding, and sustaining influence that history did so descend. But it is said, particular history, as that of separate nations, cannot do this; it must have an universal character, which Scripture history can alone possess. Now this we doubt. The history of any one nation, is a chapter of the universal history of man. Treated in a comprehensive and enlarged spirit, it is sufficiently extensive in its perceptions, to enable us, in some degree, to comprehend that mighty whole. But it is again objected—history must not be ideally treated; your portraits must be authentic. We answer, every nation has a sufficient conventional belief in this respect, which, if you disallow, you forbid the treatment, historically, of every *Scriptural* subject. What authority have you for the portraits of the patriarchs, our Saviour, the apostles, or martyrs? None whatever. The truth is—it is the *spirit* of history which is to be represented, the form is a secondary subject; yet we have more authentic portraits of the hero, or the statesman, than even the most rigid requisitionists would require. To the introduction of allegorical representations we are in some degree opposed. The allegorical spirit was predominant in the middle ages, and was greatly nurtured and encouraged by the influence of the

Christian religion. The prohibition of sensible images of the Deity fostered the propensity originally among the Jews, and this was continued in the early Christian church, and assumed a character partly chivalrous from the oriental influence of the crusades, or mixed impressions of eastern and western civilization. Christianity itself cannot be either philosophy or poetry. It is the groundwork of all philosophy, it is far above all poetry. All allegorical representations, familiar as they may be, and pregnant with poetic or philosophic truth, soon cease to affect us—the idea is lost in its type. To our minds, the events of English history have sufficient motives, to exhibit social progress, and to become lessons expressive of moral truth and national greatness. The variable and incidental form they may assume, neither weakens their interest or impairs their efficacy. In a word, our artists should perpetuate great events, and the benefits conferred on their country by illustrious men. Not heroes whose names are

"By children questioned, and by men despised;" but such as in the lines of Juvenal we might suppose he would allude to, even when as a satirist, he surveyed the history of Rome:

"Sed tu vera puta: Curius quid sentit, et ambo  
Scipiadæ? quid Fabricius, manesque Camilli?  
Quid Cremære legio, et Cannis consumpta Juventus  
Tot bellorum animæ, quoties hinc talis ad illos  
Umbra venit?"

COMPOSITION SEALS.—A packet containing a score of composition seals has been transmitted to us, per post, from Cork. They are produced by Mr. F. R. Lewis; and the artist has received a medal for his ingenuity from the Royal Irish Academy. We cannot say of what material they are made; but they are as hard as stone, and the impressions they give have all the sharpness and delicacy of genuine engraving. Some of our specimens are large, others are so small as to be about half the size of a split pea; yet, small or large, both have the same extraordinary fineness and neatness of line. From a list that accompanied our supply, we find that the "stock" of Mr. Lewis contains about 200 "subjects," of every imaginable variety, crests, initials, fanciful devices, nay whole verses; with, of course, coats of arms, *a discretion*. We have used them, and find they answer all the purposes of far more costly acquisitions; giving no annoyance from adhering to the wax, and producing, as we have stated, brilliant impressions. And—the great marvel yet remains to be told—they are issued by the producer at one shilling each. The curious may test our recommendation by transmitting a shilling through the post to Mr. F. R. Lewis, King-street, Cork, in exchange for which he will return one of his seals.

PAINTERS' ETCHING SOCIETY.—The work—the Poems of Gray—"in progress" by this society is, we understand, to be "edited" by S. C. Hall, Esq., F.S.A., who has relieved the artists from a labour of no inconsiderable difficulty to those whose previous habits and pursuits have not rendered them familiar with the task. Indeed, it appears almost indispensable that a superintending mind should be placed over such a publication; there are so many small, but important, matters to be attended to in the arrangements and the "getting up" of the work, upon which experience only can adequately determine and direct, that the artists considered it wise to apply to Mr. Hall for his assistance; and they have tendered him their thanks for "the ready and generous manner in which their request was complied with."

LITHOTINT IN CHANCERY.—On the 21st ult. the Vice-Chancellor, Sir Launcelot Shadwell, gave judgment on an application made by Mr. Hancock, the animal painter, for an injunction to restrain Mr. Hullmandel, the lithographer, from practising his recent invention of lithotint; Mr. Hancock alleging that the patent for the lithotint process was an infringement of a patent obtained three years ago by him, "for a new method of producing figured surfaces sunk, and in relief, and for printing therefrom." Mr. Hancock's specification is voluminous, and contains several clauses; but the main object of that portion of his patent alleged to have been infringed by Mr. Hullmandel, appears to be the obtaining of a higher relief than usual from metal plates, by using aquatint ground, for taking impressions by surface-printing with a common press; lithographic stone being used only when a higher degree of relief is required, and then not

for printing from, but to serve as a mould in which stereotype casts could be taken for printing. The process of lithotint neither requires nor admits of relief; for the drawing may be made as well on a stone having a polished as a granulated surface; and the process of printing, like that of ordinary lithography, is not of a mechanical but a chemical nature. Lithotint, indeed, is only a modification of the process of lithography, made for the purpose of obtaining impressions from graduated tints of liquid ink applied to the stone with a brush, in the same way as Indian ink or sepia drawings are made on paper. M. Hullmandel's patent is not for making the drawings, but for printing them; which has been often tried by lithographers, but always without success; so much so that the thing had been pronounced impossible by a commission appointed in Paris to investigate the subject. Mr. Hullmandel succeeded by using an aquatint ground to cover over the drawing, and protect the tints from the action of a powerful acid, which he applies to the stone to prepare it to yield impressions. This appears to be the point wherein Mr. Hancock supposes that his patent is infringed; but without reason, for the aquatint ground is used by him and by Mr. Hullmandel for entirely different objects. The case was argued before the Vice-Chancellor, by Mr. Stewart and Mr. Elderton for Mr. Hancock; and by Mr. Girdlestone and Mr. Rotch for Mr. Hullmandel. The affidavits on both sides were numerous: those on the part of Mr. Hancock including Messrs. Priest and Cotman, artists, and Messrs. Day and Fairland, lithographic printers; those on behalf of Mr. Hullmandel including Messrs. Harding, Haghe, Boys, Gauci, Scharf, and Walton, lithographers; Messrs. Stanfield and Brockedon; and Dr. Faraday, the eminent chemist. Much curiosity was excited in court by Mr. Hullmandel producing a lithotint drawing made by Mr. Harding, and subjecting it to the process described in his specification, in presence of Sir Launcelot Shadwell, to whom an impression, taken at the moment, was presented: on which his Honour wittily remarked, that this was a new kind of "drawing in equity." The effect of the Vice-Chancellor's decision was virtually to refuse the injunction, leaving Mr. Hullmandel "free to act as if the case had never been mentioned," with liberty to both parties to apply to the court on the subject of costs, at a future time; his Honour reserving the consideration of costs until the finding of a jury, or the refusal of the plaintiff to bring his action at law, should determine, absolutely, whether or not there was any infringement by Mr. Hullmandel of Mr. Hancock's patent, a matter of fact that it was the especial province of a jury to decide.

**AFGHANISTAN.**—We have been favoured with a view, at Messrs. Graves', of a set of sketches which have been just transmitted to England from the scenes of our late disasters in Afghanistan. The views are twenty-six in number, and are accompanied by twenty-two vignettes scarcely less interesting. They are from the pencil of an amateur, James Atkinson, Esq., superintendent-surgeon of the army of the Indus; and upon safe grounds we affirm that we have never before seen amateur drawings so well worthy to rank with the better productions of the profession. The drawings are to be lithographed by Haghe, and the publication of such a series at this time will aid powerfully in illustrating the difficulties to which an army is exposed in such a country. Some of the most remarkable views are—'The Entrance to the Bolan Pass from Dadar.' Here the passage is flanked by heights, everywhere covered by Beloochees, who, safe in their positions, poured a deadly fire upon our devoted countrymen. 'View of the Mountain Baba-Naunee, called Kutl-Gahor.' 'The Approach to the Fortress of Kwettah.' 'The City of Kandahar.' 'The Fortress and Citadel of Ghuznee, &c.' 'Entrance into Caubul.' 'The Main Street in the Bazaar at Caubul.' 'The Balla Hissar and City of Caubul from the upper part of the Citadel.' The Balla Hissar is a fortress situated on a rocky eminence, and has been famous in all letters and despatches from this place. Another view presents Caubul from a burying-ground. Among the vignettes are portraits and figures describing better than in words the costume of this part of Asia. There are 'Beloochees in the Bolan Pass,' portrait of Khan Shereen Khan, a portrait of Shah Soojah Ool Moolk, &c. By all interested in Indian affairs at this moment (and who

is not?) the publication of these views must be looked forward to with intense interest.

**HAYTER'S PICTURE OF HER MAJESTY'S MARRIAGE.**—This national picture, which has been known to have been some time in progress, is finished, and is now being exhibited at Messrs. Graves', in Pall-Mall. The agroupment of the figures is as near the reality as possible in order and arrangement. Few things in painting are more difficult than the execution of a work like this, in which the artist is bound down by rules, the transgression of which is at once fatal to his work; and the rules under which he has here laboured are the most rigid and the least indulgent to effect in the whole round of Art. Every figure is a portrait; and all the foreground personages are full-length, and brought forward in a manner to try most severely the truth of the various well-known impersonations, which, as far as we have had opportunities of observing, cannot be challenged. The resemblances of her Majesty and her royal consort are perfect; in fact, the instant the eye rests upon any figure the prototype is at once remembered if he or she have been but once seen. As identities which must strike every one who sees this work are the portraits of the Dukes of Cambridge and Sutherland, the Queen Dowager, Lord Chancellor Cottenham, the Duke of Bedford, Lord Melbourne, Duchesses of Cambridge and Kent, Dukes of Wellington and Devonshire, Marquis of Anglesey, Lord Belfast, &c. &c. The principal effect of the picture is managed with infinite delicacy and feeling. The principal light falls, as it should do, upon the Royal Pair immediately in front of the altar, whence the strength is graduated in a masterly manner to the remote parts and the background. The figures in number amount to between forty and fifty, and the whole tell against the wainscot of the chapel, which is sobered down to charming mellow background tone. In addition to the portraits of the persons already named there are also those of Earl Howe, Prince Ernest of Saxe-Coburg, the Marquis of Westminster, Marchioness of Normanby, Duchess of Sutherland, Duke of Saxe-Coburg Gotha, Duchess of Hamilton, Archbishops of Canterbury and York, Princess Sophia Matilda, &c. &c. The picture, which is the property of her Majesty, is about to furnish an addition to the list of national engravings; but no engraver has as yet been named for the execution of the plate.

**THE "UNIQUE BIBLE."**—It is gratifying to learn, that the list is again opened for the names of persons desirous of obtaining this profusely and beautifully illustrated copy of the scriptures. It is still in the possession of Mrs. Parkes, of Golden-square, who, we have pleasure in adding, is again in a position to carry out the propositions of the prospectus. The number of names deficient is only about 120.

**THE WELLINGTON STATUE.**—The plaster cast of Mr. Wyatt's work is at length completed; and persons acquainted with this department of modelling will readily understand the delicate and perilous nature of the enterprize of transferring to plaster, a design of such vast proportions. This was of course effected piecemeal, and necessarily in small portions; but such does not appear, so carefully has the work been conducted to its present stage. Some idea of its magnitude may be formed, when we say that the mounted figure rides twenty-eight feet high, and beneath the hind quarters of the horse there is space enough to admit a man on horseback. A model of such proportions cannot be justly estimated as we now see this; the effect of which in any studio, however extensive, must be vitiated by every disadvantage. The Battle of Waterloo is the passage of the Duke's life to which the action of the statue refers. He points with his right hand in the supposed direction of the arrival of the Prussians, and is speaking of their presence to his staff. The features are in expression becoming the occasion; and the figure rides with firmness, but also with much ease. The head of the horse is the perfection of animal portraiture, and the movement full of natural truth. The tail would have been better had it been more massed; it hangs somewhat in the manner of wet hair. The costume is the usual uniform, over which is thrown a short cloak, such as the duke even yet wears. A plume surmounts the hat, an addition for which we were not prepared, as he generally appeared without it. The

limbs of the horse strike the spectator as somewhat long, an effect which we doubt not will be removed when the monument is seen on its destined site. Towards the end of this month the model will be cut up for casting, which with the adjustment of parts and final completion will occupy two years. The ingenuity and professional skill with which Mr. Wyatt has thus far conducted this national work cannot be too highly eulogized.

**THE COLLINGWOOD STATUE.**—The monument which some time ago was proposed to be erected to the memory of Lord Collingwood, is in progress by Mr. Lough. The clay model is completed, and stands eight feet high; but this is only one-third of the intended height of the figure. The design is distinguished by its simplicity and good taste. The figure is erect, with the head uncovered, and it derives support and relief from a cloak which is thrown over it—a most judicious arrangement, considering the proposed magnitude, material, &c. of the work. This important work is to be executed in stone, and placed near Tynemouth Priory, whence it will be visible at sea.

**ARCHITECTURAL CARD MODELS.**—Messrs. Reeves and Son, Cheapside, are exhibiting a model of Westminster Abbey cut in card-board by E. Andrews, of Guildford; it is an elaborate and beautiful piece of execution. Several other smaller specimens of churches and chapels are also to be seen with it. "Mr. Andrews lately exhibited two models of the Pavilion at Brighton, and St. George's Chapel, Windsor, to her Majesty and Prince Albert, who were graciously pleased to purchase them, and grant him their patronage."

**MR. GEORGE BARNARD** is about to publish a volume of sketches, to be called "Scenes and Incidents of a Tour in Switzerland," with Descriptions, so soon as a sufficient number of subscribers' names are received by the artist, or by Mr. M'Lean, Haymarket, who has several of the original drawings on view. They are clever and faithful, and give a fresh and distinct idea of the wildly picturesque features of Alpine scenery.

**SALES OF THE MONTH, PAST AND TO COME.**—At the sale of Sir David Wilkie's sketches, noticed at length in another part of the paper, the under-named drawings were sold for prices as affixed:—

**FIRST DAY.**—*Pen and Ink Drawings*—'The Highland Smuggler brought before a Magistrate—design for a picture,' £19 18s. 6d.; 'Blindman's Buff,' £31 10s.; 'The Escape of Queen Mary from Loch-Leruen Castle,' £13 2s. 6d.; 'The Arrival of a Rich Relation,' £22 1s.; 'Fox on the Hustings,' £12. *Chalk Drawings*—'Study from the "Gentle Shepherd"—a Woman dressing her Hair,' £10 10s.; 'The Gipsy, from the picture of Josephine and the Fortune-teller,' £12 1s. 6d. *Tinted Drawings*—'Burying the Scottish Regalia,' £27 6s.; 'A Summer Shower,' £9.

**SECOND DAY.**—*Sketches made in Ireland*—'Confession'—signed and dated, £6 16s. 6d.; 'A Street Scene, Dublin'—signed, £6 15s. *Chalk Drawings*—'John Knox administering the Sacrament,' £39 18s.; 'Arrival of a Rich Relation'—signed, £27 6s. *Septia Drawings*—'The Duke of Wellington, whole-length'—signed and dated, £13 13s.; 'Cranmer seated, his arm bared'—very spirited, £11 11s.; 'Clint, slightly tinted,' £8 18s. 6d.; 'Columbus,' £12 1s. 6d.; 'Grizzel Baillie bringing Food to her Father during his concealment,' £8 8s.; 'Queen Adelaide and other Figures on a staircase,' £12 1s. 6d. *Tinted Drawings*—'Columbus explaining his Chart to Queen Isabella,' £11 11s.; 'Samuel and Eli,' £21 10s. 6d.

**THIRD DAY.**—*Chalk Drawings*—'A Woman with a Comb,' £5 5s.; 'A Figure,' £8 15s.; 'Drawing a Net,' £15 15s. *Tinted Drawings*—'A Woman with Children,' £8 8s.; 'The Earl of Kellie,' £5 5s.; 'A Negro in the picture of Josephine,' £31 10s.; 'Study for the Whiskey-Still,' £25 4s.; 'Sir David Baird discovering the body of Tippecoo,' £10 10s.; 'George the Fourth's Entry into Holyrood,' £10 10s.; 'An East Indian,' £8 8s.; 'The Serenade, Seville,' £16 5s. 6d.; 'The First Kissing,' £21.

The sum realized by the first day's sale was £496 13s. 6d.; by that of the second, £488 15s. 6d.; and the third, £409 16s. 6d.

On May 3, Messrs. Christie and Manson will sell the stock of engraved copper-plates and impressions the property of the late Sir David Wilkie, comprising the plates of all his most celebrated works.

On May 6, they will sell a collection of pictures by the most eminent English painters, formed by that distinguished patron of British Art, Robert Vernon, Esq., who, being in possession of many specimens of the same artists, disposes of these to make room for the works of others whose names do not occur in his collection.

On May 13, Messrs. Christie and Manson will sell the select collection of John Turner, Esq.; among which are 'The Rabbit on the Wall,' by Wilkie, and some other very choice works by eminent artists.

## ART APPLIED TO MANUFACTURES.

NO. III.—INSTRUCTION IN THE ART OF DESIGN  
—STUDY OF THE HUMAN FIGURE—DUPUIS' MODELS.

HITHERTO we have considered the study of form by means of drawing only so far as the elementary teaching of delineation; up to which point it is an exact science that may be acquired by any intelligent person. We now enter upon the consideration of the Art of Design, the practice of which requires skill and knowledge of a peculiar kind, and the exercise of taste and invention. It is not only possible, but desirable that every one should possess the power of defining on a flat surface by means of lines, the form and relative proportion of any object correctly and intelligibly; this power in relation to the Art of Design, being analogous to the ability to express in writing a simple idea: on this base of science, of which the study of the cube is the corner stone, is to be erected the beautiful edifice of the Art of Design, with all its various parts; any one of which separately may suffice to occupy the mind of the student who would attain complete mastery over it. The principal departments, viz., Architecture, Landscape, the Human Figure, Animals, Plants, and what is termed Still Life, are again modified according to the style of representation, as drawing, modelling, painting in oil or water colours; and the purpose of the imitation, whether for pictures, sculpture, or ornament. They are further subdivided by the different manufactures to whose use they may be required to be made subsidiary, as architectural decoration, furniture, carpets and hangings, pottery and glass ware, cotton, silk, and lace drapery, goldsmith's work and bijouterie, &c. Thus three branches of study are requisite to each department; namely, knowledge of the class of natural objects to be imitated, of the style of art to be adopted, and of the purpose to which the art is to be applied. It is important that this classification of the various branches of Art should be borne in mind, because it is only by acting on the division-of-labour principle, that an adequate degree of perfection can be attained by the mechanic-artist. So soon as the student is able to draw correctly and neatly any given object, he should choose the style of ornament he intends devoting himself to, and begin by studying the manufacture in which he is to work, be it furniture, pottery, drapery, or what not. When he knows the requisitions of his department, he will be able the more quickly to seize upon those features in natural objects which are most available to his purpose; and be qualified to represent them in the characteristic manner of his peculiar craft. The different phases of Art as applied to ornament being conventional deviations from the true representation of painting or sculpture, it becomes necessary, first, for the student to learn to draw what he sees, without reference to this conventional manner: this will give freedom and power of volition to his adaptation of nature to the particular modification of Art, that a hand and eye cramped and distorted at the outset by restriction to conventional mannerism, can never acquire. Therefore we are opposed to teaching elementary drawing from artificial representations, in which natural forms are twisted to the purpose of a conventional style: for instance, to begin by setting a pupil to draw architectural ornaments, whether Grecian or Gothic, not only cramps the hand, but for want of a preliminary understanding of the characteristics of the style, he is unable to imitate what is before him with the freedom and facility resulting from intelligence. It ought to be an axiom in teaching, that imitation should never go beyond understanding: a distinct and complete idea of the object to be drawn should be formed before its delineation is commenced; at least a perfect comprehension of all that is to be represented is a necessary preliminary. Hitherto, the practice of the student from models has been mechanical, and he has proceeded on scientific grounds: he has been copying solid objects of regular form, smooth surfaces, and with few curves (we allude to Mr. Deacon's models), and has only had occasion to observe accuracy of outline and evenness of shading. He has copied all he saw, just as it appeared to his perceptions: now he has got to learn the art of selecting the points to be seized upon; in other words, he must know how and what to indicate and to leave out. A correct and firm out-

line is the first thing to be attained, and the last to be got rid of, by filling it up with light and shade; so that the outline in the drawing shall appear, as in the reality, the result of the form, not the form a result of the outline. To accomplish this, the outline and the lines constituting the shade must be so expressive as to suggest the quality of the surfaces and depth of the hollows as well as the precise external shape of the object; and yet the lines indicating these characteristics should be as few as possible, consistent with the end sought for. It is a common mistake to suppose that the greater the elaboration of a drawing the stronger the imitation, and the more striking the idea it gave of the original; and much time and useless labour has been wasted in finishing, when every step beyond a certain point has been a departure from the spirit and truth of the representation. The excellence and charm of a sketch consist in the lively indication of the character and form of anything by a few expressive lines; and in proportion to the proficiency of the draughtsman will be his skill in this suggestive power of indication: at every stage of his progress the skilful artist learns to be able to dispense with some labour; because, from amongst the multiplicity of lines he selects the few that are absolutely necessary to figure the object, from knowing which are the leading points on which the truth of the delineation depends. This power is the result of knowledge and skill combined, and refined by practice and observation; the expressive quality of the drawing will depend upon the liveliness of the artist's perception, and the feeling of his hand. Many affect laxity of style and slovenly execution, thinking these negligent qualities will pass as denotements of superior power that does not condescend to precision; but such will never satisfy the eye of the nice observer; their delineations are not always intelligible, and never without some trouble and a degree of uncertainty. It is erroneously supposed that "sketching-drawing," as we heard it called, is a sort of royal road to the delineation of form; but this is confounding the feeble, imperfect outline of a tyro, which is vaguely suggestive, with the expressive indication of a master-hand that conveys a complete and distinct idea; the one a perfect result available and pleasing to all, the other a faint approximation to the reality, useful only to the person who traced it as a guide for his future efforts to reach the truth.

In delineating objects of complex form, there are two courses of proceeding; the one from the whole to the different parts, the other from the parts to the whole. It would seem hardly necessary to contend that to proceed, from a general comprehensive idea of the whole, to a particular understanding of the various parts of which it is composed, must be the proper course, this being obviously the more rational mode of setting to work; but custom has followed the opposite course, against which we have, therefore, to show cause. The popular drawing books of the human figure begin with eyes, noses, mouths, and ears, proceeding on to parts of faces, heads, busts, hands, and feet, and, lastly, arriving at the entire form; but, though the pupils may have succeeded in copying the separate features of the face and members of the body with tolerable fidelity, when they come to draw the whole they find great difficulty in putting the limbs well together, and setting the head on the trunk, balancing the figure, and even keeping the features of the face in accordance. The reason is, that they have learnt neither the contour nor the proportions of the figure, nor, indeed, the details properly; and however apt the eye may have been in catching the general appearance of the drawing they were set to copy, their want of knowledge of the conformation is apparent in the unmeaning, slavish, spiritless imitation. Had they been first put to draw a strongly-marked outline of the whole figure, and made to know the relative proportions of the different parts, they would have been able not only to understand the details better, but also to put them together with relation to each other, according to their knowledge of the form. Mere copyists, who follow mechanically a pattern set before them, may succeed in this course, by practice, because all the work of the mind is done to their hand; we have heard, too, of artists of great talent proceeding in this way when painting an original picture; but such peculiarity is exceptional, and is one of the licences of surpassing dexterity, or genius, which makes laws

for itself. The course of the student cannot be too carefully laid down; for any deviation from a right track at the outset leads to endless errors and difficulties, and tedious retracing of erring footsteps: keeping, or the due relation of parts to the whole, is essential to good drawing; and this can only be secured by a strong and comprehensive grasp of the ensemble. M. Dupuis appears to have had this object in view in his series of models for teaching to draw the human form; and though we venture to express an opinion that he has not accomplished it quite so thoroughly as is desirable, the adoption of the principle makes them valuable aids to instruction, and its application is highly ingenious. The set of models, which we saw at the Government School of Design—where we hope it will be used—consists of bassi reliefs of the whole figure, in various attitudes of action and repose, half-life size; heads the size of life, in different postures; and colossal hands and feet. Each one is modelled with the leading forms blocked out, square and angular, like the rough-hewn marble for the sculptor to finish, as represented in the annexed figures of a hand and foot; and the same

are also modelled as finished sculptures. The heads are in four stages of development: the first resembles a wig-block; the second, the same with the hair, the projection of the nose, and the hollow of the eyes, strongly marked; the third has all the features roughed out, as in the annexed

figure; and the fourth is a finished head. A proof, were any needed, of the consistency of this plan with the principles before laid down; namely, proceeding from the whole to the parts, and advancing in delineation commensurately with the understanding, was incidentally afforded by the circumstance of Mr. Deacon having been designing a set of models for teaching figure-drawing on a similar principle, but different in details, without being aware of the existence of these models of M. Dupuis. Whether M. Dupuis makes his pupils draw the head and extremities of the figure before or after the entire figure, does not appear; but, from the circumstance of the head being cast in four successive stages of development, it is a probable inference that he commences with the head. Mr. Butler Williams,\* who uses Dupuis'

\* The mention of this gentleman's name affords the desired opportunity of stating, which we have much pleasure in doing, that Mr. Butler Williams has improved upon the French mechanical models, by reject-

models in teaching the drawing classes at Exeter Hall, agrees with Mr. Deacon and the writer of this paper, that it is preferable to commence with the entire figure; and Mr. Frank Howard, in his admirable little treatises on the "Science of Drawing, for the Use of Amateurs," advocates this course. The best teachers of drawing, in setting beginners to copy outlines from paper, are in the habit of directing the pupil to block out the form squarely; that is, substituting straight lines and angular shapes for curved forms—that by this kind of exaggeration the hand may acquire freedom and spirit instead of a timid and tame littleness; and M. Villalobos, in his drawing academy, taught the drawing from the round on this principle. What these teachers direct the pupils themselves to do, M. Dupuis has done for them in his rough-hewn models; and there is this advantage attending his plan, that the pupil is enabled to copy truly and with knowledge all that he sees of form in the rude blocked-out mass before him. For the purpose of ornamental art, or amateur practice, this superficial acquaintance with the structure of the human frame—such a knowledge of its relative proportions, and the leading points of its anatomy as may be acquired by these means—may suffice; but it is essential for students of sculpture and painting to study the anatomy in the skeleton, and by dissection or demonstration. It is desirable also for the student of some branches of decorative art to go deeper: for this purpose bassi reliefs of the figure in repose, showing both front and back views, might be modelled with one half showing the bones only, and the other half the muscles. An anatomical statue the size of life showing the muscles, and a well-articulated skeleton, are essential to every drawing-school, where the figure is taught to students of painting and sculpture.

We hope to conclude the consideration of this subject next month; when the publication of the Drawing Book for the Schools of Design will furnish occasion to speak of the progress of the students under Mr. Dyce's system of instruction.

#### THE STRAWBERRY-HILL COLLECTION.

THE pictures, generally, at Strawberry-hill, are remarkable rather as curiosities, than as triumphs of Art; and valuable especially as historical and biographical accessories. There is, however, among them, a portion taking rank with the most transcendent in their respective styles, but there is not one first-class picture in the entire collection. In turning over the catalogue before visiting Strawberry-hill, its pages conveyed impressions which were effaced by the locale and its contents. We may complain of this because the inimitable strain of the Ossianic advertisement breathed a hope that it would find a permanent place in the bookcase. Now it contains numerous errors—one whereof will serve to show what we mean—*ex uno* then—in page 215 to the description of a crayon portrait by Rosalba, are appended the words, "Considered one of the best portraits of this master." Now, this master was a lady, and one whose works we have venerated ever since we have known the difference between crayon and oil.

We are led to doubt the originality of many of these pictures, inasmuch as they depart from the recognized and settled styles of the painters. Even when such works are "undoubtedly," they are at best but arrant humours of the authors—mere caprices, bearing, but not sustaining the names that attach to them. The most desirable of an artist's works, are specimens of his best style; if these are not procurable, there should be as little room as possible to question the originality of those substituted. There are, for instance, a 'Head' by Cuypp; 'Kitchen Interior,' by Watteau, &c. &c. Such derelictions of style we cannot estimate highly—since in them the artist presents himself in masquerade. Few houses are less calculated for the display of pictures than the villa at Strawberry-hill; and singular enough it is, that many of the best pictures are hung in such positions that their degree of merit is with difficulty determinable. As the space which we can afford to a notice of this collection is very limited; the few pictures upon which we remark are selected with a view to quality of execution; others which we pass by derive importance only from their antiquity and historical associations, since to them, of these, attach all the vices of the infancy of painting.

"The Tribune," so named according to Italian usage, contains many beautiful cabinet pictures. No. 3. (Catalogue p. 122) is a small and beautiful 'Landscape,' by Muntz. 'The Head of an Old Woman,' by Gerhard Douw 35, in the same room, exhibits in its high finish a striking contrast to similar works of Rembrandt the master of Douw. 36. 'A Man and a Woman seated in a Garden,' Watteau, is not a valuable specimen of the master. The female figure is evi-

ding some of Dupuis' arbitrary forms, and substituting others, so as to make them more susceptible of combinations suggestive of real objects.

dently a portrait. It is brought forward by a light background, but the composition is not so well balanced as those of Watteau generally. 'The Temptation of St. Anthony,' by David Teniers, 44, is a small picture—retiring in colour, but spirited and elaborate in execution. The subject is grotesqued, and he might have entitled it 'St. Antoine pour rire.' The Louvre contains another more serious version of the legend by the same hand. Portraits of 'Pœlenburg and his Wife' (57.) are curiosities, as the work of a landscape-painter, of whom Rubens said, "Were I not Rubens I would wish to be Pœlenburg."

In the room called the Holbein Chamber is a most interesting and valuable collection of pictures and drawings, as well copies as originals. Of many of the latter attributed to Holbein, it is difficult to believe the authenticity; as they exhibit, upon close inspection, material differences in style. No. 40 (Cat., p. 199), is a 'Portrait of Man in a Black Dress, of the time of Henry VIII.;' the companion to which is a 'Portrait of Frobenius,' the printer to Erasmus, finished with singular care and labour. Near those is seen the portrait of another celebrity, 'Philip Melancthon,' with a Latin inscription on the frame—"Que cœcis tantum non, viva Melancthon ora, Holbinius rara dexteritate dedit;" and, indeed, the "rara dexteritate" is everywhere conspicuous. These works must not be considered, with respect to the present state of Art, as productions of an early period generally; but if we refer them to their epoch of three centuries ago, they cannot be pronounced otherwise than wonderful. Holbein is described in an old Louvre catalogue—"Fils de son pere Jean Holbein;" but he must assuredly have been more than this. Holbein's oil miniatures are infinitely preferable to his larger portraits; for in those the hard lines and offensive markings of the countenance are softened and qualified. There is frequently an unnatural monotony of colour, and the hands are picked out of a dark background, and so left without connexion with the other lights; but, notwithstanding these and other faults, Holbein was centuries in advance of his time. No. 86 (Cat., p. 202) is termed 'A splendid old painting, representing Henry VIII. and his Family; the king is enthroned, and upon his right stand Philip, Mary, and the God of war; and on his left Elizabeth, attended by Pence and Plenty; Henry is delivering his sceptre to Edward. The name of the artist is unknown; the work is distinguished by most of the errors of its period—so stiff is the dress worn by Elizabeth, that it seems to have been built on to her. Upon the frame appear some verses, imputed by Walpole to Queen Elizabeth, wherein she complacently enough claims all the virtues of her father and sister. No. 87 (page 283), 'A full-length Portrait of Margaret Smith, wife of Thomas Carye, Groom of the Bedchamber to Charles I.,' by Vandyke. This picture was in the Wharton collection, and subsequently in that of Sir Robert Walpole; and is an admirable work, mangle some rigidity which the artist might even have caught from nature in such a habit. The hands, in colour and lightness, remind us of Homer's figure, "rosy-fingered morn." No. 88 (page 203), 'Portrait of Philip Herbert, Earl of Pembroke and Montgomery,' by Mytens. We cannot agree with the proposition in the auction catalogue, that this would form an excellent pendant to the preceding. Although incorrect in drawing, it possesses many points valuable in portraiture; but the work of Mytens can never pair with that of Vandyke. No. 89 (in the same page) is 'A splendid Portrait of King Henry VII.,' on panel. The following passage we quote from the catalogue:—"This picture is considered incomparable for its truth to nature, expression, and chiaro-scuro—the character and thought in the countenance, and its exact conformity with the bust by Torregiano, in the Star Chamber, make it unquestionably a portrait for which the king sat." The execution is by no means that of the period; it is said to have been retouched by Rubens; it is true that the glazing matter with which it is finished is similar to what is found in his works, but in these it is much more skillfully applied.

No. 99 (page 204), 'Richard I., Prisoner to the Archduke of Austria.' This picture is admirably painted, but faulty in its chronology. No. 100 (page 204). The 'Presentation in the Temple,' by Rembrandt, has all the characteristics of the master. The shadows are less transparent than in other similar pictures, and despite the supposition of its "purity," &c., some parts of the picture appear to have been touched upon. No. 101 (same page), is a 'Landscape, with Cattle,' by Gaspar Poussin; the foreground is in shadow, the effect being that of evening. The picture, as usual with this artist, is painted on the principal of denying colour to shadow. This does not merit the reproach so often cast upon him, of being too green. 'Mademoiselle Hamilton, Comtesse de Grammond,' painted by Eckhardt. The features of this lady are, perhaps, remembered with more pleasure than those of any of the other beauties among whom she is classed. The figure, in its movement, leaves the canvas behind it, and the morbidness sets the bosom heaving under its effect. 'The Original sketch of the Beggars' Opera,' painted by Hogarth, No. 114 (page 205). It contains portraits of the first supporters of the characters, as the opera was performed in 1728, in Lincoln's-inn-fields. We need only say of it, that it is marked by all the spirit of the master, and was purchased at the sale of John Rich, the celebrated harlequin, and master of the theatres in Lincoln's-inn-fields and Covent-garden, for whom it was painted.

'The Rehearsal of an Opera' (115, page 206), by Sebastian Ricci, is a gem of its kind. The *corps operatique* are richly caricatured, being Nicolini, Mrs. Toft; Sir Robert, Rich, &c., &c. Notwithstanding the freedom of pencilling, every touch has fallen in the proper place, with a care and forethought to amplify the substantive merit of the whole. The style of Ricci, who died in 1734, and was of the Venetian school, was allegorical; but in a run of subject like this, we should have been proud of him as an English painter. There is a small landscape painted in this picture by Marco Ricci—a reputation within a reputation—on the right of which is a beech-tree, worthy to be incised with the name of Genone. "Fage, vive precor, hoc in rugoso cortice carmen habes."

The Round Tower contains six interesting sketches by Rosalba, as she is called, of the Earl of Lincoln, Horace Walpole, John Shute, Joseph Spence, Mr. Chaloner, and Mr. Whitesend. Crayon drawing was the profession of Curiera Rosa Alba, in which she has never been equalled. The collection contains other works by this lady: they are somewhat faded, but exquisitely tender. In the Refectory we find, by Reynolds, one of the finest groups of female heads ever painted by him; consisting of portraits of the ladies Laura, Maria, and Horatia Waldegrave, daughters of James, second Earl of Waldegrave. It is much to be lamented that this really valuable picture is seen in such an imperfect light. We may presume that it has occupied its present position, perhaps ever since it was painted, and the tones seem to have flattened and drooped under the privation of light, a most dangerous test for those pictures of Sir Joshua, upon which he may have experimented. The ladies are assembled round a work table, and the rigidity and stateliness of the female costume of the last century is here charmed into ease and grace. Much that might have been unbecomingly veiled, and that which could not be veiled, is rendered ornamental. 'The Education of Jupiter,' by Poussin, No. 46, page 211, is a fine picture, and infinitely preferable to many of the highly prized works by him in the Louvre.

The long Gallery contains many admirable pictures, a few of which we must be content, from want of space, merely to name. No. 53, page 213, is a 'Portrait of George, Duke of Buckingham,' by Rubens; 58, 'An Interesting Interior,' by Old Franks; and 59, a 'Portrait of Mr. Leneve,' by Cornelius Jansen; near which hangs a portrait of the son of the last named, by Sir Peter Lely, more sober in tone and in better taste than his works generally. By Sir Joshua Reynolds, 71, p. 214, is a 'Portrait of James, second Earl of Waldegrave,' of high value, and extreme beauty, the pendant to which, the Widow of the above Nobleman, painted also by Reynolds, is a most beautiful female head, and equal in its kind to the productions of any school and any time. The figure is supported by a smoky background, from which it comes out with singular brilliancy. No. 82, page 215, called 'The Exterior of a Kitchen,' &c., is described in the catalogue as a work of Watteau. It is in every respect the very antipodes of his style, yet may have been one of his *facetiae*, for of such he had many.

No. 89 (Cat., p. 216) is 'A splendid gallery picture, whole length Portraits of Catherine de Medici and her Children, Charles IX., Henry III., the Duc d'Alençon, and Margaret Queen of Navarre,' by Janet. This picture is full of that kind of truth, the contemplation of which, in nature, is offensive, but in art positively painful. The work has every appearance of having been left in an unfinished state; the flesh-colouring seems not to have been advanced beyond a flat and mealy dead colouring, and the drawing is feeble, graceless, and full of imperfections. Notwithstanding the number of figures, there is no agroupment; no understanding between them; each is unconscious of the presence of the others; the heads possess, however, one great merit of old portraits—they are full of character; and the features of Catherine we cannot describe better than by the title of a book written by herself: they are "Le Miroir de l'ame pecheresse."

There is, by Mark Garrard, a whole length 'Portrait of Frances, Duchess of Richmond,' and by Vansomer, a whole length of 'Henry Carey, Lord Falkland,' which suggested to Horace Walpole the idea of the figure moving out of frame, in the "Castle of Otranto." The picture is in a very insufficient light, but obviously of no great merit. In the blue bedchamber is a family composition, containing 'Portraits of Sir Robert and Lady Walpole,' small full lengths; the former in his robes. The likenesses are painted by Eckard, from miniatures by Lincke, and other portions of the picture by Wootton. Accessories are thrown in to typify the condition and tastes of both. The laboured finish of the picture is inimical to brilliancy; we find, therefore, much stiffness; no connexion between the figures, which are both looking out of the picture, and all the precision of a consciousness of being painted.

To the miniatures, their histories and associations, an entire book would scarce do justice. "The collection of miniatures and enamels," says Walpole, "is, I believe, the finest in any country;" and proud are we say that the best of these are by English artists. Persons who have not seen the works of Oliver and Hilliard may not believe that miniature painting has not advanced since the days of Queen Elizabeth; but such is the fact, this Art has, like the crab in the fable, been progressing—obliquely passibus.

## THE ART-UNION OF LONDON.

## SIXTH ANNUAL DISTRIBUTION OF PRIZES.

THE eagerness of the public to enrol their names as subscribers in this excellent Association, as the time approached for closing the lists, was very extraordinary. During the two last days the office was literally besieged, while two or three clerks could hardly take the subscriptions fast enough. One post, it is said, brought no less than £700 from the country; and, to sum up all, the total subscribed amounts to £12,900, being again, as it has been each year from the foundation of the Union, more than double the amount of the previous year's subscription. This must be most gratifying to all who desire the prosperity of the Arts in England: from artists themselves gratitude is eminently due to those gentlemen who have worked out this great result, and who still devote their time and energies, without one selfish motive, to advance its interests, and to induce a right application of the large funds now placed at the disposal of the prize-holders. The honorary secretaries in particular, Mr. Godwin and Mr. Pocock, have, to our certain knowledge, worked night and day for some time past in this "labour of love," to perfect the arrangements and attain a satisfactory result—conduct which, as it entails much personal sacrifice, cannot be too highly honoured.

The progress of this Association, from the time when two or three gentlemen first met to arrange the plan to be pursued, up to its present position, has been singularly rapid. In the first year the amount collected was £489 6s.; in the second £757 1s.; in the third £1295 14s.; in the fourth £2244 18s.; and in the fifth, namely, last year, £3562 18s. Again, as we stated before, the amount is *more than doubled*; and it is hardly possible to say where its progress may stop, short of the whole adult population of the kingdom. The Art-Union of London has become national in importance, and on its proper guidance may depend the future state of the Fine Arts in England.

Tuesday, the 25th of April, having been fixed for the annual distribution of prizes, a meeting was held for that purpose in Drury Lane Theatre—no other available building in the Metropolis appearing likely to be large enough for the expected assembly. We shall presently give some details of the proceedings; but first extract a few passages from the "Report;" much of the information contained in it, relative to its former progress, its present state, and its future prospects, we have already published; it is, therefore, needless to occupy space by giving the whole of it entire. We feel bound to state, however, that it is an exceedingly clear, comprehensive, and satisfactory document, written in a style of considerable ease and elegance.

"In the last Report made to the subscribers the progress of the Society was traced from the first year of its establishment, when the amount collected was £489 6s., to the close of the year 1841, when your committee congratulated the members on having attained a subscription of £3562 18s., an amount which some considered would not be exceeded in future years. On the present occasion, however, they have the pleasure to state that the number of members is 11,919, of whom one subscribes 10 guineas, one 7 guineas, thirty-three 5 guineas, four 4 guineas, fifteen 3 guineas, one hundred and eighty-three 2 guineas, and eleven thousand six hundred and eighty-two 1 guinea each, making a total of £12,905 11s.

"Pursuing the statistical details of the Society's operations, one hundred and thirty-two pictures, and one piece of sculpture, were purchased by the prize-holders of the year 1841, at the cost of £4330 19s., being £680 19s. more than the total amount of prizes. A list of these works of Art was printed at the end of the last Report, so that it is not necessary to introduce it here. They were exhibited four weeks, by the kind permission of the Society of British Artists, in the Suffolk-street Gallery, together with the various engravings issued by the Art-Union. For the first three weeks the members and their friends were admitted by tickets, and for seven days afterwards the public were invited by advertisements to visit the gallery.

"It was estimated that during these four weeks no less than 75,000 persons viewed the collection, and it is a gratifying circumstance to record that, notwithstanding the pressure occasioned by the crowded state of the rooms, not one accident occurred. During the exhibition a large number of catalogues were sold, by which means a considerable sum of money was realised. With this amount, derived for the most part from visitors, your committee propose to commence

the formation of a 'Reserved Fund,' to be increased hereafter by the addition of all moneys accruing to the Society, other than the actual subscriptions of the current year. By this means the future stability of the Art-Union will be rendered more certain, the trustees secured with regard to prospective engagements with engravers and others, which it may be desirable to make, and a fund will be provided, wherefrom Art in the abstract may ultimately be aided, without any sacrifice of the subscribers' pecuniary interests.

"Formerly, the number of impressions required in order to present to each subscriber a copy of the print would have thrown great difficulty in the way of the Society's operations. Lately, however, science, in return for the many benefits derived by her illustrative art, has come in powerfully to the aid of her ally, and your committee hope, by means of the electrotype process, to be able to present to every member a perfect impression of the various prints which may be issued by the Society.

"For the subscribers of the present year Hilton's picture, 'Una entering the Cottage,' has been placed in the hands of Mr. W. H. Watt, to be engraved in line.

"Relative to engravings for future years, your committee have the pleasure to state that, by the kindness of the respective owners and artists, Sir Augustus Calcott's picture, 'Raffaello and the Fornarina,' belonging to Sir George Philips, and Mr. Mulready's picture, 'The Convalescent,' the property of Lord Northwick, will be engraved for the Society.

"Reference has been made to the illustration of the Report. Your committee, wishing to obtain an appropriate device, wherewith to head the Society's papers, offered a premium of 10 guineas for a design in outline for the same. More than 100 drawings were submitted, and from those your committee selected one, which was found to be by Mr. F. R. Pickersgill. The subject of it is 'Minerva encouraging the Sister Arts.'

"There were, amongst the drawings, several other very excellent designs, and your committee, desirous of rendering the Annual Report interesting to the subscribers generally, and so inducing its preservation as a record of the Society's operations, as well as to aid, although slightly, the art of wood engraving, selected two other devices, which, by the kind liberality of the authors of them, they are enabled to engrave for its adornment.

"The first (without reference to the order of merit) is by Mr. Bonomi, and is described as 'Minerva replenishing the Lamp of the Genius of Art.' The second is by Mr. Selous, and represents 'Genius nurtured in the lap of the Society.' The three are engraved respectively by Mr. Thompson, Mr. Orrin Smith, and Mr. Jackson.

"The receipts for the current year amount to £12,905 11s., and the disbursements to £10,573 9s. 10d. The amount set apart, according to the foregoing statement, for the purchase of pictures, statuary, or other works of Art, viz., £8900, will be allotted as follows:—

60 works of Art, the value of		
	£10 each	£600
40	"	15
44	"	20
30	"	25
26	"	30
20	"	40
14	"	50
10	"	60
8	"	70
6	"	80
6	"	100
3	"	150
2	"	200
1	"	300
1	"	400
271		£8900

"To these may be added 20 bronzes before mentioned, making 291 works of Fine Art; in addition to which, 10 casts, in plaster, of the marble figure of 'A Magdalen,' purchased by a prizeholder of last year, will be distributed.

"Unwilling, however, to interfere with the prize-holders' right of choice, your committee are not disposed to alter the present regulations, but desire to impress strongly on those who obtain prizes the necessity of using the utmost care and judgment in their selection; to the end that the great object of the Association, viz., the advancement of the Fine Arts, and the elevation of the general taste, may be satisfactorily attained. To appreciate the highest efforts of Art, education and study are necessary. The power to enjoy these, and the manifold delights this power brings with it, will not come by inspiration, but must be sought for diligently. All can comprehend the merit of a faithful imitation of a familiar object; most persons can value representations of special and individual nature, so to speak. These however, useful and delightful as they may be, are not the works which elevate the beholder and immortalize the artist: it is UNIVERSAL and GENERAL nature which Genius

grasps and delineates, which exists everywhere in parts, nowhere as a whole; which, when represented, is called the Ideal, but is, in reality, Nature freed from the disfigurement of accidents and circumstances, viewed at large and from on high. Ability to enjoy such works (almost equally as to produce them), must be gained slowly and with effort. Rich and ample, however, will be the reward of the endeavour, and most sedulously should it be made. Let those who mistrust their present power of judging, should they to-day gain the right of selecting prizes, take prudent counsel; and let those works of Art be sought for which speak to the mind rather than to the eye. Certain it is, that only by pursuing such a course may great good be expected to result from the Association.

"For the two chief prizes your committee would strongly recommend subjects from the Bible, from some incident in British history, or from some English author, animated by a desire next to that of illustrating the holy scriptures "to enlist British art more immediately in the service of British history and British literature."

"Sculpture they trust will not be disregarded by the prize-holders, so that the younger professors of this elevated art, encouraged by the prospect of that aid from the public, which, as yet, has not been given to them in England, may be induced to labour strenuously to advance themselves in their profession.

"To the artists of the United Kingdom generally, your committee, in concluding their report, would point out the present scheme of prizes as an index in part of what the Art-Union of London may expect to require next year; and they venture to express a hope that efforts will be made to produce, not merely pictures for the wants of to-day, but works for posterity. Simply a pecuniary return for his labour and ability cannot be the aim of a true artist,—of one proud to say, "I, too, am a painter;" to induce new ideas and images, to uphold and inculcate the beautiful, to influence the growing mind of a country, to enlarge and elevate the enjoyments of a world,—these are the motives which lead to fame, and may end in immortality. Let, then, our young artists, in applying to the task so prompted, address themselves to the mind, and satisfied now that their endeavours will not pass unrewarded, find their chief delight in the production of truth and beauty, and know no higher reward than the exercise of their art. Every step forward will be a source of increased gratification, and every fresh triumph make succeeding triumphs more easy.

"GEORGE GODWIN, JUN. } Hon. Secs.  
"LAWIS POCOCK, }

The scene in Drury-Lane Theatre on the 26th was, without exception, the most gratifying it has ever been our lot to witness. Every part of the huge building was crowded; boxes, pit, slips, and gallery, were literally crammed; and we understand many hundreds went away "for want of room." On the stage seats had been arranged for the committee; but this portion of the theatre was also thronged. From an estimate formed by those who are best able to give an opinion, it is believed there were not less than five thousand persons present; and there can be little doubt that a vast majority of the immense assembly were there far less from motives of curiosity, than an earnest interest in the business of the day, and a sincere desire to advance the great purpose of the Institution.

An apology having been made for the absence of his Royal Highness the Duke of Cambridge, in consequence of indisposition, the chair was taken by Benjamin Bond Cabbell, Esq., one of the earliest and warmest supporters of the Society, and a gentleman who is distinguished for his zealous co-operation with every public institution having for its object the public good. Having made a few brief introductory remarks, he called upon George Godwin, Esq., F.R.S., one of the honorary secretaries, to read the Report.

Its adoption was moved by Hughes Hughes, Esq., M.P., and seconded by W. Wyon, Esq., R.A.; both gentlemen alluding in general terms to the gratifying results which had already followed the establishment of the Society; its great augmentation of means within six years from its commencement; the immense amount to which the subscriptions of the present year extended; and the vast sums likely to be realized hereafter, by the Institution, for the fosterage, encouragement, and recompense of British genius.

S. C. Hall, Esq., F.S.A. (Barrister-at-Law), having been called upon to move a resolution of

thanks to the committee, finding a general anxiety to proceed to the business of the meeting—the prizes about to be distributed being very naturally uppermost in the thoughts of the subscribers—made a very few observations in reference to the mighty impetus which the distribution of such large sums—collected in every part of the British dominions—had given to British Art; congratulating the subscribers, the artists, and the public, upon the gratifying results of the year's exertions, so far beyond the calculations of the most sanguine, and attributing these results mainly to the untiring energy and undiminished zeal of the committee, by whom the Institution had been guided from its small source into its present fertilising and productive channel. Too much praise, he said, could not be given to these gentlemen; for they had laboured without a reward, and also without patronage—the primary rule of the Society, which left the choice of pictures to the prize-gainer, taking from the committee all recompense but that which they derived from the consciousness of the great service they were rendering their country, the great benefits they were conferring upon the Arts, and the strong claims they were establishing to the gratitude of posterity.

One or two other "motions of course" having been made, two scrutineers were appointed, and two young ladies were requested—the one to draw the numbers, and the other the prizes from boxes placed conspicuously upon the tables.

In giving these few "business details" of the day's proceedings, it is necessary that we offer a few remarks.

We have given the Institution our heartiest and most cordial co-operation from its commencement, or rather from ours; for we are younger by some two or three years. It required no gift of second sight to foretell that its influence upon the Arts would be most important and extensive; but we confess the results have very much exceeded our most sanguine expectations; indeed, we believe that no person had, until very lately, the slightest idea of the astonishing extent to which it was destined to be carried. We may now very safely prophecy that within the next three or four years the annual income to be expended in the purchase of works of Art will not fall short of £50,000: we refer to *this Society alone*; for our readers are aware that, if we include all the provincial societies and those of Scotland and Ireland, the sum even now collected reaches somewhat more than half that amount. A mighty engine has, therefore, been formed, which, if skillfully, judiciously, and honestly governed, cannot fail to produce mighty effects. We accept as guarantees for the future just, discriminating, and equitable management of the committee, the proofs supplied to us by their past conduct. It is only bare justice to them to state, in addition to what we have said of their disinterested labours, that they have patiently listened to every suggestion made to them for its improvement; and that they have very considerably improved its constitution, gradually but safely, as their means increased; introducing some changes, and all of them for the better; and manifesting continually an earnest and sincere resolve to work the powerful machine they contrived, so as to render it really and practically serviceable to the Fine Arts of Great Britain. No doubt further improvements will occur to them; let them be bold in making them. They received, on the 26th, satisfactory assurance that they have the confidence of the subscribers; and they are now certain that changes which *may* be introduced, so as to render the Institution emphatically NATIONAL, will obtain the sanction they require.

We shall have other opportunities of offering such suggestions as we may conceive desirable—some of which even now occur to us—and of giving publicity to those of our correspondents.

In giving the list of prizes we have thought we might better gratify curiosity by printing them in the order in which they were drawn, affixing the "lucky number" to each. The list has been carefully revised, and we believe will be found correct.

No. Drawn.	SUBSCRIBER'S NAME.	Prize Drawn.
10,601	Flowman, J., Corn Market-st., Oxford	15
6,464	Mrs. Pearson, Manchester-terrace, Liverpool-road	60

26th April, 1842.

JAMES WHISHAW.

ROYAL IRISH ART UNION.—A public meeting of this Society was held, in Dublin, on the 19th of April, when the hon. secretary, Stewart Blacker, Esq., read the Annual Report. It is very encouraging, and anticipates a sum of upwards of 4000 guineas; fixes the last day of June for closing the subscription list; and adverts to many prospective advantages for the Arts in Ireland. Seven members of the committee retired "by rotation," and their places were supplied. A few passages of the

Report we desire to quote, as hints to "the Art Union of London."

"We have received from time to time, from various of our members, most useful suggestions; some we have been able to act on with advantage, but there are others which, though well considered in themselves, are unfortunately not quite compatible with our rules or our present resources."

"Our recommendation is to turn our thoughts and energies to the obtaining a National Gallery for this country, and thus provide suitable objects of imitation for our rising artists."

"Another is the forwarding our purchases of modern works to form exhibitions through the principal provincial towns, thus rendering the works of our living artists more generally known, as well as exerting and keeping alive a taste for modern Art in the provinces."

"A third is the getting up courses of lectures on the various subjects connected with the Fine Arts, and by this popular mode of instruction, trying to induce the public to give the matter greater study and attention."

"A fourth is the having a common place of meeting for all the lovers of Art, artists as well as amateurs, where books of reference connected with the subject may be consulted, or questions discussed, and an interchange of information take place."

Too much credit cannot be given to Stewart Blacker, Esq., for his exertions in bringing the Institution to its present high and balmy state.

NORWICH ART UNION.—It will be perceived, by an advertisement in our journal of to-day, that a society has been formed in Norwich, under very auspicious circumstances. Artists should be directed to the announced exhibition of works of Art in that city.

## THE WORKS OF THE LATE SIR DAVID WILKIE.

The long and impatiently expected sale of these works commenced on the 25th ult., and continued during the five following days, previously to which they were exhibited two days, at the rooms of Messrs. Christie and Manson, by whom they were sold. These productions in number amounted to upwards of 660, in every style of Art, from the slightest water-coloursketch to the most elaborate oil painting. Wilkie's method of working has long been known to the world; it is not therefore a matter of surprise that his drawings should have grown into number, during a long course of prosperity, as that those particular kinds of sketches which are generally the earliest studies of an artist should have continued to multiply even as preparatory to his latest projected works. Success and the caresses of the world frequently operated as a powerful sedative to the energies; but if Wilkie's latter works are not altogether as good as his earlier productions, it is by no means through any lack of labour. A glance at any of his pictures brings home conviction, that every object entering into its composition formed a distinct and separate theme for study, and was as carefully treated as if the success of the entire work had depended solely upon such particular perfection. Nothing, how insignificant soever in appearance, has escaped his notice—nothing has he found unworthy of his pencil in preparatory study; and, although this was sufficiently known, it is not too much to repeat it here on the occasion of these sketches going forth to the world.

The first day's sale consisted of academical studies and early sketches, among which were 'Card Players,' 'The Clubbists,' also sketches for latter works, and others that were never executed. 'John Knox administering the Sacrament,' &c. &c.; two 'Talleyrands,' study for the unfinished picture of 'The School,' &c. &c. On the second day were sold the sketches made in Ireland, together with many others of hands for celebrated pictures, &c. &c. The third day's sale began with studies of hands, and comprehended drawings made in Holland and the Netherlands in 1816, together with a variety of other *morceaux*; many recognised as prominently figuring in well-known pictures.

The drawings made during the last journey of Sir David Wilkie were sold during the fourth and remaining days of sale, together with the finished oil pictures and various other drawings. In the eastern sketches, character is well supported; many of the women are beautiful; and among the men we found the well-tanned Arab, the ruddy Persian, and many a dash of the Tartar character. A few of these only can be named, though all have elicited universal admiration. 'The Sheikh who accompanied the Travellers from Jaffa to Jerusalem,' 450; 'The Muletier from Jerusalem to Jaffa,' 451; 'Portrait of a Circassian Lady,' 462; 'The Dragoman of the Austrian Consul at Alexandria; 'Madame Josephine, the landlady of the Hotel, Constantinople; 'The Dead Sea,' 572; 'A Sheikh who accompanied the party to the Dead Sea,' 573; 'Ahmed Wefyk Effendi,' 581; 'Reischid Pasha,' 589; 'Mehemet Ali; 'Three Greek Sisters at Therapia,' &c. &c. No. 643, 'The Queen in her Robes.'—Her Majesty wears a tiara of diamonds, and is otherwise correspondingly habited. It is a finished half-length, and less fictitious than other portraits we have seen of the Queen. No. 616 is a small full-length 'Portrait of George IV.' in Highland costume, equally rich, and by no means so opaque in the shadows as the larger pictures.

No. 652. 'John Knox administering the Sacrament

at Calder House.' Of this picture little has been done, the panel being as yet almost blank, with the exception of the principal heads, which have been put in with the usual powerful effect of the artist. It was designed to supply a pendant engraving to the other famous work, 'Knox Preaching before Queen Mary.' The heads are some ten or a dozen, Knox occupying the middle of the picture, his place having been determined by two lines crossing the panel at right angles. The *anima* of the work is already distinguishable, and it is as it should be, different in everything from the other, in which is thundered forth the blighting anathemas of the zealot preacher, while here would have been read his *parabolicum*. A picture on panel, to have been entitled 'Samuel and Eli,' remains in the condition of the preceding, or in a less advanced state it may be—five heads have been painted in, the rest of the panel being blank. The whole-length finished portraits are those of George IV., William IV., Queen Adelaide, Queen Victoria, and a head of William III., begun upon a full-length canvass. Of these, that of George IV. is obviously the best. It is an imposing work—the king wears the Highland dress, and the heron feather is in his bonnet. He fronts the spectator, but is looking to the right. The feeling of portraiture is almost laid aside, for in the work there is a measure of pictorial worth raising it beyond its class. The portrait of William IV. is perfect in resemblance, but we find throughout a littleness which reminds the spectator of miniature, in the place of a more ample treatment which rarely fails to make him feel a presence. The work has been flooded with a glaze, which has settled heavy and opaque, rather than given richness. The great error in Wilkie's large portraits, especially in ceremonial pictures, was his applying to them the same maxims which guided him in smaller works: the result has been spottiness, and the sacrifice of breadth and brilliancy.

During his last tour, Sir David Wilkie began eight pictures upon panel, the subject of one of which that is somewhat advanced, is 'A Tartar relating the News of the Capture of Acre;' another is 'The Letter Writer'—one of the public scribbles of Constantinople, writing from the dictation of a lady who is accompanied by her attendant. The writer by the way seems to have made the pilgrimage to Mecca, if we may so judge from the green band round his cap. Parts of this picture are carefully finished.

No. 662, 'The School,' carries us back to Wilkie's early days; it is unfinished save the figures, which as usual have been painted first. It reminds us of Jan Steen's school, inasmuch as the two pedagogues are the finest fellows of their condition that have ever figured upon canvass. In neither is fraud anything like the modern pretension to the

"Foolscap uniform turned up with ink." Both sit covered, and Wilkie's genius wears under his hat something like the famous tow wig which in one of Scott's novels covers a head of kindred material—but in our dominion, the head has unquestionably the best of it. The composition consists of about thirty figures, each of which contributes its *quota* to the main stock of interest. There is a promise of less finish, but not of less genuine nature than in earlier works—'A Head of Talleyrand' is an extraordinary work. Beyond the mask nothing has been even sketched in, the remainder of the panel being bare: the effect, however, is startling at first glance, so unlike is it to ordinary productions, to every thing of the kind we have seen. The face is unfinished; according to Wilkie's principles of Art—it has been wrought up to the crisis at which he began to finish: the features are painted freely and firmly, every touch being creative of a spirit of eloquence, proclamatory of the subtle disciple of Loyola.

Although this collection contains many of the early sketches of Wilkie, it is not to be understood that all were assembled here, for many have already enriched the portfolios of collectors. We trust that this is not the last exhibition of the works of an artist the most esteemed and most generally understood of modern times. We may indulge a hope that the directors of the British Institution contemplate an exhibition of his pictures.

MR. FERGOUSON.—Mr. Ritchie has recently finished the model of a colossal statue, designed to be erected on the summit of a hill in the immediate vicinity of Dirlton, in Haddingtonshire, to commemorate the late Mr. Ferguson, of Raith, one of the early patrons of Wilkie, and an enthusiastic encourager of artists and of the fine Arts. The design and execution of the subject are capital, cleverly modelled and manly in conception; the likeness, by all who have seen the models and known the original, is pronounced accurate in every lineament. When executed this monument will form one of the most beautiful, as well as the most imposing features of the fairest landscape in Scotland. The total height of the figure, including the pedestal, will be upwards of fifty feet; and, placed upon the top of a gentle hill close to the sea shore, will form to the mariner a most interesting landmark in guiding his

"homeward veering skiff." To the landward it will command an amphitheatre of hills, encircling it at a distance of nearly twenty miles, including Edinburgh on the one side, and Berwick on the other; it will also be a prominent object from the Fife shore; while at its base the delightful village of Dirlton is spread out on a lawn so sweet, beautiful, and freshened by the sea breeze, in such a manner as may challenge competition.

## REVIEWS.

THE WAVERLEY NOVELS. "Abbotsford Edition." Part I. Publisher, ROBERT CADELL, Edinburgh.

We hail with great satisfaction the publication of this work; as certain to place in the hands of an immense proportion of the public, illustrations by a large number of the artists of Great Britain, in association with the most famous fictions of the age. There is no saying how far it may be made to operate in extending the influence of the Arts; in rendering excellence familiar to the mass; and in advancing a general taste for, and appreciation of, what is really good and true in pictorial embellishment. The occasion is an important one; we trust the exertions of the liberal and enterprising publisher will receive from the painters and engravers such zealous co-operation as will contribute to secure his interests while forwarding the great object we more immediately keep in view. To illustrate the Waverley Novels, is a task worthy of genius commensurate with that of the great producer of them; and we hope the majority of our leading artists will engage in it. There is no style of Art that may not here find ample scope; every character of subject, from the most elevated, and the purely imaginative, to the merest matter of fact, may be introduced into the pages. The chivalric may suit one; the home scenes of Scotland another; the foreign marvels of Nature and Art, a third; the sea with its innumerable accessories, a fourth; veritable history, a fifth; the supernatural, a sixth—in short, there is no topic upon which the mind can be employed so as to give occupation to the pencil, that may not be made available, for illustration, so as to render perfect this edition of the novels of Sir Walter Scott. We earnestly hope that a sound judgment and a refined taste will be exercised in applying the abundant resources at the command of the publisher. Both are very requisite, in distributing the several branches of the agreeable duty; for it is not only essential that "many hands should make light work," but that each hand should be employed in the manner best suited to its peculiar power; and to accomplish this great purpose effectually, much experience, as well as much labour, is necessary.

The publication is to run through several years; the issue being at the rate of two parts in each month, "once a fortnight." It is, therefore, of great moment that from the commencement, it should be *well done*: should be made as complete and as perfect as the present advanced state of the several arts can render it.

The specimen before us, Part the First, although very satisfactory, is not, as it should have been, a remarkable advance upon the publications issued in monthly parts, that have preceded it; but from all we have heard, and much that we have seen, we do not hesitate to assure our readers that it will be greatly surpassed in excellence by its successors. Several "mistakes" have been made, of which we take note with regret. The page is too broad for elegance; a very little less breadth would greatly improve it; and the poverty stricken initial letters, "inventions" of the type-founder, considerably mar the text. Two or three of the subjects are failures both in design and execution—we may point to one of them, at page 39, which does little credit to either painter or engraver.

The work will have an immense circulation—of that there can be no doubt—and at present it is merely commencing. To point out defects is, therefore, not only a duty, but may be useful. Even taking into account those that we consider to exist—but which may be surely remedied hereafter—the publication is highly interesting and most valuable; it will prove a desirable acquisition to all classes—and is indeed within the reach of nearly all—not excepting those who already possess one of the editions of the novels; for this will be so full of facts, explanatory of the matter, and of beautiful works of Art, illustrative of the characters, scenery, and incidents introduced, that for reading or reference it will become an almost inexhaustible treasure.

"SCENERY OF THE PYRENEES."—We have received a few specimens of a work, on the eve of publication, to be thus entitled. It will consist of 26 plates, executed in lithography from

the drawings of William Oliver, Esq., a member of the New Water Colour Society; and are to form a volume designed to class with those of Stanfield, Roberts, Müller, Haghe, &c., of which it will be in no way, an unworthy associate. The drawings "taken on the spot" are lithographed in a very meritorious and effective style; the subjects have been judiciously selected, and, taken altogether, are perhaps as interesting a series as we have ever had an opportunity of inspecting. Of their great variety, a passage from the prospectus will convey some idea:—

"Fertile valleys and verdant plains, cultivated by a peaceful peasantry, of pastoral habits and unchanged costume—impenetrable forests, clad in rich harmonious foliage—cheerful villages, with humble church and sainted shrine—clear, cool rivulets, or sweet cascade—lakes high in mid air, o'er whose waters hangs a death-like gloom—gigantic mountains, capped with eternal snows—dangerous passes, accessible only to the climbing goat or nimble lizard—rugged and many coloured rocks tossed in chaotic confusion—amphitheatric landscapes of boundless extent and grandeur—bridges of snow crossing yawning gulfs—subterraneous grottoes—appalling precipices—unexplored caverns; such is the scenery which the Pyrenean range presents, and which delights and astonishes the most experienced traveller, by its endless variety and diversified character; affording, with frequent and sudden transitions, specimens of every class—the simple, the beautiful, the picturesque, the magnificent, the grand, the sublime."

We shall review this volume, at some length, next month; meanwhile, judging from the specimen we have seen, we give it a strong recommendation.

## FOREIGN PUBLICATIONS CONCERNING ART.

DE L'ART EN ALLEMAGNE, par H. FORTOUL. Paris, 2 tomes, 8vo., 1842.

ON ART IN GERMANY, by H. FORTOUL. Rolandi. London, 2 vols. 8vo., 1842.

No subject has been probably so much misunderstood, as the rise and progress of modern German Art. In its feeling it has been mistaken; in its character despised; or,

"Raised in extremes, as in extremes decried," it has suffered as much from the injudiciousness of praise, as the injustice of censure. Into the cause of the decline of Art, it is needless now to enter. The student does not require to be made acquainted, the scholar to be reminded; it was an effect partly local, partly temporal, assignable to various conditions no less of the individual than of the social state. Genius was the exciting cause, religion the consecrating feeling, enthusiasm the motive power of the Florentine. But the effect produced by the great masters of this school was as the momentary brilliancy of the sun, which sheds far and wide an atmosphere of beauty, creating an ethereal landscape; then extends into deep masses of light and shade, which slowly fade until the rich hue that lingers in the horizon is the only indication of the splendour that has declined. The greatness of Da Vinci, M. Angelo, and Raffaele was naturally imitated; but imitation, however successful, or occasionally heightened by originality of treatment, was but the faint reflection, the fading tint which hovered in beauty o'er the waning light. In 1717, the critical spirit of the German, ever restless in literary research, was directed to Art. Its tendency was to antiquity from classic influence; its philosophy was the metaphysical abstraction of the time. From that period to 1800, Art became gradually the type of religious and national feeling, but the main cause of its restoration, and of its mediæval tendency is ascribable to the influence of modern literature and the zeal and industry of the brothers Boisseree. In 1803 they established themselves at Cologne, and in 1817 they had formed a collection of pictures by German masters extending over two hundred years. Thus the Germans became aware of a school of Art very distinguished in the fifteenth century; and which, equally with the schools of Italy, might be traced to the Byzantine period. They felt *this to be inherently national*, and in many of these works they traced a purity of thought and feeling not before acknowledged. Thus they became an object of study, of enthusiasm, and imitation. The Boisseree collection, and that formed by Mr. Solly, were both purchased; the first by the King of Bavaria, the other for the museum of Berlin. It cannot be denied that this tendency towards early Christian Art was enthusiastic and unreflective. There is al-

ways in Germany an inclination to cure by cutting off the wrong leg; or by the adoption of the *one sole method*. To attain perfection in the nineteenth, they adopted the characteristics of the thirteenth century. It was as if, to amend our lives, we should return from manhood to infancy, and recommence life as a child. They forgot the purity of a child arises from natural circumstances, not from the deductions of reason; and that though the early productions of Art, as the first attempts of poetry, excel generally in strength and invention, the later combine this with elegance and refinement. But the enthusiasm of the artist might have been weakened, and public feeling diverted; for professions are united not so much by any peculiar tendencies of opinion, as by the general influence of the collective interests of their own class; and public attention pursues pleasure in novelty, or subsides into apathetic indifference. But the zeal of the present King of Bavaria combined the efforts of many, and gave direction and unity to the natural impulse of all. From 1814 to the present time, the abilities of Cornelius, Hess, and Schnorr in painting; Kleuze, Ziebland, and Gartner in architecture; Schwant, Halder, and others in sculpture; with numerous pupils, have contributed towards the creation of those buildings, which have already made Munich an object of interest, by reviving the practice of ancient Art, and extending the progress of its modern form, in various modes of expression, alike illustrative of intellectual greatness, as of national feeling. The work which we have cited at the head of this article, will be of much interest to those who desire to be made acquainted with the present state of Art in Germany, and its progress there, during the course of the last half century. The first volume contains chapters on "German Archæism," a description of the public buildings of Munich, and of their style of decoration, with discussions on the "Renovation of Art," the "Schools of Painting," and biographical sketches of Cornelius, Hess, Schnorr, and Kaulbach. The second volume comprises a "History of Greek Art, after the collections in the Glyptothek," &c.; "History of Christian Art, after the collections in the galleries of Cologne, Frankfurt, Munich," &c., with observations on the principles of German Art, in connexion with architecture and painting. Thus, in extent and variety of information, this work has superior claims to any with which we are acquainted; that of Count Raczynski being too elaborate and expensive for the general reader. The chapter on "Monumental Art" we have read with much pleasure; and in the opinions expressed with regard to its power as an historical development of opinion we agree. M. Fortoul's new theory of "Greek Art," and "Observations on the various Schools of Painting in Italy," and "On the Architecture of the Lower Rhine," possess much of originality in criticism, and of useful detail in description. But we cannot but wish that the work was less verbose, and more reflective, and that we were not so often reminded of the existence of the genius of France. We are well aware of the obligations we owe to that great country for her beneficial influence on European civilization.

## TO CORRESPONDENTS.

A lady, the grand-daughter of a famous artist in former times, expresses a wish to reside, for a few months, in the family of an artist, where she may have the advantages of information and instruction concerning the Arts. We will forward to her, confidentially, any letter that may be sent to us.

In answer to a kind letter signed G. H. H., we beg to say, first, that the British Institution will close on the 7th of this month; next, that the Exhibitions of the Royal Academy, the Society of British Artists, and the two Societies of Painters in Water Colours, will continue open, each and all of them, until about the end of June, or the middle of July. The best time for artists to visit London with a view to these Exhibitions is, certainly, the month of May.

We state, we can scarcely say with regret, that the numbers of our journal for the months of January, February, and April, of the present year, cannot be obtained. Our edition is exhausted. This will be an answer to several persons who have communicated with us on the subject.

Another part of Messrs. Finden's "Gallery" will be published, we understand, immediately.

## C. R. LESLIE'S, R.A., PICTURE OF THE ROYAL CHRISTENING.

MR. MOON, of Threadneedle-street, has the honour to announce that

MR. LESLIE'S SPLENDID PICTURE OF

## THE ROYAL CHRISTENING

is so near completion that he hopes shortly to be enabled to exhibit it at his Rooms, in the City, to the Nobility and other Patrons of Art.

This Picture contains the most STRIKING LIKENESSES and interesting PORTRAITS of  
HER MOST GRACIOUS MAJESTY THE QUEEN, | HIS ROYAL HIGHNESS PRINCE ALBERT,  
HER MAJESTY THE QUEEN DOWAGER, | HER ROYAL HIGHNESS THE DUCHESS OF KENT,  
AND OTHER MEMBERS OF THE ROYAL FAMILY;

TOGETHER WITH

HIS GRACE THE DUKE OF WELLINGTON,

And such distinguished Personages as were present at that most august Ceremony.

Now ready,

THE SECOND PART OF

## ROBERTS'S HOLY LAND:

JERUSALEM;

CONTAINING

THE TOMB OF ZECHARIAH,  
JERUSALEM, FROM THE SOUTH,  
CHURCH OF THE HOLY SEPULCHRE,

POOL OF BETHESDA,  
TOWER OF DAVID,  
SHRINE OF THE HOLY SEPULCHRE.

The Publisher has sincere pleasure in noticing the continued success attendant on this magnificent Work of Art, and the undying popularity consequent upon the grandeur of the subject and the unrivalled beauty of the Lithographic Plates and Letter-press.

Just published, dedicated, by permission, to the Right Honourable Lord Denman, Lord Chief Justice of the Court of Queen's Bench, &c. &c.,

**FOUR VIEWS IN DOVEDALE, DERBY-SHIRE**, with a Vignette. Drawn from Nature by T. F. LEE; Lithographed by G. BARNARD. Proofs, Folio-Colombier, 15s. the Set; Prints, Folio-Imperial, 10s. 6d.

Sold by Reeves and Sons, 150, Cheapside; and Moseley and Nephew, Derby.

PAUL DE LA ROCHE'S WORKS.

**KING CHARLES THE FIRST IN THE GUARD ROOM**, after sentence of death was passed upon him; the fallen, but yet dignified Monarch, calmly enduring the taunts and insults of the brutal soldiery of Cromwell. From the beautiful historical picture in the collection of Lord Francis Egerton. Engraved in the most highly finished style of Mezzotinto by G. SANDERS.

Prints, 12s.; Proofs, 21s.; Before Letters (only 50 taken), 31s. 6d.

Also the Companion, by the same Artists, and of the same size and price.

**THE EARL OF STRAFFORD GOING TO EXECUTION**; from the splendid picture in the collection of the Duke of Sutherland.

Published by Ackermann and Co., Strand; and to be had of all Book and Printsellers in the United Kingdom.

**EAST OF ENGLAND ART-UNION.**—An EXHIBITION of MODERN ART in PAINTING, DRAWING, and SCULPTURE, will take place during the ensuing Assize and Festival weeks at THE ARTISTS' ROOM in NORWICH.

Connected with, and at the close of this Exhibition, will be an Art-Union, in which it is anticipated that the Drawing of Pictures will be on an extensive scale, the Subscription List having already met with the most distinguished patronage and is progressing rapidly.

## COMMITTEE.

Sir John Boileau, Bart.	William Matchett, Esq.
John Marshall, Esq.,	Mr. Charles Muskett.
Mayor of Norwich.	T. T. Mott, Esq.
Horatio Bolingbroke, Esq.	Alfred Master, Esq.
John Barwell, Esq.	Mr. John Norgate.
Rev. H. Banfather.	Henry Patteson, Esq.
Rev. E. S. Dixon.	Mr. E. Pearson.
Mr. J. H. Druery.	William Stark, Esq.
Mr. Robert Leman.	John Sulbyer, Esq.
Mr. Thomas Lound.	George Skipper, Esq.
Mr. W. Freeman, jun.	James Winter, Esq.
Mr. R. Fitch.	Mr. James Watson.
John Gordon, Esq.	Charles John West, Esq.
Joseph Geldart, Esq.	

## TREASURER.

Robert John Harvey, Esq.

## SECRETARY.

Mr. William Willins.

The constitution of this Society is similar to that of the Art-Union of London, in which every subscription prize-holder will be entitled to one or more pictures at the drawing.

Artists and Amateurs, intending to exhibit their paintings, drawings, and models, are requested to communicate their intention to the Secretary at their earliest convenience, who will supply further information.

The expense of carriage will be paid to and from Norwich of all works sent for Exhibition, being the production of and contributed by artists to whom a circular will be particularly addressed.

This day is published (unavoidably postponed from last month, on account of the author's illness), in royal 4to., half-bound morocco, gilt labels, price 16s.,

**RICAUTI'S SKETCHES FOR RUSTIC WORK**, including Bridges, Park and Garden Buildings, Seats and Furniture. Forming Sequel to "RICAUTI'S RUSTIC ARCHITECTURE." There being but a limited edition of this work (originally published in parts), and the plates destroyed; Part No. 1 is out of print, but a few parts of 2, 3, 4, 5, and 6 remain on sale, price 5s. each.

London: James Carpenter, Old Bond-street.

**A NEW WORK ON DRAWING, LIGHT AND SHADE, AND PAINTING.**

Just published,

**PRACTICAL INSTRUCTION in the USE of a BOX of WATER COLOURS.** By HARRY WILLSON, Author of "Fugitive Sketches in Rome, Venice," &c. &c., in a Treatise on Composition, Light and Shade, and Colour. Beautifully illustrated with plain and coloured Examples, in the entirely new Art of painting on Stone, for which Charles Smith is indebted to M. Hullmandel's Patent Invention. To accompany which, a Box of Tints and Colours is prepared, to enable the student in Water Colours to paint direct from Nature, without the difficulty and uncertainty in mixing them. In imperial octavo, handsomely bound in cloth, price 24s.

London:—To be had of the Proprietor, Charles Smith, Artists' Colourman, 34, Marylebone-street, Piccadilly; Messrs. Tilt and Bogue, Fleet-street; and all other Publishers, Stationers, &c., throughout the Kingdom.

**TO MINIATURE PAINTERS, &c.**—W. WARRINER, 30, GREAT CASTLE-STREET, REGENT-STREET, Manufacturer of OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES, of all sizes, shapes, and patterns.

W. Warriner, having been established more than a quarter of a century, begs to return his sincere thanks to those Artists and others who have undeviatingly patronised him; begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses always ready, or speedily made to order.

The Trade, Merchants, and Captains of Ships supplied on the most advantageous terms, and with the greatest punctuality.

**THE CHEAPEST MANUFACTORY FOR GILT AND FANCY WOOD PICTURE FRAMES.**

**P. GARBANATI, WORKING CARVER** and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane, respectfully informs Artists, &c., that as he manufactures entirely on his premises every description of ORNAMENTED GILT and FANCY WOOD PICTURE FRAMES, he is enabled to offer them at such low prices that he defies competition. A most extensive assortment of every size Picture Frames kept ready. Re-gilding in all its branches in a most superior manner, cheaper than by any other house in the trade. Estimates given free of charge.

A large assortment of handsome ornamented swept Gilt Miniature Frames at 6s. each (glass included), not to be equalled for price and quality by any other manufacturer in the kingdom.

A list of the prices of Plate Glass, Gilt and Fancy Wood Picture Frames, &c., sent, pre-paid, to any part of the kingdom.

**ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.**

**C. J. ECKFORD, 45, FLEET-STREET**, corner of Mitre-court, Temple, opposite Fetterlane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

## ARCHITECTURAL CARD MODELLING.

Patronised by her MOST GRACIOUS MAJESTY and his ROYAL HIGHNESS PRINCE ALBERT.

**MR. ANDREWS, of GUILDFORD**, begs to introduce to the notice of the Nobility, Gentry, and the Public generally, a novel branch in the Fine Arts, viz., ARCHITECTURAL MODELLING in Card-board in imitation of ivory. Specimens of this beautiful Art have been submitted to the inspection of her Majesty and his Royal Highness Prince Albert, who were graciously pleased to express their satisfaction, and to purchase Models of the Pavilion, Brighton, and Saint George's Chapel, Windsor.

Gentlemen's Residences modelled to order.

Orders received by his Agents, Messrs. Reeves and Sons, 150, Cheapside, London, where Specimens may be seen; also by the Artist, 61, High-street, Guildford.

## SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES McLEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

## POOLCOO'S CHINESE CEMENT.—The

extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razormakers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

## PICTORIAL WAVERLEY.

*Illustrated with above Two Thousand Engravings on Steel and Wood.*

Part 1., price Half-a-Crown, of  
**THE ABBOTSFORD EDITION** of the  
WAVERLEY NOVELS is now in the hands of all  
the Booksellers.

TO BE CONTINUED EACH ALTERNATE SATURDAY  
TILL COMPLETED.

R. Cadell, Edinburgh; Houlston and Stoneman, London. To be had of every Bookseller in Great Britain, Ireland, and the Colonies.

"The sale of this edition is likely to be an extensive one in all quarters of the world."—Times.

"This splendid edition of the Waverley Novels is rightly named the 'Abbotsford.' The half-crown number is cheaper than any of the pictorial publications by the steel plate frontispiece."—Spectator.

"We congratulate the public upon the appearance of this most splendid edition of the Waverley Novels that has ever appeared. The Wood-Engravings especially are beautiful specimens of our best artists."—Atlas.

"The Illustrations to the Part are twenty-four in number; and they exhibit every variety of drawing, landscape, architecture, and figure, and all are excellent."—John Bull.

"When this work is completed, it will be by many degrees the most satisfactory and elegant edition of Sir Walter Scott's Tales that has yet appeared. The Part is got up in every respect with remarkable skill and attention to details."—Sun.

"We have never seen a more beautiful work."—Bell's Weekly Messenger.

"The Edition will be one which every one who honours the memory of Sir Walter Scott will take care to be possessed of."—Cambridge Chronicle.

"This Edition will take the place of all others with those who can afford to purchase it; and we must add, that, when put in comparison with its merits, the price is singularly low."—Hull Packet.

"Altogether the work is got up in a style worthy of the great author, and there cannot be a doubt that the sale will be commensurate with the very great outlay incurred in its execution."—Newcastle Journal.

"The Abbotsford Edition will be one of the most magnificent pictorial works ever issued from the press."—Gloucester Journal.

"The First Number gives promise of great excellence, and we hail the work as a most valuable edition of the best novels that were ever written."—Manchester Courier.

"The most beautiful of all the beautiful editions through which these immortal works have passed; it is unique."—Dublin Monitor.

"We hail this splendid edition with pleasure and feelings of national pride; and we anticipate for it a full and brilliant measure of success."—Exeter and Plymouth Gazette.

"We have long anticipated that an edition would one day make its appearance with fine illustrations suitable to the fanciful nature of the work. This is at length promised in the Abbotsford Edition."—Liverpool Albion.

"This will be the *ne plus ultra* of illustrated prose fiction."—Salopian Journal.

"From the promise offered by this first Part we cannot but hail with pleasure the appearance of the Abbotsford Edition of the Waverley Novels."—Leeds Intelligencer.

"We have no doubt this curious and interesting edition of Sir Walter's Works will be an acceptable gift to the public, and meet with an extensive sale."—Edinburgh Courant.

"The first Number, now on our table, is a fine specimen of what its purchasers may expect to have in their libraries when the whole is complete."—World.

"This splendid undertaking we cordially recommend to the liberal patronage of all who would adorn their libraries with the most perfect edition of the most attractive series of books which the nineteenth century has produced."—Nottingham Journal.

"The edition, of which the first Part is before us, is so beautifully brought out, that we think the publisher may calculate on another 60,000."—Farley's Bristol Journal.

"This promises to be a very splendid publication."—Dublin Evening Post.

"Of the Part before us we must say that it is every thing that could be desired."—Liverpool Courier.

"The design of this work is so original, and its execution so masterly and beautiful, that its success is certain."—Liverpool Chronicle.

☞ *The Proprietors have succeeded in purchasing, at the sale of the works of the late Sir David Wilkie, a number of Designs by that eminent painter, illustrative of Sir Walter Scott's Novels, all of which will be given in the progress of this edition.*

**CHARLES F. BIELEFELD, MANUFACTURER** of the IMPROVED PAPIER MACHE, 15, WELLINGTON-ST. NORTH, STRAND, LONDON. —Architects, Builders, House Decorators, Upholsterers, &c., are respectfully invited to inspect the extensive collection of Ornaments at the above Show Rooms, in every style and form, the designs of the first Architects of the day. The use of this truly valuable material is becoming daily more general as its merits become better known and proved. Its extreme hardness, durability, and strength; the opportunities which it affords of giving to every kind of enrichment a sharp under-cutting and forcible relief; its lightness; the rapidity with which it may be prepared, and the facility with which it may be fixed up; and, finally, its cheapness; are qualities which eminently distinguish it above every other artificial composition whatever. It has been used at the Palaces, the Houses of Parliament, the British Museum, most of the principal club-houses, and many of the best public and private buildings throughout the country. Among the obvious uses of this substance are ceiling flowers, ventilators, cornices, consoles, window cornices, frames for pictures, glasses, &c.; also for the enriched members of cornices and friezes to rooms, by which a perfectly plain ceiling may be rendered highly ornamental in the course of a few hours; and generally for all panelling on walls, capitals of columns, bosses pendants, tracery, &c.

A quarto volume is published, containing nearly 1000 Designs, which are in stock, ready for sale. A tariff of prices accompanies the volume, bound complete, for the architect; is sold at three guineas, or any plate or plates may be had separate, at 6d. each; also a pattern-book may be had, price 14s., consisting of a great variety of picture and glass frames, and window cornices.

SHOW ROOMS, NORTH JOHN-STREET,  
LIVERPOOL.

### WINSOR AND NEWTON'S COMPRESSIBLE METALLIC TUBES TO SUPERSEDE BLADDER COLOURS FOR OIL PAINTING.

**W** and N.'s Compressible Metallic Tubes are made on an entirely novel plan, of a series of layers or rolls of extremely thin metal; they are extremely light, yet have great strength and toughness, so that they are not liable to split and leak, as is the case with all Tubes made on any other plan.

By a process peculiarly original, W. and N. line every Tube with a thin membranous substance, and thereby prevent the very injurious effect occasioned to colours which are long kept in direct contact with a metallic surface. The most delicate colour is thus effectually protected from any chemical action that might otherwise cause its deterioration.

The oil colour is ejected from these Tubes in a manner similar to that in which colour is expressed from the common bladder colour, by squeezing or compressing between the thumb and finger, so that the colour is always kept gathered up in a compact state; the empty part of the Tube remaining closed or compressed behind it.

The bottom of the Compressible Tube is cemented in a manner entirely new, which gives a security to the Tube not before obtained, and renders it impossible for the contents to be forced out through accident or imperfect closing.

W. and N. beg to apprise their Patrons that their new manufacture of Compressible Metallic Tubes is entirely original and, excepting the tubular form (which has been generally adapted in various contrivances for preserving oil colours for the last fifty years), their Tubes are not similar in their manufacture to any of the numerous other tubes applied to the preservation of oil colours now in existence.

They are light and portable, and may be packed with safety among linen or paper. They preserve oil colour for any length of time, are peculiarly adapted for expensive colours, and offer the most perfect mode of sending oil colours to warm climates.

*The advantages of these Tubes may be thus enumerated.*

The preservation of the colour free from skins.

The cleanliness with which the art of painting may be pursued, either by artist or amateur.

The readiness with which the colour may be pressed from the tube without the necessity of laying down the palette and brushes.

Freedom from smell, and danger of breaking or bursting.

Economy in use, and moderate price.

TO BE HAD, WHOLESALE AND RETAIL, AT  
**WINSOR AND NEWTON'S  
ARTISTS' COLOUR MANUFACTORY,**  
38, RATHBONE PLACE, LONDON.

Price 6d. each, to be filled with colour (Cobalt, Madder, Lakes, &c., extra as usual).

## MILLER'S SILICA COLOURS.

The SILICA OIL COLOURS are prepared in collapsible tubes, and can be forwarded per post to any part of the country, on receipt of an order, for any of the under-mentioned tints, viz.:

Pale and Deep Red.

Pale and Deep Blue.	Pale and Deep Yellow.
Pale and Deep Orange.	Pale and Deep Purple.
Pale and Deep Green.	Pale and Deep Brown.
White and Half Tint.	Grey and Black.

### VAN EYCK'S GLASS MEDIUM FOR OIL PAINTING.

This Medium, having been tried by Artists of the first eminence, is found to be the grand desideratum for removing the existing evils of the Modern School; namely, the destructive effects of Varnishes, Oils, and M'guels, as all pictures painted with them, after a time, lose their transparency and brilliancy, and become horny, spotted, and dark-coloured; whereas those painted with the Glass Medium have a most brilliant effect, and will be found to remain perfectly unchanged, as its durability can only be compared to painting in enamel.

#### Glass Medium in Bottles.

No. 1. For first and second painting.

No. 2. For rubbing up powder colours with.

No. 3. For third painting, finishing, and glazing.

Any of the above Media may be thinned, according to the taste of the Artist, with Florentine Oil.

T. Miller respectfully directs the attention of those artists and amateurs who have not had an opportunity of witnessing the gem-like lustre of the Silica Colours and Glass Medium to a picture painted by F. Stone, Esq., 'The Bashful Lover,' No. 77, in the present exhibition of the British Institution, Pall Mall.

The SILICA WATER COLOURS are prepared in small squares, which possess many and great advantages over the Cake and Moist Water Colours, at present in use; and can be forwarded per post to any part of the country, on receipt of an order for any of the under-mentioned tints, viz.:

Pale and Deep Red.

Pale and Deep Blue.	Pale and Deep Yellow.
Pale and Deep Orange.	Pale and Deep Purple.
Pale and Deep Green.	Pale and Deep Brown.
Pale and Deep Grey.	White and Black.

### MILLER'S GLASS MEDIUM.

It is well known that some preparation for giving brilliancy and depth to Water-Colour Painting, and for enabling the Artist to repeat his touches without disturbing the colours already laid on, has been long sought after; this new vehicle possesses all these advantages. When mixed with the colours it has a most brilliant effect, and will preserve delicate tints uninjured; in durability it will approach nearer to Oil Painting than anything hitherto in use.

#### Glass Medium in Bottles.

No. 1. For first colouring or laying on masses of colour. This dries so hard that the second colouring or finishing will not disturb it.

No. 2. For second colouring, glazing, and finishing.

Were any one sceptical as to the superiority of the Silica Colours, every doubt might be easily removed by a glance at the picture painted by E. Corbould, Esq., 'The Woman taken in Adultery,' No. 66, in the present exhibition of the New Water Colour Society, 53, Pall Mall, and lately purchased by H.R.H. Prince Albert, for two hundred guineas.

**MILLER'S ARTISTS' COLOUR MANUFACTORY,**  
56, LONG ACRE, LONDON.

**ARTISTS' BENEVOLENT FUND.**—Under the Patronage of the QUEEN.—Established 1810: incorporated by Royal Charter, August 2, 1827.—The THIRTY-THIRD ANNIVERSARY DINNER will take place in FREEMASONS' HALL, on SATURDAY, the 7th of MAY, 1842.

The Right Honourable Lord JOHN RUSSELL, M.P., in the Chair.

**STEWARDS.**  
 The Earl of Surrey.  
 Sir W. Herries, K.C.H., CB.  
 Thomas Allom, Esq.  
 George H. Adcock, Esq.  
 E. H. Bailey, Esq., R.A.  
 F.R.S.  
 Jackson Barwise, Esq.  
 Thos. Bacon, Esq., F.S.A.

 George Robert Smith, Esq.  
 C. Stanfield, Esq., R.A.  
 George Thrupp, Esq.  
 Charles Vignoles, Esq.  
 C. E. Wagstaff, Esq.  
 John Wood, Esq.

Ticket, 20s., to be had of the Stewards, or at Freemasons' Tavern.—Dinner on Table at Half-past Five for Six precisely.

JOHN MARTIN, Secretary.

**WOOLLETT, THE EMINENT ENGRAVER.**—TO THE LOVERS OF THE FINE ARTS.—Forward as the British Public has ever been to alleviate misfortune and reward merit, it is presumed the announcement of the necessities of the only surviving daughter of this distinguished artist will strike a chord of sympathy, not confined alone to those who, by their connection with the Arts, will at once recognise and acknowledge the genius that raised his Art from comparative obscurity to a perfection that artists only can duly appreciate, but universally in the breasts of all who feel identified with the glory of their country, some of whose brightest achievements his talent has assisted to immortalise. From the death of Mr. Woollett, in 1785, until the commencement of the war in 1793, his widow and family derived a respectable income from the sale of his works on the Continent. From the occurrence of that event until the year 1819, with the exercise of the strictest economy, the small property he had left was their chief support, which then being exhausted, the family were advised to make over his plates and prints to Messrs. Hurst and Robinson, the publishers, for the consideration of an annuity for two lives. Six years after this arrangement the firm failed, and the only surviving daughter, Elizabeth Sophia Woollett, has been since that period dependent on a very small annuity, raised by subscription by the friends of the family, together with the assistance of her brother, who being no longer in a situation to afford it, she is now reluctantly compelled to make this appeal to the sympathies of the public.

As, in the course of nature, few of Mr. Woollett's contemporaries live to attest his merits, the following extracts are appended, doing justice to the private worth of the man, as well as to the excellency of his genius:—

"This eminent English engraver was born at Maidstone, in Kent, in 1735. He was instructed in engraving by an obscure artist, named Tinney; but he was indebted for the admirable and original style for which his works are distinguished to the resources of his own genius. By an intelligent union of the point and the burin, he carried landscape engraving to a degree of beauty and perfection which was unknown before him; and which, perhaps, still remains unequalled. The foreground of his plates are as admirable for depth and vigour as his distances for tenderness and delicacy; and in his exquisite prints, from the pictures of our imitable Wilson, he appears to have impressed on the copper the very mind and feelings of that classic painter. The talents of Woollett were not, however, confined to landscapes; he engraved, with equal success, historical subjects and portraits. The extent of his abilities, and his extraordinary merits, are so universally acknowledged, that any further comment on them is unnecessary. His character, as an artist and as a man, has been drawn up by one of his friends, with so much truth and simplicity, that it is here inserted:—'To say that he was the first artist in his profession would be giving him his least praise; for he was a good man—naturally modest and amiable in his disposition, he never censured the works of others, or omitted pointing out their merit. His patience, under the continual torments of a most dreadful disorder, upwards of nine months, was truly exemplary; and he died as he had lived, at peace with all the world, in which he never had an enemy. He left his family inconsolable for his death, and the public to lament the loss of a man whose works (of which his unassuming temper never boasted) are an honour to his country.' He died the 23rd of May, 1785, aged 50."—Bryan's Dictionary of Painters and Engravers, 4to., 1816, page 620.

"On Saturday last was interred (agreeably to his desire) in the churchyard of the parish of St. Pancras, Kentish Town, the remains of Mr. William Woollett, engraver to his Majesty. He was attended to the ground by a considerable number of his pupils and friends, whose concern for so worthy and benevolent a man was expressed in a manner which deeply affected even the vulgar who were present."

"We are credibly informed that the works of this distinguished artist have greatly contributed, not only to improve the Art itself, but that they have been the means of raising the reputation of the English engravers abroad, so that a balance of 30,000l. annually, in favour of this kingdom, hath for many years arisen from the exportation of our prints in general—of such importance to his country is a single man of genius in this profession, and his death may, therefore, be considered as a public loss. It is no exaggeration to affirm that, in landscape at least, Mr. Woollett hath hitherto stood unequalled, though we trust that many, who have caught no inconsiderable portion of his elegance and yet greatness of manner, will go on to merit the public favour, and to carry the Art still further, upon his principles, towards its utmost degree of perfection."—The Gazetteer and New Daily Advertiser, May 30, 1785.

The following gentlemen have volunteered their services, in the hope that a sufficient sum may be raised to enable them to secure to Miss Woollett, now in the decline of life (her 69th year), an annuity for the remainder of her days, and will readily and thankfully receive subscriptions for this purpose:—

Samuel Cartwright, Esq., F.S.A., Old Burlington-st.  
 Wynn Ellis, Esq., M.P., 30, Cadogan-place.  
 Messrs. Ellis and Son, 36, Fenchurch-street.  
 Richard Gibbs, Esq., White Hart-court, Lombard-st.  
 Richard Hervé Giraud, Esq., 7, Farnival's Inn.  
 Robert Moffatt, Esq., Mincing-lane.  
 John Noble, Esq., F.S.A., 90, Gloucester-place, Portman-square.  
 Alexander Randall, Esq., Maidstone.  
 W. Wren, Esq., 32, Fenchurch-street.  
 Richard Westall, Esq., 115, Lower Thames-street.

#### THE LATE MR. SINGLETON'S PICTURES.

**MESSRS. CHRISTIE and MANSON** will **SELL by AUCTION**, at their GREAT ROOM, KING-STREET, ST. JAMES'S-SQUARE, on THURSDAY, MAY 5, at One precisely, the beautiful **COLLECTION of PICTURES**, the works of that elegant artist, Henry Singleton, Esq., deceased; consisting of historical, poetical, and fancy subjects, treated with the greatest taste, and displaying the fertile genius of that distinguished artist.—May be viewed two days preceding.

#### CAPITAL ENGLISH PICTURES.

**MESSRS. CHRISTIE and MANSON** will **SELL by AUCTION**, at their GREAT ROOM, KING-STREET, ST. JAMES'S-SQUARE, on FRIDAY, MAY 6, at One precisely, a **COLLECTION of PICTURES**, by the most eminent English Painters, formed by a distinguished patron of British Art, comprising works of upwards of sixty artists of the English School. Among them will be found specimens of the following artists:

West, P.R.A.	Turner, R.A.	Gill
Sir A. Calcott, R.A.	R. Wilson	Hofland
A. Chalon, R.A.	Uwins, R.A.	Hurlstone
Collins, R.A.	Knight, A.R.A.	Linnell
Cooper, R.A.	Webster, A.R.A.	Linton
W. Daniell, R.A.	Witherington, A.R.A.	Liversidge
Eastlake, R.A.	Allen	Pidding
Ety, R.A.	Barker	Rippingill
Fuseli	Bonington	Shayer
Hart, R.A.	Mrs. Carpenter	Sharpe
Jones, R.A.	Corbould, sen.	Stanley
Lee, R.A.	Creswick	Starke
Roberts, R.A.	Davis	Wyatt.
Stothard, R.A.	Farrier	
Thompson, R.A.	Frazer	

May be viewed two days preceding, and Catalogues had.

#### PAINTING IN OIL.

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC TUBES**, for COLOURS, OILS, VARNISH, MAGYLP, ASPHALTUM, &c.—**THOMAS BROWN** begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "BROWN'S PATENT" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

Pictures and Prints, the Property of the late Matthias Wilks, Esq., brought from his Residence in the Country.—By Mr. RAINY, at the Gallery, No. 14, on the east side of Regent-street (in the division between Piccadilly and Pall-mall), early in May, by direction of the Executors.

**A Small COLLECTION of PICTURES**, and amongst them three beautiful specimens by that distinguished artist of the British school, the late George Morland; a fine set of 25 Prints, the Luxemburg Gallery, after Rubens, framed and glazed; some carvings in ivory, &c.—Due notice of the days of view and sale will be given.

Pictures of the Highest Class.—By Mr. RAINY, at the Gallery, No. 14, on the east side of Regent-street (in the division between Piccadilly and Pall-mall), some time in May.

#### THE very valuable and select COLLECTION

of PICTURES, chiefly of the Italian school, well known in Scotland as purchased by the late Mr. Irving for the late Sir William Forbes, Bart., from the Tenari and Zambeccari palaces at Bologna, from Count Lecchi at Breschia, and other noble families at Venice, Florence, &c., for whom many of them were painted. They are generally in a pure state, and among them are specimens of fine quality, by the following great masters:—

Gian Bellini	Luini	Ann. Carracci
Rembrandt	Titian	Salvator Rosa
A. del Sarto	Morone	Paolo Veronese
Canaletto	Guido Reni	Sasso Ferrato
F. Francia	Lud. Carracci.	

Particularly the Virgin and Infant Saviour, with St. John, a grand gallery picture by Guido; the Martyrdom of St. Giustini, by Paolo Veronese; portrait of the Doge Grimani, Titian; View on the Great Canal, Venice, Canaletto; St. John in the Wilderness (after Raphael), A. del Sarto; a splendid Landscape, Albano, &c.—Due notice of the day of view and sale will be given.

Cabinet Pictures of a superior Class, from the Country Mansion of a Gentleman.

**MR. PHILLIPS** begs to announce that he will **SELL by AUCTION**, at his GREAT ROOMS, NEW BOND-STREET, on TUESDAY, MAY 3, at ONE precisely, a **VERY PLEASING and VALUABLE COLLECTION of ANCIENT CABINET PICTURES**, selected by the Proprietor, a gentleman of known taste and liberality, at very considerable cost, from distinguished collections, which have been disposed of both at Paris and in England during the few past years; amongst these is a 'Holy Family,' by Francesco Vanni; 'Daniel in the Den,' and the 'Infant Saviour,' by Rubens; a 'Dead Christ with Angels,' by Guercino; an 'Old Lady seated in a Chair,' Metzger; an 'Interior,' J. Steen; a 'Landscape,' Ostade; 'Battle Piece,' Borgognone; a 'Subject,' by Ety, R.A.; 'Farm-yard,' Morland; and other equally interesting examples, which will be more fully detailed hereafter, by

Domenichino	Cignani	Teniers	Cuyp
Parmegiano	Wynants	Bergheim	Watteau
Marinari	Wouvermans	Borgognone	Maas, &c.

May be publicly viewed two days preceding the sale, at Mr. Phillips's, 73, New Bond-street; and catalogues then had.

THE ELEGANT LIBRARY OF SIR FRANCIS CHANTREY, R.A., DECEASED.

**MESSRS. CHRISTIE and MANSON** respectfully inform the Public, that on TUESDAY, MAY 10, and following day, they will **SELL by AUCTION**, at their GREAT ROOM, KING-STREET, ST. JAMES'S-SQUARE (by order of the Executors), the valuable **LIBRARY of WORKS of ART and GENERAL LITERATURE**, in the most beautiful condition, of Sir Francis Chantrey, R.A., deceased.—May be viewed Saturday and Monday preceding.

THE VERY CHOICE COLLECTION of MODERN PICTURES of JOHN TURNER, ESQ.

**BY Messrs. CHRISTIE and MANSON**, at their GREAT ROOM, KING-STREET, ST. JAMES'S-SQUARE, on FRIDAY, MAY 13, the small and very select **COLLECTION of PICTURES**, the works of the most celebrated Modern British Artists, collected by JOHN TURNER Esq., and removed from his late residence, Clapham Common; comprising the 'Rabbit on the Wall,' the much-admired work of Sir David Wilkie, painted for Mr. Turner, in 1816; a 'Nymph and Cupid,' a beautiful work of the late W. Hilton; 'The Morning Star,' a highly poetical design, by Howard, R.A.; a most capital and important work of Morland; 'Richard and Saladin,' and two others, by Cooper, R.A.; three charming subjects of Rustic Figures, by Witherington; and some of the happiest efforts of the following talented artists:—

Ward	Burnet	Cooke
Clennell	Linnell	Good
Allen	E. Cooper	J. Wilson
Starke	Shetky	Shayer.

The Collection may be viewed three days preceding the Sale, and Catalogues had.

PREPARING FOR PUBLICATION,

**THE BOOK OF BRITISH BALLADS.**

EDITED BY S. C HALL, ESQ., F.S.A.

**PLAN OF THE WORK.**

**THE WORK** will consist of British Ballads taken from the collections of PERCY, EVANS, RITSON, PILKINGTON, SCOTT, MOTHERWELL, JAMIESON, BUCHAN, HERD, and others, by whom they have been gathered with so much industry and care; and, also, from sources comparatively unexplored by the general reader. No attempt has, hitherto, been made to select, and arrange in a popular form, the best of these ballads from the several volumes in which they are scattered, and where they are mixed up with a mass of inferior, or objectionable, compositions.

The Work will be issued in Monthly Parts, small Quarto; the Part will consist of five sheets,—forty pages; and *every page* will contain an Illustration engraved on Wood, in the finest style of which the art is capable.

The present intention of the Editor is to complete the Work in twelve Parts, so as to form one Volume; but if the public shall call for its enlargement, it may be increased to twenty Parts, so as to form two Volumes, beyond which it will under no circumstances be extended.

Part I., to be published on the first of June, will contain the ballads of—

CHEVY CHASE; illustrated by J. FRANKLIN; the engravings by SMITH, LANDEDLS, ARMSTRONG, BAUTIN, &c.  
 THE CHILDREN IN THE WOOD: illustrated by J. R. HERBERT, A.R.A.; engraved by GREEN.  
 FAIR ROSAMOND; illustrated by J. FRANKLIN; engraved by T. WILLIAMS, Miss WILLIAMS, WALMSLEY, &c.  
 THE DEMON LOVER; illustrated by J. GILBERT; engraved by FOLKARD.  
 THE NUT-BROWNE MAYD; illustrated by T. CRESWICK; engraved by J. WILLIAMS.

Each ballad will be preceded by two pages; giving its history, and supplying such information concerning it as the Editor may be enabled to obtain. Into these pages will be introduced, generally, the airs to which the ballads were sung; and any pictorial illustrations that may serve to explain the text.

Each ballad will be illustrated by one artist, and in every instance the design will be drawn by him on the wood,—so as to secure uniformity of character; and such arrangements have been made, that as the Work progresses, it will exhibit examples of the genius of a large proportion of the most accomplished artists of Great Britain.

The supremacy of our English Engravers on wood is universally admitted: this important department of the Work will be entrusted only to artists of acknowledged skill and eminence; and the whole of the illustrations of a ballad will be confided, as far as possible, to one engraver.

The aim of all parties engaged in the production of the Work will be to render it worthy of the Country and the Arts.

It is unnecessary to add, that the Publishers calculate upon a very extensive sale to return the immense outlay of capital that will be required: they feel assured that public patronage may be looked for to an extent corresponding with the value of the Work.

LONDON: HOW AND PARSONS, 132, FLEET STREET.

*By whom are also just published,*

**THE ILLUSTRATED ITINERARY OF  
CORNWALL.**

With Five Landscapes, by CRESWICK, engraved on Steel, a Map of the County, and 110 Wood-cuts. Imperial 8vo., price 10s. in half-morocco.

Illustrated and complete in box, price £1 1s.

C. SMITH'S ARTISTS' REPOSITORY, 34, MARYLEBONE-STREET, QUADRANT.

**EAST OF ENGLAND ART-UNION.**—The EXHIBITION of MODERN ART in PAINTING and DRAWING connected with this Institution, will be opened in the latter part of JULY, at the Artists' room, Exchange-street, Norwich.

Mr. Green, of Charles-street, Middlesex Hospital, has been appointed Agent to the Society for packing, and all works of Art should be forwarded to him by the 11th of July.

No carriage or expenses will be paid by the Institution, except on works sent from those Artists to whom the Exhibition Circular has previously been forwarded.

By order of the Committee.  
St. Andrew's, W. WILLIAMS,  
Norwich, May 24th, 1842. Hon. Sec.

**THE ART-UNIONS OF GERMANY.**—In order to facilitate and render more convenient to parties non-resident in London, who may wish to become Subscribers to these Institutions (for full particulars of which see Advertisement in last page), Mr. HERING, the appointed Agent for this Kingdom, is willing to receive from Gentlemen resident in the following Cities and Towns, Proposals for the Office of Honorary Local Secretary, in the selection of which Office a preference will be given to any one more immediately in connexion with Art or Literature in the town in which he is resident. The application to be accompanied by a reference in London.

Edinburgh,	Manchester,	Hull,
Glasgow,	Birmingham,	Newcastle-on-
Dublin,	York,	Tyne,
Cork,	Canterbury,	Bath,
Oxford,	Salisbury,	Bristol,
Cambridge,	Southampton,	Cheltenham,
Norwich,	Portsmouth,	Dover,
Exeter,	Leeds,	Plymouth, and
Liverpool,	Sheffield,	Devonport.

German Repository of Art,  
9, Newman-street, London,  
1st June, 1842.

**FINE ARTS.**—Shortly will be published, a beautiful Drawing in Lithography, by a well-known Artist, representing the interesting ceremony of allotting the Prizes of the ART-UNION of LONDON, at the THEATRE ROYAL, DRURY-LANE, on TUESDAY, the 26th of APRIL.

**WEST OF ENGLAND ART-UNION.**—The WEST OF ENGLAND ART-UNION is established to promote the interests of Art in the Western Counties.

The following is an outline of the plan upon which it is proposed that the Society shall be conducted. It will be found to embrace many improvements, which the experience of other Art-Unions has suggested as desirable.

A Subscription of Half-a-Guinea to constitute Membership.

A part of the fund raised to be expended in the production of an Engraving, to one copy of which every Subscriber shall be entitled for each half-guinea subscribed.

The surplus fund, after paying the necessary expenses of the Society, shall be divided into Prizes of various amounts, which will be distributed by lot among the Subscribers; so that each Subscriber, besides receiving a Print fully equal in value to the amount of his subscription, will also have a chance of obtaining a valuable Work of Art as a prize.

The winners of prizes will be allowed to select one or more Works of Art, to the amount of their prize, from either of the Exhibitions in Plymouth or Exeter, or from the Polytechnic Exhibition at Falmouth; or they will be allowed to have Portraits of any members of their families, painted by an artist chosen by themselves.

It is believed that this latter regulation will be found very acceptable to many prizeholders, and will afford encouragement to a class of artists who have hitherto been very much excluded from the benefits of Art-Unions.

The drawing for 1842 will take place at a Public Meeting, to be held in Plymouth, the last week in August.

To obviate the objection so frequently expressed by Subscribers to Art-Unions, of having to wait many months after the distribution of prizes, before the Print is delivered, arrangements have been made with Mr. Ryall, the eminent engraver, to complete an engraving in his best style, from a very beautiful picture by Mr. A. Penley, entitled 'The Spring of the Valley,' the Print to be ready for distribution to the Subscribers within one month of the time that the prizes are drawn. It is believed that this Print will be one of the most attractive that has ever yet been issued by any Art-Union. The impressions are to be delivered strictly in the order of subscription.

Subscribers' names received at the Devon and Cornwall Banking Company, Plymouth and Exeter, or at any of its Branch-offices; by Mr. E. Fry, Honorary Secretary, Plymouth; Mr. W. Roberts, Honorary Secretary, High-street, Exeter; by Messrs. Ackermann and Co., 96, Strand; Messrs. Graves and Co., Pall-mall; Messrs. Winsor and Newton, Rathbone-place; and Mr. E. Ramsden, 12, Finch-lane, London.

Now ready, with additional Illustrations,  
THE NEW EDITION OF  
**LOCKHART'S ANCIENT SPANISH BALLADS**; embellished in a new and perfectly original manner, with Coloured Titles, Borders, Ornamental Letters, and Vignettes. Quarto, £2 2s., or richly bound in morocco, £2 12s. 6d.

This volume must be seen to be appreciated: it is perfectly unique in its original and beautiful Illustrations.

"A more appropriately as well as beautifully embellished volume never was offered to the world. The text throughout is accompanied with heraldic and ornamental embellishments, with views of localities and representations of subjects, which present an admirable commentary on the stirring stanzas."—Edinburgh Review.  
John Murray, Albemarle-street.

**SIR DAVID WILKIE'S EASEL.**—J. BARNARD has the above useful relic to dispose of (size 10 feet by 5 feet 6 inches), at his ARTISTS' COLOUR WAREHOUSE, 339, OXFORD-STREET.

DAVID ROBERTS'S, R.A., HOLY LAND, With Notes, Historical and Descriptive, by the Rev. G. CROLY, LL.D.

**PART III.**, just ready. Price 21s.; Lettered, 42s.  
London: F. G. Moon, 20, Threadneedle-street

Now ready, Second Edition, with Plates, post 8vo., 9s. 6d.,

**A TOUR** in NORMANDY, with some REMARKS on NORMAN ARCHITECTURE. By HENRY GALLY KNIGHT, Esq., M.P.  
John Murray, Albemarle-street.

**FIELD ON COLOURS.**  
In a large 8vo. vol., price 14s. cloth,  
**CHROMATOGRAPHY**; or, a Treatise on Colours and Pigments, and of their Powers in Painting. By GEORGE FIELD. New edition, revised and improved.—Also, by the same Author, **CHROMATICS**; or, an Essay on the Analogy and Harmony of Colours. Coloured diagrams. Royal 4to. 21s. cloth.

Tilt and Bogue, Fleet-street.

Just published, in 4to., price £2 2s., in French boards, and on royal paper; with proof impressions of the Plates, price £4 4s., half morocco, gilt tops,

**DISCOURSES** delivered to the STUDENTS of the ROYAL ACADEMY, by Sir JOSHUA REYNOLDS. Illustrated by Explanatory Notes, and Twelve Plates. By JOHN BURNETT, F.R.S., Author of "Hints on Painting," in 4to., price £4 10s.  
James Carpenter, Old Bond-street.

**PICTURESQUE VIEWS OF THE RIVERS NIGER and QUORRA**, by CAPTAIN ALLEN, of H. M. S. V. Wilberforce. Dedicated, by gracious permission, to his Royal Highness PRINCE ALBERT. These Views (twenty-two in number), comprising all the principal points on the Rivers, with a Map and descriptive Letter-press, may be had of Messrs. H. Graves and Co., publishers, Pall-mall; and Mr. William Stokes (Captain Allen's agent for the sale of the Views), No. 15, Parliament-street. Price 25s., stitched in a wrapper; 30s. in cloth,

Lately published.

**THE THEORY AND PRACTICE OF WATER-COLOUR PAINTING**, elucidated in a Series of Letters, by the late GEORGE BARRETT, Member of the Society of Painters in Water-colours.

"The instructions that are conveyed in these letters are so simple, and the language so familiar, that almost any young person who is desirous of information will, I trust, readily comprehend them."—THE AUTHOR.

Royal 8vo., price 10s. 6d.

London: published by Ackermann and Co.

Just published, imperial 8vo., handsomely bound, 24s.,

**THE USE OF A BOX OF COLOURS.** By HARRY WILLSON, author of "Fugitive Sketches in Rome, Venice," &c. &c. Being Practical Instruction on Composition, Light and Shade, and Painting. Illustrated with beautiful Patent Lithotint examples, plain and coloured. Also a Box of general Landscape Tints have been prepared to accompany the same.

London: C. Smith, 34, Marylebone Quadrant; Tilt and Bogue, Fleet-street; and all other Publishers, Stationers, &c.

## CHRISTOPHERO WREN,

D.D.D.

CAROLUS ROBERTUS COCKERELL,

DUM PRÆCLARE OPIFEX TUA QUÆ MANUS UNA CREAVIT COMPONO EN FACTA EST ALTERA ROMA TIBI.

ALEXANDER HILL,

*Publisher to the Royal Scottish Academy, 67, Princes Street, Edinburgh,*

Announces, that he will have ready for delivery to Subscribers, early in June, the First Class proofs on India paper, of  
Mr. RICHARDSON's splendid Line Engraving, from the celebrated drawing, entitled

## "A TRIBUTE TO THE MEMORY OF SIR CHRISTOPHER WREN,"

"Lector si monumentum requiris, circumspice!"

BY C. R. COCKERELL, ESQ. R.A.

PROFESSOR OF ARCHITECTURE IN THE ROYAL ACADEMY OF LONDON ;  
ARCHITECT TO THE BANK OF ENGLAND, ETC.

SIZE OF THE PLATE, TWENTY-TWO BY SIXTEEN AND A HALF INCHES HIGH.

This magnificent work embraces, in one gorgeous and picturesque composition, exquisite and correct representations of upwards of Sixty Public Structures, the work of that greatest of British Architects, whose memory and genius it is designed to hallow and commemorate; and has been admitted to form one of the most elegant Tributes ever paid by living to departed genius. With a view of obtaining the utmost Architectural accuracy, combined with pictorial value, the plate during its progress has undergone the careful revision of Mr. COCKERELL, and several of the most distinguished of the Royal Academicians, to whom through him it has been submitted. Besides its certain popularity in England, the Engraving has been considered, by some of the best judges, as likely to command a large Continental sale, being better calculated to convey the merit of English Architecture than any other single Plate: and that, from its possessing so much scientific and pictorial interest, it will be essential to Architects, to Academies, Academicians and their Schools, and to all Amateurs and Collectors of Architectural and modern Prints.

The Engraving being on copper, the number of Proofs are necessarily limited. It is respectfully intimated, that on and after the 20th of June, when they are expected to be ready for delivery, the

FIRST CLASS PROOFS ON INDIA PAPER WILL BE ADVANCED IN PRICE TO £4 14s. 6d.

PRESENT PRICES ;

FIRST CLASS INDIA PROOFS, £3 3s. PLAIN PROOFS, £2 12s. 6d. PRINTS, £1 11s. 6d.

A very few copies of the highly finished Etching remain, price £1 11s. 6d.

## SUBSCRIBERS

Will receive their impressions in the order of the Publisher's Subscription List. From the high finish and delicate nature of the Engraving, an early application will be decidedly advantageous, and may be necessary to secure a good impression, the limited number of Proofs being already nearly all disposed of.

## THE ROYAL ACADEMY.

## SEVENTY-FOURTH EXHIBITION.—1842.

THE EXHIBITION was opened to the public on Monday, the 2nd of May. We were among the spectators who went to—look at the people; as to seeing the pictures, that was out of the question, if we except those that were "out of sight;" for upon the first day, the works that occupy, in one sense, the highest places, enjoy advantages of which those "on the line" are deprived. Unfortunately for the Academy and the exhibitors, the old and unwise system is persevered in, and the critic is systematically deprived of the power to give to the public a just and fair estimate of the collection. To us, this is of small consequence; for we can, afterwards, enter the rooms, as soon as they are opened, again and again, before we are called on to offer any remarks upon them. But to those who are compelled to write on the Monday night, for the journals of the next day, such observations as result from an inspection made in the midst of a crowd, subjected to every possible inconvenience and annoyance, the evil is great; the results unquestionably are, often, irritability of temper which prevents the possibility of writing generously; and, always, a want of power to discharge the duty with either accuracy or ability. Yet these things will be done whether they are, or are not, desirable to the Academy; and will, as certainly, inevitably and invariably, be done badly, while the present unwise, illiberal, and unjust system is so pertinaciously adhered to. We may judge of the feelings of others by our own; and have no hesitation in saying, that if we had been called upon to write a detailed criticism, on the afternoon of the Monday, we should have been ashamed to have read it "in print" on the Tuesday morning. We trace, indeed, to this absurd principle of exclusion, which belongs solely to the Royal Academy, much, if not the whole, of the asperity and bitterness in which writers so continually indulge when treating of that body; so long as it is continued, so long will its members be annoyed upon every oc-

casation where annoyance may be given with the semblance of justice. Under what pretence the plan is kept up, we cannot say; but sure we are that the courtesy of sending admissions to a dozen of the leading journals, might be accorded without being considered derogatory; and there can be no rational doubt that by so doing the members would best consider, not alone their own interests, but the interests of the great body of British Artists of whom they are, in a degree, the appointed guardians. If the Council had been situated as we were on the 2nd of May, and heard the complainings of gentlemen who "attended for the public press"—and who were *compelled* to be in the gallery, in discharge of their duty—they would, we humbly think, rescind a rule which, to say the least, is unwise, and not very creditable to this, the second quarter of the nineteenth century.\*

Of the seventy-fourth exhibition of the Royal Academy, there can be—and there is—but one opinion. It supplies evidence of great and *general* improvement. There are few pictures of all-engrossing merit; few at which crowds will rush, and beside which they will stay until their limbs grow wearied; but as a whole, it is highly satisfactory, and affords cause of sincere congratulation to the artists and the nation. It consists of 1409 works; yet, we understand, no fewer than 900 works were rejected FOR WANT OF ROOM. This is an evil not so deplorable as it is disgraceful. It is really not to be tolerated, that in a country like this, where "means and appliances" are ample, there should exist, from year to year, a necessity for excluding from competition, perhaps from distinction, and certainly from profitable occupation, the many who must be included among those whose pictures are returned to the saloons, the painting-rooms, or the attics, in which they have been produced. The evil is so much the greater, because it is capable of a simple and easy remedy. The portion of the long building built by the nation for national objects, surely could not be better occupied during two months of the year, than in supplying space upon which the works of British artists might be hung—and *well hung*.

The paintings of the old masters might be laid aside for a brief while—or rather covered up by a

\* It is neither our duty nor our inclination to canvass the opinions expressed by the newspapers; but we feel justified in asserting that some of them will be read with contempt, some with anger, and some with unmingled disgust, by the artists. Not a few of them are—to our certain knowledge—written by persons who are painters by profession; but who, having utterly failed to attain to anything like ability, are consequently the rejected of Exhibition-rooms, and the despised of the public generally, and who vent their spite and spleen upon successful men, labouring continually to bring down merit to their own miserable level. Our regret is that the directors of public journals should lend their columns to men who can judge no better than they can paint; and supply ample evidence that they are influenced by envy, hatred, and malice. One of them, now before us, in language absolutely revolting, describes the glorious work of Macleise as unworthy of a pot-house; and the estimable President of the Royal Academy in terms such as we will not insult our readers by quoting; while the writer, as if to leave no doubt of his ignorance, in one small paragraph, mis-spells the names of no fewer than four of our leading artists. This, to be sure, appears in a journal pre-eminent for all that is infamous; but its circulation is great; and it supplies to a bad painter a weapon—powerful and dangerous, because it is one against which any honourable man would scorn to present a shield.

Very different in character are two leading newspapers now upon our table, which we regret to perceive treating the Academy most inconsiderately, and therefore most unjustly; both repeating the old and hacknied, but refuted, assertion, that the Royal Academy is a "national" Institution, and that therefore the people have a right to a voice in its management. Neither our time nor our space will permit us again to canvass this matter; we have already done so fully. Up to the present hour, the Academy is no more a national Institution than the Royal Society, or the Society of Antiquaries; both these societies are provided, free, by Government with apartments in Somerset House; and from Government the Royal Academy receives nothing more. Surely it would be equally reasonable and equally just to call upon these Societies to submit their proceedings to the public voice, as to demand that the Royal Academy should do so.

We are by no means prepared to say that a system of encouraging and protecting British Art might not be devised that should be strictly "national;" or that such a system might not be greatly preferable to that which now exists; but until such a change has been effected, it is most unjustifiable to argue against the Royal Academy upon grounds utterly untenable.

temporary wall—as they do at the Louvre, where "they order these things better." Every meritorious picture might then be exhibited—and exhibited, not to the injury but the advantage of the artist.

It would give us exceeding pleasure to learn that the Royal Academy had been stirring in this matter. The duty is entirely theirs; it would be impossible for more than a suggestion on the subject to proceed from any other source. To them such an improvement would produce results most beneficial; for they would rid themselves, in a great degree, of that painful responsibility which attaches to the duty of hanging the pictures; a duty which an archangel could not discharge to the satisfaction of all parties; but which might be made infinitely less difficult by such an arrangement as we take the liberty to suggest. We feel quite certain that, if a proper representation were made by the Royal Academy to the trustees of the National Gallery, the plan would be at once acceded to.

As usual, there is, this year, the customary quantum of complaint regarding unfairness or ignorance in placing the pictures of unprivileged contributors. It is a troublesome and embarrassing topic to touch upon. Persons who think themselves aggrieved will make no allowance for the difficulties under which the "hangers" labour; and pay no consideration whatever to the fact that there may be two very opposite opinions as to the merit and value of a work—upon which there is a very sincere desire to judge rightly. We certainly think that in the present exhibition there have been some "mistakes;" but we are far from willing to attribute them to a bad motive. We know who the "hangers" are, and consider it impossible to sustain a charge so unworthy and discreditable as that of premeditated injustice. Yet among these "mistakes" there are some—we shall find it our duty to refer to them—that the ordinary observer will find it difficult to account for upon other grounds.

## EAST ROOM.

No. 1. 'Portraits of Misses Wynn, children of Lord and Lady Newborough,' T. M. JOY. Placed over the entrance, and yet seen to advantage. The work is pleasing in composition, and painted with sound judgment; happily blending the actual with the fanciful.

No. 5. 'Portrait of Mrs. Burr,' B. R. FAULKNER. A work that ranks high above the ordinary standard of its class. The figure of the lady is graceful, and the expression of her countenance full of gentleness. The work contains a bold attempt to paint a "shot" silk, and if the artist has failed, he has done so only with greater men—one of whom was Paul Veronese.

No. 6. 'A Magdalen,' W. ETTY, R.A. No matter what subject this artist may select for the exercise of his pencil, there is always in the execution much that is valuable—much that a school might safely follow, but at the same time much that prudence would counsel to eschew. The Magdalen stands with dishevelled hair, looking upwards in fervent ejaculation. The expression of the countenance is earnest—not dramatically intense; indeed the work is without any alloy of affectation. It would have been better had it been more conventional, since the learning of the artist must have added a value of his own to such a quality. The colouring of the picture is in the lights, a truth incontrovertible, while the shadows are heavy and turbid. There is no life in solid asphaltum or umber, as it is here used; and we appeal to this test—if the lights of the flesh were covered—the shadows alone would extinguish all idea of the relationship of the substance with anything so life-like as the lights of the picture.

No. 8. 'The Schoolmaster,' C. W. COPK. A subject from the well-known description in Goldsmith's "Deserted Village." The schoolmaster seems to have surprised some little truant, in whose faces the artist has skillfully depicted an apprehension of direful consequences: he is "severe and stern to view," but has withal playing in the corners of his mouth a light, which partially dispels the cloud on his brow. The picture is a happy conception of character, true to the poet and to nature; the execution exhibits the master hand.

No. 9. 'Interior of the Church of San Miguel, Xercy, Spain,' D. ROBERTS, R.A. A most ex-

quisitely-finished work; one of the happiest efforts of an artist who, in picturing these glorious remains of old time, peopled by a degenerate race, remains without a competitor.

No. 10. 'An English Landscape—Composition,' Sir A. W. CALLCOTT. We have of late seen but little of the works of the accomplished author of this picture; we hail his reappearance on these walls with such evidence as he brings us, that the principle of life is yet strong within him. The elements of the composition are common-place, and to which none but a master spirit can attach even a limited measure of interest; here they are brought forward with a profound veneration for the sublime and beautiful, which, thus expressed, cannot fail to be participated by all who may look upon the picture. It is an upright landscape, rather large, made out simply of a foreground covered by shallow water, in which are a few cows luxuriating, a few trees, and a distance. On the right, the eye is confined by the stately trees, whence it ranges over a gently undulating country into an airy perspective, which is finally mantled in the sky of the horizon. The season is summer, the day is sultry, and the painter has charged the air with a slight haze, which gives to his composition an effect rarely equalled. The water is cool and inimitably limpid; but the triumph of the picture is its atmosphere—air has never before been better painted. The shadow under the trees is pure and deep; a cow has sought refuge there, but she is pursued by the flies, if there be any meaning in the movement of her ears. If the end of painting be to move us to unison with the intended spirit of a representation, none will ever more eminently succeed than this 'English Landscape.'

No. 11. 'The first Introduction of Christianity into Britain,' J. R. HERBERT, A.R.A. This is a work, in all respects, of the highest class; the production of an artist of unquestionable genius, and one of the most "prospering" professors of the "grand Art." In parts it is evidently insufficiently finished, and in other parts it is wrought most elaborately; this inconsistency is an evil. But it is a happy conception of a striking and interesting incident; strictly historical, yet with ample scope for the exercise of imagination; and the artist has given to his fancy full play. An early Christian teacher (somewhat too close a resemblance to the modern monk) is converting a group of ancient Britons, under the shadow of those huge Druidic monuments which still exist at Stonehenge. The group is beautifully pictured: a young mother presents her babe; a sturdy youth is breaking one of his idols; an old man listens thoughtfully; while at the side of the missionary stands a graceful youth bearing a cross. The picture affords evidence of thought and study; the painter has obviously entered upon his task under the conviction that it was not to be performed as a work of ordinary labour, but that due consideration was required for every portion of it. We must wish that longer time had been taken to finish the subordinate parts.

No. 12. 'A View of Bolton Abbey, Yorkshire,' C. FIELDING. We are not to blame that  
"Thou hast dealt us memories so passing sweet,  
That naught less dainty now doth serve us."

We cannot help comparing Mr. Fielding, as he presents himself to us here, with himself in *se*. The force of certain styles of Art lies in their breadth and freedom; that of others in their microscopic finish, a quality which debilitates a substantial firmness of manner. We wish this oil picture had partaken more of the tone of his water-colour works; it wants their breadth and sweetness: yet this comparative failure in him would have been a triumph to another.

No. 20. 'Vallone dei Malini, Amalfi,' C. STANFIELD, R.A. A view in Italy, a sort of rocky defile, crowned in the near distance by one or two white Italian buildings. There are no trees to tell us so; but the season is summer, or the thread of water, trickling down the picture and losing itself in the frame, would have been swollen to a brawling torrent. In the foreground there is more freshness than in the soil of Italy under its summer sky, gaped with innumerable cracks, like so many mouths opened to catch the largesse of the heavens. This picture throughout is inapproachable in its execution; its tones are mellowed and harmonized with the nicest skill; and the foreground is a palpable reality from which all would shrink, to whom a rugged ascent is at all objectionable.

No. 21. 'Winning Gloves,' J. C. HORSLEY.

A lady sleeping in a chair, and a cavalier about to "win gloves" by kissing her. In this picture there is much that is beautiful; but brilliancy in the lights and depth in the shadows are counteracted by a finish of parts which breaks the unity of these qualities. A care, even *zu Holländisch*, has been lavished on unimportant matters in the composition, while some of the same would have advantaged the female figure, who sits uneasily; indeed she would seem to have thrown herself hastily into her seat, and feigned sleep on hearing the approach of the gentleman. The gloves will be won easily; the lady is an accessory before the fact. We trust that artists will not receive ungraciously remarks like these, which can give us pleasure in proportion only as they may be productive of good.

No. 24. 'The Invalid,' J. W. KING. The invalid is a lady reclining on a sofa reading. The picture is an effect of light, which is thrown so judiciously on the figure as to disengage it from the canvass. It is a work of good promise.

No. 25. 'Portrait of a Gentleman,' M. MULREADY. Pure and bright in tone; the figure is easy in position, and we cannot fancy it otherwise than a likeness.

No. 27. 'Portrait of Lady Haddo,' Mrs. W. CARPENTER. There is about the works of this lady a greatness of purpose rarely found in those of professors of portraiture. Her execution is worthy of the highest walk of art. In composition and general treatment this portrait is unexceptionable.

No. 32. 'Mrs. Cooper, of Markree Castle, and youngest Children,' F. R. SAY. A group of full-length portraits in a garden. The lady is seated with her head turned to the left; the features are extremely felicitous in expression. The drapery is richly and effectively painted, and the background is put in with an old school feeling of which we cannot complain.

No. 33. 'The Dance,' W. ETTY, R.A.—  
"A figured dance succeeds; a comely band  
Of youths and maidens bounding hand in hand,  
The maids in soft simars of linen drest,  
The youths all graceful in the glossy vest," &c.

The lines are a portion of the quotation appended to the title in the catalogue—they are from Pope's *Homer*—the description of the shield of Achilles. None of Mr. Etty's works that we have lately seen, have—being pronounced finished—been left in a state so studiously sketchy as this. A band of youths and maidens, as the lines above express, have joined in a dance, while, at the same time,  
"Two active tumblers in the centre bound."

So subtle is this painter's apprehension of the graces of the female figure, that no production of his may we expect to see without a demonstration of this power. We have, accordingly, one of the principal figures distinguished by the most accomplished execution. In consonance with the regime of Mr. Etty's late works, this picture wants colour; indeed it seems to have been kept down in tone by an effort. In how many more cases shall we have to lament the abandonment of particular styles which have nurtured reputation into fame?

No. 45. 'Portrait of the Rev. Hugh Mac Neill,' G. PATTEN, A. This is a subscription portrait, painted for the congregation of St. Jude, Liverpool, by whom it is presented to their respected pastor, Mr. Mac Neill. The figure is in clerical robes, and the background is correspondingly grave: an arrangement which gives extraordinary force to the head.

No. 46. 'Welsh Guides, Llanberris, North Wales,' W. COLLINS, R.A. A most sweet picture; three little urchins stand by the way side, with their small stock of merchandise, gathered in the neighbouring mines. In the foreground is water, and in the back-ground are the mountains. A dog at the feet of the juvenile group adds much to the interest of the subject.

No. 48. 'Scheveling Sands,' E. W. COOKE. A work of great merit, which, in its particular style, is surpassed by very few of our British painters. It supplies evidence of a matured acquaintance with nature, and close observation of peculiar characters and effects. All the accessories of the scene are skilfully and happily introduced.

No. 50. 'Portraits, A Family Group,' the late Sir DAVID WILKIE, R.A. The figures in this composition are three small full-lengths, circumscribed with all the truth and reality which characterized Sir David Wilkie's smaller works, he having in this, as usual, mustered his force in his figures,

leaving the picture to stand or fall by their merits. The whole of the work has been subdued to something of a Dutch household hue, which makes us wish that its better parts had been more worthily toned.

No. 51. 'The Course of the Greta through Brignal Wood,' T. CRESWICK. The title is followed by a quotation from the poem of "Rokeby." The subject of the picture is a bower of greenwood, woven by nature over the course of the Greta, amid the rocks and stones of which struggles a shrunken thread of water. The foliage is painted with the accustomed excellence of this artist, and a portion of it conveys perfectly the effect of the light of the sun breaking without the screen of leaves. It would be difficult to exaggerate in praising the works of this accomplished painter. He paints *facts*; at least he always seems to do so, for his works are full of what appears strict truth; and, at the same time, he always contrives to make a poem of a picture, no matter how insignificant may be the scene. A solitary tree, a lichen covered rock, a bubbling rivulet, become most graceful and most effective when touched by his almost magic pencil.

No. 52. 'The Dogana, San Giorgio, Citella, from the Steps of the Europa,' J. M. W. TURNER, R.A. Venice was surely built to be painted by Canaletti and Turner; her greatness scarcely held out till the former had done with her; and by the time the latter has given us his serial version there will be nothing left for anybody else to celebrate. These Venetian pictures are now among the best this artist paints, but the present specimens are of a decayed brilliancy; we mean, they are by no means comparable with others he has within a few years exhibited. A great error in Mr. Turner's smooth water pictures is, that the reflection of colours in the water are painted as strongly as the substances themselves, a treatment which diminishes the value of objects.

No. 54. 'A Jewish Maiden in Exile,' T. MORGAN. This, although placed high, seems to be a work of no common value; there is much in it from which we augur excellence. The painter appears to have appreciated truth of character, and to have manifested no inconsiderable ability in the execution of his task.

No. 59. 'The Lady Glenlyon,' F. GRANT. This is a charming portrait, as remarkable as any of Mr. Grant's works, for its total absence of affectation. The expression of the countenance alone is such as only a master of the art could achieve. The figure is seated, and relieved by a landscape background.

No. 60. 'A hora me cognosces?' A. E. CHALON, R.A. A portrait of a Spanish lady removing from her face a mask, at the same time saying, "Now do you know me?" The picture is distinguished by national character, and all the archness which should prevail in it; but the hands seem too large, and we cannot help declaring our greater relish for its author *all' acqua*, as the Dottore Linguadoro preferred his liqueur.

No. 61. 'Mrs. Beauclerc,' F. GRANT. A small portrait. A lady lapping her dog. It is surpassingly beautiful; a most sweet subject, most exquisitely copied. The painter informs us who the lady is; one of "lineage high and proud;" but if it were possible to imagine one so graceful and beautiful, the spouse of a cheesemonger, the picture would lose nothing of its value. The lady is nothing to us; yet we do eagerly covet her portrait; we fancy we might grow better in heart and mind by frequently looking upon it.

No. 62. 'The Play Scene in Hamlet,' D. MACCLISE, R.A. As a work of Art this painting is worthy of association with the more magnificent creations of the great poet. It is, in all respects, a *chef-d'œuvre* of the British school. Faultless it is not; but its faults are of very minor import in comparison with its perfections. There may be too much horror expressed by the group to the left, who are ignorant of the consequences of the experiment on the "conscience of the King;" and in the perspective to the right, there seems to us to be something wrong; but in all the grander qualities it approaches very near perfection. Ophelia has been objected to for the very reason in which we think the merit lies—she expresses sympathy, rather than love, for Hamlet; and in the countenance of Hamlet there is just the character we look for from familiar acquaintance with the poet's work—a mingling of horror, abhorrence, and ven-

geance to be taken—yet still a “letting I dare not wait upon I would.” How famously is this contrasted with the calm but resolute watching of Horatio! How grandly depicted is the sudden and amazed remorse of the King; how admirable the wonder, mixed with suspicion, and yet conscious innocence, in the Queen! But the triumph of the picture is, unquestionably, “the play” acted in the background. What a sublime conception!—how intrinsically full of poetry is the figure of the murderer seeking to shadow his face from the yet lingering light of day—and the dim gigantic form, his huge outline, reflected from behind! The play is, indeed, “the thing.” As an example of fine drawing it is unsurpassed; in all the highest attributes of Art it will rank among the most memorable productions of our school.

No. 63. ‘Portrait of the Queen,’ J. PARTIDGE. This portrait will not be a favourite with the English people. It is not a pleasant likeness; and as a painting it is ungraceful.

No. 69. ‘Portrait of Mrs. Pulleine,’ H. W. PICKERSGILL, R.A. There is, in this portrait, much truth and beauty, but it is marked by an execution which declares abundant occupation. The neck wants purity of tone—there is a haze, inconsistent with the warmth of life. Other portions of the work are painted with the known excellence of the artist.

No. 70. ‘Portrait of Mrs. Richard Bevan,’ T. PHILLIPS, R.A. A beautiful and most effective portrait. It absolutely looks out of the canvass.

No. 71. ‘Ophelia,’ R. REDGRAVE, A.R.A. “To one thing constant never”—verily should we not have recognized Mr. Redgrave in this picture; not, be it understood from a want of excellence, but from its inconsonance with all our impressions of its author. The title is followed by a quotation—

“There is a willow grows ascaunt the brook,” &c.

and, according to its description, Ophelia is occupied in making “fantastic garlands” of

“Crow-flowers, nettles, daisies, and long purples.”

She is pale—woe-begone—and her restless, fevered eyes, bespeak a mind diseased. The painting of her dress, which is white, resembles the manner of some of the old masters, a feeling which is extended to the banks of the brook, this part of the work being enamelled on the canvass like the foreground of some of Giorgione’s garden scenes.

No. 72. ‘The Tired Soldier resting at a Roadside Well,’ F. GOODALL. We have had frequent occasion to speak in terms of the highest encomium of this young artist; but we marvel that he should delay so long to “flesh” his pencil in English scenery. The composition of this work carries us over to Normandy, or Brittany it may be. It consists of but few figures—a man with an ass, the old soldier seated near the well, and a *pay-sanne* drawing water. The figures are powerfully characterised; the female is a repetition, but this is a foible of some of the greatest professors of the Art. The work altogether is certainly not a retrograde movement.

No. 73. ‘Campo Santo—Venice,’ J. M. W. TURNER, R.A. Again—Venezia la ricca—water, and a few lustrous buildings in the distance. We have seen many of Mr. Turner’s pictures, which, although not highly coloured, vie in beauty with anything he has ever done; these were constituted of the same materials as this, and similarly treated, but yet infinitely superior to it. The infirmity of which we complained in the other picture is more distinctly shown here in the reflection of the sail of a boat, which is painted up to the force of the sail itself, producing at a near view a false effect, which is not improved by distance.

No. 79. ‘Devonshire Scenery,’ F. R. LEE, R.A. The productions of this artist afford us very accurate representations of effects the most volatile in nature, and consequently the most difficult to define upon canvass. The objects composing this ‘Devonshire Scenery,’ are found everywhere and painted continually; but rarely, very rarely, with the profound intuition which is conspicuous in every part of this picture. The water has motion.

No. 83. ‘Portraits of Scyron and Tit,’ A. COOPER, R.A. A lurcher and a diminutive terrier, which having been upon the stroll together, have hunted down a hare, over which the pair are panting in exultation after a hard run. The background is a moor thrown into deep shadow, and

overhung by pinky clouds which do not contribute favourably to the picture.

No. 91. ‘The Ford,’ W. MULREADY, R.A. A main “virtue” in the works of Mr. Mulready is, that they tell their own story without the aid of descriptive title. The reading of this picture is so simple that such a remark is not called for in speaking of it; although it partakes of the character of others, where we find in connexion with the immediate subject, a previous and a subsequent tissue of relations. Here two youths are bearing a maiden across ‘The Ford,’ while the remainder of the party (the old people) are about to follow on horseback. It sustains the high reputation of its author; it is a work of surpassing beauty, grace, and excellence—one of the most valuable paintings ever produced in England.

No. 92. ‘Maria,’ T. UWINS, R.A. A most sweet and delicate composition; a touching and effective reading of the famous story in the ‘Sentimental Journey.’

No. 94. ‘Dorothea,’ H. LE JEUNE. A good example of rising genius; but the artist must study nature more and academic models less. This is broadly and forcibly coloured, and is a decided approach to excellence.

No. 95. ‘Dorothea disguised as a Shepherd Boy,’ T. UWINS, R.A. This is a small picture, treated with so much of the spirit of Michael Cervantes as to show, if evidence were wanting, that the accomplished painter is not less at home in such subjects than in those Italian scenes, for which he has created so strong and general a taste.

No. 96. ‘Otters and Salmon,’ E. LANDSEER, R.A. In the catalogue of the last year this name did not appear—a *hiatus* which taught us all the real value of him who bears it, perhaps, as much as anything else could have done. No artist was ever more purely national than Mr. Landseer; the public have persuaded themselves into the idea of an annual claim upon him, and the long accustomed indulgence having been but once withheld, complain loudly of a breach of prescriptive privilege. In this picture, an otter having secured a salmon, which it has dragged to a rock, is disturbed in his intended repast by another animal of the same species, desirous of sharing the prey. The animals are painted in a manner so substantial, as to approach the reality as nearly as art can ever do.

No. 97. ‘Scene from Twelfth Night,’ C. R. LESLIE, R.A.—

Sir Toby.—Accost, Sir Andrew, Accost.

Sir Andrew.—What’s that?

Sir Toby.—My niece’s chambermaid.

Sir Andrew.—Good Mrs. Accost, I desire your acquaintance.

The productions of this artist are figure-pictures in the strictest meaning; his *persona* being accompanied by circumstances just barely enough to signify the scene of action. He does not call our attention to the perfection of his *upholstery*—such a diversion being unnecessary. The figures are here but three in number; Sir Toby is seated, and Sir Andrew turns his back to the spectator in the act of “accosting.” The picture excels in character, the *forte* of this artist, but the point of sight is unusually high; this which may, or may not be a fault, is but as a speck on the sun. The work is of rare value; intrinsically excellent; calculated to satisfy and gratify the mass no less than the critic; and, to the highest degree, delightful to those who can thoroughly comprehend and fully appreciate almost the nearest approach to perfection of which the Art is capable. We cannot regret that it manifests a design to return to his former tone of colour, and an intention to abandon the unnaturally white hue that of late often spoiled the effect of a graceful, a beautiful, or a powerful conception.

No. 98. ‘The Highland Shepherd’s Home,’ E. LANDSEER, R.A. Another exquisite work of the artist, who is as completely “at home” as the shepherd himself in a Highland bothy. The subject is a most pleasant one: a happy mother is gazing on the face of her first-born sleeping in its cradle; the father, with his rougher countenance, but equally thankful expression, sits by her side; and the guardian dog is at his post.

No. 99. ‘Desire,’ J. J. CHALON, R.A. A work of no common merit, with some qualities in the production of which it has been surpassed by few. As a landscape it is remarkable; a fine and powerful tone of colour pervades it; and the reality of the scene is preserved with great ability. The

comment upon the word “desire” is made by a group of youths and maidens in a boat; one of the lads is striving to reach a water lily—apt gift for the lass beside him; the boat, however, has grounded, and can advance no nearer to the tempting object. There are few to whom the incident is not familiar; few who have not found the long stalk of the water lily slide from his grasp. Although a frequent occurrence, the use of it thus is very original. The shadow of the boy in the water is surely too strong; at first sight we fancied it a drowned youth, turning upon his light-hearted companions the ghastly look of death from beneath the clear wave.

No. 104. ‘Prayer; a Family about to leave their native shores imploring Divine protection,’ W. COLLINS, R.A. The scene is Italy; the sun is below the horizon; and before a public crucifix, planted on the sea-shore, a family are kneeling in prayer. A lamp is burning before the image, and its rays fall upon the figures, bringing them forth out of the dark back ground with most felicitous effect. The work is pervaded by the finest sentiment. It is probable that the balancing of the composition may be questioned, as the group is assembled on the right of the picture; but this arrangement leaves a void which may contribute to its grave tone. The wayfarers have no friends on earth; darkness and solitude are before them. This is a picture of a high poetic rank, doing honour alike to the head and heart of its accomplished author.

No. 115. ‘Inquiring for the Ferry—Evening on the banks of the Thames,’ T. S. COOPER. It has often been regretted, that in the pictures of this most able and justly-popular artist the figures are not so well painted as the cattle—if they were, a large proportion of his works would be faultless. We are content that the dish which he contributes to the banquet is *toujours rache*—we are satisfied, because no one else could supply us with such material so good; and a monotony in Art is more tolerable than in anything else; were it not so, painters innumerable would be exhausted before their prime. This picture consists of a few cows tended by a woman, very indifferently painted, of whom a man is “inquiring for the ferry.” Mr. Cooper’s works generally present us with two skies—one so heavy that the cattle lean against it, the other clear and atmospheric, of which latter this picture presents an example; notwithstanding these defects, this gentleman is the *arvus maximus* of the *milky* way. We beg his pardon for the comparison, but will let it stand; only hoping that ere long he will have the good fortune to add to his herd.

No. 116. ‘Portrait of his Highness Mehemet Ali, Pacha of Egypt,’ the late Sir D. WILKIE, R.A. This is a small portrait treated in the simplest taste. It is marked by much of the signal excellence on which the fame of Wilkie rested; and although not of a size to receive the finish he bestowed upon his small figures, it was yet small enough to escape the manner of his large portraits. The famous Pacha is habited in black velvet, and looks precisely the man he is known to be.

No. 117. ‘Portrait of his Imperial Majesty the Sultan Abdul Meedgid,’ the late Sir D. WILKIE, R.A. The Sultan is costumed in the European taste, and seated on a sofa. No sooner does the eye rest upon this figure, than the attention is roused as if a voice had proceeded from its lips. The posture, although sedentary, is one of movement, not of repose. This picture, which is of the same size as that of the Pacha, has not been filled in by the hand of Wilkie, but the other we believe was.

No. 121. ‘Portrait of James Aspinall, Esq.,’ T. H. ILLIDGE. A portrait of a right good class; soundly and carefully painted; and as we happen to know the original, we can testify to the striking accuracy of the resemblance.

No. 123. ‘The Lesson,’ T. UWINS, R.A. One of the beautiful Italian subjects whence Mr. Uwins has raised for himself an enduring fame. The scene is the *loggia* of the cottage of a vine-dresser, where, under the shade of a vine, the family are assembled on a *fiesta* day. The child of the vine-dresser is receiving a lesson in the steps of the tarantella from the mother, while the grandmother touches the tambourine. This work is highly successful in character and expression; it manifests a fine feeling for nature—happy nature, in its rich and full and pure enjoyment; and is remarkable for excellent qualities as a production of Art. The

possession of one of this painter's pictures is a perpetual feast; one that contents without overloading the mind. In the joyous and sunny countenances he so loves to portray—reflection of tempers undisturbed and hearts at ease—one can fancy the artist copying his own gracious and generous thoughts—and loves for all human things that are good and happy.

No. 127. 'The Challenge,' F. P. STEPHANOFF. "None but the brave deserve the fair," is the spirit thrown into the demeanour of a burly gentleman occupied in the serious business of delivering a challenge, which is received by the party challenged with a simper that would argue something of contempt for the challenger. The subject of dispute is a lady, who is concealed behind a screen. The picture is extremely rich in subdued colours, and remarkable, as are most of the works of its author, for the play of the limbs of the figures. The story is not very clearly told. It occurs, we believe, in some modern novel, but we cannot call it to mind; and are uncertain whether the burly gentleman be the mere bearer of the cartel, or the actual competitor for the hand and heart of the wily mistress.

No. 128. 'Isola Bella, Lago Maggiore,' C. STANFIELD, R.A. The fidelity of the pencil of this artist, in rendering the likeness of a locality, is not to be surpassed; the perfect identity of the scene itself with the picture will be acknowledged by all who have seen both. Mr. Stanfield does not paint the southern sky with such a blaze of affected purity as we are so often accustomed to see; but his version is not the less true: we see his distances through a volume of air, of which there is no apprehension in the bulk of our painters of Italian scenery: the whole of this picture is most skillfully cleared up by a piece of broken rock, &c., as foreground.

No. 130. 'The Mother,' The name of the artist is printed Lander, but it should be R. S. LAUDER. The work seems to be a portrait. We have remarked in the productions of this gentleman a laudable effort to give, in composition, a tone of sentiment to portraiture. There is yet room enough for sentiment in heads. A certain confusion in the drapery might lead the spectator to impugn the drawing; the work, however, bears, in many parts, the impress of originality and power.

No. 130. 'A Portrait,' E. M. WARD. We notice this small and unpretending portrait, chiefly because it is a likeness that will instantly strike all who have seen the original—off the stage, that is to say, when Mr. O. Smith is not the "discontented and repining spirit" he usually represents.

No. 136. 'Sisters,' C. L. EASTLAKE, R.A. This is the only picture contributed this year by Mr. Eastlake—a disappointment of which we hear complaints in every quarter—expressions of impatience highly complimentary to the author—for were he never again to exhibit, his work of the last year was one that raised him to the level of the greatest masters of expression who have ever lived. The elements of this production are of every day—two female figures in a garden painted with a German, or rather an old Italian, feeling. The citadel of the strength of the painter is, as usual, the features, which discourse with abundant eloquence in the language of the heart. If the perfection of didactic art be to arrest and enregister the emotions in the characters of that tacit language intelligible to every human eye—if it be to translate the soul with its deepest and purest affections to the countenance—then are the works of this gentleman the essence of that perfection. If Mr. Eastlake exhibits this year so very little as to create a want which the whole gallery cannot supply, our readers know that he has not been an idler—that his time has been spent in extending his own great fame, than in laying a foundation for the fame of his professional brethren. We can ill spare him from this annual banquet; but we know that his absence from it is rather matter for rejoicing than regret. It augurs of noble deeds of which we shall some day have ample evidence.

No. 140. 'The Highland Gillie,' A. COOPER, R.A. A sort of Callum Beg, as wild as the heather of his native hills; he is in charge of a shooting pony and a lurcher—a favourite race, by the way, with this artist. A fine highland background closes the scene; but the clouds are of a most dis-tempered hue—a pinky mannerism, which marks so many of the pictures of this artist—the value

of which would have been enhanced by something less original, and more ordinarily natural.

No. 141. 'Ziva, a Badger Dog,' belonging to the Hereditary Prince of Saxe Coburg-Gotha, E. LANDSEER, R.A. Ziva is by no means one of the beauties of his species—a black, glossy, short-legged animal, with an eye of intense meaning fixed upon an apple which a monkey is rapidly devouring. To say that the monkey is as well given as those of years and years ago by the same hand, is to say enough. The dog is living, and even warm on the canvass; there is very little gradation of shade on his coat, but he is nevertheless of an astonishing roundness.

No. 142. 'The Grandmother,' T. WEBSTER, A.R.A. Two figures—a child receiving instruction in reading from his grandmother. The repugnance to the task, manifested in the countenance of the pupil, is expressed with a truth resulting from the nicest observation; the boy looks out of the picture, and is willing to be amused with anything save the matter in hand.

No. 145. 'A Pair of Brazilian Monkeys, the property of Her Majesty,' E. LANDSEER, R.A. This is a small picture, and the diminutive animals are mounted on a pineapple, regarding with intense astonishment the proceedings of a wasp near them. This little work is characterized by an extremely high finish; and the mixture of surprise, curiosity, and apprehension, could not have been more successfully expressed in the human subject.

No. 147. 'The Impenitent,' T. WEBSTER, A.R.A. This little picture requires no title; so well do the circumstances hang together. A boy having been disgraced, is placed in what seems to be a kitchen, to do penance with his book as his only companions; but his heart is hard, there is in his face no contrition, he stares at you with such a look, as signifies that he only waits for the opportunity of repeating his fault. Others of his class-fellows are seen in another room, undoubtedly pursuing the routine of "good" children. A valuable gleam of light penetrates the gloom of the impenitent's cell; it falls upon some broken earthenware, to illustrate, perhaps, more pointedly the direct impulses of his organ of destructiveness.

No. 148. 'Scene from Henry VIII.' C. R. LESLIE, R.A. We remember a very similar version of the same subject by Mr. Leslie, which was engraved in one of the "Annals." The Queen is seated, and her attendant stands behind her with a lute. It is a graceful and beautiful and very touching composition; telling forcibly the sad story of the crowned queen, whose

"Soul grew sad with troubles."

No. 153. 'Portrait of James Walker, Esq., LL.D.,' &c. &c. J. P. KNIGHT, A. This portrait is painted with that kind of care which gives due value to every part of the composition, without interfering with the importance of the figure. The likeness is striking, and the expression significant and conversational. The various textures of the objects and materials are made out with the nicest truth.

No. 154. 'Ambleton Ferry, near Henley on Thames,' W. F. WITHERINGTON, R.A. There will be two opinions in reference to this picture. Those who demand a high tone of art, harmony of colour, and vigour in execution, will be dissatisfied with it; but it will more than content those who love nature, and love to see her copied by a "friendly" hand. The several accessories—the group, the boat, the horses, are skillfully "put in;" and a pleasant English character—fresh and green, and simply happy—pervades the work. If not the production of a powerful pencil, it is the work of a graceful one, influenced by a kindly spirit and a generous mind; and cannot fail to afford enjoyment to such as desire natural and true copies of scenes and incidents peculiar to England. The critic may murmur; but the mass will be pleased.

No. 156. 'Horses pursued by Wolves,' T. WOODWARD. A herd of horses have been surprised on the skirt of a wood by a pack of wolves, some of which are already in the midst of them. The terror and confusion of the animals are described with a power and reality which bespeak long and diligent study. The horses are numerous, and the artist seems to have courted every difficulty of position and circumstance, and has acquitted himself to admiration.

No. 157. 'A Scottish Dinner,' A. FRASER.

One of those interiors which seem diminishing in number with each successive year. A cottage family have placed themselves at table, and the precise point of time chosen by the artist is that at which the "head of the house" says grace. The substance of the dinner seems to be a "singit sheep's head." The picture is well painted throughout.

No. 158. 'Frankfort,' G. JONES, R.A. A picture of a style of Art which has been more or less imitated by every school in Europe, but in which the English school stands yet unrivalled. Somewhat more of finish would have increased its value: it is, however, marked by many excellent qualities; and of its class, may be placed in a very foremost rank.

No. 159. 'A Greek Girl preparing for the Toilette,' A. GEDDES, A. The work in this production comes forward with the utmost freshness and the most perfect beauty. The drapery is described with consummate skill; but character is wanting to the head to warrant the title 'A Greek Girl.' Such pictures are continually painted of necessity from English models, but in most cases a national character is communicated to the subject. Deducting somewhat, therefore, from its value on this ground, there are few modern paintings superior to this; it is rich, firm, and sound; and at the same time refined to delicacy. The expression of the countenance is peculiarly sweet; the attitude is strikingly graceful; and it abounds in proofs that the painter is thoroughly a master of his art.

No. 166. 'An Italian Landscape,' composition, Sir A. W. CALLCOTT, R.A. Here is a mingling of ancient and modern history; the crushed and fallen diadem of old Italia is at our feet, in contrast with the *alla giornata*, the perking tile-covered houses of modern Italy. The foreground is in shadow, and so elevated as to afford a distant prospective. In the middle distance flows a broad and winding river, across which stretches an old Roman bridge of many arches; it is broken and dilapidated, and is the work, we are here shown, of another time, when another genius presided over the destinies of the land, called by Virgil *terra beata*. The extreme background, managed with unexampled skill, fades into the grey mist of the remotest distance. This great artist (as well as others of high reputation) repudiates here the vulgar error of painting a crude blue sky, and calling it "Italian."

No. 167. 'Advice Wasted,' E. V. RIPPINGILLE. A bandit is idly listening to the earnest counsel of a friar—"Advice Wasted." The picture possesses considerable merit; the characters are portrayed with great ability; but the style is crude and hard, the excellent artist having obviously fallen into the error so general with our English artists, who have lived just long enough in Italy to learn to paint nature as she is not—anywhere else. They get rid of the evil habit in time, and so will Mr. Rippingille; while the strength and originality of his mind will be unimpaired.

No. 168. 'Tired Pilgrims,' P. F. POOLE. Two sisters, worn out by travel, are resting in the solitude through which their path lies. One has fallen asleep, supported by the arm of the other. The free and firm manner of the artist is perceptible in every part of the work, which is of high merit. The picture is a fine moral lesson. We are safe in foretelling the future distinction of the painter. He looks into nature closely, but kindly; his copies of her works are never exaggerations either of her beauties or her deformities; he loves to portray the delicate and the graceful, but also the true. His productions are just such as thousands will covet who desire excellent displays of Art, but require something more than mere artistic skill in objects they will daily be called upon to contemplate.

No. 171. 'Portrait of Prince Albert,' J. PARTRIDGE. We cannot congratulate either the artist on his production, the Prince on the copy, or the Duchess of Kent, whose property the portrait is to become. This portrait and that of her Majesty, its "companion," are strikingly inferior to the portraits of the Queen and her Royal Consort, exhibited last year, the works of the same painter; and which are in process of engraving, the one by Mr. Doo, the other by Mr. Robinson. These two were, at all events, very pleasing transcripts of the originals; valuable as likenesses, and good as works of Art.

No. 172. 'Hymen burning the Arrows of Cupid,' G. PATTEN, A.R.A. This, although a "conceit," is a striking and original one;—a good idea, skilfully treated, and painted with much ability.

No. 178. 'Portrait of his Grace the Duke of Richmond,' S. LANE. A capital portrait; accurate as a likeness; and painted with freedom, force, and right good feeling.

No. 180. 'A River Scene,' T. CRESWICK. Another of Mr. Creswick's delicious copies of nature; somewhat too green perhaps; but refreshing to the eye and mind; and making the pale student miserable, as the fox in the fable, when the grapes were beyond his reach.

No. 181. 'Poor Arabs,' a sketch, W. MÜLLER. Few productions of our school are more original than the "sketches" of this gentleman. His poor Arabs, humble enough, are seated on the ground, begging of some wealthy Mussulmans. Every figure is purely Oriental, all having been undoubtedly transcribed from the life. The background may be a fragment of some one of the Egyptian cities visited by Mr. Müller in his recent tour in the dominions of the new Pharaoh.

No. 182. 'Snow Storm,' J. M. W. TURNER, R.A. Through the driving snow there are just perceptible portions of a steam-boat labouring on a rolling sea; but before any further account of the vessel can be given, it will be necessary to wait until the storm is cleared off a little. The sooner the better.

No. 184. 'Thebes, looking across the Great Hall, Karnac,' D. ROBERTS, R.A. This picture presents to us a view of the vast substantiality of Egyptian architecture, which would seem unwilling to decay, save with the world itself. The painting is executed with the usual perspicuity of its distinguished author; the shadows are clear and support admirably the higher tones.

No. 185. 'Portrait of a Lady,' GAMBARDILLA. The work of a modern Italian artist, and one of high merit. The portrait is very life-like.

No. 190. 'Portrait of Sir James Eyre, M.D., G. PATTEN, A. Many of the most valuable points of portraiture are discoverable in this work. The treatment and accessories are becoming the profession of the learned and excellent original, of whose person the figure is a striking transcript. The materiality of the features is perfect in resemblance; not less so is their *morale*, wherein we read a category of the milder virtues.

No. 201. 'The Battle of Preston Pans,' W. ALLAN, R.A. The particular period of the battle is that of the death of Colonel Gardiner, who is a foreground figure, mounted on a grey horse, from which he is about to fall having been mortally wounded. Gardiner's Dragoons are in full retreat, and the English Infantry are surrounded and cut down by the Highlanders. On the right of the picture Charles Edward is riding up, attended by the Duke of Perth. The artist has bestowed upon the action and passion of the work the utmost study, and with the best results. The picture is, indeed, one of the best of its class that has been produced in this country. To represent a battle is a task of no common difficulty—it must be all action; to convey an idea of the several incidents that occur, so as to come up to the imagination of the spectator, is almost impossible. The artist has very nearly reached this point. In all its minor details the work possesses great merit: there seems to be no portion that has not been carefully considered. It is the production of a man of industry as well as of genius.

No. 202. 'Juliet and the County Paris at Friar Lawrence's Cell,' J. HOLLINS. Even under the most skilful treatment this is a subject which would yield but a meagre return. We have before us the three figures with much power of painting, but the soul of the matter—their discourse—is ill sustained.

No. 208. 'Innocence,' J. P. PHILIP. A graceful and happy thought communicated with skill and judgment. We rejoice to find the name of the artist among the exhibitors; we have missed it for some time. Although we have here but a limited notion of his progress, it is by no means unsatisfactory.

No. 210. 'A Portrait,' Miss E. SETCHEL. A luminous and life-like little work; but there is a want of drawing, which it would well repay any care to remedy.

## MIDDLE ROOM.

No. 212. 'The Death Bed of John Wesley,' M. CLAXTON. Some twelve or fourteen portraits are comprehended in this work, which is far superior to the bulk of its class. The principal light falls upon the dying man, around whom are grouped members of his family and friends. It is full of good drawing and good colouring; and the grouping is admirable.

No. 213. 'Reading the Letter,' T. CLATER. A picture painted with the artist's usual ability in depicting homely or domestic scenes; the subject is taken from a story by Mrs. S. C. Hall—an author whose works, we venture to say, supplies many good themes for the pencil. It relates an incident of a young girl who, being unable herself to read her lover's letter, is compelled to communicate her secret to an aged recluse. The incident is related with much truth, simplicity, and effect; and it is very carefully finished.

No. 214. 'The Look Out—A Swiss Soldier of the sixteenth century,' J. A. HOUSTON. This, although a small and unpretending picture, appears to possess considerable merit. It is the production of an artist with whose name we are not acquainted.

No. 222. 'The Cottage Door,' P. A. MULREADY. An admirably painted picture, possessing great merit; the figures, however, are too large for the canvass. This young artist seems bent upon overtaking his accomplished father.

No. 227. 'Winchester Tower—Windsor from the Thames,' F. W. WATTS. A chalkiness of tone pervades this landscape, but for which it would be a picture of high merit; as it is, the foliage is made out with a decided and crisp touch, and the shadows are so graduated as to give fulness and luxuriance to the masses.

No. 228. 'The Chapel of the Convent of St. Catherine on Mount Sinai,' D. ROBERTS, R.A. Gorgeous as is this interior, we miss those effects to which Mr. Roberts has now so long accustomed us, that we complain of their absence. The present picture is painted in subdued tones, mellowed into one grand and harmonious whole, which, in the precision of its details, excites our unbounded admiration; yet this picture is not the style of Roberts we should think of adding to a collection of our own.

No. 229. 'The Contest of the Lyre and the Pipe in the Valley of Tempe,' F. DANBY. We seldom see a picture by this artist without experiencing as much pleasure as the contemplation of a picture can give. The ancient poets have been much followed by artists in bucolical composition; but the general range has seldom got beyond dry academical inanities. The presented work consists of two magnificent compositions—the Contest—and the '*frigida Tempe*'—of Mr. Danby's most Thessalian brain; the latter a landscape to awaken in the heart of every churl a passionate love of the beauties of the world he lives in. It is evening, and the sun is looking for the last time on that day on the brow of Ossa, while the river Peneus flows below with a light borrowed from the skies; but the picture should be seen, it cannot well be described. Mr. Danby is a kind of ancient *redivivus*, he must have also lived at a period anterior to these iron times. Virgil surely alludes to him in these lines—

"Fortunatus et ille, deos qui novit agrestes,  
Panaque Sylvanumque senem Nymphasque sorores!"

By the same artist is No. 236. 'A Soirée at St. Cloud in the reign of Louis XIV.' Another style of subject, but treated with exquisite feeling.

No. 237. 'Queen Elizabeth, widow of Edward IV. delivering the young Duke of York into the hands of Bourchier, Archbishop of Canterbury,' E. M. WARD. This excellent artist is successfully pursuing, with zeal, energy, and industry, the highest walk in his profession. He evidently reads and thinks; and is not content to transfer merely what he sees to canvass. We have occasionally under his hand, convincing proofs that he labours to cultivate his mind—so that in picturing historic personages, and in depicting historical events, he may bring knowledge, and the advantages of comparison, to bear upon his work; and this is the sure way to achieve excellence. Here also, as elsewhere, we perceive proofs that his powers of execution are strengthened by study; and that while he strives to mature intellect, he does not neglect the less essential but very important objects of the artist. Every part of this

work is carefully finished; the story is skilfully told; and the characters are represented with admirable truth of purpose.

No. 240. 'Sorrento, Bay of Naples,' W. COLLINS, R.A. A small upright landscape, painted with infinite sweetness. We have in it a mere snatch of the Bay, but (che vorreste?) with such a foreground we do not miss it. The following number, 'Villa d'Este, Tivoli,' is by the same accomplished artist; painted with a fine perception of the beauties of nature.

No. 244. 'Cinderella,' R. REDGRAVE, A.—We find here an exertion of those powers which so eminently distinguish this artist. The sisters have just tried the slipper, into which, from its dimensions, it is easily seen they have found it impossible to compress their feet; and the Prince is bringing forward Cinderella for the same purpose. We read in this work the fairy tale over again—not only its main incident, but also all the by-play, in the description of which the imagination of this painter is so rich. The sneer which curls on the features of the envious sisters is rendered with much power, as is also the retiring demeanour of Cinderella. In colour the picture is rich, and in effect most successful.

No. 251. 'Going to School,' T. WEBSTER, A. The subject is a school-boy about to depart to a boarding-school. The room resounds with the note of preparation, and is strewn with such items, in addition to those of a boy's equipment on such an occasion, as a fond mamma provides for a darling of whom she is to lose sight for at least a quarter. In this walk of Art Mr. Webster is unrivalled; and this is equal to his best works.

No. 252. 'Scene from the Tale of the Bold Dragoon,' F. P. STEPHANOFF. A manner cleaves to a painter through his life—it is a sort of familiar, ever mocking him with the point of his own pencil—it begins with his beginning, lives with him, and sees the last of him. The manner of this artist is a pleasant one, although sometimes in his movement pictures the figures are a trifle too theatrical. In this case the canvass is filled up with the usual tact, and overspread with the rich and deep tones which mark the pictures of Mr. Stephanoff. The 'Bold Dragoon' is in person a fine fellow, but in features too feminine, a failing we have before observed in the pictures of the artist.

No. 253. 'A Fisherman's Cove,' E. W. COOKE. A nook on the sea-coast, apparently so retired as—setting aside the fisherman himself—to be haunted only by the screaming sea-mew. It is painted with the usual ability of this excellent and able artist.

No. 255. 'Breeze, a favourite Retriever,' E. LANDSEER. A picture signalled by all the beauties of this artist's canine portraits.

No. 256. 'Mary, Queen of Scots, when an infant, stripped by order of Mary of Guise, her mother, to convince Sadler, the English ambassador, she was not a decrepit child, which had been insinuated at Court,' B. R. HAYDON. The mere choice of a subject from history does not constitute historic painting. The artist has long been labouring to show that modern painters cannot achieve "great Art;" and he exhibits a picture to prove the truth of his assertion. The work approaches excellence in no one quality; it is neither well conceived, well drawn, well grouped, nor well coloured. It has no claim whatsoever to a rank beyond that of the merest mediocrity. It contains nothing that a mere tyro in the Art might not have achieved.

No. 258. 'Paul and Francesca, of Rimini,' H. O'NEIL. This is a work of a much higher class; we do not allude to its position—where it certainly ought not to have been—so much nearer the ceiling. The subject, as will be remembered, is from Dante, taken from the sad story related by Francesca da Rimini, in the second circle, the place of punishment for the luxurious. By any other name the picture would have produced an impression equally forcible; so strongly is love characterized by the two figures—love, indeed, of that kind which describes in the line—

"Amor condusse noi ad una morte."

The female is especially beautiful—beautiful not only in form and expression; the figure is painted with exceeding grace and power: there are few more admirable works in the Gallery.

No. 260. 'Portrait of a Gentleman as a Pilgrim,' H. W. PICKERSGILL, R.A. Much good painting

thrown away. The whimsical costume—so ill in harmony with the countenance—was no doubt the choice of the "sitter" and not of the artist. The "gentleman" cuts a very ridiculous figure.

No. 261. 'Portrait of the Rev. George Stanley Faber, B.D.,' T. PHILLIPS, R.A. Painted with all the truth and brilliancy of this gentleman's style.

No. 262. 'Dort,' Sir A. W. Callcott, R.A. Surely this is beating Albert Cuyp on his own ground; there is the same spire and other lofty objects in the distance; and—not the same cows, but their descendants fully as well-favoured as they—which Cuyp has painted twenty times in an atmosphere not so palpable as in this picture, which is in short a Callcott with figures, every whit as Dutch as even Cuyp made his, and without any balancing between Dutch nature and human nature.

No. 264. 'On the Scheldt looking toward Antwerp,' H. LANCASTER. This view seems to be on the Flushing side of Antwerp, though we do not remember anything like it in that direction, save always the lofty *flèche* of the cathedral. The picture is, however, full of matter, free, airy, and generally well painted.

No. 267. 'Charles the First receiving instruction in Drawing from Rubens,' S. WEST. There are manifestations of considerable talent in this picture; it is a good composition, carefully drawn, and skilfully coloured. The expression does not please us; Charles is made to look too finnikin; and the great painter does not resemble either of his well-known portraits.

No. 268. 'The Reverie of Alnaschar,' T. BRISTOL. A capital reading of the famous old story—a story that has been read a lesson to many a castle builder. With the name of the artist we are not familiar, but he has here given evidence of ability, from which we feel justified in expecting great things hereafter. The subject is admirably imagined; we have rarely seen the sentiment of disdain so cleverly depicted; it is strongly expressed in the countenance, and every muscle and motion of the body seems to sympathize with the feeling. The drawing, too, is unexceptionable. The picture is sadly prejudiced by being hung so high; it is most skilfully fore-shortened, and this effect is completely destroyed.

No. 273. 'The Return of the Knight,' D. MACCLISE, R.A. One of the most beautiful we have ever seen of the minor works of this artist. The Knight is returned, he is yet in full panoply, and his lady eagerly assists him to unbuckle his harness—the work, by the way, of his squire and pages—but she cannot wait for them, and the helmet of course is the first to be doffed. It is a charming picture, and in every way worthy of its author.

No. 274. 'Evening in the Downs,' W. A. KNELL. The effect of this picture is admirable, but it wants breadth. A dimasted hull is labouring on the heaving sea, which is over canopied by a sky charged with a coming storm. In the west the sun is gone down behind a curtain of red and threatening clouds, in contrast to which the gloom of the swelling waters presents a powerful effect.

No. 278. 'The Departure of Charles II. from Bentley, in Staffordshire, the house of Colonel Lane,' C. LANDSEER, A.R.A. 'The Departure' is gracefully pictured; but even with a tolerably correct impression of the adult features of him who grew into the "Old Rowley" of after years, it might be difficult to make out the Charles of the party. In this style of painting success will most frequently attend the labours of this artist, whose descriptions, with such materials, are always extremely forcible. This is certainly a clever composition, and some parts of it are admirably painted; yet it can scarcely be characterized as a decided improvement upon former productions.

No. 279. 'The Money-lender,' R. M'INNES. A jaunty cavalier is negotiating a loan with a usurer, whose abode is furnished with all appliances becoming his calling. The borrower is a roister, somewhat of a braggart, and little of a gentleman; his old age will be a "latter summer," without a Sun to mature the fruits of early experience. The expression thrown into the countenance of each party of the group is admirable; fully bearing out the story, with its impressive moral. It is excellently drawn, and all the minor parts are carefully finished. The work

altogether is one of a high class, and may be quoted as an example in support of the opinion, that the English school is advancing.

No. 285. 'Portrait of William Coningham, Esq.,' J. LINNELL. An excellent work, full of life and character; but the general tone of the picture is too flat.

No. 288. 'Highland Scenery—a Snow-storm passing off,' F. R. LEE, R.A. This gentleman is most happy in the selection of his subjects, since all the localities themselves which he presents us must in nature be remarkable. His picture is the song of a Baird, who sings of the snow-drift mantling on the hill, and the shadow of the storm demon darkening the earth.

No. 295. 'An Italian Widow selling all her Trinkets to a Jew, except her Husband's Picture,' J. SEVERN. An effect, and a carefully studied one. The heads are most forcibly painted, but the artist has communed much with the spirit of the earlier masters. "So much the better," some will say. There is great force and vigour in the painting; in the arrangement of the group, a display of judgment and taste; a nice feeling in the expression given to the leading figure; and the picture is wrought with well applied and well sustained labour.

No. 298. 'Portrait of F. Twynam, Esq.,' G. P. GREEN. The pose of the figure is extremely easy, and the portrait is generally well painted.

No. 300. 'Portrait of Charles Hampden Turner, Esq.,' Sir M. A. SHEE, P.R.A. A work distinguished by the solid and rich impasto of the manner of the president. The heads painted by this gentleman are such as must give pleasure to all spectators when closely inspected; they are careful, firm, and transparent, and they acquire force by distance.

No. 301. 'Hagar,' A. GEDDES, A.R.A. A finely wrought and deeply touching picture; full of interest in subject, and evidencing great power in Art.

No. 302. 'From the Play of Edward VI.,' E. M. WARD. A capital work; abundant in interest, and in skilful "workmanship." The point represented is that in which, in the presence of the Duke of Gloucester, the Beadle performs a miracle by making the pretended lame to leap. The picture is full of matter; the treatment of the subject is faithful and judicious, and has been wrought with very considerable ability.

No. 308. 'Portrait of Admiral Napier,' J. SIMPSON. An excellent likeness, and a remarkably well-painted portrait; for which the gallant sailor owes the artist much; for while he has preserved the resemblance accurately, he has not—as some other artists have done—laboured to make the brave original as great a bugbear to his friends as he has been to his enemies.

No. 313. 'Pozzuoli, looking towards Baia—Istria in the distance,' C. STANFIELD, R.A. Here we look again upon the water cleared and deepened by the treatment of the near objects. The distance is most skilfully thrown off by the force of the buildings, and some tall pines which rear their dark crests sky-ward, throw a valuable shadow on the foreground, on the left of which some peasants are addressing prayers to the Virgin or a saint.

No. 314. 'A Pause! Two Portraits,' E. U. EDDIS. This is a method of circumstancing portraits of which we would willingly see more. The work is interesting to others beyond the circle of friends to whom the ladies may be known, because in it there is more of picture than of portrait. It is, indeed, a graceful and beautiful production, possessing high value apart from consideration of the mere fact that it is a portraiture. It would be a welcome acquisition to all who love Art, and know nothing of the fair maidens who sat to the painter.

No. 315. 'Samuel relating his Dream to Eli,' J. H. WHEELWRIGHT. In the general effect there is much grandeur, which would have been well sustained by more breadth of manner. The head of Samuel is too English, but that of Eli is as good as many of those which in celebrated pictures are the cynosures of the eyes of all spectators, because they are associated with great names.

No. 321. 'Admonition,' F. STONE. In all exhibitions there are pictures which are never forgotten—which we can, at any moment, call up amid recollections of thousands which we have learned by heart, yet which have no place in the heart. Of such memorable compositions this

will be one—it consists simply of two figures, an elder and a younger sister, the latter of whom has received a love-letter, and is listening with down-cast eyes to a lecture from the other on the impropriety of encouraging the addresses of the writer. The incident is so common in nature and in Art, that nothing but powers of the highest order could bring it forward in a manner so touching. These high powers have been exercised with admirable effect. Mr. Stone has been gradually advancing towards a foremost position in Art; if he has not yet quite reached, he is very near, it; another step or two forward and it is gained. And when he has gained, there will be no fear of his losing it; for he evidently trusts nothing to chance, and owes even more to persevering industry and resolute application than he does to genius. He is right. A lucky hit may be made in a moment of inspiration; but fame can be sustained only by a resolution not to risk failure at any time.

No. 322. 'The Spurn Lights at the Mouth of the Humber,' J. WILSON. The "lights" form but an insignificant feature of this picture, the main object of which is a little vessel standing in for the harbour, and bidding fair to out sail the storm-cloud that overhangs her wake. This is a picture into which the sea birds would long to dip their wings.

No. 325. 'An English Servant attacked by Robbers,' E. V. RIPPINGILLE. This incident, we are told, occurred near Rome; and the desperadoes are portraits of the famous Gasparone, and one of his gang. The manner of this work exhibits evidence of the study of early works of the Italian schools.

No. 328. 'An intercepted Raid—Etrick Shepherds,' T. S. COOPER. This picture carries us back at once to the flourishing days of black mail—of the legitimate raids of the border rieviers—when every man's house was his castle, and his best friends, in the day of trial, his jack and his good sword. The cattle are painted with Mr. Cooper's usual excellence; and the subject is of a more stirring character than many of those we have of late seen from his pencil.

No. 336. 'Portrait of a Lady,' A. FRASER. A fine taste pervades this work; the background is rich and deep; and the figure comes forth rather a living presence than a painted form.

No. 338. 'Peace—Burial at Sea,' J. M. W. TURNER, R.A. In substance, this picture is only a steamboat temporarily at rest on the broad bosom of the silent waters. The effect is a moonlight; and the time may be midnight, or any other time after night fall; as to the "burial at sea," the spectator must imagine that—there is a light at the side of the vessel, but the matter and the manner are sufficiently indistinct, and "Turner-like." There is but little colour; in fact, much of the canvass is covered with a mere modification of white and black, thrown on in seeming mockery of every thing like design. On the paddle-box of the steamer is visible the word "Oriental"—we may therefore conclude that the "burial" is that of Sir David Wilkie. The steamboat, which on close inspection seems so loosely put in, appears at a distance round, and somewhat real. Still it is very provoking to see genius so misapplied. The strength of a great and original mind is visible, undoubtedly; but the mass of spectators would receive just as much enjoyment if the picture were turned upside down; and perhaps even then the judicious might perceive as abundant evidence of power gone mad. If Mr. Turner were to frame his palette, by way of an experiment, and send it to the Academy, working up with his finger a corner of it into something like form, it would be almost as valuable, nearly as intelligible, and quite as remarkable as this "picture."

No. 347. 'Kitchen of the Inn at Amalfi,' C. STANFIELD. This kitchen would be open to the sky but for the partial covering afforded by an arch; and even upon one side it is walled in by the bare rock which rises out of the picture. The buildings, &c., are painted in a firm and substantial manner; the work is worthy of the artist, although a novelty.

No. 348. 'Landscape,' H. JUTSUM. The productions of this artist are always fresh and beautiful; they are constituted, as are those of so many of our artists, merely of trees, often with the addition of water; and this is, perhaps, the best that has ever come from his easel. His touch is free and decided, but entirely guided by the nature of the object under his hand. These trees are rich in

colour and leafy in character; and laid in with a peculiar method of pencilling which we have no desire to see changed.

No. 352. 'Market Girl,' P. F. POOLE. She bears on her head a basket of fowls; one of the simple subjects, in the execution of which this artist shows the most refined feeling. The figure is most effectively painted; she leaves the canvass behind her.

No. 353. 'War—the Exile and the Rock Limpet,' J. M. W. TURNER, R.A. Napoleon apostrophizing a rock limpet. An extravagant picture, in which there may be much meaning, but it does not appear.

No. 361. 'Portrait of a Florentine Lady,' R. ROTHWELL. The countenance of this figure will remind the spectator of many of this gentleman's heads; the eyes are piercing to a degree, and the movement is light and graceful.

No. 363. 'The Microscope,' G. LANCE. The unexampled patience with which this picture has been elaborated, is approached by nothing save the veriest niceties of the Dutch school. The composition consists of one figure, having before him "the microscope," painted with the most curious accuracy; there is also some tapestry on the left of the figure, the threads of which may be examined by the aid of the microscope itself.

No. 367. 'The Locks at Windsor,' F. W. WATTS. Often as these have been painted we have rarely seen them better described than here, though a little more breadth in the foliage would have improved the picture.

No. 368. 'Desolation,' F. R. LEE, R.A. We need not the title to tell us that this is the haunt of the wolf and the vulture; the place seems cursed; and the now unhallowed soil refuses support even to the trees which, in happier times, flourished there. This picture may be a composition, but the parts are adapted in the closest adherence to natural facts.

No. 369. 'Virginia discovered by the Old Man and Domingo,' H. J. TOWNSEND. A work of great merit as regards either the conception or the execution. At first sight, it seemed painted under an erroneous impression that the subject was one for an elevated, rather than a touching, sentiment, and that an attempt had been made to invest the picture with an heroic interest which it could not sustain. As we look closer, however, this feeling diminishes; and we perceive a happy blending of the grand with the pathetic. The energy of grief in the negro is natural and in no way exaggerated; that of the old man is more repressed but equally true; while the dead Virginia is a fine conception, most skillfully rendered. A great and yet a refined purpose is apparent in the work; the sad incident is related in the most impressive manner; the picture will retain a firm hold on the memory of the spectator—and this, after all, is a strong test of its merit.

No. 370. 'Percy Bay, Northumberland,' T. M. RICHARDSON, sen. A right good picture; the production of a landscape-painter of established reputation; and although that reputation is "only" provincial, he is not encountered at disadvantage in any gallery of British Art.

No. 375. 'The Holy Family reposing during the Flight to Egypt,' F. DANBY, A.R.A. We are strongly reminded by this work of many of the pictures of Gaspar Poussin—the shadow is equally deep and parts are made out with the firm and decided touch of Mr. Danby's earlier works. This production must have been the result of a devout resolution to keep all in shadow as much as possible—the time is daybreak, but this uniform purpose is by no means disturbed by the dawn.

No. 376. 'Una and the Lion,' H. LE JEUNE. The lion crouches at the feet of Una—

"His bloody rage assuayed with remorse."

And the realization of this passage evinces the finest feeling for the poetry of Spencer. We find here none of those palpable diversions which enervate so many works of this kind; but the artist takes at once high ground, and we do not see that he has mistaken his position. Let him keep it, steadily, and it may be proudly too, in the teeth of some discouragement. He will be a great man yet.

No. 377. 'The very Picture of Idleness,' R. ROTHWELL. A gay and laughing maiden with an expression of countenance which the pencil of this gentleman seems to reach better than that of any of his contemporaries. The face beckons you with

its laughing eyes—everything is resolved into inviting sweetness, in short she is

"Not very dashing, but extremely winning."

No. 379. 'Il Voto, or the Convalescent,' P. WILLIAMS. This is a "voto sciolto," the fulfilment of a vow made to the virgin during sickness, on which occasion the Convalescent comes to the shrine of the "Madonna della Salute," attended by her family and friends. The principal figure—a young girl—yet pallid from recent suffering, is mounted on an ass, and habited in black, according to the custom of the ceremony. Her now useless crutches are carried by her mother, and her friends are the bearers of small offerings in gratitude for her recovery. The general execution of the picture is that of a master mind moving at will a hand which, like the wonderful lamp of the Eastern tale, realizes the conceptions of the dominant power. In all respects, it is a work of the very highest class; beautiful and accurate in conception, and almost perfect in execution. A more faultless performance has never been sent to us from Italy—the production of an English artist. In expression it is exquisitely fine; every member of a numerous group contributes to the deep and touching interest of the whole design; examine as closely as we may, we can find nothing to object to. It is a volume in a single passage; taken altogether it may be pronounced the gem of the exhibition; at least, the gallery contains no work, not by a veteran in Art, of such surpassing excellence.

No. 380. 'Portrait of Mrs. Warburton,' B. R. FAULKNER. A fine daylight effect distinguishes this work—some of the rarest points of female portraiture are abundant in it.

No. 387. 'A Scene at Aberystwith, Cardigan Bay, with Portraits of the Three Children of Edmund Antrobus, Esq.,' W. COLLINS, R.A. To deal with materials so simple as those constituting this "scene"—and to invest them with interest, displays a power with which few are gifted. The view comprehends a considerable extent of seashore—the life of the picture being several children in the foreground with precisely such heads as Reynolds would have delighted in painting. This is a method of treating the portraits of children, which succeeds beyond all others.

#### WEST ROOM.

No. 389. 'Margaret alone at the Spinning-wheel,' P. F. POOLE. Margaret is here lamenting the absence of Faust. The words are, if our memory serve us,—

"Meine Ruh' ist hin,  
Mein Hertz ist schwer;  
Ich finde sie nimmer  
Und nimmer mehr."

Now, in the spirit of these lines there is a sentiment so deep that it had better not have been disturbed by the stream of light which is thrown into the room from the window; but for this a broken heart could never touch us more than it does from the canvass. It is most unfortunately hung, although but a small picture. The artist is rapidly making his way to fame, and will, ere long, rise higher in one sense and descend lower in another.

No. 391. 'Nostradamus predicting the future Fate of Mary Queen of Scots,' J. E. CASEY. The Nostradamus of this composition is well conceived and ably executed. The same amount of care exercised upon a more manageable subject would produce a work incalculably superior to this.

No. 395. 'Flight into Egypt,' J. MARTIN. It is scarcely necessary to allude to the effect or period of the day signified in this work, or the manner of its signification, remembering the words—"He took the young child and his mother by night, and departed into Egypt." The scene is one of rocks and barrenness, unlike the prolific land whence, according to the Turkish tradition, Mahomet had fruits sent from heaven. This, however, aids the loneliness of the pilgrims, who move along a winding path enveloped in the shadow which is cast over the entire composition. The figures are unaccountably large, considering their position in the picture; but of this we can scarcely believe the accomplished author to have been unaware. The lofty and rugged mountain, one of the granite bores of the earth, tells severely against the lighter sky, with a colour uncompromisingly blue; we see too much of it, but the effect is nevertheless fraught with grandeur, and the chill night air comes off the canvass strongly enough, without other evidence to convince us that the scene is yet presided over by Hesperus and a bright society of

dew-distilling stars. The work is marked by all the care of other latter pictures of the artist; a fact which it is gratifying to observe.

No. 402. 'The Lady Caroline Duncombe and the Lady Elizabeth Campbell, daughters of Earl Cawdor,' Mrs. J. ROBERTSON. Two miniature full length figures, painted with a refinement of taste unequalled in this now rare style of Art.

No. 403. 'The Daughters of the Count de Flahault,' a similar work, containing three figures, is painted by the same lady, in a manner equally beautiful.

No. 404. 'Edward the Black Prince thanking Lord James Audley for his gallantry at the Battle of Poitiers,' B. R. HAYDON. Mr. Haydon has at least no ground to complain of injustice on the part of the Royal Academy. They have placed him where he may, at all events, speak for himself. Was there not some sly malice in this? for they have permitted him to pass his own sentence upon himself. Who will hereafter marvel at his exclusion from Academic rank?

No. 406. 'Thetis bathing Achilles in the Styx,' W. CARPENTER, jun. This picture seems to be judiciously painted—all that we can say about it from its being so high; it is one, however, which, although so placed, attracts the eye, and we think might have hung lower.

No. 410. 'The Two Children,' FANNY M'LAN. Gallantry, if not justice, might have found a worthier place for this small picture. The lady-artist had a right to it, not because she is almost the only one of her sex who essays loftier subjects in Art, but because her merits entitle her to a post of honour in any exhibition. It is impossible to judge of the ability displayed in the execution of this work; that it is not unworthy of her accomplished mind, and powerful as well as graceful pencil, we cannot entertain a doubt; because we may not believe that she would be so regardless of her own fame, and so indifferent to the judgment of the Royal Academy, as to send to the gallery a production inferior to many she has already produced, and which have invariably found purchasers as well as admirers. We can see, however, enough of 'The Two Children' to know that it is a beautiful design, skillfully, happily, and naturally placed upon the canvass; that it illustrates interesting passages in human life; and that it is altogether, in conception and in finish, a work of high order.

No. 425. 'Portraits of Lieutenant Colonel Thomas Wood, M.P., Captain David Wood, Royal Horse Artillery, and Captain Robert Blucher Wood, 10th Hussars,' J. LILLY. A triad of full-length portraits brilliantly made out—there is, perhaps, some slight want of relation between the figures, which play rather to the spectator than to each other; yet it is altogether one of the most meritorious performances of its class we have for some time seen. The colouring is generous and ably distributed.

No. 427. 'Moses going to sell the Colt at the Fair,' vide "Vicar of Wakefield," C. SROWHOUSE. One or two happily illustrated passages from a known book are sure to be followed by an almost interminable series from the same source. One Sir Roger de Coverley is productive of a score, as is also a good Oliver Cromwell or Robinson Crusoe. They do not follow in units, but in higher powers of enumeration—they grow like the armed men of Cadmus, and have precisely the same fate—that is, they destroy each other. The bulk of artists do not think enough for themselves, consequently those who do, the pioneers of the profession, become, each of them, an involuntary *dux gregis*. The present subject has often of late been painted; our remarks are not intended for any individual, but apply to a large class of our painters. It is, as are all the works of this artist, decidedly good.

No. 428. 'The Origin of the Harp,' D. MACLISE, R.A. Conceived in the purest sentiment of poetry. The subject is from Moore's Irish Melodies, and is brought with the very best attributes of Art and without any of its trick. The lines whence we have this beautiful picture, resulting from the conjunction of the twin stars, Moore and MacLise, are—

"Still her bosom was fair—still her cheek smiled the same,  
While her sea-beauties gracefully curl round the frame;  
And her hair, shedding tear-drops from all its bright rings,  
Fell over her white arms to make the gold strings."

This picture must be seen to be understood and felt; any prosaic description would be a profanation, from which we shrink with becoming reverence.

No. 429. 'Whitby Pier, Coast of Yorkshire,' A. CLINT. A beautiful version of sea-side nature, though not so brilliant as many similar scenes we have noticed by the same hand.

No. 430. 'Interior of a Temple inhabited by Arabs, who sell the curiosities found in the Tombs, Thebes, Egypt,' W. MULLER. This admirable work is laid in with a decision and solidity which characterize this gentleman's works generally, and whence they derive so much of their value. The tones of the picture are kept down, and the place seems to be drawn precisely as it is—a feeling we could wish more extended. The huge pillars have coloured capitals, and every plain space is covered with hieroglyphics.

No. 431. 'The Sanctuary,' E. LANDSEER, R.A. "Loch Maree, a poem, 1842," affords the subject for this production, which illustrates the power of a great mind over the simplest materials in composition. The immediate objects are, a stag and a flock of wild ducks that he has scared from their retreat; but the poetry of the whole is such as never can be excelled in Art. The scene is in the Highlands, and the eye of the spectator is carried across a broad expanse of lake, on the opposite shore of which the rising backs of the hills come out in shadow against the subdued light, for the sun is behind the ridge. To escape his pursuers the flying stag has taken the water, and has just gained footing after a long swim in "the Sanctuary," an island in the lake.

"How blest the shelter of that island shore!  
There whilst he sobs, his panting heart to rest,  
Nor bound nor hunter shall his lair molest."

The waters of the lake are perfectly at rest, so that we can mark the course of the "weary swimmer," by his wake, which is yet distinct on the surface: and the solitude and security of the sanctuary is most powerfully illustrated by the alarm of the wild fowl, which have risen from their shelter, and direct their flight to the main land. This is the last (as numbered) of the pictures exhibited this year by Edwin Landseer, whom we, for ourselves, thus thank aloud, as others will do in their hearts—*curat ut valeat*—that is, may his shadow never grow less.

No. 433. 'Portrait of a Lady,' T. F. DICKEE. Parts of this picture are equal to anything that colour is capable of effecting. The satin dress is represented with the most singular truth; but other portions of the work are not comparable to this.

No. 436. 'The Death of Sir W. Lambton at the Battle of Marston Moor,' R. ANSDALL. The cavalier is extended in death, while his horse, having been shot by a wounded trooper, is rearing with the agony of the wound. This is a large picture for such a subject, which certainly would have been advantaged on a much smaller canvass; the design, however, is admirably conceived and vividly executed. The name of the artist is new to the exhibition; but it is unquestionably destined to be famous hereafter.

No. 439. 'Bad News from Sea,' R. REDGRAVE. A picture of a sailor's home, which is about to become a house of mourning, the wife of the absent mariner having received a letter with a black seal which she hesitates to open. The sudden revulsion of feeling depicted in the countenance of the wife on discovering the black seal is described with the utmost natural truth.

No. 443. 'Rivals,' J. G. MIDDLETON. This is a portrait of a little girl, carefully drawn, and well coloured. The 'Rivals' are her bird and dog—the latter of whom solicits a share of the attention she bestows upon the former. It is one of the sweetest and most graceful compositions in the gallery; and is admirably finished.

No. 449. 'Portrait of Lady Baring,' J. LINNELL. Nothing can exceed the simplicity and unaffectedness of this portrait, which is a small full-length; but the strong yellow glaze which has been thrown over the face is objectionable.

No. 451. 'A Great Sinner,' BIARD. This is a contribution of a French artist to the British Royal Academy, and one for which we can scarcely thank him; for although exceedingly clever, the subject is "nasty;" and affords a striking contrast to his picture of 'The Slave Dealer.'

No. 454. 'A Scene from the Vicar of Wakefield,' W. P. FAITH. The "scene" is that pas-

sage of the novel, where Mrs. Primrose, telling the Squire that he and Olivia are about the same height, causes them to stand up "to see which is the tallest." The two are accordingly erect, and *dou-à-dou*, while the good lady claims the attention of the Vicar to the measurement. The main characters of Goldsmith's novel are here charmingly portrayed, and nothing strikes the eye of the spectator so forcibly as the generic difference between the Squire—the destroyer—and every member of the family by whom he is surrounded. He is the pronounced man of pleasure—he has an eye of reckless sensuality—and a person and manner to captivate one so simple as the Olivia of this picture—"Our Olivia." The Vicar is all benevolence; Dame Primrose all business and match-making; and the younger branches precisely what they should be. The author of this work studies profitably the characters he transfers to canvass. He is not a mere picture-maker; but thinks, and thinks long and deeply over what he does. His abilities to execute are not inferior to his powers to conceive. He is acquainted, and that intimately, with the capabilities of Art. His style may bear somewhat more of vigour and less of delicacy; and will no doubt have its ere long; but it is exceedingly effective, and cannot fail of being appreciated by "the mass," while it will as certainly satisfy "the critic." Mr. Frith is—and this we have long foreseen—a candidate for professional distinction; and one who will be sure to have his claims allowed.\*

#### DRAWINGS AND MINIATURES.

558. 'Sir F. Chantrey when a boy,' H. P. PARKER. The immediate subject of the picture is the story which appeared in the *Sheffield Mercury* about the first money earned by Chantrey. He is here represented going to Sheffield with his milk, and carving with his knife the head of 'Old Fox the Schoolmaster.' The picture is painted in a clear and effective manner; but it would answer equally well for any boy with a donkey.

No. 563. 'Portrait of James Rennell Rodd, Esq.—enamel from life,' H. P. BONE. An example of some of the best properties of the process of enamelling. The colouring generally is rich, and the shadows are deep and transparent, but the features are lethargic.

No. 587. 'Portraits of Lady Hawley and her Infant Daughter,' J. HAYTER. One of the well-known chalk sketches of this artist. The heads are finely rounded without being conspicuously elaborate, and the feeling thrown into that of the mother is of the most refined description.

No. 611. 'Les Arbres ont des Oreilles,' G. H. HARRISON. A water-colour drawing, with much power of description and decision of execution. It is surrounded by a garland of flowers, which give an undue insignificance to that intended as the principal work. They are, however, beautifully and most skilfully wrought.

No. 610. 'Children of Elhanan Bicknell, Esq., S. P. DENNING. An interesting group, admirably drawn; the drawing being finished carefully and skilfully; the whole being obviously the work of an accomplished master.

No. 615. 'La Blonde,' W. PATTEN. Very graceful and very sweet; a most fortunate original, the value of which the artist seems to have duly appreciated.

No. 625. 'Portrait of a Lady,' T. CRANE. The figure, which is a full length, is graceful, and parts of the attire, such as the velvet, &c., are admirably described.

No. 638. 'Portrait of a Lady in an Old English Dress,' Miss AUGUSTA COLE. An exceedingly clever drawing, gracefully composed, and coloured with spirit and delicacy.

No. 670. 'Portrait of a Gentleman,' A. CHISHOLM. The effect of this head is an ample compensation for the manner in which it has been wrought out.

No. 694. 'Portrait of Middle Celeste in the character of *Narranattah*,' ELLEN DRUMMOND. A boldly drawn portrait, supplying an excellent idea of the subject.

No. 708. 'Madlle. Rachel, role de Camille dans les Horaces,' A. E. CHALON, R.A. There is in

\* Notwithstanding our anxiety to review the whole of the exhibition in this number, we have found it impossible to do so; and must, therefore, postpone the publication of the remainder until next month. To have completed it we should either have entirely destroyed the "variety" of our journal, or have left many good works unnoticed.

this portrait less of dramatic action than is seen in those generally by the same hand. In this the sketch is superior to others of Mr. Chalons's theatrical portraits; but we cannot identify Rachel in the face, which is too round. As a drawing it is of the very highest character; a work absolutely grand.

No. 714. 'Sketch of a Turkish Letter Writer,' the late Sir DAVID WILKIE, R.A. Parts of this are extremely slight, although distinct and well defined; it seems to have been the original sketch for the oil picture recently sold by Messrs. Christie and Manson. The subject is the dictation of a letter by a lady to one of the public scribes of Constantinople. The head of the writer has been studied in a manner such as to show at once the intention of painting from it.

No. 715. 'Portrait of Mrs. Charles Kean,' A. E. CHALON, R.A. A most beautiful work, full of the higher qualities of the Art; a great example of the effect that may be produced by a picture of a single figure.

No. 722. 'Portrait of his Grace the Duke of Wellington,' S. DIEZ. A positive libel; the great captain converted into an old village schoolmaster. There are several other miniature drawings by this artist—of sundry royal personages—all intolerably bad.

No. 730. 'The Hon. Charles Mount Edgumbe,' C. BROCKY. A chalk drawing on coloured paper of a child's head; most skilfully invested with the winning graces of infantile character.

No. 743 and No. 813. "Portraits of Gentlemen," by J. S. TEMPLETON, are miniatures of high character; delicately pencilled, yet manifesting no inconsiderable vigour. They are conspicuous for a wavy style in design, and for careful finish in execution; and are behind few in some of the best qualities of the art.

No. 763. 'Portrait of Mrs. Luigi Sagrini,' W. BOOTH. Without great mastery in composition, a striking brilliancy has been communicated to this miniature; it is in every part highly wrought, and the objects and materials are clearly defined.

No. 768. 'A Young Lady,' A. ROBERTSON. About this miniature there is all the richness and feeling of oil, with all the niceties of water-colour.

No. 769. 'W. Stirling, Esq.,' A. ROBERTSON. Our remark on the preceding number will also apply to this; the head, however, is better relieved, and has, in respect of the background, been painted with the consideration due to a life-sized portrait.

No. 774. 'Portrait of Lord Walter Butler,' Sir W. J. NEWTON. This miniature is made out in the usual method of Sir W. Newton's male portraits. The background quiet, but transparent, throws out successfully the head, the flesh colour of which is florid, but life-like.

No. 778. 'Portrait of Major Waymouth,' T. CARRICK. We find in the works of this artist a new and original style of miniature painting, the value of which does not lie in what is understood by "finish," although the finish of his miniatures is equal to the most tedious elaboration. The force of his work consists in their luminous breadth; and the clear definition and prominence of their parts, without any cutting up or diminution of the main effects of the heads. Other miniatures by Mr. Carrick are—799, 'Portrait of the Earl of Shaftesbury'; 840, 'Portrait of Lord John Russell'; 846, 'Portrait of P. C. French, Esq.' &c., all drawn with the most astonishing truth and effect. There is, however, a flatness of tone in the colouring, which it is to be hoped will be remedied. We are aware that this artist paints upon marble; if this defect arise only from this basis, a remedy is at hand. From what we now see of this gentleman's works, we may safely predict that his name will be one of the most celebrated that has ever been known in miniature painting.

No. 786. 'The Arran-Fisherman's drowned Child'; No. 897. 'Connemara Girls on their way to Market,' F. W. BURTON. These are large drawings, of a high order of merit; the productions of the leading artist of the Royal Hibernian Academy. They are certainly not seen here as they were in Dublin last year, where we had the good fortune to examine them under more favourable circumstances. Yet even here, placed high up, and surrounded by small and highly-wrought miniatures, they will satisfy all who look closely into them that the painter is a man of genius. In

vigour of execution, as well as in delicacy of touch, his merits are of a high order. These two works are full of matter, and of very touching interest; the one telling a sad story with "moving eloquence," the other picturing Irish character, with no less truth than poetry. We hope he has not made a voyage to London to "see how his pictures look;" he would return no doubt greatly disheartened, but perhaps somewhat instructed: for it is no very grand achievement to be great among little men; and before Mr. Burton can take professional rank, he must be compared with others who are, like him, candidates for distinction.

No. 812. 'The Lord Bishop of Hereford,' W. C. ROSS, R.A. This striking resemblance to the right reverend prelate is the perfection of portraiture. The work is somewhat large, and involves details which are made out with a fidelity that would astonish, had they been painted by any other hand than that of Mr. Ross.

No. 816. 'Master York,' R. THORBURN. A full length miniature of a child; the head is successful in its expression, but colour and light are denied to the picture.

No. 847. 'Portrait of her Majesty the Queen,' W. C. ROSS, A. This is one of the richest and most beautiful of the works of this artist. The felicity of the resemblance has never been exceeded, and the colour is that of the life. Her Majesty is seated in an ancient high-backed chair, with an ease and grace which must have been carefully studied in nature, to be so perfectly represented here. Other valuable portraits by Mr. Ross are, No. 857. 'Her Majesty the Queen of the Belgians,' No. 861. 'Mrs. Charles Kean,' and No. 886. 'A full length of Lady Norreys,' in all of which the materials of composition are painted with extraordinary truth.

No. 917. 'Lady Carmichael,' R. THORBURN. There is in this miniature an undue severity of style which cannot be understood by the many. There is a German taste about the work which, however well it may suit the highest walk of Art, will tell to disadvantage in a miniature. There is in the face a fine tone of sentiment, but the figure is otherwise heavy.

No. 937. 'Portrait of H. Roxby Benson, Esq., 17th Lancers,' B. DE LA COUR. An officer in uniform, painted in a manner to concentrate the interest in the figure, which—a half-length—is well drawn and substantially made out.

No. 943. 'Portrait of Mrs. Ibbotson,' Miss M. GILLIES. A half-length with a countenance full of gentleness. The figure and materials are turned to the best account.

No. 942. 'Portrait of Captain the Hon John Vivian, M.P.,' W. EGGLEY. The author of this portrait perfectly understands that purity of tone may be destroyed by being over-wrought. The flesh tones are clear, and the portrait generally is effectively executed.

No. 963. 'Portrait of Miss Gray,' Miss M. HUCKLEBRIDGE. The pose is most natural, and the general disposition highly effective. There is, indeed, great evidence of very high ability in this production.

No. 964. 'A Portrait,' C. COUSSENS. A half-length of a young lady, painted with much force but wanting brilliancy; there is, however, a breadth of touch that we much admire.

[We are compelled to "skip" over a great number of excellent miniatures; it is indeed utterly impossible for us to find space for comments upon more than a small portion of those that are decidedly good. The catalogue contains a list of works exhibited in this room, extending from No. 557 to No. 988.]

In the "miniature-room" and in the room dedicated to "architecture," visitors will find some paintings of very great merit. We judge less from the results of inspection than from the established reputations of the artists—acquired elsewhere; for they are placed as near the ceiling as may be, in wretched lights, and above hosts of works that ill prepare the eye for an appreciation of their merits. This is "too bad,"—on a par with the system pursued by a certain small Society in the immediate neighbourhood; for there is no one of the exhibitors so placed who would not give more than the value of his picture, or rather the sum he once hoped to obtain for it—to be permitted to remove it from the walls. It is an unequivocal sentence of excommunication; a ban which points

out the unhappy "sinner" as a reproach among his brethren; a sort of hint to carry a hod rather than paint pictures. We cannot envy the feelings of the parties who preferred branding the painter, so that a very long time must elapse before the mark of shame can be effaced—to sending back his work, that it might be at least "hung at the place from whence it came." It would have been merciful, and comparatively generous, to have placed these works with the faces to the wall.

It will scarcely be expected that we criticise pictures we cannot see; but here is a list of those we know to be good—because we know that the respective artists can paint well and have painted well—and cannot entertain a suspicion that they have sought to insult the Royal Academy, by sending to their exhibition productions that would discredit the producers and the exhibitors of them.

We earnestly hope the Academy will order this matter better hereafter; and respectfully call upon them to enter the two rooms referred to; and consider how many hearts have been made to ache and reputations to suffer, by a very unnecessary act of cruelty—we can use no milder word.

Thus circumstanced, for example, are two works of H. JUTSUM—a vigorous landscape-painter, who might put to the blush some veterans in the Art, who "stand at ease" upon the line.

Another by H. MONTAGUE—also an admirable landscape-painter, whose works would do credit to any exhibition.

Two others by H. GRITTEN—scenes painted from continental cities; where he has been travelling at great cost to gather knowledge and experience.

A capital picture by "a stranger" in the exhibition—we do not know his name, and probably it is a first appearance, or rather attempt to appear—we refer to a 'Scene in North Wales,' by D. H. M'KEWAN; evidently of a most meritorious class.

H. J. BODDINGTON is thus also doomed. Let the visitor who is here made sceptical as to his merits walk into Suffolk-street and see some admirable landscapes of his.

G. E. HERING is another case in point. His works have been hung "on the line" for the last three years at the British Institution; and, we believe, were in every instance "sold," as they ought to have been.

And surely a painting of T. C. HOFLAND might have been subjected to more worthy treatment. No. 948 (he has sent but one), 'Castellamare,' is worthy of an artist whose pencil is at all times pure, vigorous, and effective.

Condemned equally is a beautiful moon-light picture by J. B. CROME, an artist who, in this peculiar class of Art, has few, if he have any, rivals.

A. J. WOOLMER—his works in the Gallery of British Artists have gained for him a high reputation—here he is at the "tip-top" of the architecture rooms, literally above the roofs of a score of buildings.

Here, too, is a sweet and touching picture by H. O'NEIL. We answer for it that if a question as to its value were put to the vote, among the members of the Royal Academy, there would be a majority for hanging it on the line.

Here, also, is a capital picture of 'Don Quixote and Sancho,' by J. GILBERT, an artist who might even now be a candidate for the distinction implied by the two mystical letters R.A.

W. DENDY—a name we have not, we believe, heretofore met with—contributes a work 'Infancy,' which seems entitled to a far different doom.

It is scarcely necessary for us to say, that we make these observations with exceeding pain: first, because in doing so we are compelled to add to the evil by giving greater publicity to the opinions apparently entertained of these artists by the judges of their merits; and, next, because we know how arduous, embarrassing, and distasteful the duties of the "hangers" must be; and have no desire to make the labour still more distressing than it is, by harping upon the terms "partiality," "injustice," and so forth. But, in the cases we have quoted, we can really see no excuse, unless the hangers had actually persuaded themselves that men such as those we have named would rather see their pictures hung anywhere than not hung at all.

"'Tis villainous—pray you avoid it."

#### SCULPTURE.

1267. 'Marble Bust of her Majesty the Queen,' J. FRANCIS. In the features of this bust of our

Gracious Sovereign, there is much in common with those of the illustrious family whence she is descended; but we find also somewhat of "anxiety," of which it would have been better to have relieved the countenance, substituting the character of benignity, which must be ever present in memory with all who have once seen her Majesty.

1268. 'His Royal Highness Prince Albert,' R. W. SIEVIER. This is also a bust, and it is remarkable by much power of execution; the likeness is striking, and the work is, in all respects, characteristic of his Royal Highness. It is to be regretted that the marble has turned out so defective.

1269. 'Marble Group to be erected in St. George's Church, Madras,' H. WEEKES. Two figures constitute the group—representing the Right Rev. Daniel Corrie, LL.D., imparting religious instruction to an Indian youth. It is executed by public subscription to the memory of Dr. Corrie; and, being in design well conceived and most appropriate, cannot fail to enhance the solemnity of the interior of the edifice for which it is intended. The lawn sleeves of the principal figure are not well expressed, but a material more difficult to minister to in sculpture cannot well be imagined. The youth is finely modelled, but he is not of Indian mould, although distinguished by the lock of hair at the back of the head, whereby, according to the faith of his land, he is to be "lifted up to heaven."

1270. 'The Broken Pitcher,' W. C. MARSHALL. The charm of this work is its simplicity. A child has broken a pitcher, and laments the consequences with tears. This little figure must attract its share of attention, for the incident is rendered so literally, as to be open at once to the plainest understandings.

1271. 'Model of a Nymph preparing to Bathe,' E. G. PHYSICK. From the "prentice" to the practised hand in every school of Art since the antique days of Phidias have 'Nymphs Bathing' been the wherewithal to fall back upon, because sculptors in their onward progress are too heedless of storing materials for thought. This nymph is like the universal Venus of some of the foreign schools—of which every disciple produces a version in each cycle of three years. We speak not, be it understood, in reference to the statue under notice, but to hundreds that have been executed under the same title, and whose galleries of others that will follow, unless there be more research for original subjects. In this figure there is some exquisite modelling, and the adaptation of parts is unquestionably good; the action not only sufficiently declares the intent, but relates also to many graces of the female form.

1271. 'The Mother,' H. F. WOODINGTON. This is a group of two figures—supposing a mother bewailing her child drowned by the waters of the deluge. The artist has allowed himself some licence, for the text of Scripture declares that "All in whose nostrils was the breath of life, died." The subject, as we read it in Genesis, is worthy of the chisel of the greatest sculptor who ever lived. The grouping is unfortunate; the mother is bending over the child in a manner to conceal every beauty, and if the drapery be intended to fall as if wet, the design has been injudiciously managed, for we fear it will not be generally understood.

1273. 'Model, life size, of a statue of Lord Viscount Nelson,' to be executed, 18 feet high, in stone from the Granton Quarry, and to be placed upon the column now being erected in Trafalgar-square, E. H. BATLY, R.A. By those yet living, to whom the person of Nelson was known, this statue is pronounced a remarkable likeness of the hero of Trafalgar. The figure is in uniform, wearing a three-cocked hat, the right sleeve is looped to the coat, and the left hand rests upon a sword. We can conceive no impersonation more difficult for a sculptor to deal with than that of Lord Nelson; subjects presenting such untractable material will yield nothing, save to the most unaffected simplicity; a method of treatment to which this statue owes much of its success. Such statues seldom have the head covered, but conventionality has here given way to recollections of the man, upon occasions in which those who may have seen him can only forget him when they have forgotten everything else.

1274. 'Sketch for Eve—the Bride,' J. BELL. A work ably executed after a peculiar style of fe-

male figure: it appears to have been wrought out from one model, whose imperfections have been carried into the design. Many of the parts present a matchless play of outline, but the figure is substantially too heavy. A devout admiration of the really beautiful would have dictated in this case a more *literatim* adherence to Milton—

"Grace was in all her steps; heaven in her eye:  
In every gesture dignity and love."

1275. 'Venus rescuing Æneas from Diomed,' J. H. FOLEY. A group of three figures, well managed for effect, but not sufficiently epic in feeling to sustain the grandeur of the subject. There is everywhere visible, great anatomical knowledge, with evidence of study well directed.

1276. 'A Phrygian Hunter, modelled in Rome,' E. B. STEPHENS. The hunter holds a hound in leash, and powerfully instances attention fixed upon some distant object—as game. The idea is good, and the manner in which it has been wrought out is highly narrative: but the figure has the fault of being too meagre—wanting development.

1277. 'Statue in marble of Admiral Sir P. Malcolm,' E. H. BAILY, R.A. Eight feet is the height of this statue, which is intended for St. Paul's Cathedral. It is backed and upheld by a mass of marble wrought into a cloak; an appendage of which we lose sight in considering the movement whereby the figure disengages itself from the supporting substance. The work will be a valuable addition to St. Paul's; a few more statues like this, and Behnes's 'Babington' would so effectually overshadow the bulk of the monumental erections which we find there, as to raise the general character of the sculpture of that cathedral.

1278. 'The Babes in the Wood,' J. BELL. The children lie enfolded in the arms of each other; and to aid the aptitude of the illustration, a few leaves are scattered near them. The relation is pathetically sustained, and the degrees of human life, infancy and childhood, truthfully portrayed. The work is, indeed, one of those pure and happy conceptions—skillfully and beautifully worked out—in the production of which the accomplished sculptor has few competitors. His mind is deeply imbued with a poetic feeling; he is one of the few artists who attempt higher efforts than mere busts; and as his success has been great, he may take a very prominent station in the most elevated department of the arts. We consider his onward and upward career as matter of certainty.

1279. 'Statue in marble of Andromeda,' L. MACDONALD. Many of the most elevated qualities of Art are visible here. The author has taken a clear view of his subject, and endowed it with due poetical eloquence; although we conceive his construction would not have been too literal even with the addition of other circumstances from the story. We have seen from the chisels of the old *magistes* of the Art—the subject, as well in basso relievo as in pure sculpture—and (though, now, alas! "sedeant spectentque Latini", for the spirit has departed their school)—these respected fathers began and ended their tale; yet how indispensable soever a conclusion may be, it is, perhaps, the *exordium* that we miss here, rather than the catastrophe, which cannot well be forgotten.

1280. 'The Falconer, to be executed for Flete, Devon, the seat of J. C. Bulteel, Esq.,' C. R. SMITH. This figure wears the costume of the palmy days of falconry, and will tell admirably in an old hall surrounded with the trophies of the chase. It possesses great merit.

1281. 'Group of the Graces in marble,' J. LORR. Three figures seated—contrary to usage. Much grace may be displayed in a sedentary figure, but all that can be thus shown must fall far short of the attributes of these creatures of poetry. The figures are so individualized that each is in the group, but yet not of it: such a want of correlation is always fatal to the interest of a subject. With respect to the disposition of the figures, it may be remarked that a mere departure from a normal propriety is not originality—and in regard of the subject, it may, at once, be pronounced a bad one from adoption so general, since each sculptor, who selects it, subjects himself to comparisons, whence but a few may derive a modicum of credit; seeing they have entered the lists and broken a lance with the greatest men of all times.

1282. 'Model of a statue of Michael T. Sadler, Esq., M.P.,' to be executed in marble, for Leeds, P. PARK. This statue is set forth in the ordinary

attire of the day, without any of the legitimate aids whence sculpture derives advantage and value. The figure is in the act of addressing an assembly, having the right arm uplifted in a manner to give an angular and ungraceful appearance to the whole.

1283. 'Group of Abel and Thirza, from Gessner's Death of Abel,' T. EARLE. Abel is a fine conception wrought out with much ability; the subject is well chosen and has yielded a grateful return for the labour bestowed upon it. The power displayed in the male figure has flagged in the execution of that of Thirza; although the latter, considered apart, must be allowed to be of high merit.

1286. 'Eve and First-born,' W. C. MARSHALL. The affectionate cares of maternity are here but defectively expressed, for Eve seems heedless of the infant at her side. The work, however, like the other productions of the artist, gives abundant evidence of genius. This and No. 1287, may be referred to in proof of the high power both in conception and execution of our British school.

1287. 'Venus rescuing Æneas from Diomed,' W. C. MARSHALL. In 1841 we are told this group obtained the gold medal, and it seems a very likely work to earn such distinction for its author. Venus and Æneas only are present, Diomed being left to the imagination. The subject having been proposed as an effective one for sculpture, the part of Venus could not, by any means, have been left out; although it is derogatory to the multipotence of even a heathen deity to be compelled, in defending her son, to throw herself between him and his enemy. The classic poets often reduce their divinities to the level of mortals; and in this they must be followed—since in this and other licences—

"Their stars are more in fault than they."

1288. 'Oberon and Titania,' E. W. WYON. The lines in the 'Midsummer Night's Dream,' commencing "I know a bank whereon the wild thyme blows," are here illustrated. Titania sleeps amid the flowers, and Oberon is about to streak her eyes with the juice of "love in idleness," to make her "full of hateful fantasies." The composition is a bas relief, and in spirit and feeling comes well up to the poetry of Shakspeare.

1289. 'A bas relief, representing Bacchus and Silenus,' J. FILLAINS. The artist has looked with advantage at the antique. There is a fine character in these figures which we cannot help admiring; albeit the subject is threadbare, and found *passim* among the ancients.

1290. 'Unfinished figure in marble of a Girl Trapping a Bird,' J. E. CARREW. Well designed for the class of Art to which it belongs, but, being unfinished, is seen under disadvantage. It is, however, by no means unworthy of one of the most accomplished sculptors of our age and country.

1291. 'A Greek Warrior crouching, illustrative of caution and resolution,' P. PARK. The extrinsic circumstances to which this figure has relation, such as an enemy, danger, &c. &c., are well defined; but there is nothing to warrant the extreme tension of many of the muscles in various parts of the body—an anatomical demonstration; called for to such extent only when the body is in the most violent action.

1293. 'Statue in marble of a Bacchante,' L. MACDONALD. The *Nymphæ bacchantes* of modern poetry being impracticable in sculpture, our artists seek *les belles et les joyeuses* in the immortal verse of the ancients. Artists have attempted to invest such subjects with a modern spirit, and it is done, but the luxury of rich association is thus marred. The figure is beautiful, but the head would never be pronounced that of a bacchante: it corresponds not in expression with the rest of the figure.

1294. 'Statute in marble of Hyacinthus,' L. MACDONALD. The design is that of a powerful mind, and the execution has been conducted to a happy issue by talent of a high order. The figure generally in the modelling shows an assemblage of beauties, though in the limbs some of the lines are deficient in richness; and this is the more apparent in contrast with so much that is excellent.

1298. 'Model of a statue of Sir Astley Cooper, F.R.S., &c., &c., E. BAILY, R.A. Eight feet is the height of this cast, which is to be executed in marble for erection in St. Paul's Cathedral. From the shoulders flows an academical robe, disposed in a manner to give much grandeur to the statue, which is further characterized by more personal

elasticity than the frame of Sir Astley latterly exhibited. The resemblance is perfect, and the sculptor has gifted the features with the most impressive language; in short, every part of the work is in the purest taste.

No. 1299. 'A Monumental Angel, a statue in marble, part of a group at the entrance to a Family Vault,' R. WESTMACOTT, A.R.A. A fine and delicate conception, exquisitely chiselled.

1301. 'Summer, a statue in marble,' S. NIXON. A child bearing a garland of flowers, the whole, perhaps, better in execution than design. The work is one of a series for the hall of the Goldsmiths' Company. The flowers are equal to anything of the kind we have ever seen in sculpture; but the song of summer-tide might have been better sung.

1303. 'An Old Satyr, extracting a thorn from the foot of a young man,' B. SMITH. This is a bas-relief, and reminds us, in its design, of a gem we have somewhere seen like it.

1304. 'Statue in marble of Sir Charles Forbes, commissioned by the native merchants of Bombay, the late Sir F. CHANTREY, R.A. This work resembles, in all its parts, a great many others of its distinguished author. It has by no means the force and power of some of his busts, for these qualities lying chiefly in the heads were in a great measure counteracted by infirmity of design when the portrait extended to the full figure. There is, however, about the statue that integrity which has always marked those of Sir F. Chantrey.

1305. 'A Favourite Horse, the property of Lady Dallas,' H. W. and C. M. MAC CARTHY. A small model in plaster, remarkable for a display of knowledge of the proportions and character of the animal.

1313. 'Colossal bust in marble of the late Right Hon. J. P. Curran,' C. MOORE. This is a portion of a monument to the memory of Curran, to be erected in St. Patrick's Cathedral, Dublin. The head,—we can speak only of that,—is the production of a mind capable of realizing its impressions with the most perfect success. Although we observe here the gravities, the more serious part of Curran's character, there is also a mingling of that which, in a lighter mood, would express wit, but which now threatens sarcasm.

1319. 'Bust in marble of the late J. Gray, Esq., of Carnryne,' S. JOSEPH. In any assemblage this would be a remarkable bust; in the features are graven the most perfect expression of benignity.

1327. 'Marble bust of Sir W. Follett, M.P.,' E. B. STEPHENS. The friends (we are told in the catalogue) of Sir W. Follett have commissioned this bust for the purpose of placing it in the Devon and Exeter Institution. As a portrait, not only in *physique*, but in the character, it is one of the most successful we have ever seen. The eyes are withdrawn into deep shadow; they have the effect of at once fixing the attention of the observer, who finds in them every evidence of a keen and penetrating intelligence.

1330. 'Francis Grant, Esq.,' E. DAVIS. The free and flowing manner of the hair of this head is beyond all praise, it seems to be precisely "as the winds have left it;" and in the whole there is as much of poetical sentiment as may be risked in portraiture. So Schiller-like is the head that it would enrapture the *burschenschaft* of Germany.

1331. 'Bust in marble of Sir James Eyre, M.D.,' T. BUTLER. At the first sight of this work the spectator is struck with the vitality of the features, and is arrested by their power of speech; the marble has something to say to him. There is no self involution; the bust is explained from its own lips. It is a work which would do honour to the greatest of our sculptors; for no skill in the art can exceed that with which it has been elaborated into the elevated character it bears. A finer bust than this we have never seen, it will bear comparison with any of modern times.

1346. 'Lady Godiva,' W. BEHNES. A female equestrian model, original in design, and beautiful in execution. The horse is in a novel position, being in the act of rubbing his nose against his leg, a most ingenious conceit, highly favourable to the importance of the mounted figure. We may suppose the lady about to set off on her progress through the streets of Coventry. She is admirably modelled, and is seated on her palfrey with much ease and grace.

1347. 'King Charles I., a sketch,' H. NICHOLSON. This small figure is the result of much research into the costume of the cavalier period. It

is "toileted" with exceeding care, and reminds us much of the small portrait of Charles in the Louvre, painted by "that Antonio Vandyke."

No. 1348. 'Scenes at a Fair in the North of Ireland,' E. KENNEDY. If there be any meaning in the words *alto rilievo*, that meaning is certainly made out in this piece of sculpture, wherein the figures in number amount to thirty, many of them chiselled out of the mass with a boldness of relief truly surprising. Every circumstance of the composition alludes to Irish character in its broadest development, and the action of the various groups is so ingeniously distributed as to leave no single figure unmoved by the spirit of the whole. There might have been more nicety of execution in the work, but we doubt if there could possibly have been a more perfect national identity than is here shown. It is, indeed, the work of a most accomplished mind, and tells the story admirably. No writer of Irish subjects has every brought a familiar Irish scene more completely before a spectator. Every person introduced contributes his, or her, due portion to the value of the whole; and in the countenance of each is that expression which speaks forcibly of the gaiety and humour so strongly illustrative of the country. Yet there is no exaggeration about it, and not the remotest approach to vulgarity; although no attempt has been made at undue and "untrue" refinement. The work is full of vigour, life, and character, and tells as much as might be found in many a printed volume. In these days, when the sculptor too often either dedicates himself exclusively to the "classic," or devotes himself constantly to the common place, it is absolutely refreshing to find an artist thus applying genius, industry, and powers of execution to the development of an ordinary incident, in which the poetry is retained without sacrificing the truth. This *alto rilievo* is, in all respects, honourable to the mind and hand of the producer, and is a work of rare value. We have dwelt upon it at greater length than we should have done, because, we understand, it is the production of a lady—not of the profession—whose station in society has made the cultivation of taste a source of enjoyment to herself—and, now, to others. It is scarcely necessary to add that she is an Irish lady.

No. 1354. 'Marble Bust of Edward Hawkins, Esq., F.R.S., M.S.A.,' T. THORNECROFT.—There is in this work much of the excellence of the highest school of Art—it is pure in style, and careful in execution.

No. 1355. 'Marble Bust of Sir W. Molesworth, Baronet,' W. BEHNES. Independently of its striking similitude to the original, this would anywhere be a remarkable bust—the arrangement of the hair is to the life, and gives the head at once to a person tinctured with enthusiasm of some kind.

No. 1360. 'Marble Bust of D. Blaine, Esq.,' J. G. LOUGH. In the countenance is the inpress of the most perfect tranquillity of temperament. The drapery is simple and beautiful.

No. 1363. 'Bust in Marble of the late Peter Burrows, Esq., of Dublin,' T. BUTLER. Much skill is here displayed in the management of the features, which are those of a person advanced in age. Age is finely expressed, and without any of its vacancy.

No. 1375. 'Marble Bust of David Barclay, Esq.,' S. JOSEPH. The intelligence of this head is in full action—the sculptor has left it at work. It is something to be able to impress the spectator with this idea.

No. 1376. 'Bust of Lady Baker,' L. MACDONALD. The bust (properly so called) of this work is better than the head. The shoulders are round and well modelled.

No. 1384. 'Marble Bust of Thomas Poynder, Esq.,' W. BEHNES. The cranium has been finely modelled, and no less admirably sculptured. The expression of the countenance is benign to a degree.

No. 1385. 'Bust in Marble of Mrs. Edward Tyrrell,' E. A. FOLEY. The best taste has been exercised in the execution of this bust. It is graceful, and free from the reproach of affectation.

No. 1393. 'Marble Bust of the Marchioness of Douro,' T. CAMPBELL. The utmost nicety and care has been used in the carving, but no *finesse* can ever compensate for such a want of expression as we find here. A tiara mingles with the hair; without it we think there would have been a better effect.

No. 1396. 'Marble Bust of Allan Cunningham, Esq.,' H. WEEKES. This is one of the most characteristic works we have ever seen. As a likeness,

it is the life itself. The simplicity of the work is carried almost to a fault, although this denial of appliances has a worthy object. Nothing can exceed the penetrating power thrown into the eyes, whence gleams the light of life, bespeaking an actively-thinking intelligence. The energy of this head is unsurpassed. The light arrangement of the hair is beautiful to the last degree, and the general finish the mastery of Art.

No. 1397. 'Bust in Marble of a Lady,' W. C. MARSHALL. There is a sentiment in the work betokening a refinement of feeling rarely thus shown.

No. 1404. 'Marble Bust of the Rev. Samuel Wilson Warnford,' P. HOLLINS. The style of this head is bold; the features are animated by much earnestness, and the manner of the air free and natural.

No. 1409. 'Marble Bust of James Morrison, Esq., M.P.,' the late Sir FRANCIS CHANTREY, R.A. A close inspection identifies this with the general feeling of the late Sir F. Chantrey. There is a strong purpose in the head, and the finish is, as it always has been in his works, exquisite.

#### THE ARCHITECTURAL ROOM.

This room contains the same ill-advised and injurious mixture as usual, of designs for churches and 'Scenes from the Vicar of Wakefield,' elevations of orphan asylums with 'Mountain Maids,' almshouses with 'Faries sporting,' a Wood Scene in Hampshire, crowns a design for Camberwell church; and 'H.R.H. Prince Albert' is not far from a county lunatic asylum. This system, alike injurious to the painter and the architect, we have constantly and earnestly reprobated; but it is useless to expect any alteration in it until more space be taken for the exhibition generally.

As a whole, the 130 architectural drawings here exhibited are more satisfactory than those of some years past, and serve to remind one that many works of more than ordinary magnitude are now in progress in England.

C. BARRY, R.A. elect, exhibits two beautiful drawings of different portions of the 'New Houses of Parliament' (1030 and 1040), made with the view of showing the effect of a proposed mode of decorating the walls with paintings. The first is a View of the Royal Gallery, showing the return of the procession on the occasion of opening Parliament; and the second, 'St. Stephen's Hall,' forming part of the public approach to the two Houses, the libraries and committee-rooms. Pictures in square panels occupy the walls, and the vaultings of the hall are heightened with colours: the whole forms a specimen of elaborate decoration at present without a parallel in England; and if so executed, cannot fail to give an impetus to the decorative arts, the effect of which will speedily become visible alike in our manufactures as in our dwellings. The premiums offered by the Royal Commission with a view to this end, already commented on in our pages, prove that the matter is now taken up in earnest, and lead us to anticipate most satisfactory results in connexion with it.

No. 1068, by R. H. ESSEX, representing the 'Interior of the Temple Church, London,' as it will appear on the completion of the restoration now in progress, affords another example of interior decoration worthy of consideration.

T. L. DONALDSON has three designs: the new 'Scotch Church recently erected at Woolwich,' (1110); 'All Saints Church, Gordon-street, St. Pancras,' now in course of erection (1118); and the approved elevation of 'Hallyburton House, Angusshire,' the seat of the late Lord Douglas Hallyburton (1091). The latter is composed in the style of the Florentine palaces, the chief characteristics of which are solidity and massiveness. Sculptured figures are introduced at the angles of the building. The recessed porch would be very effective. The Gordon-street Church is of the modern German school of architecture, and has some details of much elegance. Coloured marbles are introduced externally in decoration, but somewhat too sparingly.

WYATT and BRANDON have sent, a view of a 'New Church at Crockerton' (998); 'Interior and Exterior of a Church at Wilton' (1019 and 1055); 'County Courts at Cambridge' (1038); 'St. Andrew's Church, Bethnal-green' (1080); and a 'Church at Merthyr Tydvil' (1093): a goodly list, bearing evidence of their ability and good fortune.

The most striking of these designs is that of the church at Wilton, which is Italian-Norman in style, and has an attached campanile of striking proportions. Some parts of the campanile, it may be remarked, hardly agree in style with the rest of the building, being of a more recent period.

P. HARDWICK, R.A., besides a 'Mansion at Maresfield' (1062), has a large drawing of his fine staircase in Goldsmiths' Hall: the effect of the drawing, however, is hardly equal to that of the object represented.

Nos. 1027 and 1050 are admirable drawings by J. W. ATKINSON, of the 'Palace at Moorshedabad,' erected for the Nawaub Nazim, by Major General M'Leod. This building, which is above 400 feet long, 200 feet wide, and 50 feet high, is Grecian-Doric in style, and has a portico at front and back. The erection of this building has caused much sensation in its locality.

H. L. ELMES has an admirable perspective of his no less excellent design for the 'Assize Court,' at this time in course of erection in Liverpool (1037); and a view of the 'Liverpool Collegiate Institution,'—the first Greek, the second Gothic. Mr. Elmes is an architect of no ordinary ability, and bids fair to obtain a high place in his profession.

L. N. COTTINGHAM, in 1123, shows the 'Choir of Hereford Cathedral,' in the restoration of which he is now engaged. 1083 is an elaborate drawing of the 'High Altar at St. Alban's Abbey Church,' by the same gentleman.

No. 994. 'A Royal Academy for the Fine Arts,' including national glyptotek and pinacotek, by CARL TOTTIE, is a fine design.

E. B. LAMB has an exceedingly clever little drawing of storehouses and other buildings, designed for a public company. No one understands Italian architecture better than Mr. Lamb. The same remark, substituting Elizabethan for Italian, will apply to H. E. KENDALL, jun., who exhibits two views of his design for a country mansion, which obtained the gold medal at the Society of Arts.

EDWARD HALL, known by his success at the Institute of Architects, has a tasteful little design for a sculpture gallery, 1156.

For Camberwell Church there are no less than eleven designs, none of which, however, have more than ordinary pretensions.

No. 1112, is a nice drawing, by J. GOLDICUTT, of the 'Church now Erecting at Paddington,' from the designs of Gutch and Goldicutt: the manner in which the competition for designs in this case at Paddington was conducted, has justly excited much animadversion; it is, however, gratifying to find that a satisfactory building is likely to result.

W. H. CAMPBELL's 'Design for a House of Parliament' (1163), which gained the gold medal of the Royal Academy last year, is a work of no common merit—it is coloured, too, in very masterly style.

No. 1067. 'Design for the Cove and South Hawley Church, Hants, by E. C. HAKEWILL, although an unpresenting structure has claims for originality. We must not omit to mention, too, a 'Model of Salisbury Cathedral and Cloister,' in card-board by G. TRUEFITT (1168), evidently a work of much patient labour. Our space will not enable us to do more than thus point out some of the most striking works in this very important department of the Academy, although we would gladly go into lengthened criticism, and give a reason for every opinion we have expressed.

[We have thus gone very fully through the exhibition; having noticed, as we believe, nearly every work of which we felt justified to speak in terms not disagreeable to the artist; for we adhere to our plan of not going out of our way to direct attention to works that may be referred to with no other result than to pain or annoy the painter.

It is not improbable, however, that we have omitted some which deserved praise, and demanded observation; in so large an assemblage of objects this evil is, indeed, almost unavoidable; and we therefore intreat the indulgence of those who may feel that we have unfairly neglected them.

We repeat our conviction that the exhibition, taken altogether, is highly satisfactory. From among the junior candidates for distinction, the seniors will have no difficulty in recruiting their ranks. We, for a time, respectfully and cordially bid the exhibitors farewell—bidding them "go on and prosper!"]

## FAIR ROSAMOND.

WHEN as King Henry rulde this land,  
The second of that name,  
Besides the queene, he dearly lovde  
A faire and comely dame.

Most peerlesse was her beautye founde,  
Her favour, and her face;  
A sweeter creature in this worlde  
Did never prince embrace.

Her crisped lockes like threads of golde  
Appeard to each mans sight;  
Her sparkling eyes, like Orient pearles,  
Did cast a heavenlye light.

## THE BOOK OF BRITISH BALLADS.\*

FINDING that our subscribers, generally, have been much pleased with the examples of wood-engravings, from illustrated books in course of publication—which we have been enabled, occasionally, to introduce into our pages—we have made arrangements to give, somewhat frequently, this additional advantage to "The Art-Union."

We here present specimens of "THE BOOK OF BRITISH BALLADS;" and on the other sides of these leaves, a few selected from "THE ABBOTSFORD EDITION OF THE WAVERLEY NOVELS,"—of the latter we shall be enabled to speak fully and freely; in reference to the former, however, we must content ourselves with printing the Editor's "Introduction."

\* Edited by S. C. HALL, Esq., F.S.A. Publishing in Monthly Parts, by HOW and PARSONS, 132, Fleet Street.

"Although various collections of British Ballads have been published, from time to time, since the elegant mind, refined taste, and sound judgment, of Bishop Percy were brought to bear upon the interesting and important subject, no attempt has been made to select and arrange, in a popular form, the best of these Ballads, from the several volumes in which they are scattered, and mixed up with a mass of inferior, or objectionable, compositions. This appears, indeed, to have been almost the only department of our 'Polite Literature' to which public attention has not been adequately directed. Yet, without subscribing to the opinion, attributed to high authorities,—'Give me the making of National Ballads, and I care not who makes the Laws'—it requires no argument to prove their powerful influence, over the thoughts and feeling of all

classes—the cultivated as well as the uncultivated. It is not too much to say, that in 'uncivilized ages' no source of instruction was so fertile,—and no Missionary so effective in moulding the general sentiment, as 'the blinde crowder,'—it may have been,—'who with no rougher voice than rude style,' stirred up the sympathies of the multitude, and moved even the great heart of Sidney 'more than with a trumpet.' Nor can he be considered a visionary, who would draw conclusions, as to the pre-eminently moral character of Great Britain, from the fact, that the songs which encourage virtue and justice, uphold heroic fortitude, and inculcate, as an axiom, that 'God defends the right,' have been, in all ages, the chiefest 'darlings of the common people.'

"The Editor will endeavour to form a selection that shall be agreeable and interesting to the general reader,

## THE BLIND BEGGAR.

Itt was a blind beggar, had long lost his sight,  
He had a faire daughter most pleasant and bright:  
And many a gallant brave suiter had shee,  
For none was soe comelye as pretty Bessee.

And though shee was of favor most faire,  
Yett seeing shee was but a poor beggar's heyre,  
Of ancyent housekeepers despised was shee,  
Whose sonnes came as suitors to pretty Bessee.

DYCK, del.

LINTON, sc.

and not unsatisfactory to the antiquary and the scholar. It is, however, an essential part of his design, to collect only the Ballads that appear most worthy of preservation,—and not to reprint those which have no stronger recommendation than their rarity; rejecting none, because they are already sufficiently known, and accepting none, because they are merely scarce. It will be his duty to decline no labour that may give completeness to his task, and to omit no opportunities of consulting available sources of information, whether accessible to all readers, or to be obtained only by patient industry and careful search. His plan, in its several details, it is unnecessary for him to explain, inasmuch as it is here sufficiently developed. It will be perceived, that he has

not modernised the orthography; believing that 'these old and antique songs' will be most readily welcomed in their ancient dress,—

'The garb our Muses wore in former years.'

"It will not, however, be expedient to follow any chronological order; to do so with accuracy would be, indeed, impossible, for there are few of the more ancient compositions to which any date can be assigned. The Editor will, therefore, consider himself justified in so arranging these Ballads as to obtain variety, both of style and illustration, without regard to the period at which they were written, or the sources in which they originated; prefacing each by such explanatory remarks

as shall communicate all the information he can obtain concerning its history.

"In illustrating the work, he has been ambitious, so to apply the great and admitted capabilities of British Art, as to prove that the embellished volumes of Germany and France are not of unapproachable excellence, in reference either to design or execution. He believes himself warranted in stating that, as the work progresses, he will be enabled to submit examples of the genius of a large proportion of the more accomplished artists of Great Britain—as exhibited in drawing upon wood. The supremacy of our English engravers, in this class of Art, has been long established."

## AN ARTIST'S TOUR.

[For the very interesting, although brief and limited tour, described in the following letter, we are indebted to an artist, who already holds a distinguished rank in his profession. It exhibits proof that he has not passed through fertile Italy without turning valuable opportunities to profitable account. He has very properly communicated to his professional brethren his observations in reference to a remarkable vicinity of Rome, of which many of its permanent residents know little or nothing. We hope his example may be followed. There are many artists who might thus confer benefit on the student, supply information to the traveller, and afford enjoyment to the public.]

Rome, 3rd June, 1838.

I have been traversing the classic, though now desolate shores of Ostia, Ardea, Nettuno, &c., accompanied by an intimate friend, a Swiss artist. We set out on foot at four o'clock in the morning, carrying with us our sketching materials, a knapsack containing linen, &c., good stout sticks with iron points, to defend ourselves on the road in case of necessity, and a chart of the country to facilitate our progress. We arrived at Fumicino about ten o'clock in the morning, and, having refreshed ourselves, proceeded to Ostia, passing the famous fields of Apollo, on which stood his temple, now a melancholy waste, marshy, and sterile. We arrived at the ancient Ostia about twelve o'clock, having crossed the Tiber a little below its termination into the sea, a slight memo-

randum of which I transferred to my sketch-book. After having scrambled our way with much difficulty through long grass and brambles, we entered the ruins of a temple said to be the Temple of Jupiter, and which still bears evident marks of former splendour; from these ruins we had a view of the very slender remains of the ancient city, which consist of a number of foundations of buildings, &c., almost lost amongst briars

and brambles. One can scarcely imagine, when looking on the desolate scene around, that this was once a flourishing and populous city, into the ports of which entered vessels from all parts of the world. Leaving these ruins we arrived at the modern Ostia, and were so much struck with its appearance, that we sat down to take a sketch of it: it is a most picturesque object, and the two pines which grow in front of its half-ruined walls

add much to its "picturesqueness." After the dreary waste we had left, it seemed like a spring in the desert. Having completed our sketches, and feeling our appetites sharpened, we entered the village, and were served at the inn with a sorry repast by a brutal and ill-looking landlord, who made us pay exorbitantly. We took a survey of the interior of the large tower, but found in it nothing particularly interesting, except a few inscriptions dug out of the neighbouring ruins. Having satisfied our curiosity, we proceeded by a pleasant

walk to Castel Fusano, a country seat of Prince Ghigi, where we intended to pass the night: it is an old castellated mansion; and tradition says that the stone figures of sentinels on the top of this mansion were placed there to deceive the Turkish corsairs, who from time to time made incursions on the neighbouring shore, and did not spare the castle itself. It is situated in a spacious though neglected park, and is surrounded by beautiful pines. As we approached it the sun was setting, and threw a gorgeous light on an avenue of those trees, at which we were gazing with admiration, when we were accosted by the custode, or keeper of the park, with whom we entered into conversation; in the course of which he informed us, to our great vexation, that the steward had accompanied the prince to Rome, and that all the rooms in the castle were locked up, and advised us to go back to Ostia. Here was a pretty predicament: we were not disposed to retrace our steps, as the distance from Ostia was seven miles; nor did we like trusting ourselves in the hands of the worthy landlord, and other certain ferocious-looking individuals we had noticed in the inn. We therefore begged and prayed of the custode to give us shelter, if it were only in a shed, explaining to him our forlorn condition. Upon consideration, he said he would apply to the cowherd, who lived

in a kind of hovel with his family adjoining the villa, whither we accompanied him; and, after no little persuasion, he was induced to give us shelter; we supped with the cowherd and his family on bread and water, this being the only fare they had to offer us. He then conducted us to a room without furniture, and having supplied us with some straw for beds, and lighted a fire, we laid down to repose ourselves, or at least with that intention, for we were kept awake all night by the buzzing of mosquitoes, with which this part of the country is infested: they bit me so severely on the hands that I still bear the marks of them. We arose at daybreak, not sorry to get out of our wretched resting-place. It was a chill misty morning, and our prospect of breakfast was very doubtful, but we were sustained by our enthusiasm: we thought of Virgil, Apollo, &c.; and my friend, who is a zealous classic, opening a pocket edition of the *Æneid* in Italian, spouted as we proceeded briskly along a road in the midst of a wood, formed from the materials of the Via Severiana, and which brought us to the sea-side just in time to see the sun rise on the ocean—a glorious sight! which gave us fresh energy. So beautiful was the effect, that I was induced to make a sketch of it, but gave it over in despair; and after we had lingered awhile gazing on the broad blue ocean, we proceeded along the shore for many miles without meeting a soul, except two or three soldiers stationed in cabins to prevent smugglers from landing. The sands in this part are very smooth, so we took off our shoes and stockings and walked in *cuerpo* the whole length of them: having trotted in this manner for about seven or eight miles, we arrived at a solitary tower called the Tor Paterno, inhabited by a few miserable looking soldiers employed in watching smugglers: this was the site of the famous city of Laurentum, celebrated by Virgil in his *Æneid*, and which was the first place where *Æneas* landed on his arrival in Italy; and the daughter of whose king, Latinus, he married. Leaving the sea-shore we branched off into the road to Practica, the place of our destination for that day: this path lay in the midst of a wood which, for desolate wildness, I conceive, may rival any in the most savage region. After walking a considerable distance without meeting with any living creature, except snakes and lizards, and descrying no signs of Practica, we began to imagine we had lost our way; this was a melancholy reflection! we had tasted nothing but a bit of bread since twelve o'clock the preceding day. The sun shone hotly upon us, and we were encumbered with our trappings; yet, not allowing our courage to flag, we trudged on till we arrived at a cross-road in an open country; here, however, we could discover no signs of Practica; and my companion leaving me in charge of the luggage walked to a hill at a short distance, where he, to his great joy, discovered the eagerly sought for town; and at that moment some labourers coming up, told him they were going on the road to Practica to a farm, where they were employed in hay-making. We all joined; and having arrived at the farm, were enabled to procure some bread and wine, which you may easily imagine we needed not a little. After this refreshment, we proceeded to Practica, where we arrived about two o'clock in the day, having slept on the ground for above two hours from excessive fatigue. This town is very small, but prettily situated, and from the tower of a palace of Prince Borghese there is a most magnificent distant view of Rome, and the surrounding countries of Albano, Gensano, Frascati, &c. Practica is situated on the same site as Lavinium, built by *Æneas* in honour of his wife Lavinia; and many antiquities have been dug up in the neighbourhood. After having dined and supped tolerably well in the inn of the place, we went to rest,

and next morning early we set out for Ardea, sketching many objects on the road. It is a curious circumstance, that all the farm-houses and

cottages on this road were formed exactly in the same manner as those described by Virgil, and they are only to be found so in this part of the country. We passed several herds of fierce looking

buffaloes, which we wished a hundred miles off; luckily, however, they offered us no annoyance. The country round about on this road is very picturesque, and now and then one catches a distant

view of the sea, or of a long line of blue mountains. We arrived at Ardea about twelve o'clock: this town is exceedingly picturesque and interesting; the air, however, we were told, is so extremely

bad in the summer that all the inhabitants leave it and go to more healthy parts. Ardea is celebrated by Virgil in his *Æneid* as the habitation of Turnus, King of the Rutuli; and Ardea was the capital of their kingdom: it was besieged by Tarquin the Proud; and in after ages was the retreat of the celebrated general Furius Camillus, on leaving his ungrateful country; and from its gates he sallied forth to combat Brennus, King of the Gauls, when he had reduced Rome to its last shift. We occupied ourselves in sketching many objects there the rest of the day, and the next morning departed for Porto d' Anzio. After passing many fields of oxen and buffaloes, we arrived at the sea side, at a large tower, called the tower of St. Lorenzo, where we reposed ourselves for a short time, and breakfasted on some provisions we had brought with us from Ardea; for experience had taught us the necessity of providing ourselves in this manner. We then walked for many miles along the sea shore: the morning was very fine, and the sea of a beautiful azure blue, now and then relieved by a tint of emerald green, and where the sun was reflected on its surface it appeared as if spotted with a thousand brilliants. In England it is impossible to imagine these effects; the deepest ultramarine is not too strong to represent the sea in fine sunny weather: there was one annoyance, however, in the midst of this beautiful scene, which tended to disturb the delightful feeling it produced; numbers of oxen, driven by the great heat from the woods and meadows lying inland, had come out to the border of the sea to enjoy the freshness of the breeze, and we had to drive them away as we passed along, though not without some fear and trembling. We at length arrived at a solitary tower on the sea shore, called the Solfatara, where we reposed; and gazing on the sea shore, and reflecting on the "dangers we had passed," we regarded with other feelings the formidable oxen, forming, as it were, in the perspective, a white border to the beach; and they now served to remind us of Europa and the "fair white bull." Keeping along the shore for four or five miles, we arrived at Porto d' Anzio. The first object that met our eye on entering the town was a large villa where Don Miguel resides when he goes into the country; his constant occupation is in shooting the wild boars, &c., which frequent the neighbouring woods. Passing by the villa, we came to a barrack of soldiers, and were passing some ruins on our right unnoticed, when we were addressed by an officer from the window, who told us they were the remains of Nero's birth-place. "I have no doubt," said he, "but that to see it is one of the objects of your visit here." We answered in the affirmative; and he then politely directed one of the soldiers to show us over the ruins. They contain many rooms with rich mosaic floors and painted walls: we observed many small apartments which have evidently been baths, and on the upper part of the room is a very handsome mosaic floor in black and white. This palace, of which these ruins formed but a very inconsiderable portion, extended to a great distance, covering a large space of ground; it was among a part of its remains that

the famous statue of Apollo Belvidere, and many of the chef-d'œuvres which now adorn the Vatican, were found, but the spot where they were discovered has since been filled up, the ruins that remain have only been excavated within a short space of time. Having satisfied our curiosity, we went to the inn where we met the officer, who had called our attention to the place; we found him a very pleasant, well-informed man, a native of Ravenna: he invited us to the barracks to show us some drawings and sketches he had made, which were indeed very creditable; he pointed out some very beautiful views to us, which he thought we might like to sketch, particularly a very extensive one from his room window. To the left lay Nettuno, a very picturesque little town bordering the sea, with a small fort of the middle ages; beyond, and extending to a considerable distance, lay a beautiful line of majestic mountains, spotted with the small towns of Norma, Sermonetta, and

Sezza—the shore, continuing from Nettuno, runs on towards Terracina, and is entirely uncultivated and deserted. Formerly the shore was covered with gorgeous palaces, villas, and temples; and at Nettuno, was a magnificent temple of Neptune, from which it took its name, and the foundations of which are still visible. More to the right, lay the famous promontory of Circe, rising like an island (which it formerly was) from the sea. It was here the famous sorceress Circe had her habitation, and where she turned, by her incantations, men and women into animals. If ever there were a beau idéal of an enchanted spot, it is this: it rises like magic on the horizon of the sea; and when we beheld it, was of a light purple mixed with a warmer tint from the reflection of the sun on its crags. Below it, and in the foreground, lies the pier, arsenal, and part of the town of Porto d' Anzio. One would little imagine, to look at this small insignificant town, that it was the site of the

once famed city, the birth-place of Nero and Caligula, abounding in luxury, wealth, and magnificence, and into whose port, vessels brought their riches from all parts of the then civilized world. There are still remains, in the sea, of the famous mole built by Trajan, and which, from the slight relics that still remain, give an idea of its immense strength and greatness. All these objects combined together in one view, the splendid effect of the broad blue ocean, a vast mass of bright azure, bordered by a picturesque shore, and spotted here and there with massive remains of Roman antiquity, which, from the reflection of the afternoon's sun, assumed that rich golden tint so peculiar to the south, gave such an effect which I shall never forget. We then proceeded leisurely to Nettuno by a road bordering the bay, lingering to view the beautiful effects which the island, or rather promontory of Circe assumed as the sun sank lower, or sketching Nettuno as it presented itself in different points of view. I am surprised that the scenery round the bay has not been more represented by landscape painters: what fine subjects there are for Callcott, Collins, or Turner! We had remained so long on our road that we did not arrive in Nettuno until the sun had set; but we had just time to look about the town, which, with the exception of the picturesque costume of the women, and its fortress,

has nothing particularly remarkable in it. Having retired to rest at the locanda, we rose next morning at four o'clock, and set off for Albano, where we arrived about half-past twelve, after a very hot ride of twenty-four miles; and after dining, set off in a voiture to Rome, which we reached at seven o'clock in the evening, having performed a journey which very few make, as it cannot be done without going on foot, and is not unattended with danger.

#### THE FRESCOS OF CORNELIUS.

In a former article we gave a brief sketch of the life, and a description of some of the works of Peter Cornelius; we propose now to point out the peculiar qualities of his genius, and its productions. In doing this, we shall draw largely from the work of one of the best living writers on Art, and who, residing in Germany, has so profoundly studied the peculiar forms which Art has taken in that country, that he has entered into the feelings from which they arise; and he writes as a German would write in describing them, and making us understand them while he preserves the critical calmness of a judge in giving his opinions.

When Raffaele Mengs, towards the middle of last century, sought to revive the art of

painting, the models he chose were Raffaele, Correggio, and those of their time, who had brought the art to its highest perfection. If true fame has attached itself to the name of Mengs himself, his success at the head of a school was not great. The subsequent revivers of Art in Germany, in our day, have chosen, as examples, those who were the masters and models of the greater men who followed them. It is from the works of Giotto, Cimabue, Perugino, Fra Angelico di Fiesole, and the Umbrian painters, that Overbeck, Schadow, and Schnorr, and almost all the historical painters of modern Germany have drawn their inspirations; and they wish to reproduce the simplicity, the mystic grace, the quaint antiquity with which those masters strove to express their religious feelings as well as their genius. They have also sought to imbue themselves with the taste and style of Italy; and we recognise nothing German in their works.

Cornelius has never yielded to the prevailing style; he has preserved an independent manner; his thoughts and their expression are national and individual; his genius, severe and bold, presents in his works the nerve, the power, the majesty, which we find in the remains and traditions of the old Byzantine style. These, his ardent imagination has combined with the movement, and much of the never tranquil character, and the exaggerated colouring which marks the epoch of the decline of Art; he combines the two extremes, the beginning and the end. But the defects of colouring seen in many of his works, are not always, or often, attributable to himself; for the greater part of the frescoes designed by him are executed by his scholars: such is the plan followed out by almost all the fresco painters of Germany, and most of all by Cornelius. To this cause also, I believe we may often attribute errors, observable in the drawing, and exaggeration in the expression, which sometimes spoil the beautiful and philosophical inventions of the master. Mind is the peculiar province of Cornelius; all the highest part of painting, which consists in embodying fine and deep thoughts is especially his, and there is meaning in his compositions that render them worthy studies for a thinking man. Cornelius has twice visited Rome; he describes the effect it had on him as a new birth in his artistic life: his genius led him, it will easily be supposed, to study Michael Angelo more than Raffaele. He left there some cartoons, the subjects taken from Dante, which breathe a fresh, early beauty combined with spirit and character. Cornelius did not extend these cartoons, they were finished and executed by M. Veit, and the style of the work was quite changed. He returned to Rome at an after period, when the painting of the Ludwigskirche (church of St. Louis) was committed to him by the King of Bavaria, saying, that it was only at Rome his mind could be prepared for the work, and that there only he could compose the cartoons. It was in 1820 that he received the king's commands to adorn with fresco painting a part of the Glyptotheca: this part consisted of three halls in the centre of the building, one wing being appropriated to the collection of Grecian marbles, the other to those of Rome. The very thought of the presence of these remains was sufficient to crush an artist unless it inspired him.

The whole subjects were to be taken from classical antiquity, and the mythology of the Greeks and Romans. Cornelius has arranged his compositions in the following manner:—In the first hall are the gods, in the last, the heroes of antiquity; but he has in the latter confined himself entirely to Grecian history, or rather poetry. Between these two halls, is the third of smaller dimensions; and here Cornelius has placed Prometheus, a link between heaven and earth. The roof of the hall of the gods is divided into four compartments; on each are several zones; on the highest, which forms the centre of the roof, Cornelius has represented Love presiding over the four elements, thus expressing the idea of the ancient Greeks, which attributed to Love the organization of chaos.

The manner in which the cosmogonical symbols are expressed is curious, with their correspondences. In the compartment opposite to the window, Love rides on a dolphin, indicating the principle of water; a season corresponds to this element, it is spring; an hour, it is the dawn. The history of Aurora is most charmingly com-

posed; on one side she is seen rising, preceded by the morning star, leaving her husband, Titan, and her son, Memnon, still asleep. On the other side we see her imploring from Jupiter the gift of immortality for her lover. These two pieces, the last especially, are of such beauty and expression, that these are felt in spite of the purple colouring. In the compartment to the right, Love is sitting, holding the Olympian eagle, which has the thunderbolts in its claws. This is the principle of fire: to this, corresponds the hottest season, and the meridian hour of the day. Apollo is conducting the chariot of the Sun, and presiding over the summer. To the right are represented the metamorphoses attributed to his power, which have given names to some of our fairest flowers. The division below the window, gives us Love with the peacock, the sign of the air, autumn and evening. Evening is represented by Diana, in her car, drawn by deer, passing among groups of lovers. This part of the work, is indeed, a morsel of most rare elegance, painted, it is said, entirely by Cornelius himself; here his genius offers us some of the soft attractions of a virgin, but through them pierces now and then the more austere grace of a matron. To the left Diana recompenses Endymion, to the right she punishes Acteon. In the fourth compartment, Love playing with Cerberus, indicates the creation of the earth; Winter and Night form their train. Night holds in her arms Sleep and Death; she sits in her car, drawn by owls, and the nocturnal hours; at each side are the subterranean divinities, who preside over men's destinies, and make them feel their occult influences.

All these small figures in the roof, contrast, by their dimensions, with the great ones on the walls, and recall the paintings with which Primaticcio has adorned the roof of the palace of Gonzaga, at Mantua. We cannot describe so minutely as we should desire the other parts of this hall; we can merely indicate as to the composition, that under the compartment of water and Aurora, we have on the walls the kingdom of Neptune; under fire and Apollo, that of Jupiter; under night and the earth, that of Pluto. Over all the part of the walls representing the still reign of Pluto, we cannot but notice the wonderful character of languor and deadness that is expressed; Orpheus is striking his lyre, and the stone of Sisyphus and the labours of the Danaïdes are for the moment suspended; but over all, there is a want of energy and life that has a most peculiar and imposing effect. The colouring is unequal, as if it were the work of many different hands, but the light and shade are finely disposed. The throne of Pluto, representing the power of Death, is enveloped in darkness. We are compelled to pass over the other paintings in the hall of the gods; and in that of "heroes," we shall perhaps give more pleasure by describing one composition, than by naming the designs of all. The piece we select, is the last of the series describing the Trojan war: it is most striking in itself; and on none of the walls do we find the rich invention of Cornelius more displayed, nor the expression of it so much injured by the manner of the execution. We do not say we have seldom seen a more beautiful composition; but we have seldom seen one so powerful, it is something you can never forget.

In the midst of a vast space Hecuba is seated, her family murdered around her; Troy in ashes. All the grief gathered on her head seems to be changed into fatuity. Death has counted all her defenders; Priam lies dead at her feet; the base of a tragic pyramid, of which Cassandra prophesying with streaming hair forms the apex. Neoptolemus, standing on the body of Priam, holds Astyanax, whom he is ready to throw against the walls. Andromache, who should have better known how to defend her son, falls senseless at his feet. Menelaus seeks to bear from Hecuba her daughter Polixena; while Agamemnon would seize Cassandra as his prize; but she, prophesying, proclaims to him the disasters which await him after his victory. The other heroes are drawing lots for the spoils of Troy; while Helen, the cause of so many miseries, sits devouring her grief at the foot of a column. Eneas is seen bearing from the flames his father and son, destined in another land to found another Troy.

Now, let us imagine what would be the effect of a composition like this, painted by Rubens,

Tintoretto, or even in our own times, by P. Delaroche or Hayez. How should we be thrilled with horror in witnessing these scenes! We should see the dead, we should hear the cries of the living, we should be spectators of the intoxication of victory, and all the terrors of war; blood and flames would stream around us. But as it appears, the want of true colouring and life, gives a coldness to the whole, and the harmony, which is the result of a fine feeling of colouring is wholly wanting. There is also, sometimes, exaggeration in the drawing, as well as in the expression. The body of Priam is of immense length, that of Neoptolemus is impossible. In many of these figures we recognise the manly simplicity of the old Byzantine style; but there is also far too much of the exaggerated movement and ambitious colouring of the last period of Art. In short, you are enraptured with the thoughts and composition, but the execution often wounds you, or leaves you indifferent. When the works in the Glyptotheca were finished, they obtained the approbation of all Germany, happy to find a thinker in a painter. In 1825, the painting of the Ludwigskirche (church of St. Louis) was entrusted by the king to Cornelius. Its architect, M. Gartner, was happily endowed with a mind suited to the genius of the painter, and the frame he prepared was well adapted for the work of Cornelius.

He had made many studies from the Cathedral of Bamberg, one of the finest monuments of the German middle age; and he now adorned and prepared the church of St. Louis with ornaments purely architectural, well adapted to enhance the works of Cornelius. He has given relief to the nave by a grey tone, from which the curves and nerves of the arches come out in warmer colours, while the vaults of the roof not destined for painting are ornamented in the old manner, an azure ground with stars. The parts of the church prepared for fresco painting, were the immense walls from the bottom of the choir to the end of the transepts, the upper part of the Latin cross, and four vaults of the ceiling, those of the transepts, that of the choir, and the part between. Cornelius has arranged his composition as follows: The three walls are devoted to the mission of Christ; three of the vaults to the kingdom of the Holy Spirit; and the vault of the choir to God the Father. The idea of the Trinity is everywhere present in the inventions of Cornelius in this church. The mission of Christ commences with the adoration of the magi, and, except the Last Judgment, ends with the Crucifixion. This last composition is very grand, and it is executed by Schlotthauer in a firm, broad, and grave manner, displaying much knowledge of Art. In the vault of the choir is represented God the Father, Creator, and Preserver of all things; on either hand are Michael as the destroyer of evil; and Raphael, as the messenger of divine grace, typifying the two principal acts of Providence. The kingdom of the Holy Spirit represents its influence as shown in the history of the church; on one side, apostles, martyrs, prophets, evangelists, doctors, and founders of orders; on the other side, as types of all the elect, are kings and virgins. All the figures in the part of the painting devoted to the kingdom of the Holy Spirit, appear to us the grandest inventions of Cornelius. The character of all is that strong and pure faith belonging to the primitive times. It is true, some are close imitations, almost copies of the old Byzantine style; but to do this, as these works are done, proves the possession of those rare gifts which nature only bestows on some of her most favoured organizations. The great work, however, of this church, is the Last Judgment, occupying the vertical wall of the choir; and we need not point out to the reader how beautifully all these different parts of the work conduct to one another, and are combined. The Last Judgment meets the eye on entering the church; on each side, on the vaults, are seen the crowds of the blessed, in the guidance of the Holy Spirit; and on the vault in the centre of the choir, Jehovah presiding over all. While the Last Judgment presents the explanation of the mission of Christ, and its completion, the other two walls represent his life on earth. In the Last Judgment, Cornelius seems to have taken the elements, as it were, of Michael Angelo's style, which, in its unpolished vigour, recalls the Byzantine manner. In the Christ, Cornelius seems to have had in view a grand and terrible representa-

tion of the Saviour, which is seen in some old cathedrals, built before the thirteenth century; it is seen in the apses of St. Paul's, without the walls at Rome, and it is also to be found on the medals of one of the Constantines, recently published by M. Saulcy. This sublime Christ, robed in antique drapery, the knees marking bold angles, the right hand raised, two fingers only open, and holding with the left hand, on his knees, the Liber Vitæ preserves strongly the Jewish type, and yet recalls the Jupiter of Phidias. With this image Cornelius has sought to combine the milder attributes of Jesus, and also, he has changed the attitude. The result is a figure expressing benignity and calm majesty. We cannot describe, as it merits, this great picture, any more than we have been able to note the immense series of compositions which cover the walls and the vaults; we may mention only two episodes in the Last Judgment: the first is considered, at Munich, the master-piece of the school of Cornelius. It is composed of five figures, two are bishops, the other three, a woman and two men ascending to heaven with the rapture of the blessed on their countenances. The other admired group, is a woman seized by a demon; she looks imploringly to an angel, and so finely is the expression of compassion in his face depicted, that we feel assured she is saved.

We feel how imperfect is this account, and therefore how little just to the artist. Taking the whole, we prefer the frescoes of the church of St. Louis to those of the Glyptotheca. They present more of the fine qualities and fewer of the defects of Cornelius. We cannot conclude, without naming, as they well deserve to be studied and admired, the illustrations of the *Niebelungen*, by Cornelius, full of fine invention, and designed with such force and simplicity, and so much of German character. We have tried to convey to the reader what are the prominent qualities of the genius of Peter Cornelius: these will, of course be differently appreciated, according to the tone of mind of those who study his works; but, perhaps, only when the varied feelings and excitements of friends and rivals, national and individual, have passed away: shall an artist like Cornelius receive his just award, and take his merited place whatever that may be. The glare of popular applause, the mists of ignorance and prejudice, alike disappear when we enter the calm regions of the past, and the slow gathered voice of ages stamps a judgment that changes no more. P.

#### THE ARTS IN CONTINENTAL STATES.

**ITALY.—Rome, 1842.—Notes of a Traveller.**—One of the great pleasures certainly that Rome offers to a stranger, is to visit the studios of the many artists of all nations congregated here. Our attention is particularly directed to the sculptors Thorwaldsen, Tenerani, Finelli, Rinaldi, Tadolini, Gibson, Wyatt, Macdonald, Crawford, Wolf, Fogelberg. What rich treasures of art testify the genius and labours of these men. Thorwaldsen, embracing every varied subject, from Jason, to the *Haufenstaufen* Conradin, Adonis, and the battles of Alexander; Christian and biblical subjects, Copernicus, and the horse of Poniatowski. Tenerani's pure creations—the lovely Psyche, the wounded Venus, the mischievous God of Love, and last and best of all his works, the 'Descent from the Cross,' which only requires a few finishing touches. Finelli, so powerful in every branch of his art: Rinaldi, the Professor of the Academy of St. Luca, so celebrated for his 'Sybilla,' and for his 'Joan of Arc,' commissioned by the King of France. Laurence Macdonald's studio is a particularly interesting one, as well from the masterpieces of invention it contains, as from the immense number of well-executed busts we see there. He is particularly happy in likenesses: you meet all your acquaintance, but well as they are represented, the thought will pass through the mind, how few faces bear the severe test of Sculpture.

Bearing some relation to the number of artists are the number of living models at Rome, and yet there are complaints of the want of beautiful female ones. The place of the most celebrated in former years—Victoria Albano and Sabineria Fortunata—has never been supplied. The latter became the wife of an artist, and is now an elegantly dressed lady, whom I often

meet;—still beautiful, though her features are not faultless, nor even very regular. But, notwithstanding these complaints, let it not be thought there are here few beautiful forms and characteristic heads, such as best serve the painter and the sculptor; they are inexhaustible, especially in the towns near Rome: in Rome itself the population is mixed, and often sunk in poverty and squalor. Of male models, the *Piazza di Spagna* presents many a group, lying down or sitting sunning themselves on the steps of the stairs of the *Trinità de' Monti*. Here are the bandits, the pipers, the Apostles, that have served for many a race of artists, and will do so probably for many more; for their lives are such easy ones, awaiting the call of the artist, heedless whether success crowns his efforts or not—whether they are well or ill represented, so only that the required payment finds its way into their pockets; indeed, the only wonder is that their happy existence does not tempt so many others to the same way of life that they must end in devouring one another. We have noticed especially an often-painted bandit, with long carefully-curved ringlets; a magnificent old man, with hair and beard snow-white and of great length—a most ragged prophet and Apostle; two lovely little boys, often introduced as taking care of cattle, with lambskin caps and peacock's feathers—little miniature "pifferari." How many interesting recollections and traits of the distinguished men to whom they have sat—the birds of passage of some seasons in the one rallying ground of all artists—might these persons give could they furnish us with all they might have observed. What relates to the obscure and laborious days of a great man is always to us far more interesting than the anecdotes that belong to his successful and brilliant period; and many a man of genius has, and does, obscurely labour in that city, which still exercises so powerful an influence on all who have one spark of intellect of a poetic kind.

**NAPLES.—Antiquities.**—A most interesting discovery has been recently made, in the country round Pausilipo. At a considerable distance from it, to the west, opposite Nesida, a part of a fluted pillar of cipoline was observed protruding from the earth: the manner of the chiselling and the form of the pillar gave indications that it was of the best style of Art; and further observation on the spot of some remains scattered here and there of houses "laterizate" and "reticolate" led to a belief that excavations at this place would lead to important discoveries. The design of the excavations was immediately made, and the works commenced, and they have well rewarded the undertakers. A magnificent theatre has been opened, a half larger than that of Pompeii, an odeon opposite to it, and a portico towards the sea, which probably belongs to some magnificent villa. It is believed, from various circumstances, that these buildings, the theatre and odeon, formed part of the villa of Lucullus or of Vedius Pollio; but to whoever it belonged, it was certainly one of those of delicious villas where the masters of the world called around them every luxury and enjoyment. The aqueducts display the usual grandeur of Roman works. A large room is also opened, which seems to have been a triclinium, or perhaps a part of a temple. Many marbles have been found, and on the 13th of January, near the odeon, a statue was disinterred, about half the size of life; the head and arms are wanting, but the sculpture is of the highest character of Art; and none who have seen the Greek marbles now in London will hesitate to regard this statue as a Greek work of the best epoch; there is the same sublime style and manner of the folds of the drapery, which would justify the name of Phidias being inscribed on it.

One of the great works in this country which testify the Roman power is the Claudian aqueduct ("Acquidotto Claudio"): it was constructed to convey the water of the celebrated "*Piscina Mirabile*," to supply the fleet of Augustus stationed in the port of Miseno. The distance is 50 miles from Sarino to Miseno, through hills, valleys, and plains, all compelled to yield to the will of man. For nearly 20 centuries this aqueduct has been inoperative, and in many places the vestiges of it are almost effaced. About 280 years ago, Tavorario Lettieri had visited and described it: it has now again become the subject of research. The architect Felice Abate has examined the whole course of the aqueduct, and has pub-

lished a memoir, with an exact description of its present state, and pointing out how it might still be made available by means of some reparations.

**FRANCE.—PARIS.—Monument to Marshal Moncey.**—A project for a monument to the memory of Marshal Moncey has been presented to the section of the fine arts, by M. Pigeory, architect. This plan consists in removing from the Barrier de Clichy, the scene of the last warlike exploit of the Duke de Cornegiano, the edifices which encumber it, and placing in front of the two iron gratings which open on the Rue d'Amsterdam, in the midst of an oblong spherical space, a statue of the Marshal.

**Worthy of Imitation.**—The bronze casters of Paris had a general meeting on the 25th of April, for the new arrangements of their bureau. M. Gastanibide has been re-elected president. At the same sitting, the masters give prizes for drawing and sculpture to some of their young workmen. The first prize a silver medal and a silver case of mathematical instruments, was awarded to the student Kevillon, chiseller; the second prize, a silver medal and a book in the saving-bank, to Irle, also a chiseller (the book in the saving-bank includes a small sum deposited there, but which we believe cannot be immediately withdrawn). Four bronze medals were also given. It were most desirable such encouragements to industrious youth were given in other branches of art and industry.

**Marshal Clausel.**—April 23. At present, when the death of Marshal Clausel excites so much interest, we may recall the following circumstance of his life as connected with art. Towards the close of the year 1798, Adjutant-General Clausel was charged to receive the abdication of Charles Emanuel IV., king of Sardinia. He discharged this mission with so much delicacy towards the king, that the latter, as a mark of esteem, presented to him the celebrated picture of 'The Woman in a Dropsy,' by Gerard Dow. The general did not retain this precious gift for himself; but sent it to Paris a present to his country. It was immediately placed in the gallery of the Louvre.

**Necrology.**—Aguado. — We have to announce the death of M. Aguado, at Paris, one of the greatest amateurs of painting of our day, and the possessor of a most splendid gallery of Spanish and other pictures. We trust his son inherits with his large fortune his father's love of art.

Mr. Rapatel, a young and very clever sculptor, nephew of the General Rapatel, was killed among the other victims in the dreadful accident on the railroad to Versailles.

**Académie des Beaux Arts.**—M. Gauthier has been elected a member of the "Académie des Beaux Arts," of the section of architecture, in the room of M. Guénessin.

**VERSAILLES.—Hall of Constantine.**—The new historical gallery in this palace, painted by M. Horace Vernet, is now opened, and crowds of visitors from Paris daily throng there. It is called the "Hall of Constantine," and the paintings are intended to commemorate the triumphs of the French arms during the first ten years of the reign of Louis Philippe. The number of pictures is fourteen—seven large pictures and seven smaller ones. All are executed with that poetic and picturesque spirit which gives such an interest to every work of M. Horace Vernet, no less that the clear intelligent style which is the seal of this artist; a merit which makes his pictures understood, and to a certain degree appreciated by all. Of the large pictures, three of the 'Siege of Constantine' have been already exhibited; of those never before seen by the public, the 'Battle of the Hahrah,' is one of the most impressive. The landscape presents the rich and peculiar vegetation of Africa, and is very beautiful; the elegance of the forms of vegetable life, and the tranquillity of the spot, contrasting strikingly with the terrible scenes of war represented. In the 'Taking of St. John d'Ulloa,' we have all the details of marine warfare, given with great exactness, and an interest attached to them, which is one of the strongest proof of M. H. Vernet's genius.

**MARSEILLES.—Puget's Monument.**—A colossal statue is to be erected here to the memory of Puget, the celebrated sculptor. It is to be placed at the *Prado*.

## ROYAL COMMISSION OF FINE ARTS.

WE had, in our last number, the pleasure of communicating to our readers the plan adopted by the Royal Commission, as the first step towards promoting and encouraging the Fine Arts, with immediate reference to the decoration of the New Houses of Parliament. Viewed simply as regards the object thus strictly limited, it is a matter of extreme interest; but when we consider the influence it must exercise, not only as regards the introduction of architectural decoration, but the promotion of the highest tendencies of Art, the announcement of the Royal Commission assumes a character and an importance, far beyond what otherwise its transitory nature might possess. The acts of an individual, however exalted his position, with whatever greatness of intellect he may be endowed, and powerful, whether combined or directing the passions, and ambition of men, can affect society but to a limited extent; he is borne along by the current of opinion, which obliterates the track of his career, as the restless force of ocean destroys every vestige of the mighty armaments which sweep over its expanse. But the principles we inculcate, the truths to which we give utterance, the thoughts that we encourage, have an efficacy which, unheard, unseen, mingles as it were with the universe, and unrolls in mighty gradations the spiritual influence of the Eternal Cause, upon the immortal mind of man. And in a country such as this, where the people, although ever apt to canvass and debate every occurrence, yet reflect so much the prevalent opinion; where systems once adopted are so firmly retained; any truth, principle, or maxim that is enounced, every system that is established, exacts an attention in proportion to the interests it may regulate, destroy, or extend. We propose, therefore, to consider the probable result of this patronage and encouragement of the Fine Arts, by the state, not as regards individuals, but as concerns the nation, in its principles, but not in its details. There are men who assert that the object of the Fine Arts is merely pleasure, that they are but the handmaids to wealth; attributes of luxury, and ministrants to the enjoyments of opulence and ease. Even in this respect, they possess a refinement, which has an influence in conducting the mind to intellectual pleasures, or restraining it from those indulgencies to which the luxurious and the indolent are inclined. Considered as a pursuit, the more they are advanced the more sociable do men become; they cannot exist without a general degree of culture, they are a part of the spirit of the age; and as they tend to animate exertion, encourage knowledge, or minister to industry they increase happiness; by enlarging those powers and faculties with which, for the highest moral purposes, we are endowed. Nor do they exist alone; whatever perfection they attain is a sign of general progress; of advancement inseparable from knowledge, of condition remote from debasement. To say, they have chiefly flourished in countries where public morals have been the most degraded, is to show there was a sufficient moral left to permit their appreciation. The supremacy of the Italian in the imitative Arts, does not account for his political degeneracy; nor is the corruption of Rome to be ascribed to luxury and the Arts, but rather to ill-managed governments, and the unlimited extent of conquest. But are they not subsidiary to education? Education does not consist in the course of study pursued at an university; it is not the routine of a tutor, the system of Genlis and Rousseau, it is of the eye as well as of the ear; the insensible action of time, the impression of opinion gradually acquired, and the result of experience, circumstance, and truth. And does not the picture instruct? Is not the artist—

"Copying with awe the one Paternal mind,"

a moral teacher? has religion no influence in the

energy of Michael Angelo? is there nothing elevating in the compositions of Raffaele?

The first association of painters was at Florence; and their motto was "Levar di terra al ciel nostro intelletto"—to raise the spirit, mind, from earth to heaven. If the beautiful mythology of the ancients possessed the power of a moral creed, its existence at least depended upon the creations of Art; and in what manner was the early history of Christianity transmitted to the uneducated mass of its adherents? By the types, forms, impressions, symbols of Art, depicting alike the mercy which descended to save, and the faith which aspired to ascend. When we have learned to respect the creations of intellect, we have advanced in the culture of our own: the honours that have been paid to the great men of the past; the long glories of the Italian school, are the silent homage of the human mind, to qualities we feel elevating to the imagination, and becoming the attribute of reason. But since the mind is not so much governed by the hourly influence of philosophical deduction, as by a multitude of minor causes, of feelings suddenly awakened, or ideas most familiar to the circumstances of daily life, let us consider the Arts, with respect to their utility in the formation of a pure taste. Whether taste be a distinct faculty, or a mode of judgment, has been a subject of much controversy. It may be considered as feeling and judgment combined, and directed either to the consideration of sensible images or ideal creations; the first being considered as Art, the second as Literature, including under these divisions Poetry, Eloquence, Painting, Sculpture, and Architecture. Now these Arts are distinguished from the mechanical, by this—their end is not directly utility, nor, strictly speaking, instruction; but to minister to the pleasures of the imagination, and thus indirectly to create a niceness of discrimination and a delicacy of feeling, which largely assist and develop the conclusions of reason. And when we reflect upon the power of the imagination, that it gives existence to the ideal, transfers us to scenes the most distant, or approximates the most remote, that its visions are forms of the beautiful, and that—

"—the glad impulse of congenial powers,  
Of sweet sound, or fair proportioned form,  
The grace of motion or the bloom of light,  
Thrill through imagination's tender frame;"

and while it aids the inventive power of the poet, that it leads the philosophical inquirer, or by realizing another's situation awakens the mind to the consideration of relative happiness or want; surely we cannot underrate its influence as a power of the mind, but aim sedulously at such a cultivation of it as may most contribute to the formation of what is pure, virtuous, and estimable in human character. The only means to obtain a pure taste, to educate and guide the imagination, more particularly as regards the Fine Arts, is to encourage their highest tendencies—the illustration of nature and life, the eventful actions of man, and the scriptural truths of God. This can only be effected by patronage, intellectual, liberal, and enduring. Thus only can we nourish in the artist, or impress upon the public,

"—a discerning sense  
Of decent and sublime, with quick disgust  
From things deformed, or disarranged, or gross  
In species;"

and establish such habits of *practice* by which chiefly the mind is capable not only of estimating the excellency in a work of Art, but of ascertaining its quality and degree. Individual patronage must be variable both in its origin and aim. Its origin must date from the taste of the patron, a result dependent upon his intellectual powers, their education, and the moral government of his mind. Tried by its frequent tendency in literature, we shall be probably able to estimate its value as a *system* when directed to Art. Now we choose our favourite author, as we do our friend, from similarity of habits, modes of thought, and conformity of

feeling; even mere intercourse will encourage the associations of the mind. But we change our opinions, both of books and men, as we progress in life, enlarge our experience, and improve our judgment. Ovid in youth, Horace in manhood, and moralists and Tacitus at a later period, exhibit the successive phases of our literary taste; and our companions are similarly selected, or retained, not only from alternations of circumstance, but by our different estimation of character. Youth revels and derives its existence from the present. Age enjoys the calmness of the passing scene, already illumined by the brighter radiance of the future. One addresses himself to time, the other to eternity, a part of which he is. Now patronage extended to Art, as that of the individual, must be liable to similar variations of opinion, it will be influenced by the same cause, and be exercised under equal impressions. And this kind of encouragement is too precarious as a reward, to be sufficiently powerful as a stimulus. "The patronage of the public," says Sir Martin Archer Shee, "as distributed by individuals, has never been sufficient of itself to produce the higher excellence of Art in any nation. Bad taste, caprice, and an injudicious interference with the conceptions of genius, must always materially obstruct the advantages to be derived from this kind of encouragement; nor are the subjects and occasions upon which it is commonly exercised of a nature sufficiently elevating and impressive to excite all the enthusiasm of the artist, and call forth all the powers of his Art." To know the tree we judge of it by its fruit; to estimate a government we consider the condition of a people; to test the value of private patronage we examine the catalogue of an exhibition. Great and predominating ability there must necessarily be; but on what is it exercised? The portrait which most frequently ministers to vanity—and the small picture to enrich the wealthy gallery, or adorn the private house. It is not said this system is of itself bad; for there are patrons in every land of whom men are justly proud, but that is not *sufficient*, if we would dedicate Art to high purposes, associate her powers with the sacred subjects of religion, or aid the progress and encourage the moral welfare of the social state by the exhibition of great actions, and the perpetuation of high examples. This is a task for a government, this is the duty of a nation. "This kind of patronage is (to use again the words of the President of the Royal Academy), the employment of individuals selected for the execution of great works of public ornament and patriotic commemoration. This is certainly that exercise of patronage which appears to be the most worthy of a great and enlightened people, which is the most splendid and permanent, and which, under judicious management, must always be the most effectual. This is the patronage which principally contributed to raise the Arts to excellence in Greece, and to revive them in eminence in Italy; which, while it rouses the genius, rewards the virtues of great men, and gives at once refinement to the people and dignity to the state."

The arts, literature, and the drama reflect invariably the character of a nation. A freeman, and educated for the public service of the state, by which means the individual becomes merged in the mass, and is more induced to habits of generalization; with senses trained to the perception of the beautiful by the luxuriance of his land, and the blended harmony of mountain, wave, and sky, which became a part of him and of his soul, the Greek created those combinations of excellence, which it is the ambition of the modern to equal, to imitate, and to possess. These he dedicated to the genius of his countrymen; and from the days of Phidias to its decline, Art was the expression and the image of their varied condition. But in its history we do not mark those variations of taste, that uncertainty of style and manner, those alternations of good and bad, noble and trivial, which are the conse-

quence of defective principles and hesitating guidance. Christian Art, nurtured in concealment, early deformed by types and symbols, and the controversy of rude and enthusiastic minds, yet

"come un bel fume  
Che con silenzio al mar va declinando  
E se vada, o se stia, mal si presume,"

shed imperceptibly, under the protection of religion, its elevating influence on the mind. At the command of the Pontiffs, the bidding of free states, and the expressed will of successive emperors, the pictured forms which imagined the truths and spiritual feeling of Christianity were variously reproduced, always with a scriptural expression, more particularly in that favoured land, whose ideal impressions were so deeply reflective of the stern grandeur and picturesque trilogy of Dante. From Giotto to Raffaele the history of Art is that of the highest genius dedicated to the greatest purposes: it was with many an imaginative devotion, to all an ambition—

"Which haply vulgar hearts can scarce conceive;"

and as the materialism of antiquity had been purified by visions of truth and aspirations high, whose origin was in the creative beauty of nature, so also was its subsequent and secondary form spiritualized, not only by the impressions of a pure creed, but by the efficacy of the religious feeling, the eloquent proportion, vastness, and significant designs of Art.

Like exiles, who, on return to their fatherland, rekindle the sacred flame on the long-neglected altar of the protective deity, so we, so long estranged and alienated from that domain of creative and imitative excellence, now seek to restore the practice of those monumental works which cannot die, and may not be forgotten;—from the enduring evidence of facts;—the Sistine Chapel, and the Stanze of the Vatican, and by the authority of great names—Da Vinci, M. Angelo, and Raffaele. This silent worship of the great of old, is chiefly observable in Italy, Germany, and France, and in England for the first time the state has liberally conceded to opinion, and now seeks to ascertain "whether by painting or sculpture, or both combined, the events of our past history, and the persons of our public benefactors, may not be transmitted with unimpaired respect to the grateful recollection of the English people." If this arose from admiration of novelty, or obedience to the capricious will of a momentary impulse, we should say of the promoters of this design,

"Non ragionamo di lor, ma guarda, e passa;"

but, convinced that it is commenced, and will be continued upon principles alike honourable to the Commission, as useful to the country, we shall endeavour to submit to our readers those leading points which appear to us most important as harbingers of future good. First, then, it is an appeal to the common understanding of the people as to the propriety of encouraging monumental works of Art, the object of which is to enliven without destroying architectural effect, and directed to the illustration of great events. Secondly, the Commission has based its plan upon a liberal and enlarged scale; for while it seeks to introduce fresco, in which M. Angelo and Raffaele excelled, it evokes the aid of English artists in that branch of Art of which Sir Joshua Reynolds is their pride, and of sculpture, eminent by the ability of Flaxman and of Chantrey. Thus it seeks to erect, by the union of architecture, painting, and sculpture, a palace becoming the state of Art, of the nation, the Sovereign, and the senate. But there are other considerations. The end we gain is frequently valuable in proportion as it is the means to a remoter purpose. Thus if the mode of mural decoration here proposed be successful, it will not be confined to the Houses of Parliament, but as in Rome, in the time of Augustus, will become the decorative principle of the temple, the palace,

the exchange, and the town-hall. Moreover, works of this nature require, not only "that a man should be able to draw before he is let loose in fresco," but the preparation of the cartoon itself exacts that he should reflect as the critic of nature, and compose as the historian; that he should not detect casual contrasts or minute appearances, but express great truths and striking incidents; that he should separate that which is abstract, from that which is real; and represent life as it is seen in nature, not as it is described by the philosopher, or depicted by the poet. Under the guidance of one eminent in design, many moreover must work for its completion: thus much of energy that does not rise beyond a respectable mediocrity may here study and practise with success; ability which now dies in obscurity may attract attention; and a more extensive sphere for exertion will be presented to many who adopt the Arts as a profession.

"Different minds  
Incline to different objects: one pursues  
The vast alone, the wonderful, the wild;  
Another sighs for harmony, and grace,  
And gentlest beauty."

By encouraging fresco, and including oil painting and sculpture, the Royal Commission has, thus thrown down every barrier that can obstruct Genius in her career. The profession of the Fine Arts should be a liberal profession, it should assist, encourage, patronise, and protect, not this or that favourite, not opinion because it is of the public, or judgment because it is of wealth and state, but merit however humble, genius however daring, and pursuit wherever directed, with reference to the intellectual promotion of Art, and the honour that a great name confers upon a nation. Most earnestly do we hope that our young artists will consider the patronage of Art by the state, as a school for the instruction of genius, and its honours the reward of their career; and that without study, assiduous practice, unremitting attention to general principles and minute details, however superior their capacities or attainments, those capacities will be useless; those attainments misapplied. Life will glide away in different endeavours, and age but recall to their minds the thoughts of talent abused, opportunity neglected, and of honours they have lost, by wanting the ambition to win. In closing this article we must be permitted to add the expression of our homage, fervent, grateful, and sincere, to that Illustrious Prince, who, by his general acquirements, zeal, and educated taste, has not in this respect alone, but on every occasion, aided and encouraged the promotion of religion, science, literature, and Art. It was a proud ambition that made Cæsar the conqueror, Augustus the ruler, Napoleon the destroyer of kingdoms; but it is an ambition more lofty, because it is more pure, to wrest honours, not from the present, but the future; not by inscribing a name amid the conquests of war, but the victories of peace; not by recounting the nations we have added to our sway, but the minds we have won to intellectual greatness; the intellect we have directed to improve the condition of man, and the hearts we have turned to justice.

"Gratum est, quod patriæ civem populoque dediisti,  
Si facis, ut patriæ sit idoneus, utilis agris,  
Utilis et bellorum, et pacis rebus agendis.  
Plurimum enim interit, quibus artibus, et quibus  
hunc tu  
Moribus instituas."

"Not a tomb or an inscription," says Roscoe, "marks the place that received the ashes of Lorenzo; but the stranger who, smitten with the love of letters and of arts, wanders amidst the splendid monuments erected to his family, the works of M. Angelo, and his powerful competitors, whilst he looks in vain for that inscribed by his name, will be reminded of his glory by them all."

## VARIETIES.

THE DINNER AT THE ROYAL ACADEMY previous to the opening of the Exhibition, is one of the most remarkable things connected with the arts in this country. Sir Robert Peel described it on one occasion in the House of Commons with his usual good taste; and Sir Walter Scott, in one of his published letters, has given some account of it. But the splendour of this meeting does not require the aid of the hon. baronet's eloquence, nor the poetic talents of the great Wizard of the north. It is unique. There is nothing with which it can be put in comparison. Here government, foreign relations, the church, the law, the army and navy, the mercantile world, science, poetry, literature, and the drama, all find their representatives. Dukes, archbishops, bishops, ministers of state, law officers, ambassadors of foreign powers, heads of learned and scientific bodies, poets, philosophers, the civic authorities, the mayor, the governor of the Bank, the chairman of the India Company, gentlemen who have become conspicuous as patrons of art, in short, all who are connected in any way with the greatness and prosperity of a great country, are called upon, by their presence at this festival, to acknowledge the influence of the Fine Arts on civilized life. Political opinion here becomes no bar of separation. Whig and Tory are found sitting together side by side, forming one harmonious union in aid of elegance, refinement, and taste. The tables are set in the east room, surrounded by the pictures. At six o'clock the president takes the chair. On his right hand are seated the ambassador of France, the Lord Chancellor, Sir Robert Peel, Lord Stanley, Sir James Graham, &c. &c.; on the left the Dukes of Beaufort, Newcastle, Wellington, Sutherland, &c.; bishops in front, then foreign ambassadors, marquesses, earls, &c. &c. &c. By the time the cloth is removed it has become dusk: but darkness is changed into light at the name of the Sovereign, whose health is proposed as patroness of the Institution. The immense gas lamp is suddenly ignited, the pictures come into full display, and the whole company stand up while the national anthem is sung in a blaze of splendour and glory. During the interval between the toasts that follow, the pictures are the subject of conversation. The Count St. Aulaire speaks the thanks of the foreign ambassadors with rapid fluency rather than stately eloquence. He congratulates himself and his diplomatic brethren on being surrounded by this assemblage of distinguished talent. He assures his hearers that such is the community of genius, and such the neutral ground occupied by science and art, that persons eminent in this country are eminent throughout Europe; and that in every quarter of the world an Englishman distinguished by genius find the right hand of fellowship extended to him, and feels himself at once in the midst of brethren and friends. The Duke of Wellington, in a feeble and scarcely audible voice, returns thanks for the army and navy. The Lord Chancellor speaks for the visitors. He renders justice to the Royal Academy for their long-continued and persevering exertions for the advancement and dignity of the Art. He tells of the exemplary conduct of the professors and teachers in the various schools, supported solely by the self-devotedness of the members of the Academy. He speaks of the integrity and nobleness of their cause as matter of his own personal knowledge and experience, and congratulates the President and the meeting on the prospect of the fruition of all their hopes, promised by the commission now sitting on the subject of Art. Employment, honourable employment, will henceforward be the reward of study, and rising genius will have the long wished for field of exertion, which will mark the character of the age, and it is hoped will add to the glory of the nation. The noble and learned lord proposes the health of the President; who, in his reply, adverts with much feeling to Wilkie and Chantrey, cut off in the full vigour of mental power before time and age had prepared us for the loss. He tells of the noble bequest of the deceased sculptor, by which in his death, as well as in his life, he proved himself a real patriot and a true friend to the Arts he loved. The Royal Society, the Society of Antiquarians, the Society of Arts, Manufactures, and Commerce, the British Institution, are severally proposed and acknowledged; and the company disperse at ten o'clock, all highly gratified

with the scene they have witnessed. The influence of such a meeting as this is felt throughout the whole community of Art. Every student is benefited by the impression thus circulated. Art is placed on its proper elevation, and each individual is thus bound to support, in his own character, the honour and dignity of the profession. When we know that the Royal Academy has supported national schools for every department of Art; has opened its rooms for the exhibition of the works of every candidate for fame; has aimed at placing the arts of England on a footing of honour and dignity equal to the most renowned ages; and that all this has been done by the exertions of its members, unaided by Government, we cannot but think the public owe a large debt of gratitude to this noble establishment, and we do not envy those persons who would depreciate its benefits, or abuse the public ear with calumnies to its prejudice.

**HER MAJESTY'S BAL MASQUE.**—The occurrence of a Masked Ball within the walls of a British Palace is a novelty of considerable interest, and one which the resources of an aristocracy may improve upon at some future period, and restore bygone characters, and a picture of the times in which they lived and moved, with a vivid reality to be un-hoped for elsewhere. The study of costume in the largest sense of the word has, within the last ten years, made great progress; and the feeling once prevalent among artists, even of great eminence, that a conventional idea of costume that belonged to no age or country was preferable to that accuracy and truth that might be obtained by a reference (in some degree troublesome) to the existing relics of the age they were attempting to delineate, has passed away; or at least its last relics are lingering in slow decline among us. The day is, we hope, for ever gone, when Greece and Rome furnished the only available costume for the British warrior or senator, who became in consequence so disguised by it as to be alienized in his own land, and so al-ered that his own countrymen could scarcely recognize him. St. Paul's Cathedral abounds in specimens of this taste. Who would recognize the naked Hercules there as Dr. Johnson, had not the inscription beneath recorded the sculptor's intention? and how much more interesting would it have been to have seen the rough but kind hearted old man "in his habit as he lived," rather than in the *classic* one in which he never appeared? The declaration that correct costume was not available to the artist, and was not sufficiently pliable for his purpose, has also rapidly disappeared—it was the language of indolence and ignorance. The triumphant resuscitations of ancient historic scenes by the modern French artists, and the successful results produced by the diligent investigations of our own, have completely silenced such assertions. Still much remains to be done, and that it will be done we feel sure, for a healthy spirit of inquiry is afloat, and that spirit will receive not a little impulse from the attention given to the subject by the noble and wealthy of the land, on the occasion of the late brilliant masque in the home of our sovereign. Too much praise cannot be given to the good taste and correct judgment exercised by her Majesty and the Prince Albert in the selection of their costume and that of their immediate attendants. The chivalric Edward and his noble-hearted Queen were characters worthy of impersonation. Surrounded by a court all clothed in the costume of the household at this period of our history, the illusion was perfect, and the *royal* reality of the chief characters completed the charm, and for a few brief hours restored in vivid truthfulness the long-departed glories of the middle ages. It is not our intention, indeed it is not our province, to enter into a detail of the costumes exhibited on this interesting occasion. The newspapers and journals of the day supply this in abundance. Neither is it our wish to criticise in an unkind or querulous spirit the characters impersonated; but we think a few words may be said, not unprofitably, on some few incongruities. We think that the period selected by her Majesty for her own costume ought to have been the boundary epoch of all the other characters; and while this would have admitted a great range of fancy costume of an early, a richly decorated, and an unquestionably novel character, it would have hindered the possibility of anything interfering with the general air of truth that would then have prevailed throughout. We

could not, indeed, help being forcibly struck on looking over the list of dresses in the *Times*, by meeting the names of Ali Pacha and Chaucer following each other, and coming in juxtaposition with a courtier of the time of Charles II., or with Anne Boleyn vis-a-vis with Madame de Maintenon. The Crusaders might appear with much propriety; and indeed the costume of any age or country down to the reign of the third Edward, for courtiers of that age *might* personate earlier character; but it unquestionably involves an absurdity when Queen Berengaria and Richard Cœur de Lion dance in the same quadrille with Quentin Durward and Anne of Grierstein, the more particularly when they are led by the daughter of the Lord High Treasurer to King Charles the First. The extensive acquaintance formed by Queen Philippa and King Edward the Third on this memorable evening with personages who never existed till centuries had rolled over the graves of those sovereigns is really not a little extraordinary. But "time and space" were evidently "annihilated to make spectators happy," and as this "consummation, so devoutly to be wished," appears to have occurred, it may be said criticism is uncalled for. It, however, remains to be proved whether this "consummation" may not be effected without the destruction of the actual in its broadest principles; nay, whether a greater amount of pleasure may not be elicited from the reflection that common sense has in no instance been violated, and a realization of bygone ages revived, upon which the mind of the scholar, the antiquary, and the individual supporter of each character may dwell with pleasure as

"The brightest spot in memory's waste."

**THE ARTIST'S BENEVOLENT FUND.**—The anniversary dinner took place, at the Freemason's Tavern, on the 7th of May. In consequence of a domestic calamity to the house of Russell—the death of a younger brother—the chair was not taken by Lord John Russell; his place was supplied by the Earl of Arundel, at a very short notice. The report supplied satisfactory evidence of the progress of the Institution, and we understand a larger collection than usual was made at the table. We regret to say that comparatively few of the leading artists were among the guests.

**THE "REPORT" OF THE ROYAL COMMISSION** will not be issued until next month; we think it better, therefore, to defer all observations upon the subject until it is before us in its completed state. The document, we can assure our readers, will not only possess the deepest interest, but will be highly satisfactory to artists and to the nation.

**METROPOLITAN IMPROVEMENT SOCIETY.**—This useful Association is now taking a position which promises to be lasting. Chambers have been engaged in Bedford-street, Covent Garden, where a library of maps and plans will be formed for the use of the Society. Sir Robert Peel has consented to receive a deputation from the members, on the subject of the general improvement of the metropolis (in which the Premier himself takes much interest), and we may speedily look for useful results.

**BRITISH INSTITUTION PRIZES.**—The four prizes of fifty pounds each have been adjudged by the Directors of the British Institution to Messrs. Herbert, Creswick, Sidney Cooper, and Fraser; a distribution liable to very little objection, if it be not entirely satisfactory. We desire to offer but one remark; this decision of "the Directors" is a vote of censure on the hangers, be they who they may. Either Mr. Herbert's pictures ought to have had better places, or they ought not to have been subsequently pointed out as among the best works in the gallery.

**WILKIE'S SKETCHES.**—All lovers of Art will be gratified to know that a series of "Oriental Sketches" made by the late Sir David Wilkie during the important tour, which resulted in his loss to this country, is about to be published by Messrs. H. Graves, and Co. We shall next month give a more detailed account of this interesting and important work.

**ARTISTS' GENERAL BENEVOLENT INSTITUTION.**—The anniversary dinner of this most valuable Institution, took place on the 28th; the President of the Royal Academy in the chair. We are, this month, unable to do more than refer to it. In our next, however, we hope to direct public atten-

tion—and that of artists more especially—to a Society, the importance and value of which is exceeded by none in the metropolis; and which affords immediate relief to the distressed, who have no other claim upon it but that of destitution.

**ARTISTS' RENDEZVOUS.**—Mr. George Harrison, a landscape painter, has formed a class for sketching "out" during the summer months. He states that "having in common with many of my pupils had frequent cause to regret the non-application of their talent in drawing, or the want of some inducement to lead them to the study of nature in the fields, I am led to form a class that shall meet once a week for the purpose of going through a course of twelve progressive lessons in pencil and water-colour sketching, with the application of perspective, &c." The plan is a good one, and may be productive of very serviceable results.

**ROYAL HIBERNIAN ACADEMY.**—The Exhibition is now open, and contains several contributions from English artists. We shall review it in our next. Meanwhile we may observe, that we have received three or four letters regarding the proceedings of the committee of the Royal Irish Art-Union, upon whom here, as in Scotland, devolves the duty of selecting the prize-pictures, and who have, consequently, a most onerous and delicate task to perform. Already, it would appear, complaints are sufficiently rife; indeed it is impossible the case can be otherwise when this principle of choosing by proxy is acted upon. One of our correspondents states—and we do think he must be misinformed—that the committee have actually purchased, *as a prize*, a miniature at the price of fifty pounds. We can scarcely credit this, for we know that the committee consist of gentlemen of high honour and integrity; but so, indeed, do the Scottish committee; yet that *they* have made "mistakes" is matter of certainty, and is not denied. It will be our duty to make inquiries into this matter.

**THE LATE GEORGE BARRET.**—We direct the attention of our readers to an advertisement printed elsewhere, which emanates from the friends of the late excellent painter and estimable gentleman. This month, we can do no more than refer to it; in our next number, however, we shall have a better opportunity of alluding to the circumstances under which it is issued, when supplying some particulars connected with his private and professional life.

Elsewhere, also, we print another advertisement which communicates an afflicting fact.

**SALES PAST AND TO COME.**—At Strawberry Hill the undermentioned Pictures realized the prizes affixed to them:—

'The Portraits of Ladies Laura, Maria, and Horatia Waldegrave, daughters of James, second Earl of Waldegrave and Maria Walpole, afterwards Duchess of Gloucester, 1781,' Sir Joshua Reynolds, 57*l.* 10*s.*; 'A Conversation, with Portraits of Lord Edguncube, George James Williams, and George Selwyn,' Sir Joshua Reynolds, 157*l.*; 'Portrait of Margaret Lemon,' said to be by Vandyke, 78*l.* 15*s.*; 'The Education of Jupiter,' said to be by Poussin, 78*l.* 15*s.*; 'A Landscape,' said to be by Salvator Rosa, 42*l.*; 'Portraits of Lady Dorothy Percy, Countess of Leicester, and her Sister, Lady Lucy, Countess of Carlisle,' Vandyke, 23*l.*; 'The Marriage of Henry VII. and Elizabeth of York,' Mabeuse, 178*l.*; 'Portrait of Maria, Lady Waldegrave, afterwards Duchess of Gloucester,' Sir Joshua Reynolds, 73*l.*; 'Portraits of Catherine de Medici and her Children, Charles IX., Henry III., the Duke d'Alençon, and Margaret, Queen of Navarre,' Yanet, 90*l.*; 'Portraits of Charles Brandon, Duke of Suffolk, and Mary, Queen of France,' 535*l.* 10*s.*; 'An Old Picture, representing Henry VIII. and his Children,' an early painting of great merit, name of the artist unknown, 220*l.* 10*s.*; 'Portrait of Ninon l'Enclos,' 131*l.* 5*s.*; 'A Curious Historical Picture of Henry V. and his Family, from Tart Hall, Westminster,' 131*l.* 5*s.*
